One Dollar Per Year

New Year's Mottoes

I asked the New Year for some motto sweet,
Some rule of life by which to guide my feet;
I asked and paused. He answered, soft and
low,
"God's will to know."

"Will knowledge, then, suffice, New Year?"
I cried;
But ere the question into silence died
The answer came: "Nay, this remember,
too,
God's will to do."

Once more I asked, "Is there still more to
tell?"
And once again the answer sweetly fell:
"Yea, this one thing all other things above,
God's will to love."

California Excursion

Thursday, Jan. 14, 1909

Will leave all points in Oklahoma for Butte Valley, California. An excursion will leave Chicago the same day; leaving Omaha, Nebraska and Kansas City, Missouri on Friday, January 15, 1909. All excursions will be consolidated at Cheyenne, Wyoming Saturday morning, January 16. For rates, routes and other information write to

E. M. Cobb,
Elgin, Ill.

Isaiah Wheeler,
Oklahoma City, Okla., or
Cerro Gordo, Ill.

Omaha, Neb.

CALIFORNIA BUTTE VALLEY LAND COMPANY

MACDOEL, CAL. Dec. 16, 1908

Mr. E. L. Lomax, G. P. A., U. P. R. R.

Omaha, Neb.

Dear Sir:—

We, the members of the excursion to Butte Valley, California, leaving Oklahoma, Missouri, Iowa, Illinois and Kansas, in charge of your Messrs. Geo. L. McDonaugh, Isaiah Wheeler and E. M. Cobb, beg to take this method of expressing our appreciation of the service rendered by your railroad as well as the Southern Pacific and connecting lines, also the special attention and care given the party by your colonization agents.

We are delighted with Butte Valley located along the new main line of the Southern Pacific, and are very frank to say that this country was in no way misrepresented to us by your representatives, and we will take pleasure in recommending this location to our many friends who are awaiting our report. The best evidence of our faith in the possibilities of this Valley is the acreage purchased by this party.

Church Membership Record

The most unique and practical system of keeping a record of church membership. The outfit provides one card for each member and is suited to the needs of pastors as well as church clerks. A comprehensive record of the individual member.

A circular explaining how this record system can be utilized to the best advantage, furnished free with each outfit. Send your order today. If more information is desired, write us.

No. 1 Church Membership Record.

A neat cloth bound box, size 5x6 inches.
A complete Index.
100 Membership Cards.

This outfit is ample for a membership not to exceed 150. More cards will be needed when membership is above 100.

Price, prepaid,\$1.25

No. 2 Church Membership Record.

A neat cloth bound box, size 5x9 inches.
A complete Index.
200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price, prepaid,\$1.75

Extra cards furnished for 50 cents per hundred, prepaid.

More About Miami Valley, New Mexico

Are you seeking health?

We have it as sure as this pure, rare mountain air brings it.

Are you wanting wealth?

We can furnish you the resources for it.

Do you desire happiness?

We have the conditions that bring it.

A co-operative thrifty community
of neighbors for you.

Excellent church privileges.

A good school for your children

now in session, conducted in a good house built with the latest ideas of lighting and equipage.

Beautiful scenery

with its ever-shifting shades and tints to feast the eye upon.

Fine weather? Good roads? Yes, none finer.

Almost perpetual sunshine.

Just think! Nearly every winter day Old Sol smiles out warm and bright. Contrast this with the days and weeks of cloudy weather, rain, snow, sleet, slush and mud back East and North.

Thanksgiving Day finds us with a goodly harvest and thankful hearts for this our first year of prosperity.

Sickness has not been in our midst, death has claimed none of us and prosperity is inevitable for the future.

"Westward Ho" tells of our claims and resources.

Send for a copy. Come and see us.

Farmers Development Company, Miami, N. M.

Results Are What Count

Results of Some Crops Raised in Idaho, 1908

			Albert Mickels,			Oats	90	
I. Hildreth,	Kind of Grain	Bushels per A.	A.					
	Wheat	58	15					

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

Homeseeker Round Trip Rates are in effect on the first and third Tuesdays of January and February, 1909, as follows: From Chicago to Blackfoot, Idaho, \$42.50; Boise, Idaho, \$57.50; Butte, Montana, \$42.50; Caldwell, Idaho, \$57.50; Hailey, Idaho, \$53.60; Huntington, Oregon, second-class, \$57.50; Idaho Falls, Idaho, \$42.50; Ketchum, Idaho, \$54.60; Market Lake, Idaho, \$42.50; Mountain Home, Idaho, \$53.90; Nampa, Idaho, \$57.20; Ontario, Oregon, \$57.50; Pocatello, Idaho, \$42.50; Salt Lake City, Utah, \$39.00; Shoshone, Idaho, \$49.00; Twin Falls, Idaho, \$50.80; Weiser, Idaho, \$57.50.

Colonist One Way Cheap Rates will be in effect from March 1 to April 30, 1909, inclusive.

Write at once for printed matter giving full particulars about Idaho and its possibilities, climate and other attractions.

No. 1.

EDUCATION IN CHINA

C. F. APPLETON

THE educational system that existed in China at the beginning of the twentieth century is one of the oldest in the history of the world. The present Chinese characters were invented about four thousand years ago and the printing of books from blocks of wooden type was in vogue many centuries before Caxton produced his first printing press, and this method is still in common use in spite of the introduction of the most modern printing machinery from the West.

The Chinese system of reading and writing is very difficult to acquire and it requires a number of years to become reasonably proficient in it. This is on account of the large number of different characters in use. Several English-Chinese dictionaries give a list of six thousand characters, but good native dictionaries define from forty to fifty thousand. When one considers that the foundation for this vast number is found in two hundred and fourteen radicals, the magnitude of the task and the ingenuity of the inventor may be more fully comprehended.

Confucius, the Shakespeare of Chinese literature, was born 550 B. C. His classical writings and those of his students have been the principal books used in nearly all the native schools until the renovation of the educational system of this great empire.

Before the Boxer troubles of 1900, a Chinese scholar could hold the degree of A. B. or A. M. and know practically nothing but reading and memorizing the classics and being able to write a literary essay consisting of the sayings of the ancient sages on any given topic. Such subjects as mathematics, geography, history, philosophy, and science were wholly unknown in the school curriculum. Probably the greatest incentive to education all these centuries has been the requirement of the government that all candidates for official appointment must be literary graduates.

Owing to several causes, this old system has passed away and a modern course of study has been out-

lined and a new system is being established by the government as rapidly as possible. Some events leading up to this far-reaching change in such an important institution in the Middle Kingdom are as follows: 1. The China-Japan War of 1895 in which the millions of this country were defeated by their pigmy neighbors and "lost their face" before the world. 2. The Boxer troubles and the ensuing siege and capture of Peking—the Holy City—by the foreign powers in 1900, revealing to the Chinese their weak points and the vanity of trusting in their false gods which could not deliver in time of need. 3. The Russo-Japanese War in which Japan, which had but recently broken off the shackles of the past and was pressing ahead for modern improvements, defeated a dangerous enemy of China. 4. The visit of the five commissioners sent out by the Chinese Government to investigate conditions in such countries as America, England, Germany, France, Japan, etc. All these movements have had their effect in bringing about the wonderful changes that are now taking place throughout this great nation. The first step was taken by the throne when it issued an edict abolishing the old plan of examination by which the literati had gained their honors for so many centuries. A new office was created in the government viz., the ministry of education. To this committee was entrusted the duty of drafting a new method of education suitable for the country such as would place her on a par in the literary world with other civilized nations. The new régime took the Japanese system for a model and outlined four grades of schools as follows: The primary school, the common school, the middle school and the high school. Each grade has a four years' course of study and a carefully prepared curriculum including the subjects taught in any up-to-date educational institution.

In theory and as a tentative scheme, as it must necessarily be for a number of years, the new system has

been carefully planned and one might think that it should meet the need, but thus far it has failed to do so. This is due to two causes especially, viz., the lack of teachers and the lack of system in raising the needed funds for the maintenance of such a mammoth undertaking as contemplated in the plan. To provide suitable teachers for the education of the children of four hundred millions of people is not a task that can be accomplished in a year or even in a generation. All that was required of the school professor under the old régime was a knowledge of the native character with ability to write the same; diligence in being at his desk from daylight till dark to hear the students recite, one by one, the ancient, unintelligible classics. But now new duties confront him. Other subjects must be taught of which he has no knowledge and in a way perfectly unknown to him. To meet this need the government has opened normal schools in many of the larger centers for the training of these teachers on more modern lines. Two courses of study, one for one year and the other for three years, have been prepared for these institutions, giving the students a very elementary knowledge of the subjects, which they are supposed to continue to study after leaving the training school. Teachers from America, Japan and other countries have been employed in these normal colleges as also in some important places in the high schools. The expense of foreign teachers and the difficulty of teaching through an interpreter have been serious objections to this method out of the difficulty. Another plan of late years has been followed quite extensively, of sending groups of picked young men abroad for a few years of training. Two years ago there were some ten thousand such students in Tokio alone, but on account of the political agitations in Japan against the Chinese government, this number has been greatly decreased and more students are now being sent to the United States and Europe. Especially has this been the case since the American government has decided to remit the indemnity imposed on this country after the Boxer troubles of 1900.

Another solution for this problem is being found in the Christian mission schools which are the best equipped of any educational institutions in China, although the government still refuses to recognize them or grant their graduates any degrees.

The second cause of failure in the new system is the lack of funds, due largely to the corruption of the officials and to the fact that the schools thus far are too much dependent upon the gifts and benefactions of the people for their maintenance.

A large number of Anglo-Chinese schools are scattered throughout different sections of the country, but the students from these centers of learning are usually in search of a little English for business purposes, as English-speaking natives are in great demand and

can command much larger salaries than their equals in other vocations.

Such special scholars as law, medicine, forestry, etc., are not unknown in China but are few and far between at the present stage of development.

The textbooks of the present day are undergoing great changes. The Commercial Press, one of the largest printing firms in China, has issued a series of Illustrated National Readers which are being distributed. The old classical works are being read in the higher grades while their places in the lower classes are being filled by these modern books which are more simple and intelligible.

For such studies as mathematics, geography, science, etc., translations from western authors are being put on the market to meet the present need. Translations from Japanese works seem to have the preference. A new English-Chinese dictionary of one hundred and twenty thousand words and phrases has just been published by the above-mentioned company.

Truly China is in a transition period, politically, socially and educationally. The old dragon is at last rousing himself after a sleep of many centuries and time alone will reveal the results of the changes which are now taking place in the Celestial Empire.

ALPHABET OF AMERICAN AUTHORS

G. FEGLEY.

XXIII.—J. G. Whittier.

JOHN GREENLEAF WHITTIER was the son of a Quaker farmer, John Whittier, and was born December 17, 1807, at East Haverhill, Mass. His father did not have much sympathy with his son's literary aspirations, but his mother, Abigail Hussey Whittier, who was twenty-one years younger than her husband, fully made up and more for the deficiency of the father. It was supposed that the brilliant black eyes of Mrs. Whittier and her son were inherited from the old colonial minister, Stephen Bachiler, who came to America at the age of seventy, founded cities, disputed with the preachers, and astonished everybody by getting married for the third time at the age of eighty-nine.

Whittier was frail physically and his health had much to encounter in the "toughening process" of a New England farm, being in marked contrast with his ancestor, Thomas Whittier, who at sixty-eight was able to do his full share in building the oak-timbered house in 1688 in which five generations of Whittiers were born and lived.

At fourteen Whittier had read and was delighted with Burns' poems, and bought a copy of Shakespeare on his first trip to Boston. He borrowed and read Scott's novels, with the greatest delight. Reading

Burns stimulated him into making rhymes of his own. His sister Mary sent them to Wm. Lloyd Garrison's Newburyport *Free Press*, unknown to him, and great was his delight to read his "Exile's Departure" in the issue of June 8, 1826:

Whittier had been working at farming and shoe-making, and wrote rhymes in leisure moments, and found them gladly accepted by Mr. Garrison, who drove over to see the bashful country boy who wrote such good verses. After considerable argument with the father, Garrison succeeded in getting his consent to the young man's going to Haverhill Academy, A. W. Thayer, editor of the *Haverhill Gazette*, agreeing to take him into his home. "He paid for one term of six months by making slippers, and for another by teaching school." In 1827-28 he published nearly one hundred poems in the *Haverhill Gazette* alone, under assumed names.

In 1829 Garrison got him the position of editor of the *American Manufacturer*, a Boston protective tariff paper, which he edited seven months, when he was called home by his father's sickness. For a time in 1830 he was editor of the *Haverhill Gazette*, later going to Hartford, Conn., at request of George D. Prentice, the editor of the *New England Review*, and acting as editor a year and a half, when he wrote the "Life of Brainard" and "Legends of New England." The subjects of these legends he afterwards worked over into his poems "Mogg Megone," "Bridal of Pennacook," "Cassandra Southwick," and "Mary Garvin."

Returning home, he was in 1835 elected to the State legislature, and was reelected in 1836. He was in 1836 appointed secretary of the Anti-Slavery Society, and became editor of the *Pennsylvania Freeman* at Philadelphia. In 1840 he came to Amesbury and made it his home, and acted as correspondent of the *National Era*. In 1844 he took charge of the *Lowell Standard*, and in 1845-46 was the real editor of the *Amesbury Transcript*. He was corresponding editor of the *Era* from 1847 to 1850. When the *Atlantic Monthly* was founded in 1857 he had a sure mouthpiece for his productions. In 1858 he was made overseer of Harvard College, and in 1860 the college gave him the degree of A. M., and in 1866 that of LL. D.

For many years Whittier lived in Amesbury with his mother and sister, and after their death passed much of his time with relatives at Danvers. He never married, although he was one of the old-school gentlemen in his attention to the opposite sex. He was by birth a Friend or Quaker. Honors were heaped upon him on his seventieth, eightieth and eighty-fourth birthdays, and he was delighted to hear "that the bells of St. Boniface, Winnipeg, Manitoba (celebrated in his "Red River Voyageur"), were rung for him at midnight of December 17, 1891." His very last

poem was a birthday offering to Oliver Wendell Holmes. He died after a brief illness at Hampton Falls, N. H., September 7, 1892.

Whittier has been called "the Quaker poet," "the Hebrew poet," "the Prophet bard," but the name that fits him best of all is "the Poet of New England." His "Snow-bound" is a faithful chronicle of his youth on the farm. He lost all hopes of political preferment, if indeed he ever cared for it, when he espoused the Anti-Slavery cause, and his "Voices of Freedom" are trumpet-blasts; the most defiant one is "Massachusetts to Virginia," and perhaps the bitterest is "The Christian Slave." "Leaves from Margaret Smith's Journal" were poems, issued in 1836. "Songs of Labor" was issued in 1851, "The Chapel of the Hermits" and other poems, in 1853, "Home Ballads" in 1859. Other poems of note are "The Tent on the Beach" and "Among the Hills." A prose work, "The Stranger in Lowell," was issued in 1845; "Old Portraits and Modern Sketches" (biographical), was issued in 1850, and in 1854 "Literary Recreations and Miscellanies."

The most of his prose is in the various papers he wrote for, and much has very likely lost its value, being of a controversial or current events nature. He was essentially a poet of nature; he said he sat on his doorstep and wrote of what he saw from there. His poetry was full of fire and energy, grace and tenderness, simplicity and majesty; he has surpassed Spenser and Sidney; he is the most thoroughly American of all our native poets.

Worthy of mention: Walt Whitman, prose-verse; Samuel Woodworth, poetry; N. P. Willis, prose and poetry; Daniel Webster, orations; William Wirt, biography; R. G. White, Shakespeare; Constance F. Woolson, novels; Mrs. A. D. T. Whitney, stories; E. P. Whipple, criticism; Gen. Lew Wallace, novels; C. D. Warner, essays; John Witherspoon, religious and political essays; Francis Wayland, philosophy and economy; D. A. Wells, science and philosophy; E. E. White, education.

Bryan, Ohio.

I THINK we want to urge most strenuously upon young men the need, the absolute necessity, that in the appointed and demanded work of their life they should look for and should find the joy of their life. To do your work because you must; to do your work as a slavery, and then, having got it done as speedily and easily as possible, to look somewhere else for enjoyment—that makes a very dreary life. No man who works so does the best work. No man who works so lingers lovingly over his work and asks himself if there is not something he can do to make it more perfect. "My meat is to do the will of him that sent me, and to finish his work," said Jesus.—*Phillips Brooks*.

PERSEVERANCE A PREREQUISITE TO SUCCESS

J. C. FLORA

A GREAT many people have the idea that success in any vocation in life depends largely, if not altogether, on luck.

Indeed, this is a mistaken idea, and the sooner the youth of our land are made to realize it the better it will be for them for the fact is, fortune, success, fame and position are never gained, except by bravely persevering in any course until the plans are finally accomplished. Victory is only achieved by hard and persistent toil. In short you must carry a thing through if you want to be anybody or anything, no matter if it does cost you the pleasures of society or the thousand pearly gratifications of life.

Show me a young man or woman who is waiting for luck to come his or her way and I will show you one who has never and will never accomplish anything, whose life is a failure; but on the other hand show me one who is patiently and persistently toiling onward,—he is the one who will make a success of life. Read the histories of the lives of successful men and you will find this to be true in almost every instance.

Newton said that he owed all of his greatness to persevering efforts; that whatever he had accomplished more than the ordinary he had accomplished solely by the virtue of perseverance.

Yea, many others who have won well-nigh imperishable renown in the world of literature, science, or art, owe all their greatness to persevering efforts. They were once as weak and helpless as many of us, once as destitute of wisdom and power as an infant. Once the alphabet of the language which they wield with such magic effect was unknown to them. They toiled long to learn it, to get its sounds, and longer still to obtain the secret of its highest charm and mightiest power, and even longer yet for those living, glorious thoughts which they bade it bear to an astonished and admiring world.

Their characters which are now given to the world and will be to millions, yet unborn, as examples of greatness and goodness, were made by that untiring perseverance which marked their entire lives.

Gibbon consumed nineteen years in writing his masterpiece. Gray spent eight years in writing his "Elegy in a Country Churchyard."

Judson studied six years before he was enabled to preach a sermon in the Burmese language and labored seven years and four months in the mission field before the first convert was baptized.

Pythagoras spent thirty years in hard study, preparing for a teacher of science.

Kepler, the author of the famous Kepler's laws in astronomy, in his attempt to find the exact shape of the orbits of the planets, worked for eight years, making nineteen different calculations and testing each one but failed each time. He did not give up but continued to labor towards his much-desired end and finally succeeded in establishing his first and second laws and by persevering for ten years longer he was enabled to announce his third law.

Hans Egede spent ten years in unavailing endeavors to gain access to a mission field and at length surrendered his charge, as pastor, still uncertain whether he would be able to secure coöperation or reach the desired place. After earnestly persevering for three years longer, despite the bitter opposition that he met, he obtained the needed help and was appointed missionary to Greenland, his desired field.

Columbus met much opposition when he conceived the idea of sailing around the world, but by his undaunted courage and perseverance, after laboring for more than seven years, he succeeded in fitting up ships and after a long voyage he reached his much-desired haven, yea, even more than he expected in the discovery of a new world.

These are only a few of the many examples of men who have reached fame and success by perseverance.

Then does it not pay to persevere? Courage, when combined with energy and perseverance, will overcome difficulties apparently insurmountable. Perseverance, working in the right direction and when steadily practiced even by the most humble, will rarely fail of its reward. It inspires in the mind of all fair-minded people a friendly feeling. Who will not befriend the persevering, energetic youth? He who perseveres in business amidst hardships and discouragements will always find ready and generous friends in times of need.

It was by perseverance that the great pyramids of Egypt, the Coliseum of Rome, and the great Chinese wall were built.

Look at Nature. She has a thousand voices teaching lessons of perseverance. The lofty mountains are wearing down by slow degrees. The ocean is gradually, but surely filling up by the deposits from its thousand rivers and by the labor of a little insect so small as to be almost invisible to the naked

eye. Every shower of rain tends gradually to bring the hills and mountains down to the level of the plains. Then Nature's lesson is, "perseverance."

How many of us when we think of the immense amount of work lying between us and the object of our desires are almost ready to give up in despair! We should not forget when we view the work in a mass that there is time enough, if only rightly improved, to suffice for each effort. Then do not become discouraged if results do not come so fast as you had expected. You cannot learn everything in a year or two years or even a lifetime, but if you will keep plodding on, step by step, you will arrive at your journey's end some day, however long it may be. Neither can you obtain wealth in a day, but patiently perform each task as it comes to you and if dark days come do not become discouraged but ever press onward, remembering that above the clouds the sun still shines.

Abraham Lincoln had for his motto, "Keep pegging away," and by working in harmony with his motto and continually "pegging away" he, in the face of the most extreme poverty, acquired a good practical education and lifted himself from the log cabin to the White House.

Every one, then, regardless of his condition in life, should set his aim high and resolve to do everything in his power for its realization.

COMMENT: CRITICAL AND OTHERWISE.

RICHARD BRAUNSTEIN.

WHAT do you read? The other day I was reading over some parts of *Les Misérables*, and I wondered how such books as have their vogue today can get their prodigious audiences. Little thin, squeaky, ivory voices that they are, with their very clamor they drive out the round and resonant passages of the masters.

But you tell me that you have read *Misérables*. If you have, read it again. There are books that can never be put into the past tense. We may read the Bible, we may read the philosophers, we may read *Les Misérables*,—but we can never read them out. Whenever the fundamental principles of life have been written into a book, that book is an eternal fount of life-giving, health-giving principles. It can no more be exhausted than can the living spring in the mountain fastnesses. But like it, they are only for the toilers—the climbers. The mediocrity of the lower levels is good enough for those who are content with the rivers—the sewers of God. The masterpieces are few—but they are filled with fissures in which the treasure waits for the seekers—there are no vapid areas of spiritual stagnation through which the soul must starve its way unfed and unsustained.

I do not say that masterpieces are not written today, but when we throw the horde of things that sell by the hundreds of thousands into comparison with

the books that have lasted through the years, it is a cruel contrast. It is like sitting down to a puppet show after enjoying the music of an old opera.

Now and then we get a touch of the real. The old masters reveal a phase of real life—nay, they reveal life. They do not set pen to paper unless they have something to teach—something we ought to know, and something by which we will profit. All books teach—the question arises, *what do they teach?*

The old books—and a few moderns—move with a touch of truth. But mostly the modern books are "make-ups"—idle tales devised of the idle hours of idle minds. They are without literary style. There is no masterful word painting. The record of crime, as printed in our daily papers is just as good reading. Every day, tons upon tons of trash appear, not worth the paper it is printed on. They are fireside tales of the nursery, made for the infantile intellects of grown-ups. They inspire no thoughts—they create no impulse. They kill time and thereby destroy the most precious thing we have.

A book to be a good book must do three things: it must teach, entertain and stimulate pure thought. Books—good books—mould our characters. They are the foundation stones of our future knowledge. *Literature influences.* The masses, as a rule, are swayed by current literature, whether viewpoints of individuals are disguised as a piece of fiction, or openly introduced as an editorial utterance in a daily newspaper

Why should we read merely to kill time? Why not make it threefold? Why not learn, be entertained, and have our own thoughts quickened to action—to healthy, stimulating, inspiring action? We can replace a great many losses, but hours of the past cannot be regained. Let us fill them, therefore, with profit. The certainty that opportunity is a fixed quantity, which we can by no effort increase, should spur us on to extract the uttermost from each hour we live. And yet, we who are careful to drive sharp bargains with our pennies, are very prodigal with our time. In nothing are we more so than in respect of books.

You would not eat a bad orange at breakfast—those who are wise would no sooner read a bad book. Inane, inert, and lifeless literature is worse food for the soul than flat, tasteless products for the body. *Cling to the verities.* Leave the determination of literary fungi to the critics, and feed only on the food which the irrevocable verdict of time has found good. Then, if you have time to waste on the desserts of inconsequentiality,—dip into the books with the pretty covers, dip into the hash produced by scatter-brains. If you have time to spare, *to waste*, dip into the rot called literature. Men, women and children *must read good books*. It is part of the work called "Promoting Christian knowledge" and it hastens to make us ready for the kingdom of God.

Around the World Without a Cent

Henry M. Spickler

Chapter XXXIX.—From Naples.

"AND God saw that it was good"—this world he had made. And I am seeing that it is good, too.

I like to take just a map of travel in my hand and look over it, picking out its land and water markings, locating its cities full of wonderful people and interesting buildings. The spirit of travel is upon me. The dry bread I munch by the wayside is a loaf of cake, chocolated by unseen hands and frosted by an innocent dairy maiden I saw in a country home. The laborers I see, in old and patched stuff, are so many servants, working, with me, to make the great round ball more beautiful. They smile back at me because they divinely discern that I am one with them, with the Creator. What are all these seas for, if not for swift-sailing boats to carry to fragrant isles big loads of happy passengers? Why all these continents, so poorly developed as yet, but with their splendors to attract visitors and workers, if God did not mean that all of us, as many as chose, might sail over these seas and live awhile, here and there, and thus catch the health that different climates give, or receive the balance and poise and temper that change of scene always has to give so freely to worried folks too long in one place?

Ah, I know I'm right. This world is a good place. I'd like to live here a million years. And I think I will. My body is less than my mind. My mind is less than my spirit. My spirit, it's big. It lives forever. It goes everywhere. It is at once a long journey, a pleasant surprise, a wonderful city, a mountain scene, a good meal, a choice fruit, a dear glance of love, a tender caress of immortal affection. My body

is the poorest of all of my ownership, but see what joy it is finding. To possess the glory of the world is not my desire, but to be *it*. To rob others from rights to property is not my care, but to enrich everybody by bringing them into their own, all the earth and other worlds if they can use them, is my wish.

Now I roll out over the soft blue waves of the Bay of Naples in a little boat rowed by a strikingly handsome Italian. How he looks at me! But I trust him. He wants only his twenty centimes. My hand, scooping at the water as he pulls me past other boats, finds the sea warm and soft. The noise made by my hand running through the water, sings to my listen-

ing ears and expectant mind and throbbing heart a sweet melody that few but poets ever hear. But more of us are poets than the editors recognize. Our trouble is in our inability to tell it. The intoxicating effect of genuine pleasure in any form seeks to rob us of the power to crystallize the joy into symbols of language or other expression so that others may share with us the exquisite

boon that has been allowed to come to us. To test your poetical power, go with me, now, as I rock on the Bay of Naples, looking back at the city, now receding and fading, as old Vesuvius, growing bigger and plainer, blows the whisks of yellow smoke and red fire from the big pipe sticking right out of the top of her bald head. This is the same sea on which Paul sailed—in which he was shipwrecked. The country I am leaving is the one that cut off his noble head. This is the sea of the Carthaginians. Here they fought with the Romans, and the Spaniards. On this sea sailed the triremes, when

lives of men, chained to a life slavery, pulled on oars too long and too heavy for their aching backs. Here they saw their own ship afire, roasting, one by one, the live bodies of their fellows, the lurid flames coming at last to feel, with hellish fingers, for their own bodies.

But I am in the boat and it is taking me out to my beautiful steamer. Paul was here before me, and so I am safe. Yonder are the rocks, standing hundreds of feet from the water. There is magic caprice, with grottoes of broken rainbows playing with blue skies and crimson sunsets. But best of all—there's my ship, for my ship *has come in!*

It is not a big liner. That is all right in its place. It is just a small boat, with graceful bow and gentle swell and moderate bulge, but big enough and high enough out of the water, to be perfectly safe. Big enough for a thousand people, but carrying only a few passengers and much freightage, products of southern shores to Naples and products of northern colds for oriental folk.

The boatman takes his money, looks up at the officers on deck, and rows back to the wharf. I present my ticket that calls for a berth "on deck" and meals. I choose the whole ship for my state room, but drop my wheel and bundles on the fore deck in front of the "bridge" and find a chair for my use on a two weeks' cruise on the Mediterranean.

Two weeks! I'm tired hustling for myself in the hot, dusty streets of Naples. Hotel Metropole was first-class in every respect and the price is all right. Sixty Americans besides myself testified to that. But now I am on a traveling hotel for two weeks, and my board is paid. My wheel can rest. So can I. The strong cylinders must push out and draw back the long, heavy arms that turn the shaft at the end of which are the big, flapping screw blades. Money will buy many things, but money cannot buy my present and prospective hope. Two weeks on the Mediterranean! Why, I never thought of such a thing except in a day dream, and then only after inheriting some untold, unforeseen wealth. Two weeks on the

Mediterranean! Two weeks of gentle seas, warm zephyrs, green islands, tropical fruits, strange sights and loving skies. Two weeks of just going, going, and then going, with rest for my legs and sleep when I want it and reading and writing and eating good food, going to sleep on deck, floating on this blue sea, awaking in the morning, still floating on the Mediterranean, and then having a tasty, odorous breakfast brought me from the cabin.

While I sleep tonight, I will be going around the world, moving forward, farther and farther from home. In Italy I slept out six different nights in fields or parks. I found no trouble with mosquitoes or malaria, and I slept in the Campagna itself at night, once believed to be certain death by such exposure to a foreigner. I feel too good now to get sick from it. Feeling good is

the best antidote for illness. I am sure that if I never feel worse than now I will have to be translated from this life. I will not die.

The whistle has sounded the present departure of the steamer. She churns the water and begins to swing about, as the second mate leans over the high railing of the upper "bridge" and signals for clearance.

Sweet music floats up to us from musicians in a rowboat pulling now from our stern and making for

the next incoming or outgoing passenger steamer. But the sweetest music of life is hidden in the inner ear. I hear that.

Behind me lies Europe. Before me—two weeks of adventure in luxury, or danger, I know not.

"Thou art gone, the abyss hath swallowed up thy form;
Yet on my heart deeply the lesson thou hast wrought,
That shall not soon depart.
He who from zone to zone
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone,
Will lead my steps aright."

And so the next day we came into the classic Bay of Palermo. This is the capital of the Island of Sicily and its chief city. It is Sunday noon and I will go on land two days. I am half afraid the sailors are playing a joke on me and when I get on land the boat will leave in the night. So I go to the head man,

"In the park I caught a picture of the huge elephant leaf and other strange foliage."

the captain, whose picture taken by me on the *Letimbro* will be shown soon. He assured me that his vessel would be in port two days. It was just what I wanted, for two days would give me ample time to get around and explore things. A better boat I could not have taken. I went directly to the big Hotel de France and was given a fine room and cared for at the table just as well as a favorite guest could have been treated. Like a true democrat, I went and came at my pleasure, careful to be around during the meal hours when the large dining-room doors opened and closed at the touch of a native servant in black dress and white bosom and curled moustache.

I was ready to sail away at the end of the first day, and that evening a message reached me at the hotel that the boat would leave during the early night. So my precautions had not been in vain. It pays to be careful and to look out for your own interests when those interests are purely unselfish. In the park near the hotel I caught a picture of the huge elephant leaf and other strange foliage growing about the fountain that sprayed the water drops about in the brightest sunshine I have seen. On the streets, little donkeys, laden with fruit and children and curious trappings and bells, stumbled along over frisking dogs, barely getting out of the way of a motley crowd of pedestrians whose color of skin ran all the way from a negro black to a flaxen fairness,—their blood the mixture of a dozen races.

A LEGEND.

H. M. FOGELSONGER.

IN a cottage by the roadside once lived a maiden and her mother. They lived alone. The maiden's father had gone to rest a few weeks before this legend begins, and they buried him in a churchyard not far from the cottage. It was in the summertime. Daily the maiden gathered flowers and carried them to her father's grave, marked by a fresh mound in the green grass. When the maid gave her daily offering of flowers she wept, wept bitterly, and the dead silence of the place was broken by her stifled sobs.

One day when she was plucking the flowers in the garden a cloud came over the sun. The maiden's heart became heavier. "Just so a cloud has come over my soul," she said to herself, "since father is not here." She arranged her flowers and made her way to the churchyard. The creaking of the iron gate seemed to cut deeper into her soul for she wanted to hear no noise, she was communing with herself.

The grave with its conventionally-shaped mound met her eyes and she wept. The image of the sad procession of a few weeks ago came into her consciousness so vividly; how the six neighbors and companions of her father in his work solemnly bore the lifeless body to its earthly bed, how it was slowly

lowered into the ground and how the minister comforted them as they wept. He told them that the father was not dead but that he was living in spirit, that he was not taken from them entirely and that God would be merciful to them. But the maiden and her mother felt their loss too deeply to be comforted.

All those things came again into the maiden's mind as she placed the flowers on the grave. The words of the minister puzzled her. "How is it that my dear father is with me?" she asked herself. "O God show me," she prayed. A voice came into her soul, "Go home and you will see."

The maiden returned to the cottage. When she entered she saw her gray-haired mother seated in her chair reading God's Word. Opposite her mother was an empty chair in which her father used to sit. Sitting in that chair he read often to the maiden and her mother and told of things long ago. Many a time the little girl would climb upon his knee and ask for a story. The father's face would brighten as he told his daughter of times when her mother was young like her and when the little girl grew to be a maid the stories were longer and fuller in meaning. When the noonday meal was prepared a third chair was by the table unoccupied. There the father used to sit and ask a blessing before each meal and while eating he brought cheer to the table.

Gradually the maiden's soul opened and she understood the answer to her prayer. *Her father still lived with them.* He was not dead. The beautiful life which he lived was not shut up in the grave. The happy associations were not in oblivion. The beautiful aspirations and hopes which he taught the maid were with her yet. She understood, and her cup of joy being full, she prayed, "O God I thank thee for thy promises of immortal life and that my father is not dead but liveth."

HOME, SWEET HOME

The Life of Its Author.

JOHN HOWARD PAYNE was born in Broad Street, New York, on June 9, 1791; and a large portion of his childhood was passed amidst the peaceful verdant scenery of East Hampton, in that State, where his father was principal of a small academy. When John was five years old his father moved to Boston in a similar scholastic capacity, and there remained eight years, after which the subject of this memoir returned to New York and entered the countinghouse of a firm in which an elderly brother had been partner. But he never took to the dull drudgery of a mercantile life. Soon after this he entered Union College, but only remained a year, after which, owing to the pecuniary difficulties of his father, he found himself under the necessity of pushing his fortune in the world alone and unaided.

Payne now devoted his time to studying for the stage, for which he displayed considerable aptitude, and made his first public appearance at the Park Theatre, New York, as Young Norval in the tragedy of "Douglas." This debut was a complete success. From New York he went to Boston, where he again appeared as Young Norval, and also as Romeo, Rolla, and other characters. In cultured Boston he became even more the rage than in the great emporium of commerce. After a time he returned to New York, thence he visited Baltimore, where he was enthusiastically received, proceeding to South Carolina and other Southern States. He went to Washington in 1809, and attracted great attention, one admiring critic declaring that "a more extraordinary mixture of softness and intelligence was never associated in a human countenance; and his face was an index of his heart—he was a perfect Cupid in beauty." In January, 1813, Payne sailed for England, and in Liverpool was welcomed by William Roscoe, who presented him to John Kemble, Coleridge, Campbell, Southey, Byron, and others, and got him an engagement at Drury Lane Theatre in the character of Young Norval. Great applause greeted the youthful American actor, particularly in the death scene at the end of the play. Payne performed for a month in London, and then went the round of several of the principal English cities, after which he proceeded to Dublin, where, in conjunction with the celebrated Miss O'Neill, he played in various well-known dramas. He now visited Paris, where he met and became intimate with his distinguished countryman, Washington Irving, and formed a friendship with Talma, the French tragedian. Once more he turned to England, but on this occasion he was less of a novelty, and did not retain his former success.

About this time he began his career as a dramatic author, one of his first efforts along this line being the tragedy of "Brutus," produced at Drury Lane Theatre in 1818, the famous Edmund Lead taking the principal part. The play was a success, being performed to crowded houses for seventy-five nights. Upwards of fifty plays of various descriptions were written by Payne, and their pecuniary returns enabled him to live comfortable during his nineteen years' residence in Europe. But the production which has achieved such a world-wide fame, and rendered its author an honored name in many a household, was his "Home, Sweet Home." This beautiful song was composed in Paris one dull October day when Payne was living in humble lodgings near the Palais Royal. The depressing influences of his surroundings, something in the atmosphere which seemed to harmonize with his own feelings, and his solitary lot in life, were instrumental in drawing forth the simple pathos and tender yearnings of the song. The song was afterwards rewritten by its author, and introduced into an opera called "Clari, the Maid of Milan," a

play sold by him, in 1823, to Charles Kemble, of Covent Garden Theatre, for £250, the music being composed by Sir Henry Bishop.

"Clari" had a great run, the chief part being taken by Miss Marie Tree, whose singing of the simple song caused a wonderful sensation, gifted as she was not only with a beautiful and expressive face, but with a fine voice which thrilled her hearers. More than 100,000 copies of the song as set to music were sold by the publishers within a year of its publication; but poor Payne reaped no pecuniary benefit from this source, nor did his name even appear as the author.

For the next ten years he resided in America, and traveled extensively both in the North and South. In 1842 he was appointed American Consul at Tunis, but was recalled in three years, returning to Washington in 1847. By the exertion of friends he was reappointed to Tunis. In May, 1851, the author of "Home, Sweet Home," bade farewell to his country for the last time, and in a few weeks afterwards entered upon the duties of his office at Tunis, with high hopes of continuing his former career of usefulness. But it had been otherwise decreed, for ere another year had passed John Howard Payne had ceased from his wanderings, while his country had to lament the loss of one of her gifted sons. He died on April 9, 1852, and his body was laid in the Protestant cemetery of St. George at Tunis, the grave being covered by a white marble slab, with a simple epitaph.—*The Musical Million*.

I BLAME THEE NOT.

RICHARD BRAUNSTEIN.

I blame thee not that thou didst prove
Unmindful of the promise given.
My soul would never stoop to love
That came not all uncalled, unbidden.
I could not count thy smiles, and know
They beamed but from thy eyes alone,
When from thy heart their liquid flow,
Dissolving, all thy soul hast shown.
'T is hard to bid thee say farewell,
Aye, life is death, from thee apart,
Yet better so, than hear love's knell
Struck at each throb of a wild heart.
I blame thee not; we may not bind
The wind, to do our wish, at will;
As well to fetter love and find
The bands soon rent with ready skill.
I long have felt, that not to me,
Belonged the magic, or the art
Whose charms, or subtle witchery,
Could spellbound hold thy changeful heart.
So fare thee well—and mayest thou be
Blest in thy love, thy all.
So forth, let not one thought of me,
Respond a sigh at memory's call.

STEADINESS of national character goes with firmness
of foothold on the soil.—*David Starr Jordan*.

Nature Studies

GLACIERS AND MORAINES

JOHN H. NOWLAN.

WHEN the temperature of a region is so low that the snowfall is greater than the loss by melting during the milder season, snow accumulates, sometimes, to the depths of hundreds of feet. As it continues to accumulate, it creeps toward the lower ground till it reaches a lower level, or the sea. These accumulations are called ice sheets or glaciers.

In the polar regions and on high mountains these are to be found today.

The ice sheet of Greenland is estimated to be fifteen hundred miles from north to south and from three hundred to six hundred east and west. The interior is thought to be nine thousand feet high.

In the Alps the glaciers are more like frozen rivers, creeping down the mountain side at the rate of from one hundred to five hundred feet a year. The ice obeys the laws of flowing water, the centre moving faster than the sides and the top faster than the bottom. This was proven by setting a row of stakes in line across a glacier and noting their change in position with reference to each other and those on the banks.

Moving glaciers press heavily on their beds. The enormous weight presses rock against rock, grinding some to powder and scratching others. Those that chance to be held by the ice and carried along, will be worn flat as will also be the upper surface of those remaining stationary in the bed. Large boulders sometimes fall upon the ice and are carried far from the parent ledge.

This rock waste is carried forward till the glacier reaches a temperature sufficiently warm to melt the ice and is then deposited. Continuing thus year after year the margin of the glacier or ice sheet is marked by a ridge of rock to which the term *moraine* is applied. Sometimes the moraine entirely covers the end of the glacier to such an extent that even forests are found on them. Such is the case of several in Alaska.

Early in the history of the earth there were periods when the glaciers were vastly more extended than now. This is known as the glacial period. During this period there must have been seasons of lower

temperature and greater precipitation than today. The most extensive of these ice sheets were those extending from eastern Canada across the Great Lakes upon the northern part of the United States and from the Scandinavian highlands across the Baltic Sea upon northern Germany. That from the St. Lawrence region is known as the Laurentian glacier and was nearly as large as the desert of Sahara.

The southern limit of the ice sheet is marked by a row of hills, called "*eskers*," extending in an irregular line across the States of Ohio, Indiana and Illinois. Hollows or "*kettles*" are to be found among these hills which on being drained have made fine farms. The Indians often made their trails along the tops of these ridges and settlers following have utilized them. One of these ridges extends east and west from Vandalia, the former capital of Illinois. Along its crest is a highway known locally as the "*Ridge Road*," where travelers may look down to the left or right on herds often fifty feet or more below. This ridge crosses Bond County in a broken line, valuable deposits of builders' and moulders' sand being found near the center of the county.

The greater portion of the debris brought down by the ice sheet was left in the preglacial valleys, filling them and forming vast plains. This debris consisted of an unsorted waste filled with boulders, and is known by the Scotch word *till*. Much of the softer rock has decomposed and forms a compact yellow earth known as "*hardpan*." The till of New England contains many boulders, so numerous in fact as to prevent agriculture being carried on in some places. South of the Great Lakes and from Ohio westward the till is less stony.

The melting ice made temporary lakes as the ice sheet retreated, the most extensive of which is named Lake Agassiz. It comprised what is now the basin of the Red River of Minnesota and reached northward into Canada hundreds of miles. Its shore lines are easily traced till they almost unite in the northeast corner of South Dakota; here the outlet, a mile or more wide, leads southeast to the Mississippi. The flow of the Great Lakes by the way of the St. Lawrence was also obstructed and the water rose to higher levels than today. Lake Ontario sought an outlet

by the way of the Hudson and Michigan by way of the Illinois. The first outlet is now marked by the Minnesota river, the second by the Mohawk and the last by the Chicago drainage canal.

The shore lines of the Great Lakes are no longer level, rising a few feet to the mile toward the east which indicates that the land is rising. Should this uplift raise the level of the lakes a few feet before Niagara can cut back into Lake Erie, the drainage of all but Ontario will be diverted to the Mississippi via the Illinois.

The ice sheets have vanished—so have the Indians almost disappeared from the East. The Indians are considered important in the study of American history. Even more important are the vanished ice sheets in the study of American geography.

*Mulberry Grove,
Illinois.*

NATURE STUDY.

"ONE advantage of nature study is that it tempts the children into long country walks, away from the formal streets, the dust, and the dirty air of the city. The air of the town is constantly charged with dust—and not simply dust, but particles carrying all sorts of disease-producing microbes. These are

taken into the nose and mouth with each breath, and also carried down into the air-passages or into the stomach when one swallows. The fact that anyone of us is alive shows that the protective forces of the body are usually sufficient to destroy these germs of disease; but to keep them thus effective we must do what we can to aid nature. It needs no argument to prove that exercise in the pure air of the country is one of the best means for gaining health and strength, and fortifying the body against the attacks of disease."

MUSQUASH IN WINTER QUARTERS.

ALL summer Musquash wandered up and down the stream, enjoying river frolics by moonlight with his brothers and sisters. He sucked the eggs and devoured the young of the water fowl, whose low-built nests he found in the rushes; gathered and cracked mussels, and waxed fat on an abundance of juicy frog meat. But now the hunter's moon, glittering on the frost that covers reed and swamp grass, tells him it is time to stop playing and go to work if he would be comfortable for the winter.

As soon as the sun has set, out troop the muskrats

from their holes in the bank. They hurry about gathering dried sticks and reeds for the foundation of the home. As these are laid in place they are firmly plastered with mud, for our friends are skillful little masons. What a wonderful instinct is that which tells them to lay the sticks very lightly at the top of their house and leave that part of the dome without plaster, so the foul air may escape and fresh air enter! The floor of the living room is just above high water mark. The front door, as well as the back and side ones, open under water, so that if danger threatens the muskrat will have more

THE BIRDS IN CHURCH.

From a leaflet printed by American Humane Association, Albany, N. Y.
Taken from Chicago Tribune.

than one escape. When the house is finished they bring in plenty of dried grass and lily pads for bedding.

So long as the water surrounding Musquash's home does not freeze to the bottom he leads a happy life. His hind feet are webbed and he is an expert in all water sports. There are gay times beneath the ice in Musquash Town. To be sure, the fare is only lily bulbs and fresh water clams, varied now and then with a few half-frozen insects or a cluster of mussels.

(Concluded on Page 23.)

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE NEW YEAR.

ONE volume of the book of time has just been completed and laid away and we are now, with anticipatory thrills, fingering the first pages of the new volume that has been given to us. We are awed by its fresh, clean appearance, its marks of newness, and our feelings are a strange mixture of delight and fear. Of delight, because we are allowed to begin over again, as it were, with the possibility of making a better record. Of fear, because of the issues at stake and the remembrance of blunders and weaknesses recorded in the volume just closed.

This illusion of a new beginning is, we believe, as productive of good as any illusion can possibly be. No factor, aside from some outside agent, is so potent in putting new life and hope into the work as the thought of a new trial. Every faculty of mind and body is called into use in a new beginning, when otherwise the worker would jog along in a spiritless way and accomplish only a small part of what he is capable of doing.

The new year of 1909, with its promise of a fresh start, finds us, therefore, ready and eager for the fray. Not in all the history of the world could we find a time when one could fight as unhampered as now or work to better purpose than now. We need, first of all, to be sure that we are on the right side,—the side of right,—then we can throw ourselves unreservedly into the work. Though the cause we uphold may not win a complete victory this year, at least we, as individuals, will be victors, since we shall have had many triumphs in the kingdom of our own soul. For no man can truly fight in any good cause who does not make decided advancement in his own life.

We wish all our readers a happy New Year. May your plans be unselfish and with the aim to be of use in the world and then you *must* be happy. In turn, we crave the good wishes of all our readers. As many of you know, this new beginning for the INGLENOOK

is more than an illusion; it is a reality. New life has come to the magazine. And in the strength of the inspiration and encouragement that have come from its many friends we trust that it may reach a higher degree of excellence than it has yet attained. We are sure this possibility may be realized if our friends will continue to lend their help as in the past.

THE BIG FARM AND THE RICH FARMER.

IN the face of Uncle Sam's crop reports one ought not to take the cry of hard times too seriously. Real downright hard times must have as their basis a shortage of the products of the soil—a real famine look. When, on the contrary, our Secretary of Agriculture reports of farm products the biggest volume ever, it ought to make some of us feel ashamed in view of the long faces we have been wearing because of the "hard times." If one could lay his finger on the real cause of the present depression it would probably be not far from extravagance in living and wild speculation. Many of us live beyond our means and most of us are extravagant in one way or another.

So it is that this year's crop report makes good reading. William E. Curtis, writing on the subject in the *Chicago Record-Herald*, says the report ought to have been published before Thanksgiving in order to furnish material for Thanksgiving sermons. But the report will do us good now. Thankful hearts are what we need to begin the year aright.

Continuing, the above mentioned writer says: "Every year since Secretary Wilson commenced his series of annual reports (nearly twelve years ago) has seemed to surpass all previous records until the farm products of 1908 have reached the value of \$7,778,000,000—'the most extraordinary amount in the history of the world,' or, as the secretary calls it, 'an unthinkable amount of real, tangible wealth as it exists at the time it leaves the hand of the producer.'

"It is not necessary for him to tell the housewives of our cities that there has been a very large advance in the price of farm products, because they are only too familiar with that fact; but every woman who goes to market will be interested in his statement that the mean factory price of butter averaged 19.16 cents in 1899 and 27.16 cents in 1908; that the average farm price of eggs throughout the United States was 11.15 cents in 1899 and 18.3 cents in 1908; that the mean wholesale price of dressed poultry in New York was 11.15 cents per pound in 1899 and 13.56 cents in 1908. The wholesale price of milk in Chicago was 10.5 cents per gallon in 1899 and 15.16 cents in 1908, while in New York the wholesale price of milk increased from 10.12 cents per gallon in 1899 to 16.62 cents per gallon in 1908. That partially explains why the farmer is the most prosperous person in the country.

"In comparison with the previous five years there has been an increase in the volume of every crop except oats, flaxseed, potatoes, tobacco and hops, and a higher value for every crop except cottonseed and hops.

"The exports of domestic farm products in 1908 were valued at \$1,017,000,000, while the imports of the farm products of other countries were \$540,000,000, leaving a balance of trade of \$488,000,000 in favor of this country. 'The magnificent figures of the farmers' contribution to the exports of this country and to the favorable balance of trade,' said Secretary Wilson joyfully, 'are maintained in spite of this country's immense growth in population and the extraordinary immigration of nonagricultural peoples, and also in spite of the diminishing fraction of the population that is engaged in agriculture. No analysis could more strongly indicate the progressive efficiency of the farmers' labor and capital and the telling effects of the agricultural sciences.'"

Surely the farmer can begin the new year with courage and with confidence in the soil which he cultivates. Add to the agricultural report the fact that the farmer's life is the most free and natural and there is no visible reason why the farmer should not be contented and happy.

WITHDRAWAL OF WESTERN PHOSPHATE LANDS.

ACTING under instructions of President Roosevelt, Dec. 10, the Secretary of the Interior withdrew from entry, selection, and location all public lands in Wyoming, Idaho, and Utah, believed to contain phosphate rock, pending appropriate action by Congress. The list of lands withdrawn was furnished by the U. S. Geological Survey as a result of preliminary examination of the field. Further work will be undertaken by the Survey as soon as practicable, looking toward a careful classification of the lands in question and the restoration to agricultural entry of such portions as are found to contain no phosphate.

This action of the President has been taken largely as the result of facts brought out at the recent meeting of the National Conservation Commission in Washington. At this meeting it was shown that, at the present rate of production, the known available supply of high grade phosphate rock in the United States will last only about fifty years. Although this western field embraces the largest area of known phosphate beds in the world, the absolute necessity of utilizing these deposits for the benefit of the farms of the United States was strongly emphasized.

Phosphoric acid is one of the three substances which must exist in the soil if the soil is to be productive. It has been shown, as the result of agricultural experiment station work in Wisconsin, Ohio

and Illinois, that in fifty-four years soils of these States, in the cropped area, have been depleted of one-third of their original phosphoric acid. This is equivalent to twenty pounds per acre annually. Assuming it to be only half this amount, for the four hundred million acres of cropped land in the United States it would require 6,000,000 tons of phosphate rock annually to offset this loss, without considering the question of increasing the agricultural yield above the present production.

In 1907 there were 2,265,000 tons of phosphate rock produced in the United States, and of this amount 900,000 tons or about forty per cent was exported. The phosphate rock of South Carolina is practically exhausted; the Florida deposits have reached their maximum production; the output of the Tennessee deposits is on the increase, but this field alone would, at the present rate of increase in consumption, last only eleven years. There is some phosphate in Arkansas but it is of low grade; therefore the large deposits of the public land States must be depended upon for the greater part of our phosphate in the future. To insure the utilization of our own deposits in our own country some means must be devised to prevent its shipment to foreign lands. It would appear that this can be done only by retaining in the Government title to all public lands underlain with phosphate rock, and leasing these lands under terms which will prohibit exportation.

The Secretary of the Interior is charged by law with the care, preservation, and disposition of the public domain for the benefit of all the people of the United States; and the rulings of the Supreme Court are to the effect that he has full power to meet such unexpected contingencies or emergencies as are created by changed conditions, new discoveries, or unforeseen happenings. In such cases he fortunately has the power to make temporary reservations or withdrawals of the public domain, with a view to protecting and preserving the same pending the submission of information to Congress in order that it may enact appropriate legislation to meet the conditions disclosed. This power has been frequently exercised during the past forty years, in the public interests.

In this particular instance, the question is so vital to every citizen of the United States interested in the present and future agricultural production of the country that immediate action is necessary.

An executive order of withdrawal, general in its nature, like this, is under the rulings effective from the first moment of the day upon which it is made, and thereafter during the existence of the reservation, no valid location can be made or claim initiated. Valid claims initiated prior to a withdrawal and maintain by compliance in all respects with the law are not defeated or impaired by such a reservation.—*U. S. Geological Survey.*

The Home World

DESSERTS

LENNA F. COOPER

THAT the desire for dessert is almost universal and a natural one is proven by the fact that the menu always seems incomplete without it. There seems to be a natural appetite calling for something especially tasteful and dainty with which to finish off the meal. A dessert is not necessarily unwholesome: indeed, it may serve a beneficial rôle in the menu, providing it is made of wholesome things, and given a proper place in the menu. It may be that this appetizing dish serves as a natural stimulus to the flow of the digestive fluids just the same way as the appetizers such as fruits, hot soup, etc., at the beginning of a meal.

The dessert should ordinarily be simple. Too frequently, the desserts are rich and heavy, and an unnecessary addition to the already overcrowded menu. The desserts are usually rich in fats and sugars. Pawlow, the noted Russian physiologist, has recently shown that fats tend to inhibit the secretion of the hydrochloric acid of the gastric juice. Since the hydrochloric acid is necessary in stomach digestion, it becomes apparent that rich desserts should never follow a heavy meal, as the fat of the dessert tends to delay the digestion of the meal. If we serve rich desserts, the remainder of the meal should be correspondingly light. Ordinarily, sufficient food has already been consumed before the time for the dessert has arrived. Thus it becomes simply a tax on the digestive organs, because, as a rule, we eat more than is needed.

Let us analyze the different materials that usually compose the dessert. Fats and sugars form an important part of the dessert. As has been stated, fats always retard the flow of gastric juice, thus lessening the ability of the stomach to digest the rest of the food. Hence, rich pastries, puddings, etc., ought not to be served after a heavy meal.

The sugars, being pepto-genic, increase the flow of the digestive fluids, but sugars taken in the con-

centrated solution are very irritating. A twenty-five per cent solution of cane sugar placed in the stomach by means of a tube has been known to produce gastritis. Fortunately, we are unable to take it that strong, due to the fact that the saliva reduces it to a lower percentage. Most people, however, are in the habit of using too much sugar. Sugar, as we know it, is in a highly-concentrated form. If we were to take the sugar in the strength in which it is found in nature, as in the sugar-cane, beet, etc., it probably would do us no harm; but after it has been extracted from these sources and reduced to granulation by boiling and evaporation, it is many, many times sweeter than when found in its natural condition.

There are many kinds of sugar, however. Cane sugar does not mean simply sugar derived from the sugar cane. Chemically, cane sugar, beet sugar, and maple sugar all have the same formula. There is no difference in these three so far as physiological purposes are concerned. There are two kinds of fruit sugar,—levulose and glucose. Glucose is sometimes called grape sugar because it is found so abundantly in grapes: in fact, it is a predigested sugar, being all ready for distribution and assimilation by the body. For this reason, fruits and fruit juices are so refreshing. Sugar, which is the chief part of the fruit, gives up its energy very quickly. The levulose is also very quickly distributed. These two sugars are also found abundantly in fruits. The glucose is also the result of starch digestion in the body. There is also a milk sugar which is found in milk which is less sweet than any other of the sugars. Maltose is another form of sugar, and is the product of starch digestion. It is the intermediate step between the starch and the glucose.

Just here let us make a plea for simplicity of diet. The simplicity probably counts more for wholesomeness than any other feature. Complex mixtures are usually detrimental. The stomach forms habits

just as the rest of our body. It gets into the habit of digesting certain kinds of food. Practically all foods contain certain chemical substances, which we call peptogens, which are really stimulants to the appetite and to the flow of the digestive fluids. When we take fruit or any kind of food into the mouth and masticate it, the peptogens affect the nerves of taste, and telegraph ahead, as it were, to the glands of the stomach and the digestive organs, saying that a certain kind of food is coming, which will require a certain degree of acidity of the gastric juice. Meats require a higher degree of acidity than bread, and bread requires a higher per cent than milk. When we take a great many mixtures into the stomach, it complicates digestion very much. We have found that people troubled with indigestion in various forms, when put on a single article of diet for a time until the stomach gets into the habit of secreting the juice necessary for the digestion of that one article, are finally brought back to health, and the stomach gets back into right habits again. People ought to form habits of eating more simply. Children should never be given complicated dishes. If they are given simple, plain vegetables, milk, bread and butter, nuts, and fruits, they will form a desire for these things and will be much better for it. The nations which have accomplished the most are those which have lived simply. Going back to the history of Greece and Rome, we find that in the days when they were the greatest, they lived the simplest. The Roman army usually carried along with them their parched barley and oil, and gathered cress by the wayside. After conquering their neighbors, and adopting their habits, they became very luxurious and intemperate, which led to their downfall. The individuals who have accomplished the most in this world are the people who are simple in their habits.

Snow Pudding.

1 qt. milk	$\frac{1}{4}$ cup sugar	$\frac{1}{2}$ tsp. vanilla
$\frac{1}{2}$ tsp. salt	$\frac{1}{3}$ cup cornstarch	4 egg whites

Rub the cornstarch smooth with a little of the milk. Add the sugar to the remainder of the milk and heat it to scalding. Stir in the cornstarch and the salt. Stir well until thickened, and cook 15 minutes in the double boiler. Meanwhile, beat the egg whites stiff. Gradually pour the heated mixture over the egg whites beating thoroughly. Add vanilla and pour into pans and moulds. Serve with strawberry sauce.

Strawberry Sauce.

$\frac{3}{4}$ cup strawberry juice	2 tsp water
1 tsp. cornstarch	Sugar if desired.

Drain the juice from canned strawberries and place on the stove to heat. Then moisten the cornstarch with cold water and thicken the juice with it. Cook in a double boiler 15 minutes. If the berries are not very sweet, a little sugar may be added to the sauce.

Other fruit juice may be used in place of the strawberry juice.

Grape Apple.

6 medium sized apples	$\frac{1}{2}$ cup sugar
$\frac{3}{4}$ cup grape juice	

Pare and core the apples, arrange closely in a pan, and fill the centers with sugar. Pour over all the grape juice. If this is not sufficient to about half cover the apples, add sufficient water to do so. Cover the pan and bake. Keep them covered until almost tender; then remove the cover and finish cooking uncovered. As soon as the apples finish cooking, remove them from the liquid, and allow the liquid to cook down until rather thick. Serve this over the apples.

FLOWERS

IDA M. HELM.

It is only a little hothouse flower, blooming in the warm sunshine of the south window. To me it is beautiful. It is a fragrant flower, and while looking at it I think of the poem—

"Smell the flower, my child, and see
What its perfume breathes to thee;
In its cup so small and bright,
Safely hidden from our sight,
There an angel spirit dwells,
And its message sweetly tells."

Out of doors all nature is frozen, the limbs of the trees are bare and brown, the frost has nipped the flowers and vegetables and they have faded away and even the hardy weeds have hung their heads and dropped to the earth, blackheaded and withered. We turn our eyes to the ground and look in vain for green grass. There is snow, snow everywhere. And we turn again to the plants in the window with their wealth of green foliage and the humble little flower that is giving its sweet fragrance for us. It is a cheering sight; they are thoughts of the Creator, written in green foliage and beautiful flowers. We admire them and we feel that we are akin to the Author of all things that are lovely and beautiful and good. They whisper to us of Jesus when he said, "Consider the lilies, how they grow." "If then God so clothe the grass which is today in the field, and tomorrow is cast into the oven, how much more will he clothe you, O ye of little faith?"

Oh, marvelous thought! The great Creator offers to clothe us with righteousness—the pure, white robes that only he can give. Into this world, in the mid-winter of sin, Jesus came to thaw the frozen soil and to give new life to the deadened germs lying in cold hearts, awaiting the warming, animating power of divinity. If I should set this flower stalk away from the sunlight into a cold, dark room, in a short time it would fade and die. It needs to be watered and kept in the warm sunlight and it will continue to grow and

bloom and give cheer to the cold winter days. We must go to the fountain of life and drink of its quickening waters and we must bask in the sunlight of the Gospel of Christ and our lives will grow beautiful like the Master's, and we can tell to hearts saddened and chilled by sin, the sweet message of salvation.

Ashland, Ohio.

TOMORROW.

Today may be dark and forbidding; our hearts may be full of despair;

But tomorrow the hope that was waning will prompt us to do and to dare.

Today we may feel that life's sorrows outweigh all the joy that we crave;

But tomorrow will teach us the lesson that life is worth while to the brave.

Faint heart is forerunner of sadness—despondency robs us of health;

The man who is chock full of gladness is the man who makes most of life's wealth;

Today may be all that is mournful—our paths cannot always be bright;

But tomorrow we'll somehow take courage, and trustingly enter the fight.

Tomorrow the sun will be brighter; tomorrow the skies will be fair;

Tomorrow our hearts will be lighter; we'll cast aside sorrow and care.

Remember, when heartsick and weary, the sunshine comes after the rain;

Tomorrow is time to be cheery—tomorrow we take hope again!

—Jerome P. Fleishman.

TEACHING THE BOY TO AIM.

"Hear, ye children, the instruction of a father, and attend to know understanding."

THE men who made Proverbs took a very cynical view of the children of good men. We are all familiar with the standing reproach hurled at the sons of ministers. The fact that a man takes the trouble now and then to contradict it with an impressive list of great and good sons of the parsonage does not seem to interfere with the popularity of the proverb. Perhaps there is a little malicious enjoyment in the contrast between father and son. At any rate there is a strong prejudice which seems in no danger of dying out that the sons of good men do not live up to their fathers and oft turn out badly. You cannot pick up a city newspaper without reading of the disgrace of some son of respected parents. The thousands of young men who behave themselves are overlooked. They do not break into the police news by being good.

The fact is that boys from good families are good fellows. They nearly all of them mean well in an indefinite sort of way. Some of them do go wrong, but they go wrong with the best of intentions. It is not a bad aim that makes them dangerous, but lack of aim.

The crisis in a boy's life comes when he leaves school. If he decides well then he has usually decided well for life. But most of them do not decide, they just drift. Here is one kind of boy—perhaps the commonest type of all. He does not know what kind of work he wants to do, but he wants a job where he can make a fair amount of money and have a good time outside of working hours. If his father will help him through college he picks out one of the recognized professions and follows it. Sometimes he goes into his father's business. He is following the line of least resistance. There is no harm in that, but there is nothing to save him from harm. And then if temptation does come, his good father helplessly wrings his hands and wonders why God gave him a wicked son.

Here is the answer. God never gave anyone a wicked son, but God never gave anyone a son that was automatically good either. Every boy has a right to be started in life with an ambition to do something worth while, and it is his father's business and your business and my business to help find him that ambition.—*Home Herald*.

VALUES OF LIFE AMONG WAGE-EARNERS.

"THE more intimately one comes into the home circle of the independent wage-earners the more clearly does the disadvantage of wealth stand revealed. Life must be lived so simply, the interests of life are so evident, that the value of words decreases; action expresses the heart perfectly. The very services the children render each other train them for the family life they will establish. The baby tended by an older brother or sister learns to depend on them for care, and that dependence in turn draws out a love and responsibility that could not have birth under any other condition. The child who finds that in pain, weariness, suffering, a father and a mother alone share its care; the elder children who see how naturally sacrifices are made for them, how little the father and mother value themselves, their ease, even their comfort, learn to value the love in the home and depend on it, and give love to it that money to buy service would bar out."—*Lillian W. Betts*.

SELECTED HOUSEHOLD HINTS.

BAKE square crackers in the oven until brown and crisp and coat them with sweetened chocolate. They are nice to put in the lunch basket for school children.

While nuts are nutritious and recommended as food, one should eat salt with them, especially walnuts or the oily kinds. Never eat a great quantity.

When lace-covered pincushions get badly soiled, remove all pins and needles and scrub the lace lightly with cornmeal. This will free the meshes from dust.

If the ribbons are badly soiled clean them in gasoline.

Grind pop corn after it has been popped and pour over it a chocolate fudge. Press the two into shape and cut with a sharp knife.

To revive wilted holly, place it in a small bathtub or any large vessel in which the stems can rest in boiling water. Put plenty of salt in the water and let the branches remain until the water is cold. It is best to clip the branches on the ends before immersing them. Mistletoe can be revived in the same manner, but it should first be placed in warm water, then cold.

White cornmeal lacks the richness of yellow meal, and in making pones, cakes and the like, more butter and eggs should be supplied to a recipe. A corn pone, however, is finer and richer when made of yellow meal, if a little white meal is mixed with it. Breakfast cakes are excellent when made of white meal, but more eggs should be added. Put milk in the water that mush is made of and it will brown more quickly when fried.

"THERE are those who stammer in their speech, and there are those who stammer in their Christian charity and honorable dealing with their fellow-men who had but words of pity for him who blundered in his speech. The one is a misfortune, the other is a vice. Better the man who stammers before man than he who stammers before God."

The Children's Corner

THE RHYMING NINES.

"OH, dear, mama, my remember is so poor when I come to nine times eight! I say it over fifty times, pretty near, then the next time I have to say it I can't tell how much it is. I think the nines are 'most as bad as the toothache," said Mildred, coming to the kitchen table where her mother was peeling apples for sauce.

"As sure as apples are good to stew, nine times eight are seventy-two," said mama, playfully.

"Oh—o—o, that makes it easy; I'll never forget nine times eight again," cried Mildred. "Please, mama, rhyme all the nines for me."

"Very well, dear, if it will help you to remember. I will have them ready for you when you come home from school."

Mildred went skipping to school, swinging her arithmetic by the straps, singing the rhyme and feeling she had conquered a very troublesome enemy.

When she returned home her mother read her the following, which she readily committed to memory:

It takes 'no time or thinking fine
When 9 times 1 are only 9.
Neither are we long in stating
9 times 2 are only 18.
Nice light bread is made with leaven,
9 times 3 are 27.
Are you fond of candy sticks?
9 times four are 36.
Bees make honey in the hive,
9 times 5 are 45.
Please come in and close the door,
9 times 6 are 54.
Wash your hands and come to tea,
9 times 7 are 63.
As sure as apples are good to stew,
9 times 8 are 72.
The nines this way are real good fun,
9 times 9 are 81.
9 times 10 are 90.
9 times 11 are 99.
The nines are done, let's go and skate,
9 times 12 are 108.

—*Sunday School Advocate.*

SIX CENTS FOR ONE.

"GIVE me a cent, and you may pitch one of the rings, and if it catches over a nail I'll give you six cents," said a man.

That seemed fair enough, so the boy handed him a cent and took a ring. He stepped back to the stake, tossed his ring, and it caught on one of the nails that was fastened on a board.

"Will you take six rings to pitch again or six cents?"

"Six cents" was the answer, and six bright pennies were put into his hand. He stepped on well satisfied with what he had done, and probably not having an idea that he had done wrong. A gentleman standing near had watched him, and now, before he had time to look about and rejoin his companions, laid his hand on his shoulder.

"My lad, this is your first lesson in gambling."

"Gambling, sir?"

"You staked your penny and won six, did you not?"

"Yes, I did."

"You did not earn them, and they were not given to you. You won them just as gamblers win money. You have taken the first step in the path. That man has gone through it, and you can see the end. Now, I advise you to go and give the six cents back and ask him for your penny, and then stand square with the world, an honest boy again."

He had hung his head, but raised it quickly, and his bright, open look as he said, "I'll do it!" will not be forgotten. He ran back, and soon emerged from the ring, looking happier than ever. That was an honest boy.—*Selected.*

The Quiet Hour

THE NEW YEAR.

MARY C. STONER.

Ah! bright the dawning of thy morn,
What on thy gentle wings is borne?
Thy sunbeams like the children play
With lightsome glee so blithe and gay.
And will your morn's be all so bright,
So full of cheery radiant light?
Thou'rt like a fair and winsome lass
So sweetly smiling while you pass.

We love thy dawn, thou fair young year,
With all thy cherished hopes or fear,
And welcome is thy beaming light
Born from the death of last year's night.
May naught of sin thy beauty mar,
But hearts grow purer hour by hour,
Until thy mysteries shall unfold
And crown thy sunset skies in gold.

North Manchester, Ind.

THE WEEK OF PRAYER.

For about half a century the meetings for prayer during the first full week of each year have had the interest and attention of the evangelical churches of the world. During the most of this time the special subject, or burden of the prayer, has been for the speedy conversion of the heathen world to faith in Jesus Christ.

In main the original purpose of the meetings has been maintained. A deep spiritual longing for the conversion of the world has been manifested. Earnest prayers have arisen to God, and the hearts of Christian people have warmed toward each other as they have unitedly gathered around the throne of divine grace, and asked God's blessing on the souls of men. They have prayed for revival, and God has sent many a gracious and glorious awakening in answer to their petitions. They have asked for the success of the Gospel in foreign lands, and during this last half century we have witnessed the most marvelous growth of the kingdom that has ever occurred since the time of Christ and his apostles.

And why should we not pray, and pray unitedly, for such ends? Is prayer a power, and shall we not employ it? Has God granted to us this power, and shall we not unite in earnest petition that the

world may be brought out of its sin and sorrow into the blessed joy and comfort of salvation? Surely it were cruel if we should not pray, since prayer is, according to the assurances of Jesus Christ, a power that we are to exert in behalf of others. Christian love and sympathy should prompt and compel us to pray, and to pray unitedly and to pray without fear or faltering, that the blessed kingdom of God may come, in peace and power, into the hearts and homes of our fellow-men all over the world.

But while we have prayed, in this general and universal way, for the whole world, we have seen many a blessed revival in our land which had its origin in the blessing of God upon the humility and confession and faith and prayer of his people. Commencing to pray for God's conversion of the heathen world, God's children have continued in prayer for a blessing upon their friends and neighbors, their children and their homes.

During this half century our evangelical churches have been drawn nearer to one another than at any time in church history, and the fraternity engendered in the exercises of this week has been largely the cause of the growing unity of believers. We have been drawn nearer to one another as patriots as we have prayed for God's purifying power in the life of our nation. We have been made more efficient and practical in our reformatory work as we have prayed for God's power to restrain and destroy intemperance and other evils.

So we look forward to the exercises of this first full week of the new year, and seek to put away evil-thinking and evil-speaking, and all unbelief and all bitterness, and to be ready to be used of God as he hears and answers our prayers. We shall find it good to draw near to God in prayer. We shall find it good to draw near to one another as we pray. We shall find anew, if we come in faith and assurance, that God is able and ready to do exceeding abundantly above what we can ask or think.—*Herald and Presbyter*.

WHEREAS: RESOLVED.

I USED to admire the ability of my friends that had the knack of writing resolutions in good shape. I

generally skipped the "whereas" portion myself, however, in reading these documents, being more eager than logical. Nevertheless I have just expressed some resolutions in this form, and I have done it to make clear to myself the reason for my action. Thus:

Whereas my experience shows me that I am not happy when I am murmuring, or complaining; and

Whereas I help to make other people unhappy by unloading the burden of wrongs real or fancied, upon them; and

Whereas complaining tends easily to become a habit, and a bad one, and to breed still more complaints; and

Whereas murmuring and dissatisfaction, and the repetition to others of my woes, rob me of spiritual power, fixing my mind on mere human conditions, instead of on God, who conquers them; and

Whereas complaining makes it impossible for me to obey the scriptural command, "Rejoice in the Lord always," because complaint and joy are opposites; and

Whereas complaining is evidence of lack of trust in God and acceptance of his will:

Be it therefore resolved:

Never to allow the mind to indulge in self-pity, to brood upon the wrongs I may have suffered, or may suffer;

Never to repeat to any one, no matter how dear they may be, any kind of complaint; but to cast such memories out of the mind resolutely and forever;

Never to seek sympathy that involves the darkening of other lives by my murmuring;

Always to dwell in the sunshine of the divine love, and know that he is taking care of all apparently untoward conditions, for "all things work together for good to them that love God";

Always to rejoice and help to make others happy!

There, now, what do you think of that? You say, of course, "You can never do it, Mr. Ripple." I know it. But the Power that inspired the desire can. "It is God that worketh in you both to will and to do."

The world is too full of complaints and lugubrious rehearsals of evils and wrongs. I cannot stop these things in others; I can in myself, by divine grace.—*Christian Endeavor World*.

LIKE UNTO THE CHRIST.

Two men were sinking a shaft. It was rather a dangerous business that they had to do—it was to blast a piece of rock. Their custom was to cut the fuse with a knife. One man then got into the bucket and made a signal to be hauled up. When the bucket again descended, the other man got into it, and—with one hand on the signal rope and the other holding the fire—he touched the fuse, made the signal, and was rapidly drawn up before the explosion took place. It was a dangerous business. One day they left their knife up above, and rather than ascend to

procure it, they cut the fuse with a sharp stone. It took fire. "The fuse is on fire. Both leaped into the bucket, and made the signal; but the windlass would haul up but one man at a time; only one could escape. One man instantly leaped out, and said, "Up with ye; I'll be in heaven in a minute." With lightning speed the bucket was drawn up and the man was saved. The explosion took place. Men descended, expecting to find the mangled body of the other miner; but the charge had loosened a mass of rock, and it lay diagonally across him, and with the exception of a few bruises and a little scorching, the man was unhurt. When asked why he urged the other man to escape, he gave a reason that skeptics would laugh at. "Why did you insist on this other man's ascending?" In his broad dialect he said, "Because I knowed my soul was safe, for I've gie it in the hands of him of whom it is said that 'faithfulness is the girdle of his loins'; and I knowed that what I gied him he'd never gie up. But t'other chap was an awful wicked lad, and I wanted to gie him another chance." All the infidelity in the world cannot produce such a single act of heroism as that.—*Selected*.

A SUDDEN ALARM.

ONE Sunday, not long ago, the audience had assembled in one of the churches to hear preaching. Suddenly the fire bells rang out.

In an instant the music stopped, and the congregation rose in a body and all rushed out into the street. Every one thought, "It may be our house on fire." So in one minute the house was empty.

It turned out to be a small blaze which had been extinguished by the time the people got out of the church. They returned, and soon got seated and silent.

The minister then rose and prayed:

"O Lord, make this people as anxious to save their souls as they are to save their bodies. May they make as great haste to rescue themselves and their neighbors from the fires to come as they now do to save their children and their property from the fires of this world."—*The Mennonite*.

CHICAGO'S anti-cruelty society now keeps horses with drivers stationed at the steep approaches to bridges up which it is difficult for teams to haul the heavy loads they easily pull on the level. The "Good Samaritan Horses," as they are called, help get the heavy loads, one after another, over the bridges.

"It is easier to discuss the duties of others than to do our own."

"MULISHNESS is often taken for manliness,—by the mulish."

Echoes from Everywhere

The department of agriculture and commerce of Japan is being prevailed upon to grant a sparrow-destroying subsidy, as in some parts of the country the English sparrow is becoming a pest, having devoured the rice crop.

The Western Electric Company of Chicago has forbidden its workmen from drinking beer on the company grounds. Careful investigations demonstrated that a large number of accidents occurred uniformly after lunch and in almost every case the victim had taken beer with his lunch.

The night of Dec. 23 was one of the busiest of the year in the handling of outgoing mail from the post-office in Chicago. About 260 tons of mail matter were sent out by the night shift. Fully 1,000 men were employed in the distribution of outbound mail and 200 were busy in the registry department.

The government of Panama has been spending large sums this year in fighting the locusts, which have become a serious menace to the agricultural interests of the country. The method of exterminating the locusts most generally adopted has been to dig a trench about 50 feet in length, 2 feet wide, and 1 foot deep, with perpendicular sides, into which the locusts are driven by men beating the grass and trees with switches. In this way millions are collected and are destroyed with a solution of strong lye soapsuds.

Claus Spreckels, the multimillionaire sugar magnate, died of pneumonia Dec. 26. Mr. Spreckels was born in Landstedt, Hanover, in 1823. He came to this country in 1846. In 1856 he went to San Francisco and seven years later established the Bay Sugar Refinery, procuring the raw material from Hawaii. He invented new refining processes and his business grew rapidly.

Statutes fixing the official status of Prince Chun, the regent, were published recently in China. The prince is given an annual salary of \$105,000, and is made commander-in-chief of both the land and sea forces of the empire. The edict provides also that a palace be built for him near the site of the late dowager's winter residence.

There has recently been completed at Great Falls, Mont., a huge brick chimney for carrying away the fumes of the smelting works, which will take rank as one of the tallest structures in the world. It is 78½ feet in outside diameter at the base, and 53 feet 9 inches at the top. It extends 506 feet above the ground and 528½ feet above its lowest foundation course. Its total weight is 24,964 tons. The brickwork is 18 inches in thickness at the top and 66 inches at the base. It is lined throughout with a 4-inch wall of acid-proof brick.

Judging from the turn of affairs, it is believed that Cipriano Castro, president of Venezuela, who recently went to Germany for medical treatment, will be permanently relieved of his office as president of the republic. Acting President Gomez has taken full charge of affairs and is doing all in his power to come to an understanding with those nations which have resented the high-handed actions of Castro.

The Secret Service of the United States after lengthy negotiations with the clearing house and banking associations throughout the country, has obtained almost unanimous action regarding the marking of counterfeit money handed to the receiving tellers. Nearly all these institutions have adopted rules requiring the tellers hereafter to stamp "counterfeit" on all specimens of bad money they receive. This will put it beyond the power of the owners of the counterfeit money to pass it on unsuspecting persons after they have failed to dispose of the coin or notes at the bank.

According to reports reaching El Paso, Texas, Dec. 27, a state of panic exists among residents of Hermosillo, capital of the Mexican state of Sonora, over a strange malady which has caused scores of deaths. Many people are reported fleeing from the new plague. Messages here do not state the nature of the disease but say that stricken persons die within a few days after being attacked. Doctors are unable to diagnose the malady and seem helpless to treat it. Fears are entertained that the plague will extend through the whole state of Sonora.

Mark Twain set the "thumb-print" craze going when he published "Pudd'nhead Wilson," and the government is still carrying on the craze. Secretary Garfield and the interior department have officially indorsed the thumb print as a signature concerning transactions of the Osage Indians. Indian Agent Millard, located in Oklahoma, has been notified that hereafter the thumb print of each Indian shall be affixed to his receipt for the payment of annuity money, and will also be recognized by the department in signing leases and other instruments in writing. Records will be taken of the thumb prints of the various members of the tribe, about 2,200 in all, and preserved for reference.

Dispatches from Rome Dec. 28 state that southern Italy and the island of Sicily were that day visited by a terrible earthquake. In many places a tidal wave added to the disaster. Small towns are reported destroyed and the city of Messina, in Sicily, with a population of 150,000, has suffered most, two-thirds of the place being reported wrecked. This is according to the earliest reports at which time it was impossible to make estimates as to total loss of life and property. However, the disaster is believed to be much greater than that of 1905.

The National Council for Jewish Women has a membership of 10,000 women banded together for work along philanthropic, legislative and coöperative lines. Some of its most effective work has been among the immigrants, and it has done much for the protection and uplift particularly of young girls lately landed in this country.

Following close on the agreement between United States and Great Britain providing for "penny postage" between the two nations comes the announcement of a similar compact with Germany. This understanding becomes effective on January 1st. The aggregate saving in postage to the millions of Germans in this country who have occasion to correspond frequently with Germany will be enormous, but better than this is the increase in intercommunication which is sure to follow. "It is for lack of knowledge that the people are destroyed; anything which increases their understanding of each other makes for mutual development and world-wide peace."

A new watch has been invented for the use of physicians and nurses in counting the pulse. The watch indicates, without mental calculation, the number of beats of the pulse in a minute. It operates on the principle of a stop-watch. By pressing the push-button a large second hand is set in motion, and the counting of the pulsations begins. At the 20th pulsation the motion of the hand is stopped by another pressure of the push-button. The dial accurately indicates the exact number of pulsations per minute. A third pressure on the push-button brings the hand back to the starting point. The use of this instrument does away with the necessity of observing the progress of the watch while taking the pulse, and in addition insures an absolutely correct record.

When Bessemer steel was first placed on the market it was hailed as the great wear-resister, as indeed it was; but now that the wear and tear of commerce and travel have so increased, it is found that the Bessemer steel does not so effectively resist. On the Boston elevated railroad, for example, the rails on the curves have given way at an astonishing rate. Within three months Bessemer steel rails were so worn that they had to be replaced. Manganese rails have been tried and found to stand the usage much better than the Bessemer steel. Within 44 days the Bessemer rails wore down .065 of a foot, whereas the manganese steel was reduced only .046 of a foot in more than 2,000 days. All sorts of steel, including nickel steel, have been tried, but the manganese has shown better wearing qualities than all the rest.

Experiments are now being carried out on German warships with acetylene shells, which it is believed may take the place of the electric searchlight used hitherto by warships. These shells contain calcium-carbide, and the water can reach it through a tube. The shells are fired by a gun built especially for the purpose. On being fired the shell goes under water, and then rises to the surface, and the action of the water upon the calcium-carbide produces the acetylene light. Each shell is said to have 3,000 candle power and will burn for three hours. The great drawback of the ordinary searchlight is that, although it affords some protection from the unobserved approach of torpedo boats, it yet makes the warship using it an excellent target. The new acetylene shell referred to will have the great advantage of lighting up a given space, while the vessel that fires it will be left in darkness.

The French government has definitely adopted the scheme of "letter telegrams" which has been under discussion in France for some time. The new system provides that letters may be telegraphed between any two points in France at night at a cost of one-fifth of a cent a word, and that they will be delivered the next morning.

Fifteen thousand postmasters of the fourth class were placed under civil service by an executive order issued in the first days of the month. Those states in which the change is made lie north of the Ohio and east of the Mississippi, but there is little doubt that this order will be followed at no long time by another extending its provisions to the other states. The traffic in fourth class postoffices is thus abolished in a large part of the country, and the postmasters become real servants of the public instead of merely henchmen of the local congressman. President Roosevelt has brightened the concluding days of his administration by this act; it must have the commendation of all with the exception of the few congressmen whose patronage it demolishes.

Cocoanut oil, which was at first used only for making soap, may now become an important factor in food. In Madagascar, eastern Africa, Indo-China, and on the Congo stations have been established where the best varieties of the cocoa tree are brought together, from which places much cocoanut oil is shipped. Unfortunately, however, by the time it reaches its European destination it has deteriorated and become rancid, owing to the partial decay of the fatty matter in it. In order to obviate this a French scientist has formed the plan of sterilizing the product by submitting the fruit of the tree, cut in two, to the action of sulphur gas. The oil then obtained does not become rancid and may be used in some forms of food.

According to a decree issued Dec. 23 by the Missouri Supreme Court, the Standard Oil Company of Indiana, the Republic Oil Company of Ohio and the Waters-Pierce Oil Company of Missouri have been fined \$50,000 apiece and are to be driven out of the State. The decision, which was unanimous on the part of the seven judges, is so sweeping that Attorney General Hadley and Governor Folk hail it as the end of illegal commercial combinations in Missouri. Attorney General Hadley, who has prosecuted the Missouri case since its inception in March, 1905, will become governor in less than a month and will then be charged with the enforcement of the decree.

The battleship fleet of sixteen vessels under the command of Rear Admiral Sperry has turned homeward after an absence from Hampton Roads of nearly a year. The vessels are due at the southern entrance of the Suez canal Jan. 5, and after leaving Port Said, at the northern entrance, where coal is to be taken on board, they will divide into squadrons and make a series of calls at Mediterranean ports. In this manner the American ships will show at Athens, Tripoli, Villefranche, Marseilles, Genoa, Leghorn, Malta, Naples, and Algiers. According to the present schedule, the entire fleet will assemble at Gibraltar the first week of February, and on February 6 it will leave Gibraltar for Hampton Roads or New York. The question of the final port in America has not yet been decided. The vessels are due in Hampton Roads or New York February 22. When the fleet reaches the United States it will have traversed, since December 16, 1907, when it left Hampton Roads, a distance of 42,227 miles.

Among the Magazines

FEW "UNEMPLOYED" WHO ARE WORTHY.

England is struggling hard with what is called the problem of the "unemployed"—and in America, too, we have been hearing the plaint that thousands of men are out of work. Fortunately this country is not so hide-bound as England is, and industry here is reviving so rapidly that the number of idle hands is daily growing less. But in England the evil of the "unemployed" is both chronic and acute and it is difficult to see any remedy for the situation.

Both in England and America, however, it is found on investigation that as a rule the people who have nothing to do are themselves to blame. Very commonly the trouble is due to drink. The sober and industrious and reliable men are being given the preference more and more, and the loafers and triflers and tipplers are being cut off. Wholesale efforts have been made to induce the unemployed of England to go to Canada or elsewhere and work out their destiny on the land, but the plan does not suit the beneficiaries. One Englishman who had come to Canada last year has gone back because, as he complained to the writer of this article, it was "ten miles to the nearest saloon." And he is typical of a large class. Most of the unemployed dote on the fevered life of the big cities; they would rather starve in a slum than live a wholesome, useful life in the country, and anything in the nature of hard and steady work is worse in their contemplation than death itself.

The editor of *Spare Moments* has been making a first-hand investigation of the subject in this country and he arrives at this same conclusion. Many of the unemployed, he says, seemed "actually to tremble at the thought" of working on a farm; they were LOOKING for work, but not looking for WORK, as he puts it. The Los Angeles Y. M. C. A. reports on the case of a young man who had been begging his way and hadn't a cent in his pocket, but when offered a job of janitor work said he would not demean himself by doing such drudgery. An advertisement in a Rochester paper calling for men for outdoor work brought 98 applicants, but not a single one was willing when offered work on a farm to accept it. A Cleveland gentleman reports a case where a man asked him for some money to get him a meal; the beggar was referred to the local mission but immediately spurned the suggestion; he would have to cut wood before they would give him anything to eat there, he said.

In every city there are many men out of work who profess that they cannot find anything to do. Go into their cases carefully and you will find that in practically all there is some very good personal reason for their being idle. In many cases they have "struck" out of a good job; in many more they prefer to be idle altogether rather than work for what people can afford to give them, and in still others they find that by working a day now and then they can get enough money to get drunk

on—and that is the height of their ambitions. Sometimes, by some conspiracy of ill-fortune, a deserving man can find no work, but it is a rare case; the work of the world has to go on, in bad times and good, and no man who is not too proud or too lazy or too mean to give value received need ever fear having nothing to do.—The Pathfinder.

PRACTICAL IMMIGRATION.

Why not put incoming people where they can work out their destinies? There are railroads in the West which maintain special departments for putting immigrants into the field. One of them has developed the idea of putting villages of Swiss, of Bohemians, of Germans, and of Italians by themselves and making it possible for them to work at the trades they learned at home and to preserve their best national customs.

There is not in America a State which does not need these incomers. New England is just finding what value there is in her worn-out fields through the prosperity that Italians and Russians are finding in them. Missouri has Brandsville's Swiss as a shining example of its soil's value for vine culture and for dairy farming. But we all need them. And it would not be difficult to distribute them if we went about it wisely. Every Western railway keeps a record of opportunities along its line: "Smithville, general store needed, town of five thousand, large farming country;" "Brownsville, town of five hundred, opening for doctor and dentist." Such notices appear in large numbers in their advertisements. A national department, with its agents as widespread as those of the postal service, could keep a similar watch upon the nation. Thus we should have a report like this: "Thompsonville, hilly upland, large acreage for farming still available, about \$15 an acre; many Bohemian farmers, and available market for such and such products," with, of course, other details.

If there were on the other side of the water government agents, like the consular service, to whom this information was supplied, an intending immigrant could there determine under the authority of government just where an opening lay for him. Were he farmer, carpenter, printer, weaver, whatever he might be, he could determine where there was probable employment for him. If the gates of Ellis Island were then shut against those who come haphazard, and opened to admit only those who come with direct purpose, ticketed to some definite location where friends or the federal authorities had shown the need of them, the result would be achieved. There would be no more dumping in New York. There would be no more wiping out of skill, training, and the virtues of an older people. We should be saved half the work of "assimilation." And by the constant absorption of the new, good qualities we should become in them fabulously rich. We are talking now of conserving our national resources, and here is a great resource awaiting its proper conservation.—John L. Mathews, in the *January Everybody's*.

LEGISLATION TO PREVENT FOREST FIRES.

The frequency and seriousness of forest fires during the past autumn prove that the present laws for the protection of the forests are inadequate. We are of the opinion that negligence or inexcusable carelessness is responsible for the majority of the fires, not merely in the Adirondack regions, but also in the fire-swept districts of Minnesota, Michigan, and Wisconsin. If this carelessness be measured by the magnitude of the disasters of which it is the original cause, it takes on surely a strong flavor of criminality. For it is no excuse to say that the hunter who fails to extinguish his camp-fire, or the settler who leaves the edges of his clearing burning through the night in proximity to inflammable forest timber, does so without any thought of the loss of life or property which may result from his carelessness; for he is well aware of the fact that such smoldering fires may, and do, start great conflagrations, and that in these conflagrations, it frequently happens that not one but many human lives are sacrificed. If such carelessness in the presence of this knowledge be not criminal, a new definition must be found for this last-named word.

Our attention has recently been drawn to the fact that in Canada there is a strong movement on foot, urging the government to follow a more definite course of action in the protection of the forests, and to make the breach of the forest-protection laws punishable by imprisonment without the option of any fine. The object aimed at by the suggested legislation is, not merely to increase the number and enlarge the powers of the forest wardens, but also to compel every camper to either extinguish his fire or keep it under guard; to require every settler, railway contractor, or railway, in clearing lands, to maintain a guard by night as well as by day, so long as the stumps are burning, and to prevent any stumps or underbrush being fired within a reasonable distance of the standing timber; and finally, to make the railways and factories whose tracks or works are within the forest area responsible for the protection of the forest to a given distance on each side of the railway track or factory.

We commend this subject to the attention of the legislatures in those States most nearly affected. It is certain that legislation bringing the careless starting and neglect of fires within the range of the criminal law would prove a most speedy and effective check upon the present annual destruction of life and property.—Scientific American.

WHAT IS THE MATTER WITH THE PUBLIC SCHOOLS?

A little while ago, The Delineator was asking the question, "What is the matter with the public schools?" There were a number of suggestions that developed from that investigation. There are a number of things the matter. Out of them all one defect in our educational system stands out glaringly. It is most tersely told in the last report of the United States Commissioner of Education. It's a simple statement of the salaries that American cities pay their school-teachers.

And that, ladies and gentlemen of the school boards, is what is the matter with our public schools. We pay our unskilled street laborers something like a dollar or a dollar and a quarter a day. We are paying our school-teachers some less and some a little more. It is the wages that a dull brain and a primitive mind are worth. In return for such wages we are requiring a service that should be entrusted only to a mind and heart enriched

with all that literature and art and science can contribute to a perfect culture. It should be only such a personality into whose training we give the future citizens of the nation. Can we get personalities like that to serve us in our public schools? Not any longer than they can help it. Just so soon as their force of character and intelligence and initiative enable them to reach a better-paying position, one that will allow them to buy books and hear music and have the other good things of life that their larger natures crave, they go after it.

Until we realize with a conviction that reaches our pocketbooks that the school laborer is worthy of her hire, we aren't going to keep the best school laborers in the public employ. And there will continue to be something the matter with the public schools.

WE AND THE WEATHER.

WHAT a great misfortune this is, the habit of considering the weather!—of thinking that we must consider the weather. It is largely due, is it not, to clothes? No mention is made of rain in the Garden of Eden; but we must not, therefore, contend that rain was disagreeable and omitted; we must recollect that Adam and Eve did not need to consider rain; furthermore, in blessed ignorance, they did not know that it was anything to *be* considered.

To mind the rain no more than the May sunshine, but to plunge into it and let the drops pelt as they will; to accept snow without a thought of discomfort, but, rather, to enjoy the thronging presence of it; to pursue one's daily stint regardless of whether the sky be dun or blue,—this is a state which we, especially of the cities, long, long have lost.

We regain it, some of us, in the wilderness camp, where we hunt, or fish, if the day be dark or if the day be bright. And where we find that the dash of the soft rain on one's face is not death, after all; that wetness and dryness are merely relative terms.

All the centuries of fussing and fuming with the weather have not affected the weather one particle; it still rains, and snows, and sleets, and blows, just as dictated by circumstances. Therefore what's the use? Are your puny diatribes, or mine, of any greater potency than those of others gone before? Evidently not; accordingly, try the plan of being friendly with the weather—of agreeing with it instead of fighting it—and, 'pon my word, presently it will be agreeing with you.—Edwin L. Sabin in *November Lippincott's*.

MUSQUASH IN WINTER QUARTERS.

(Concluded from Page 11.)

Musquash knows when the January thaw comes he can make up for this slender diet, so he waits contentedly for the floods to wash from their beds the benumbed turtles, meadow mice, and snakes. Then, indeed, will he enjoy a bountiful feast, even if it is midwinter.—*Selected*.

INTERESTING FACTS ABOUT POSTAGE STAMPS.

AN article published in the *New York Tribune* recently gives the following statements, that will be of more or less interest to all interested in stamp collecting:

Stamps were not in use before 1840. Before that time the postmasters in the United States in large towns and cities kept a private account with all well-known persons, and at the end of each month rendered a bill for postage.

Sir Rowland Hill, a member of the English Parliament, has the distinction of introducing the postage stamp, date May 6, 1840. On that date the English government adopted the penny post system. Brazil followed England in 1843, after which came the United States in 1847, Russia in 1848, Tuscany, Belgium, and New South Wales in 1849, and other countries soon after.

In our country before 1847, and as early as 1842, certain owners of local delivery companies began to sell stamps to their customers. The first of these was the City Despatch Post in New York. After being in the business for a few months, the proprietor sold the entire system to the United States Government. Soon afterward other cities adopted local stamps, as Baltimore, New Haven, Providence, and Saint Louis. The stamps of these cities were used before the government service began. They command large prices. The stamps of Millbury, Massachusetts, command a price of \$500 and upwards. The Baltimore stamp is listed at \$300 to \$400.

Many a bundle of letters which was carefully laid away thirty or forty years ago has, on being brought to light, brought to its owner a large sum of money. Today the traffic in old postage stamps is an important part of the world's industry, and the money invested in collections represents millions of dollars. A single stamp has brought as high as \$7,500. King Edward bought a one-penny 1847 Mauritius stamp, paying that sum for it. Another of these stamps sold to the German Postal Museum for \$5,000. There are, so far as known, only nine two-cent British Guiana stamps issued in 1850. One recently sold for \$1,710. Two of the nine are in the British Museum, two in a Paris collection, and two in the New York City collection. The two in the New York City collection were bought for about \$5,000, the proceeds of the sale of the two stamps being used for the erection of a church in Guiana.

Among the private stamp collectors of the world Americans stand out quite prominently. A Mr. Duveen, of Manhattan, has a collection valued at \$400,000. A Mr. Sussdorf's collection is worth \$200,000. Charles Gregory, a Brooklynite, is worth \$100,000 in stamps.

The finest collection of stamps in the world is owned by Count de Farrary, of Paris, and is valued at a million dollars. The Toppling collection, one of the finest in the world, now in the British Museum, is worth a million dollars. The Czar Nicholas of Russia, the Queen of Italy, and the King of Spain are all stamp students and collectors.

"UNBELIEF says 'How can such and such things be?' It is full of 'hows'; but faith has one great answer to the ten thousand 'hows,' and that answer is—God."

"WHEN you brand a vice as harmless you have augmented its power to hurt."

Between Whiles

He Got the "O. K." Signal.

Railway men—conductors, engineers, and brakemen—are so accustomed to communicate with each other by means of gestures that the habit of looking for such dumb signals becomes a kind of second nature, observes Harper's Weekly. In this connection a Western railway official tells of an amusing incident in that part of his State where it is so common for cattle to be run over that the manager of one "jerk-water" line required his engineers to report all such accidents, with full particulars as to place, time, and circumstance.

One day a complaint was received at headquarters that a valuable cow had been killed on a certain day and by a certain engine. The case was referred to the proper department, but reference to the files showed that the engineer had failed to report such an accident. Accordingly he was sent for and asked why he had omitted to report the matter.

"I didn't know I hurt the cow," he said.

"Then you remember hitting her?"

"Yes; and I slowed up as she rolled over on her back, but she waved her feet for me to go ahead, and so I concluded she was all right."

A traveler passing through the Broad Top Mountain district in northern Bedford County, Pennsylvania, last summer, came across a lad of sixteen cultivating a patch of miserable potatoes. He remarked upon their unpromising appearance and expressed pity for anyone that had to dig a living out of such soil.

"I don't need no pity," said the boy resentfully.

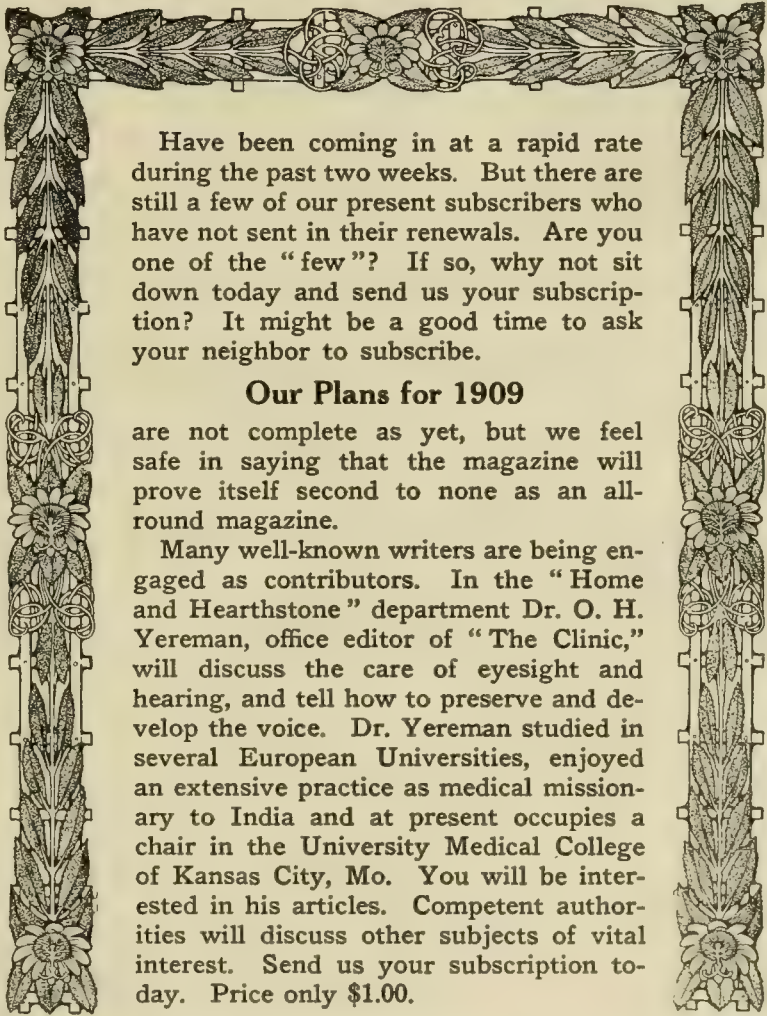

The traveler hastened to soothe his wounded pride. But in the offended tone of one who has been misjudged the boy added: "I ain't as poor as you think. I'm only workin' here. I don't own this place."

The Last Straw.—Arthur—"They say, dear, that people who live together get to look alike."

Kate—"Then you must consider my refusal as final."
—The Christian Register.

INGLENOOK Subscriptions

A decorative border with floral and leaf motifs surrounds the central text. It features a horizontal top piece, vertical side pieces, and a horizontal bottom piece, all adorned with intricate designs of leaves and flowers.

Have been coming in at a rapid rate during the past two weeks. But there are still a few of our present subscribers who have not sent in their renewals. Are you one of the "few"? If so, why not sit down today and send us your subscription? It might be a good time to ask your neighbor to subscribe.

Our Plans for 1909

are not complete as yet, but we feel safe in saying that the magazine will prove itself second to none as an all-round magazine.

Many well-known writers are being engaged as contributors. In the "Home and Hearthstone" department Dr. O. H. Yereman, office editor of "The Clinic," will discuss the care of eyesight and hearing, and tell how to preserve and develop the voice. Dr. Yereman studied in several European Universities, enjoyed an extensive practice as medical missionary to India and at present occupies a chair in the University Medical College of Kansas City, Mo. You will be interested in his articles. Competent authorities will discuss other subjects of vital interest. Send us your subscription today. Price only \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

A Splendid Seller

Even though you have had no experience as an agent, you should be able to make large profits selling the

Inglenook Cook Book

Many of our agents report remarkable success and are asking for more territory.

Contains 1,000 recipes by the best cooks in the land. Every recipe is simple and practical. Many housewives write us that they have laid aside all other cook books. A favorite everywhere. Sells on sight.

Size 5½ x 8 inches, 212 pages, tenth edition 32nd thousand.

Paper Binding, each	\$0.25
Per Dozen, prepaid	2.50
Oilcloth Binding, each35
Per Dozen, prepaid	3.50

It will pay you to write for agents' terms today.

A College President Speaks

"Whoever tells the story of the literary activity of the Brethren in the twentieth century will have some interesting subject matter to begin with in Bro. J. S. Flory's description of that activity in the eighteenth century. His book is the kind that tends to enkindle a worthy pride in our church, partly because of its own literary merit and partly because of the literary history of the church which it discloses. It deserves a wide reading and no doubt will command it. I hope that the younger generation especially of our people will become familiar with its contents. We shall await with eager expectations the promised second volume. —Edward Frantz, of McPherson College, Kansas.

Literary Activity Of the Brethren in the Eighteenth Century

Is an intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages. Price prepaid \$1.25.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

THE INGLENOOK

Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great **ALFALFA** and **FRUIT** district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address, **W. F. Gillett, Holtville, Cal.**

Our Bicentennial Hymn

We are now prepared to fill orders for the above-named hymn, printed in leaflet form on heavy paper. The words of this popular hymn were written by Eld. Jas. A. Sell, and the music composed by Bro. Geo. B. Holsinger.

Price per hundred, postpaid, 25 cents.

Brethren Publishing House, Elgin, Ill.

The Mayville Class Abroad

BY E. M. COBB

The Mayville High School Class make a tour through Europe and Palestine and write letters home of the most interesting character. It is just the thing for young people. All will find the book captivating and very instructive.

The book is finely illustrated and contains 288 pages. It is bound in fine cloth and has a beautiful cover design stamped in white. You had better send for a copy now.

Our Price,75 cents
(Postage extra, 15 cents.)

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois

NEFF'S CORNER

All houses rented and town overflowing with people and many more employes of railroad to come soon. Property double the price it was when I came here. A hundred more houses ought to be built now. Remember, a property that costs you \$350 rents for \$8 and one that costs you \$450 rents for \$10. My little folder tells all about them. Write for it.

And we very much need a sister missionary to work among these newly-established homes, and we have a chance to employ a sister of experience now, but we lack means. We want to get along without soliciting donations, so I am soliciting subscriptions to the Woman's National Daily, a clean, reliable, well-edited daily newspaper published in St. Louis. I will have it sent to you every day (except Sundays) for a whole year for only \$1, and besides, I will put one hundred cents of the dollar into our mission fund and pay for your subscription out of my own pocket. Will send you a sample copy first if you ask for it, but I assure you you will run no risk in sending the dollar now. Hope you will, for we ought to put the sister to work at once. Address

JAMES M. NEFF,
Clovis, New Mexico.

EUREKA INDESTRUCTIBLE POST

FIELD POST Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, **W. A. DICKEY, North Manchester, Ind.**

Our 1909

General Catalogue

contains a large assortment of books, Bibles, cards, church and Sunday-school requisites and Christmas booklets. Have you asked for one? If not, drop us a line today. All you need to do is to say "Catalogue" and sign your name, with proper address. "We'll do the rest."

BRETHREN PUB. HOUSE,
Elgin, Illinois.

BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

What a Young Girl Ought to Know

By **Mrs. Mary Wood-Allen,**
M. D.

A book of purity and truth that we should like to place in thousands of homes. The book is highly commended by Lady Henry Somerset, Mrs. Harriet L. Coolidge, Margaret L. Sangster and hundreds of others. Bound in cloth.

APPLE BUTTER

is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

C. J. MILLER & CO., Smithville, Ohio.

PASTOR'S POCKET RECORD

Arranged by Rev. Sylvanus Stall, D.D.

This record affords space for the recording of 63 church officers; 714 members, over 6,000 pastoral calls; 42 communion services; 126 baptisms, 84 marriages, 105 funerals, 273 sermons; 63 addresses; 168 new members, besides ten other departments.

Ministers.

You will find this an excellent little volume to carry with you at all times.

It contains nearly 200 blank pages and is bound in black leather, size 3½ x 5½ inches. Very convenient to carry in pocket.

Price prepaid only 50 cents.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

The Twentieth Century Sunday School Record System

No superintendent can afford to begin the new year's work without the assistance of our new system of records and recognitions. This plan, first used in one of our own Sunday schools, has grown in favor until it is now recommended by Sunday-school workers of all denominations. It has increased the enrollment and secures the attendance of each scholar enrolled. Encourages systematic giving and discourages tardiness. Brings the Bible to the school and relieves the teacher of keeping class records. New scholars are enrolled and all records are kept and reported by the secretary of the school. The teacher is permitted to devote her whole time to the teaching of the lesson. Our new descriptive Record System Catalogue gives full particulars.

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully. The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

Several parties of colonists, from the East and Northwest, will reach the colony about Dec. 20. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

Henry M. Spickler Tells About

MESSINA

Scene of the Recent Earthquake

Serving

*The sweetest lives are those to duty wed,
Whose deeds, both great and small,
Are close-knit strands of unbroken thread,
Where love ennobles all.
The world may sound no trumpets, ring no bells;
The book of life the shining record tells.*

*Thy love shall chant its own beatitudes
After its own life working. A child's kiss
Set on thy sighing lips shall make thee glad.
A sick man helped by thee shall make thee strong,
Thou shalt be served thyself by every sense
Of service which thou renderest.*

BUTTE, VALLEY, CALIFORNIA.

Unusually healthful climate, rich soil, pure mountain water.

Timber, pine, cedar, fir—in quantity and quality.

Timothy—five tons to the acre have been raised.

Easy terms and moderate prices on this orchard land.

Vineyards, no doubt, will be planted by the scores.

Apple trees are being planted by the thousands.

Level as a floor, and rich as the Hawaiian Islands.

Lands worth \$1,000 per acre are being sold at \$45.00 now.

Elevation of the valley is 4,200 feet above sea level.

You have, no doubt, decided to buy, but you should do it **now**.

California is the magic word of the age. You know why.

Alfalfa is perfectly at home in Butte Valley.

Lands are selling rapidly. 2,000 acres on last excursion.

Invariably purchasers recommend the Valley to their friends.

For farming, grazing, fruit-raising, the Valley is unexcelled.

Orchard lands, planted, are the best sort of life insurance.

Rents in the East are high; why not own a home in Butte Valley,

Never buy elsewhere until you have investigated this proposition.

It will pay you to get in on the ground floor before it is too late.

After you have read this, write us that you will join our

The Saloon Under the Searchlight

By George R. Stuart

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I would solicit for it a wide circulation, and a careful perusal. It cannot fail but do good."—P. J. Blough. Bound in cloth and paper, 64 pages.

The Brethren Family Almanac for 1909

A FIRST class almanac for the home. The twelve calendar pages contain the date of over 300 important historical events. Every member of the church will be interested in the biographical sketches of such men and women as Elder R. H. Miller, Sister Sarah Major, Elder John H. Umstad, John H. Filmore, Elder Peter Nead and Elder Jacob Mack. Announcements concerning the Annual Conference for 1909, and a History of the Brethren Church in Franklin County, Virginia, are unusually interesting. The Ministerial List occupies nearly 19 pages and gives the name and address of the 2,938 ministers of the Church of the Brethren together with a list of the Gish Fund Books. Several pages are devoted to a list of the Home and Foreign Mission Boards of the church with name and address of the members of each board. Sunday-school workers will be interested in the list of State Sunday-school Secretaries. A cyclopedia of useful information. Sixty-four pages. Price, postpaid, 10 cents.

More About Miami Valley, New Mexico

Are you seeking health?

We have it as sure as this pure, rare mountain air brings it.

Are you wanting wealth?

We can furnish you the resources for it.

Do you desire happiness?

We have the conditions that bring it.

A co-operative thrifty community

of neighbors for you.

Excellent church privileges.

A good school for your children

now in session, conducted in a good house built with the latest ideas of lighting and equipage.

Beautiful scenery

with its ever-shifting shades and tints to feast the eye upon.

Fine weather? Good roads? Yes, none finer.

Almost perpetual sunshine.

Just think! Nearly every winter day Old Sol smiles out warm and bright. Contrast this with the days and weeks of cloudy weather, rain, snow, sleet, slush and mud back East and North.

Thanksgiving Day finds us with a goodly harvest and thankful hearts for this our first year of prosperity.

Sickness has not been in our midst, death has claimed none of us and prosperity is inevitable for the future.

"Westward Ho" tells of our claims and resources.

Send for a copy. Come and see us.

Farmers Development Company, Miami, N. M.

not go to college, do not think, for a moment, that you must be forever denied that culture which comes with a knowledge of the classics. A college course is composed of single hours of study and if you will properly employ yourselves during your spare moments and your long winter evenings, you can acquire a good substitute for a college course. Many of our greatest statesmen, ministers and business men never had as much schooling as you can get in the average district school, but they used their spare moments, their odds and ends of time that many boys throw away, for self-improvement. They were working while others were dreaming.

It is the boy who strives to make a good impression, not only when he is entertaining his friends but in every work of life, whether it be his lot to serve as a bank clerk or to hoe out the weeds in his mother's garden, that will succeed in his undertakings. Many boys neglect the little deeds of life while they are continually looking forward, hoping to do some great work. The giant oaks of our forest have sprung from a little acorn and the little raindrops, falling, one by one, water the earth and cause it to send forth its fields of golden grain.

The boy who thinks it isn't worth while to save the nickels and dimes will never have any dollars to save, and the boy who neglects the little deeds of today will not be able for a greater work of tomorrow. Do not become discouraged when others try to belittle you because you are striving to form habits of economy. A boy with a large, healthy mind, who is trying to make the best of his opportunities, to make his life count for good, will see your good qualities much sooner than your bad ones and it is only the narrow-minded that have an eye for faults. When you find the place in life that nature intended you for, stick to it, whether it be farming, business or whatever it may be.

Of course you will always meet with those who have nothing but unkind words for you, but you will, usually, find them to be men who have been a failure themselves, hence you need not become discouraged by their hopeless words. A prosperous man has no time to discourage others.

Again, you should exercise great care in selecting your companions, for if you wish to keep your life pure, if you wish to retain that which is more to be desired than great riches, "a good name," you must associate with those whose lives are in harmony with your ideals. But above all things do not fail to put your trust in him who sticketh closer than a brother, who has promised to be with you in your troubles and who will ever watch over you and keep you. Until you have done this, your life has not been truly successful.

Ashland, Ohio.

A PLEASANT HOLIDAY TRIP

C. L. ROWLAND.

ON the day following Christmas day I boarded a crowded train to leave the bustling, noisy city and spend a few days in quiet on an old Virginia plantation. The train seemed slow to start, but, after adding an extra coach to relieve the congested condition of those already in line behind the iron horse we slowly moved from the crowded platform at the depot on which were standing many friends of those departing.

Rice scattered on the steps and some of it remaining on the conventional black of some of the young men on board the train clearly showed that we were riding with those who had celebrated Christmas Day by paying homage to Dame Matrimony at the hymeneal altar. They were now on their honeymoon. Just across the aisle from one of these happy couples sat a lady whose wrinkles and general peculiarities betrayed her to be a "lost gem," as she would put it, but usually known as an "old maid." Her look of cynicism seemed to say: "Oh! how foolish they are, how silly they look at each other," when in reality if you noticed her as she turned her gaze to the beautiful scenery of the landscape, you could have read in her countenance and deep sigh: "How I wish some one had plucked me before I had withered to die alone."

The sharp call of the conductor announced that my destination was reached, so, leaving the happy couple to the mercy of the remaining passengers, I turned my eyes toward the bystanders at the little depot to single out the friend who was to convey me across the mountain to his home.

Soon we were mounted on steeds who well knew how to reach the summit without unnecessary fatigue. We were not long reaching the foot of the ascent which led through gullies, now and then crossing the mountain stream whose sparkling beauty and low murmur added to the attractions of the scene. On either side were snow-capped peaks with dwarfed pines clinging to their sides. Overhanging rocks echoed back the noise of hoofs as the horses picked their way up the stony incline. On reaching the summit we paused to view the scenery which, had either of us been a Whittier or a Bryant, would have inspired us to write a masterpiece of poetry.

The scenery on the descent was no less beautiful than what we had just viewed. Following the mountain road we reached an old homestead which my friend was proud to call his home and whither he had resorted during his holiday vacation from school.

I was made to feel a warm welcome by all, as I was led to the glowing hearth which is a thing of the past in our modern homes. Though we were not much chilled by the morning ride across the

mountains, I very much enjoyed sitting by the open hearth and chatting with my friend and the other members of the family whom I had not seen for a time.

As is usual in winter, outdoor entertainment is rare, so most of the time was spent conversing over past memories. While I sat thus engaged, with plenty of delicious apples and a goodly basket of chestnuts close by, Whittier's *Snow Bound* came very forcefully to my mind. I fancied myself transported to a happy fireside in New England where the poem was written. But the snow had to be imagined, for you will remember that this is an old Virginia homestead in the southern part of the State where there is little snow except on the mountains.

The hearth had peculiar attraction for me, hence much of my time was spent there. I remembered the Backlog Studies as I viewed the log in the back of the hearth. The thought came to me of how one of our ablest presidents when a boy read and studied by the light of the hearth fire, and ciphered on the back of the wooden fire shovel. Then it occurred to me: Why has Virginia been called the "Mother of Presidents"? I could give no other answer than because the simple, modest living found here was the kind to raise up children healthy of body and mind. Oh! that the American people would return to the simple life of our forefathers! We would have stronger-minded men from the farm to the president's chair.

One evening during my stay the young people of the home with myself visited a neighbor who, in turn, made us welcome at his fireside which was as cheerful as the one we had just left. Learning that I was a northerner spending the winter in the South,

they talked of the differences between the North and South, relative to the Civil War. War at its best is cruel and the people of Virginia surely were made to feel the hardships of it. May there never another such conflict make enemies of brothers as did this one.

Though my stay on the plantation was but three days, I enjoyed it to the full.

Roanoke, Va.

THE NEXT STEP.

"WE have just compiled lists in the following dry counties in Ohio for mail order advertising," announces a disreputable liquor publication, and follows the announcement with the names of thirty-seven counties and the advice to "order today for your holiday circulars." We have no doubt that similar lists are being compiled for use in Georgia and Oklahoma and all the States which have done the best within their power to free themselves from the liquor traffic. It makes no difference that the citizens of these States have signified, by the most effective means they possess, that they want no liquor within their boundaries; the brewers and distillers have determined that they shall have it anyway.

All this makes more clear the necessity for a law which will prohibit the shipment of liquor out of wet States into dry—such as was asked for in the bill which was introduced by Congressman Littlefield at the last session of Congress and put to death in some committee room. This is the thing which those who have won their local fights can concentrate upon now. It is the next great step in temperance reform.—*Home Herald*.

A LYRIC

RICHARD BRAUNSTEIN.

Oh, the pollywog fell in love with a whale,
And his heart was filled with burning;
With fiery words he unfolded his tale
Of fervor and pain and yearning,
But the whale never heard his passionate moan
For the pollywog had no megaphone!

Oh, the pollywog worshiped the floundering whale,
And his bosom was full of sighing,
And his body grew thin and his face grew pale
And he seemed quite likely of dying—
He saw at a glance that for him was no hope,
For the whale didn't have any microscope!

Around the World Without a Cent

Henry M. Spickler

Chapter XL. In Sicily.

LYING close to the once Dark Continent is Sicily, famed in fact and fiction. It is August 16 and I am leaving for Messina, for the boat, contrary to its orders to me, is sailing twelve hours earlier than the captain expected it would leave. It made me nervous to think how I might have gone to some other hotel or have been out in the hills, when the message came for me to return to the boat. My wheel was on the boat and it would have been almost as hard to have the boat sail with the wheel and without me as for a parent to thus lose his child, for without my wheel I could do little in seeing sights.

From the boat my eyes lingered long upon the bold mountains that rise back and to the side of Palermo. The *Letimbro* had anchored three-quarters of a mile out at sea but my Sicilian boatman arrived in good time for me to study the outlines of these hills.

Between them and the sea runs a level road from the city to the wharf. On this drive I saw the artistic Sicilian cart, the possession of which makes the owner feel like a rich American. On week days he hauls his vegetables and fruits to market. On Sundays he takes his own and his neighbor's family out for an airing, stacked in the small box like cordwood piled vertically.

Back of these pleasure-seekers rises Mount Pellegrino which so fascinated Goethe. Its form is sublime, but you must see it under the play of Sicilian sunshine and Sicilian atmosphere to marvel at its sublimity. Massive and imposing, its steep slopes are bare, but the hoary color of the rocks is a picture of art that wins the hypnotic gaze of even the prosaic tourist.

For this bold bluff, lying so peacefully under its dreamy mantle of Sicilian haze, the sailors of all the nations around the Mediterranean steered their prows. Here was the world's battleground, the battleground of contending parties and creeds. Every atom of Sicilian dust is enchanted. Here came the Phoenician trader from Tyre; the Carthaginians, who gave me so much trouble in Latin, came here and made me burn night oil to study out their reason for coming. Here fought and died the Roman, the Vandal, the Goth, the Saracen, the Norman, the Byzantine, the Greek. Homer and Thucydides wrote of Sicily. Virgil and Cicero speak of it. Pindar, Theocritus and Virgil sing of her climate, the softest and mellowest in all

the world. Over this rocky island are strewn the heroic myths of Ulysses and Vulcan. Everywhere the weight of the mighty past oppresses the student of this little land of nine thousand nine hundred and thirty-five square miles, or less than one-third of Ireland, but a little less than half as big as Switzerland, which is one-fifth the size of Kansas. In this unbearably bright sunshine, history was made by the French, the Spaniard, the Italian, the Roman and the Carthaginian.

As the boat steams away with me as the only deck passenger, I muse upon the sights and scenes of Palermo's noisy streets. Remarkable for its mixture, the faces of the people present a "circus" of physiognomies as different as those of different countries. Behind a pure Greek face came the oval face admired by Titian, with black, lustrous eyes and low forehead, full cheeks and pug nose and little mouth. Next came a Spaniard whom I recognized by the heel set down with haughty self-esteem. All around these were the negroes, or negro types, with black, curly hair and thick lips and tawny skin. Moving among these with swifter step, were the students from the university, where eleven hundred study to fit themselves for more important duties in their little island home.

From the pepper tree, growing with beautiful symmetry, along the streets, some of the students took leaves for botanical study. In the gardens and along the esplanades blazed the gorgeous Judas tree. Amid all of the bright display of vegetation and humanity arose the musical discord of jingling donkey bells, clanging goat bells and cries of the hawkers of everything imaginable, through the confusion of which wandered well-dressed tourists and scions of the nobility, none of whom showed half so much independence as the pert little "Arabs" who followed me from street to street and shop to shop, for fun and for pennies. I am now on the boat but I feel as if I have left behind me the rest of the world. While in Palermo I was magnetized by the queeriness of the sights and sounds and I quite forgot my identity. This little world, so insignificant in the eyes of Europe or America, moved and lived just as if it was the "Whole Thing."

But for one reason, Sicily might be a paradise in every point of excellence. This she can never be

unless she awakes to the fact of one fundamental cause of a country's greatness; and it will take fifty or seventy-five years for her to redeem herself after she once resolves upon the task. That same problem of national economic value is pressing for solution right now in the United States. Our president spoke of it in his last message. I expect to refer to it again in the following letter after seeing more of this same country. I am sure that my readers will agree with me that it is one of the vital questions that Americans have to solve or give up their right to the honor of being the most progressively progressive nation around the earth.

All night we sailed and early the next morning we passed through the narrow channel between Sicily

and out of the sea between Scylla and Charybdis, our boat dropped her heavy anchor in the quiet Bay of Messina. This is the city that gave the name to that fine variety of orange, the Messina. But it was misnamed. It is raised at Catania, south of Messina, which I reach in a day or two. It is shipped from Messina, or was, in the early days of exports, and so takes the name from its shipping point.

The vessel is to lie here till midnight and so I went down the flying steps of the ship's side, hired a boat and was rowed to land. With the biggest and best buildings first, the city is built right along the edge of the inward curving bay, and makes a fine appearance from the sea.

Hotel Trinacria fronts on the bay where I took luncheon and dinner, like any first-class tourist, saving the ship's cook that much, and glad for the change of diet. From the dining hall I could look out on the many ships lying in the harbor, ships for all ports of the Mediterranean. At my table a family of seven from Brooklyn and a man from Philadelphia took their meals, and I felt as though I was in good company in a strange part of the world.

On Sunday He Takes His Own and His Neighbor's Family Out for an Airing.

and Italy, where Scylla and Charybdis are said by mythology to sit enthroned in the sand. Scylla is now a modern town on the mainland of Italy, on our left as we pass through the strait, and Charybdis must be the ugly sand bank which thrusts its nose out into the sea on our right, which is from the northeast corner of triangular Sicily. I wonder now if the Romans did ever really believe in this fable and if sailors did lose their lives here while listening to their singing. I heard the same song, or imagined I heard it, as the little wavelets washed upon the bank, ran over the pebbly beach and back again into the sea. I can easily see how superstitious sailors, losing their ordinary skill in maneuvering their ships, and believing in fate anyway, could be dashed upon one or the other of these treacherous points in this narrow channel, at night or in a storm.

Just as the big round red globule of sun came up

But Sicily is off the beaten path of tourists. The jolly companies of English, German, and American travelers who are seen everywhere during the season in Switzerland or Italy, never get so far as the enchanted isle guarded by Charybdis and haunted by Polyphemus. The cruise along the Levant, to the far East, to Turkey and the Holy Land and Egypt, as also Greece, is too far for the two-month summer traveler.

At nine that night I returned to the seaside to go aboard my ship. It was not far out in the bay—I could have swum easily to the ship, but it would have been dangerous to do so. I might have been run down by a launch or become tangled in refuse dumped into the sea. The little boats that clamored to bring me in to the shore had all put in for the night. The *Letimbro* had completed her unloading and finished taking on her cargo. She was lying quietly there, but turned

end for end by the tide that had come in during the evening. Up and down the dark wharf, in and out of the shipping sheds, nearly stepping off into the sea at times, I ran the entire length of the bay, calling for a boatman. No one answered me. I swung myself down from the planking and examined each boat as it lay rocking, and as the ever-moving waves lapped them, now on one side, now on the other, but found them all securely chained and locked. What would have happened to the boat if I could have got one loosened, after it had taken me to the vessel, I need not conjecture. It might have been lost on the high sea, but it is not probable, for the tide here has but little power to steal away anything floating upon it in the secluded bay, and I think I could have fastened it to the floating freight boat by the side of the vessel. The boatman, knowing the cause, would not regret its use under such circumstances.

Then I went back into the town, calling out for a boatman, in English, in French, and in Italian, and before long a man came running at the top of his speed, saying, "Yes, I'll take you all out." He had heard my three different calls in three languages and thinking it was a party of three or more who wished to be carried out to the boat that he knew was to sail at midnight he was eager to get "us all" into his own boat before other of his competitors came down. He took me "all" out, but it was only one fare he received when he had deposited "us" on the *Letimbro*, that not long after raised her anchor, whistled her signal, and steamed away for the harbor of Catania and grapes, down along the coast near Syracuse.

All Rights Reserved.

AN APPROPRIATE NAME

J. C. FLORA.

A SHORT time ago I was walking along the street of the little town in which I live, when I noticed a new sign on the window of a building in which a restaurant was formerly kept.

I had previously learned that the man who owned the building and had been running the restaurant expected to close his business and had rented the building to a saloon man. Hence I was not surprised to see the sign changed. But the thing that especially attracted my attention was the name that had been given to this new saloon. The name was this, "Hog Pen Bar."

After all, the name is very appropriate. When you turn a hog out of the pen, one of the first things that he will do is to wallow in some mire. So it is with those that visit the saloon often,—they come out and wallow in the mire.

In this respect, then, the saloon is like a hog pen, but in most respects it is much worse, for the hog that wallows in the mire can be washed clean as be-

fore, but not so with the poor victim of the saloon who is wallowing in the mire. You can't wash the stain from his character, you can't wash away the anguish from the soul of his broken-hearted wife; you can't wash away the cries of his poor little helpless children who are shivering with cold and perishing with hunger; no, you cannot wash the misery and wretchedness from the drunkard's home; nor the shame and disgrace from the character of the man who sold him the drink; nor the responsibility from those who voted to grant him the license to engage in destroying the characters of men, breaking the hearts of women and blighting the lives of children.

Oh, when will the people of our boasted Christian nation awake to the awfulness and blackness of this traffic!

Some say it cannot be stopped. It can be stopped and will be stopped just as soon as the Christian people of the world say, "It must be stopped."

"Then will virtue take the place of vice in every human heart. Then will every aspiration be for something higher and nobler."

Clovis, N. Mex.

MAKE-BELIEVE.

Let's dream, like the child in its playing;

Let's make us a sky and a sea;

Let's change the things 'round us by saying

They're things that we wish them to be;

And if there is sadness or sorrow,

Let's dream till we charm it away;

Let's learn from the children and borrow

A saying from childhood—"Let's play."

Let's play that the world's full of beauty;

Let's play there are roses in bloom;

Let's play there is pleasure in duty

And light where we thought there was gloom;

Let's play that this heart with its sorrow

Is bidden be joyous and glad;

Let's play that we'll find on tomorrow

The joys that we never have had.

Let's play that regret with its ruine

Is banished forever and aye;

Let's play there's delight but in doing;

Let's play there are flowers by the way,

However the pathway seem dreary,

Wherever the footsteps may lead;

Let's play there's a song for the weary

If only the heart will give heed.

Let's play we have done with repining;

Let's play that our longings are still;

Let's play that the sunlight is shining

To gild the green slope of the hill;

Let's play there are birds blithely flinging

Their songs of delight to the air;

Let's play that the world's full of singing.

Let's play there is love everywhere.

—J. W. Foley.

"WHILE we are deliberating on the time when we are to begin, the time for action is lost."

MYTHS AND THEIR ORIGIN

"THERE are stories," said Sir Philip Sidney, "which can draw old men from the chimney corner and children from their play." It is not the material things but the immaterial that move us most profoundly. It is truth, beauty and goodness that can drag men out of saloons, make them abandon gambling hells, compel them to drop nefarious schemes. Then tell us a beautiful story, sing us an enchanting song, paint us a lovely picture, show us a divine ideal and we will follow you to the ends of the earth; such things can be claimed for the myths.

Myths are the spontaneous and imaginative form in which human intelligence and human emotions conceive and represent themselves and things in general.

They are the psychical and physical mode in which man projects himself into all the phenomena which he is able to apprehend and perceive. Myths are the earliest form in which the mind of heathen people recognized the universe and things divine.

In the relics of antiquity we have abundant proof that the material things alone were not uppermost in their minds. "God did not leave them without a witness at any time, but caused the invisible things to be shown by those that do appear," and among the most savage races there was always this feeling of the "All Father" within their hearts, and this striving after the "Divine" was shown through stories and the mysterious worship of nature. Some one has defined myths as a far-away voice calling after God.

The origin of myths in their essential elements consists in the personification and animation of all natural phenomena, as well as all dreams, illusions, and hallucinations of the mind. Through this feeling of the mysterious in everything primitive man took the things of nature and made of them gods, making of all nature living beings powerful enough to bring harvest or famine, calm or storm, sickness or death, trouble or disaster.

Myths are powerful in directing the emotions, and in training in courage, real manliness, respect for the body, reverence for nature and a quick feeling for the beauty and wonder of the now dimly understood mysteries.

We must not, in teaching the myths, be didactic nor overload them with interpretations, for the story is naturally the chief interest to the child.

Teachers of young children know the value of myths in the schoolrooms, for they always have a deep and hidden truth which the children appropriate. They give the teacher an opportunity to emphasize the virtues, for as Froebel says, "Emphasize the virtues and the vices will flee away."

Oftentimes a story told of an honest boy or girl will bring forth the truth from your pupil.

Myths have survived their primitive meanings and

are the cradle songs of literature. Many of the Aryan myths are sun myths; they generally showed that "Day" triumphed over "Night" and "Good," which is Light, over "Bad," which is Darkness. This we find is the meaning of "Little Red Riding Hood." She was the twilight folded in a scarlet cloak and sent out by her mother Day into the woods; while there she was met by the Wolf, which means Night. She was eaten up by the wolf as day is swallowed up in darkness. Some of our best educators think that myths should not be given children under ten years old. Their opinion is that it trains the imagination too much, makes the children dreamers and idealists and has the tendency to make them untruthful. That may be so, but none of us have enough imagination nor enough ideals in our lives. Those people that have "done things in life for the betterment of humanity are those who have 'seen visions' and 'dreamed dreams.'"

Myths may be divided into: 1. Pure myths, of which Jack and Jill, "The Ugly Duckling," and Red Riding Hood are good examples. 2. Historical myths, such as The Iliad, The Odyssey, the Idylls of the King, Vision of Sir Launfal. 3. Nature myths, such as Clytie, How Daphne Became a Tree, The Discontented Pine Tree.

Only those pieces of literature live that have made a universal appeal to human nature, so that literature not only helps to mold civilization but each individual. As it is through literature that we receive our noblest and best thoughts, it is to that we turn to gain our best instruction for children. It is not enough to tell them of their duty and love to be shown toward their country, their love for parents and each other, the right ideas of truthfulness, kindness, and unselfishness, but these beautiful truths can best be carried home through the avenue of story and poem. This scattering of sublime thoughts of great-souled writers tends to make the world less selfish, for they help to make each one more sympathetic and lenient towards others and to give one a broader influence and outlook into life as it really is.

"Over and over again,
No matter which way I turn,
I always find in the Book of Life
Some lessons I have to learn:
I must take my turn at the mill;
I must grind out the yellow grain,
I must work at my task with a resolute will,
Over and over again."

—The Ohio Teacher.

DR. HENRY SMITH WILLIAMS ON THE EFFECTS OF ALCOHOL.

AN important thing for anti-saloon people to remember is that there is no point of view from which the drinking of intoxicating liquor as a beverage is defensible. There is no ground that the defender of the saloon can hold for one moment in the face of

the truth. If any saloon advocate has ever presented an argument which seemed to you sound or reasonable, it was because you did not know the truth. The one great thing, therefore, is to know the truth, "and the truth shall make you free"—free to assert without hesitation that the beverage use of liquor is an unmitigated evil, and free to answer every plea that the saloon advocate can advance.

Let us illustrate this. In the August number of *McClure's Magazine*, Professor Munsterberg, a member of the faculty of Yale University, the very ablest apologist that the liquor beverage users could find anywhere, made a plea for moderate drinking. Even he admitted that the American saloon was an accursed thing and ought to be abolished; so that even the greatest of all advocates of moderate drinking is an anti-saloon man. But this scholarly writer, without having taken the pains to inform himself on the actual scientific facts, held that in limited quantities intoxicating beverages produced a state of mind or excited emotions which had given to the world some of its choicest possessions in literature and art. He endeavored to show that a people who abstained entirely from the use of liquor as a beverage would not be so productive of the things which make life desirable as would a people who moderately indulge in such beverages.

Much that he said was stale and commonplace, and had been successfully contradicted over and over again. But he said it in a new way—in a very charming and attractive way, and it was caught up by the liquor people and by the average newspaper and printed and circulated throughout the country, and many a friend of the anti-saloon movement felt that the cause had received a severe jolt. *McClure's Magazine* was set down as an enemy and thousands of bitter letters were sent to its editor by temperance people.

But *McClure's* has redeemed itself. If it ever had any idea of aligning itself with the liquor forces it has seen a great light. But it probably was on the right track from the start. By opening its pages for the liquor people to make the very strongest presentation of their case that could possibly be made, it paved the way for the complete and overwhelming refutation of the only claim seriously made for the moderate use of intoxicating beverages by the greatest of its champions.

In the October number of *McClure's*, two months after the Munsterberg article appeared, Dr. Henry Smith Williams, a man whose scholarship is of the highest rank, in a masterly article sets forth a series of scientific experiments bearing directly on the effect on the human organism of so small a quantity as a single glass of beer or wine a day. Anyone who carefully reads the doctor's description of his patient and careful experiments and their results cannot get away

from his conclusions, which he sums up as follows. He says:

"I am bound to believe, on the evidence, that if you take alcohol habitually, in any quantity whatever, it is to some extent a menace to you. I am bound to believe, in the light of what science has revealed:

"1. That you are tangibly threatening the physical structures of your stomach, your liver, your kidneys, your heart, your blood vessels, your nerves, your brain.

"2. That you are unequivocally decreasing your capacity for work in any field, be it physical, intellectual, or artistic.

"3. That you are in some measure lowering the grade of your mind, dulling your higher æsthetic sense, and taking the finer edge off your morals.

"4. That you are distinctly lessening your chances of maintaining health and attaining longevity.

"5. That you may be entailing upon your descendants yet unborn a bond of incalculable misery."

In the December number of *McClure's*, Dr. Williams treats of "Alcohol and the Community" with the same careful regard for scientific accuracy. Step by step he establishes the truth which he summarizes in conclusion. Referring, at the close, to the statements he has drawn from official and scientific authorities in this country and in Europe, he says:

"They give secure warrant for the belief that at least one-third of all the recognized pauperism in the most highly civilized communities of Christendom results from bodily and mental inefficiency due to alcoholic indulgence.

"A similar correspondence of testimony shows, as we have seen, that the same cause is responsible for the mental overthrow of fully one-fourth of all the unfortunates who are sent to asylums for the insane; for the misfortunes of two-fifths of neglected or abandoned children; and for the moral delinquencies of at least half of the convicts in our prisons, and of not less than four-fifths of the inmates of our jails and workhouses.

"We have previously seen how alcohol adds to the death roll through alliance with all manner of physical maladies. Did space permit, it might be shown how largely the same common enemy is responsible for suicides and sudden deaths by accident in many lands, for the universal prevalence of unspeakable diseases with all that they may imply, and for a large proportion of such cases of marital infelicity as find record in the divorce courts.

"But these, after all, are only minor details within the larger scheme of human suffering already outlined. The insane, the criminals of various types, and the recipients of charity make up the great mass of abnormal members of the body-politic whose unfitness receives official recognition.

"Let it be particularly borne in mind that the conclusions just presented as to the causal relation of

alcohol to the production of each of these abnormal elements of society are as far removed as possible from mere sentimental estimate or pessimistic guesses. They are inductions based on careful surveys of evidence. Dealing with matters of great complexity, they are subjects to a good deal of latitude, for reasons that I have given; but they are sufficiently precise to serve the purpose of reasonably secure scientific hypotheses. Considered as gages of the misery caused by alcohol, our percentages are utterly inadequate, to be sure.

"There is a vast host of victims of alcohol that cannot thus be classified, as a moment's consideration will show.

"For every individual that dies prematurely of a disease directly due to alcohol, there are scores of individuals that suffer to a lesser degree from maladies which are wholly or in part of the same origin, but which are not directly fatal.

"For every patient that suffers complete mental collapse as the result of alcoholism, there are scores of patients that are victims of epilepsies, neurasthenias, neuralgias, choreas and palsies of alcoholic origin.

"For every criminal that alcohol sends to prison, there are scores of persons whose moral delinquencies, induced or emphasized by alcohol, are not of the indictable order, yet are a source of suffering to their friends, and a detriment to humanity.

"For every incapable who, weakened by alcohol, acknowledges defeat in the life battle and openly seeks alms, there are scores of individuals that feel the pressure of want in greater or less degree because the money that might have supplied necessities and luxuries has gone for drink, yet that strive to hide their indigence.

"But the members of all these vast companies of sufferers lie without the field of the statistician. They have no share in the estimates that have just been presented.

"As we view this joyless pageant, the vast majority of its members impelled by a power they loathe yet must obey, a realizing sense comes to us of the tyranny exercised over humanity, generation after generation, by this arch enemy of progress."

Anyone who wants to satisfy himself that these conclusions of Dr. Williams are based on sufficient evidence—evidence that will stand any test that can be suggested by the most intelligent friend that the liquor traffic can produce—should procure the October and December numbers of *McClure's Magazine* and read the articles for himself. They are the most powerful and telling blows that have been dealt to the delusion that moderate drinking is harmless.—*The Illinois Issue*.

OSIER CULTURE.

THE fact that a Chicago merchant recently advertised in German trade papers for a million willow

clothes-baskets, looks as if this country is neglecting a profitable industry. Why shouldn't we Americans grow enough willows for our own basket needs? The climatic conditions here are as favorable as in Germany, and many of us have places on our farms where willows would thrive if planted.

Willow (or osier) cultivation is not difficult, and profits are usually good. But up to the present time very few Americans have taken hold of the matter in earnest. The Germans handle the business well. They have industrial schools where basket weaving is taught. Many of these schools grow their own willow rods, cut them, and peel and prepare them for use. To the mutual advantage of both pupils and proprietors, arrangements are made to allow pupils to work part of the time in the "holts," as the willow fields are called, belonging to the schools, and in that way earn enough to pay their tuition and board.

There are a number of willow-ware manufacturers in the United States, but only about one-tenth of them grow their own stock, although they assert that the home-grown rods are equal to the imported.

Good holts pay a profit the first year, though the profits of later years are much greater. The average price of unpeeled rods last year was about one and a quarter cents a pound, and of peeled rods about seven cents. A well-managed willow holt should average 2,500 pounds of rods to the acre yearly, and the cost of growing and harvesting the crop is comparatively low.

Selection of soil: To make osier holts most profitable such soils should be selected as can not be otherwise used to advantage. Very poor soil, however, should be avoided. The best soil is a fresh, black sand, but even a heavy, compact loam, or rich but sour meadow land, which produces the poorest quality of grass, is acceptable. The situation ought to be low, level and naturally moist. The osier will prosper, however, in a somewhat dry soil, in which the shoots will not only be smaller, but harder, tougher and more compact and durable. The best situation, when the object is free and rapid growth, is along the banks of rivers and brooks. Drained marsh land is often used.

The proper planting distance is about 9 x 21 inches apart. Several varieties are grown. A holt, when once established, is good for about fifteen years, and should then be renewed.

Instructions for the growing of basket willows are sent out by the Forest Service, United States Department of Agriculture, Washington, D. C., upon request. The service is devoting special attention to testing every known variety of basket willow in order to find the best varieties for home growers. In the early springtime cuttings from all approved basket willows are sent gratis to applicants who desire to establish willow holts.—*Farm Journal*.

Nature Studies

GLOBIGERINA OOZE

N. J. MILLER.

ABOUT Globigerina ooze is woven a bit of serious discussion. Huxley and Ernest Hæckel started the train of philosophical thought. Huxley, especially, argued that the stickiness of the ooze, a deep sea mud, was due to living masses of protoplasm, which was in the past, and would be in the future, the origin of life upon earth. He called it bathybius and believed it "a vast sheet of living matter enveloping the whole earth beneath the seas." He, as well as some small and large philosophers, was certain it was the bridge between the inorganic and organic world. Upon it was the hope of those believing in abiogenesis rather than biogenesis, in spontaneous generation rather than in the dictum, "All life from life." D. F. Strauss (1872), a powerful thinker, made bathybius the basis of his negation of the supernatural, a work entitled, "The Old Faith and the New." His entire anti-christian philosophy rested upon Huxley's Bathybius Hæckelii. About that time and after the English ship, "Challenger," made deep-sea dredgings of the ocean, carefully charting its contour, life and deposits. The microscopic examination of the sea mud, or ooze, proved Huxley's Bathybius Hæckelii to be simply a "Complex mass of slime with many foreign bodies and debris of living organisms which have passed away. Numerous minute living forms are, however, still found upon it." Since that time deep sea mud, Globigerina ooze, has been well understood and Bathybius Hæckelii has taken "its place with other ghosts of not blessed memory in the history of hasty speculation."

Globigerina or Foraminiferal ooze is simply a deep sea deposit consisting largely of nearly or altogether microscopic animals or their shells. The animals principally belong to the group known as Foraminifera, gelatinous forms having calcareous shells enclosing the central protoplasm, the outer mass forming intricate interlacing threads. The most common forms belong to the Globigerinæ having chambered shells. Other organic matter and pumice are found in the ooze though from 30 to 90 per cent Globigerinæ.

In the modern ocean the Foraminiferal life is very

great—countless millions are on the surface of the sea in calm weather. Here as elsewhere death stalks relentlessly. The dead forms gradually sink to the ocean floor, where to the observer, if his vision were perfect enough, they would seem like countless drops in a gust of rain. In this way the ooze, the life and death of minute animals, is slowly accumulating. How long the ooze has been forming no one knows, though the geologist uses ages for his measuring rod. At the present rate of deposition thousands of years would be required to form deposits much less than a foot thick.

The chalk cliffs and beds of Iowa, Kansas, Texas

Foraminifera (diagrammatic).

and Europe, in some places many feet thick, are simply beds of former Globigerina ooze. Grind to powder a piece of chalk and view it under a microscope, there will be seen shells of animals almost identical with those forming the ooze on the bottom of the Gulf of Mexico and the Atlantic. These tombs mutely prove that the countries where they exist were once the bottom of deep seas, great arms of the Atlantic on both coasts. The seas must have been more than one thousand fathoms since the mechanical drifts in more shallow depths are so overwhelmingly more than the Globigerina ooze that the latter is lost sight of. They were less than three thousand fathoms since at a depth of twenty-five hundred feet the car-

bon-dioxide, increasing with sea depth, is sufficient in quantity to dissolve the calcium carbonate shells. Its attack upon calcium carbonate would not permit the ooze to collect on ocean floors below that depth, just as is obtained today.

It is an interesting fact that the Globigerinæ of the chalk cliffs differ very little from those forming the slimy gray mud at the bottom of our modern ocean. Though there are more than twice as many fossil species than those living now the same type of structure persists. Since the sediments forming the chalk cliffs were palpitant with life great portions of the earth have been lifted out of the waters, mountains have been built, river systems formed, valleys drowned, streams beheaded, mountain passes cut down great canyons worn out of the face of nature, nations born and decayed yet the chambered and perforated shells of the Globigerinæ of today have the same variety of pattern, shape, symmetry and beauty as those of the ancient seas. Thus they were as far back as can be traced in the geological history of the earth and the time to come, though long it may be, will perhaps witness little change in the form of shell and the intricate interlacing threads of protoplasm.

HUMOR IN ANIMALS.

EVERY young person who owns a dog or cat will agree with a writer in the London *Daily News* who insists that animals not only think and reason, but also have a keen sense of humor. We knew a fine exponent of this theory, a beautiful collie named "Jack." Dear doggie, he died of a good old age, with the love of all who knew him. He would "play wolf" with every indication of savagery and fierceness, with gleaming teeth and snarling jaws, and eyes that glared like the wild animal he was imitating. The rough tumbling he always received and the attacks of his human comrades in the game never deceived him for a moment. He knew it was all fun and play, and threw himself into the sport with all his heart. He thoroughly enjoyed the humor of the situation and rushed upon his antagonists with a perfectly assumed savagery, but he never forgot to be gentle even in the most exciting moments. Jack's sharp teeth and powerful jaws were ever kept for defense against his enemies, and never used to injure his friends. He had a wonderful brain, and often thought matters out in a way that was truly astonishing. For many weeks, for instance, he trotted out daily to receive the mail from the postman. This was easily taught him, and he was proud of the honor thrust upon him. It so happened that there was mail every day for a long time, and he and the postman became "speaking acquaintances." But one morning the postman passed by the house with no documents to hand to Jack. He went out to meet him as usual, and followed him a few steps in expectation. The postman

was absorbed, however, and paid no attention to the dog. Jack stopped in concern, waited a moment in deep thought, and then flew at the postman's heels, to that individual's intense astonishment and concern. The dog's master, fortunately, was a witness to the scene, and, thoroughly understanding the situation, came to the rescue by calling, "Give him something; he wants the mail; he thinks you are robbing us." Quickly the postman handed Jack a newspaper, and he in his turn, with the air of a conquering hero, carried the paper to his master, entirely pacified and content, and evidently very proud of his success. Thereafter the postman had something at hand to give to the dog each time he passed by the house, and there was never any further trouble, and in due time they became good friends.

From the article previously mentioned come the following facts concerning a kitten and her love of fun and frolic:

"I was once the possessor of a beautiful little Persian cat, with whom we used to play at times with ball games. She entered into these with great gusto, and sometimes when there was nothing stirring she would appear carrying the ball in her mouth. Then she would lay it at the feet of one of us who seemed inclined for a game, and, looking up with an arch expression, she would stand ready to begin. The slapdash explanation of acts like these as 'instinct' is, of course, ridiculous, though even in those cases where it does apply it is at best but a cover for our ignorance of deeper explanations.

"Now, play itself involves a certain sense of humor, but certain other manifestations were more precise. Kitty used to play on the balcony—this was in Paris—and when she wanted to come in she would stand on her hind legs and scratch fiercely at the window with an assumed look of excitement and alarm that reminded one of a caricature of Louis Wain's. When she entered I would generally take her up on my shoulder to hear her purr.

"One sunny day as I was reading I heard the familiar scratching, and, looking round, found her standing in her attitude of great anxiety. I went to the window and opened it, and she made a step forward, but when I tried to pick her up she turned around and ran up the balcony, looking behind her shoulder and with a laugh all over her face. She enjoyed that joke immensely."—*Selected*.

"THAT the ruthless destruction of forests, the heedless neglect of waterways, the reckless disposition of the public lands and the wild waste of mineral resources ought to be discontinued is admitted by everyone who is not financially interested in their destruction, neglect and waste."

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE DIVORCE EVIL.

SOMETIMES a great evil,—for a long time clearly recognized as such,—becomes so common that after awhile even the better class of people seem not only to countenance it, but even to approve of it. We have in mind now the divorce evil. When we think of its history we recall the familiar words of Pope on the insidiousness of vice:

"Vice is a monster of so frightful mien,
As to be hated, needs but to be seen
But seen too oft, familiar with her face,
We first endure, then pity, then embrace."

It is to be feared that when we express ourselves on the subject that it is not always with the ring of utter disapproval which should characterize our speech as Christians and as those who have at heart the welfare of our country. And when we are silent,—and most of us are silent on the subject,—our attitude is taken to be that of tolerance at least or maybe even of approval.

A recent issue of the *Home Herald* publishes the following from the pen of Mrs. William H. Taft, wife of our President-elect:

"If it were in my power, divorce would be stopped entirely. Of course, there are cases where separation might be legally granted, but there should be no remarriage allowed. The laxity of our divorce law is a menace to the very moral fiber of our nation. It is an appalling evil, and it seems to be on the increase instead of diminishing. I remember the time when one read of persons one never knew who obtained divorces, but now every one comes in contact with divorced people—in every class of society—one's own personal friends on every hand. It is countenanced by the so-called highest social circles, and it is made light of, and a woman, in many instances, is received with as much favor after she is divorced as she was before. Such conditions are shocking and are most demoralizing. Wherever and whenever I could do anything to influence legislators to make more stringent divorce

laws, I would do it, and I believe that every woman in America should feel the same way."

We honor the woman who thus bravely stands out against a popular evil, and we trust that her example may be the means of giving to some of us the moral courage we need to stand by our convictions. The evil is so widespread that if those who know it as such keep silent, the world will sweep on in ignorance to the shameful end it will bring.

GOOD ADVICE TO JEWS.

DR. EMIL G. HIRSCH, the eminent Jewish rabbi of Chicago, gave his people some wholesome advice during a service in the Sinai Temple not long ago. His theme was the "adaptation of religion to modern needs."

He made a general plea for all the Jews of the earth to unite for international peace. "If all the Jews of all the nations should work together for international peace, how far away would it be?" he asked. "There is a great opportunity of modern times which the Jews should grasp."

"Another is a settlement of the questions between capital and labor. The Jew is the barometer of civilization. Show me how a Jew is treated in any community and I will tell you the state of civilization of that community. If it could be said there is no Jewish house of commerce where provisions are not made for the workers, in excess of the economic demands of the day, our influence would be materially felt in settling the controversy between labor and capital. Some few Jews already take this advanced ground, let others follow."

Before concluding his talk Dr. Hirsch made an appeal to the loyalty of his hearers in behalf of the new Sinai institutional synagogue which has been under consideration for a year and plans for which were to have been made public before this time. He urged the building of the synagogue on the grounds that they owed it to the community and that they could not do their share in meeting the needs of modern religion without it. Dr. Hirsch is growing old, but he is alive to the demands that may be made upon his people when he is gone and he is anxious that they shall bear a noble part in the work of the world.

FOR THE EARTHQUAKE SUFFERERS.

JAN. 4, by unanimous vote, Congress appropriated \$800,000 for the earthquake sufferers, President Roosevelt by special message having asked that amount. This is the largest amount ever given to the stricken people of a foreign land by the United States or any other government. In addition, the battle ship fleet and any other necessary ships of the navy were placed at the disposal of the President in carrying out the relief work authorized.

This \$800,000 does not include the private contri-

butions from all over the country which swell the fund to stupendous proportions. While all the money given cannot make up for all the loss and suffering, it will do much in that direction and is our best means of lending aid and expressing our sympathy.

✻ ✻ ✻

NOTES ON THE GREAT EARTHQUAKE.

I WAS in Palermo and a longer time in Catania and Messina. In Messina, the hotel at which I stopped has now been totally wrecked, killing all the American and other tourists—so I read. The U. S. consul, upon whom I called, is also dead.

The people in these places were VERY good to me. My heart is sad at their great loss. The single funeral procession I *saw* there is now duplicated by 50,000 processions of lone journeyings to the other shore.

Beggar and aristocrat sleep alike—both under the debris—victims of the world's greatest horror.

H. M. SPICKLER.

✻ ✻ ✻

WON'T STAY LICKED.

BONFORT'S, the big liquor magazine, in its Philadelphia section (December 10, page 141), discussing the Anti-Saloon League, says:

"The constant and abundant optimism of the opponents of the liquor industry is the hardest thing to defeat. It is certainly very discouraging to lick a man who won't stay licked, but that is just the condition we are up against in this State. There is really very little chance of a local option measure passing the Legislature this winter, but this does not win the fight by any means, as the enthusiastic followers of this chimera say they will come back at us stronger than ever two years hence. And so they will, too, if their ammunition (money) holds out."

Yes, that's the most discouraging thing about the Anti-Saloon League—discouraging to its enemies—it won't stay licked. It absolutely refuses to quit fighting. And there will be plenty of ammunition to fight this thing out to a finish. There's no hope for the enemy in that direction.

The Anti-Saloon League is the united Church. The Church, as Superintendent Baker says, sometimes loses a battle, but never a war. This is war.—*Exchange*.

✻ ✻ ✻

THE SHADOW ON THE WALL

JOHN H. NOWLAN.

The clock had struck the hour of nine,
When at the muse's mystic shrine,
Secluded and alone
I sat. The January rain
Fell coldly on the window-pane.
I saw my shadow thrown
Upon the wall, and smiled to see
How little it resembled me.
To my intense surprise,

Its outline grew more bold and clear—
A human form was standing there
Before my very eyes.

Upon that form I wond'ring gazed,
Perplexed, bewildered, and amazed,
But ne'er the silence broke.

I questioned if it were a sprite
From the Plutonian shores of night
When thus to me it spoke:

"Thou sordid son of greed and pelf,
I am thy other better self,
By thee too long suppressed.
No man for self alone can live,
For self no man his life can give,
Nature will never rest.

"Matter you never can destroy
Though changed, she will it still employ
In varied shapes and forms.
The mould'ring vine will feed its mate,
Or aid to other forms create.

And when the raging storms

"Shall whirl the chilling sleet and rain—
When sweeps the awful hurricane
And yawns the deep abyss,
Though earth's foundation reel and shake,
The firm land quiver like a lake,
Nothing can go amiss.

"The crinoid with his fellows died
And sank beneath the restless tide,
Ere man this planet trod.
The ferns their fronded branches cast
Within the reeking foul morass,
For 'twas the will of God

"For mortals such as thou to store
In cavern deep, on ocean floor,
The energy of years—
Yea, untold ages, and unfurled
His boundless love to make this world
The choicest of the spheres.

"The coal that warms thy form tonight,
The oil that fills the room with light,
The stones beneath the walls,
That keep the elements from thee,
Prove that thy Father's love is free,
Heed thou his earnest calls.

"The past is gone, forever gone,
The future is thy hope alone,
So bow to his decree.
Go face the world for truth and right,
Live thou as he shall give thee light,
And he will care for thee."

The calm voice hushed. The form was still.
And as I watched I felt a thrill
Of fear my being shake.
I reached the outstretched hand to clasp,
My book fell from my nerveless grasp,
And I was wide-awake.

You say 'twas but an idle dream.
Perhaps, but it will ever seem
Reality indeed.
But 'tis not vain, if, false or true,
It helps us to begin anew
A better life to lead.

The Home World

TURNING CHILDREN INTO DOLLARS

LAST summer some Americans traveling in Italy stopping aghast at a sight that met them on the outskirts of Palestrina. A child of about six was plodding between a small quarry and an unfinished house, with each trip bearing on her head a large

stone for the builders. These stones averaged at least twenty-five pounds in weight, and the child could not lift them alone. One of the elders busy at the same task would poise the burden for her, and it would be taken off at the other end. The face under the stone was gravely uncomplaining; already the back showed a deep incurve. All the spring—the elasticity of growth—seemed crushed out of the little figure. The Americans were horrified. They put questions, protested, and did what they could to get the burden lifted.

Delivering Sweatshop
Work in New
York

Then they exclaimed to one another: "You don't see such things in America!" "Thank God, a child can't be treated like that at home!"

Not long ago a child of six walked down Avenue D, in New York City, carrying on her head a load of sweatshop "pants"—they are not trousers, at that price—weighing not less than twenty-five pounds. She had to walk several blocks with it and climb four flights of stairs, and when it was removed her work was only just beginning, for the endless buttons—twelve to a pair—were to be sewed on by the brown claws that gripped the bundle. She passed many Americans on her way, but no one noticed and no one was horrified. Several times a week she has trudged over the same route under the same weight, in this land where "a child can't be treated like that," without arousing any public indignation.

The New York law declares that no child under fourteen shall work for hire, and no child between fourteen and sixteen who cannot read and write simple sentences in the English language, and show that he has attended school one hundred and thirty days during the previous year: he must be of normal height and development, and his day is limited to nine hours. It is a just law—good for the present industrial conditions, however the future may improve on it. In the mills and factories it can be more or less rigorously enforced, but there is a vast field of child labor at home that this law does not and cannot touch.

To understand this, follow the six-years-old pants-bearer and her mother—whose load is thrice as big—up the four flights of their tenement, as I did, says Juliet Wilbor Tompkins in *Success Magazine*. An offer to help the little girl with her pack was introduction enough, and a few stray words of Italian established friendship on the long journey up. They are dark stairs, a skeleton of stone and iron, with walls of lurid pink and green, smeared and blotched and broken, and the stale air reeks of indecent poverty. Half naked babies crawl out into the hall to peer through the banisters at us; a careworn little girl of about seven is sitting on a step rocking a shrieking child, her little shoulders strained with its weight, but her face maternally patient. "Hello, teacher!" calls a child of school years—almost any woman visitor is addressed as "teacher" in the tenements. To the question, "Why aren't you at school?" she replies with a vague murmur about a sore finger, and a moment later she is vanishing with cautious speed down the stairs. At the same time a grimy little boy passes with a can that is obviously on

This Boy Longs for
a Chance to Go
to School.

its way to the saloon for beer—two broken laws exhibited in the space of sixty seconds.

The door of the apartment we are seeking stands open to the odors of the hall, and the owners, being Italians, smile shy welcome, setting out a chair, throne-like, in the middle of the main room, even while their hands are busy at the bundles; for they go to work at once, without so much as a preliminary stretch. Moments must be very precious in this household. The room is amazingly dirty. The light is dim, for the

An Average Messenger
Boy Who Works in a
Hotbed of Iniquity.

only window opens on an air shaft, if air it may be called that comes from that foul well. Adjoining is another room, a dark hole entirely filled with a bed—the inhabitants must get in over the foot. Lying on this, now, is a two-years-old, asleep, and a boy of about eleven with a flushed face and heavy eyes.

It looks suspiciously like measles, and the little girl, recognizing the word, nods

that that is probably the case; her miniature shrug adds that it cannot be helped—that life is all more or less measles and pants, and we must take what comes.

* * * * *

As things are, there is no help. So long as the law licenses the tenements for manufacture, and so allows the mother to bring the work home, the children will help her. Fifty thousand inspectors could not patrol the tenements sufficiently to prevent this: if it were tried, some small sentry would always sound the note of warning, and the official, on his arrival, would find only the mother working, while the little children would be playing innocently upon the floor.

Neither the mother nor little Giulia can speak English, so intercourse is limited until Maria comes home from school—a middle-aged little girl who falls to work with incredible swiftness, and who can “finish” as neatly and quickly as her mother. My presence is explained in a ripple of Italian, and from her I learn the short and simple family annals. The father is out of work—a faint shrug suggests that he is often out of work; the rent for the three rooms—for there is a still darker hole beyond occupied by two boarders—is nine dollars a month; her mother usually begins at five in the morning, little Giulia sews seven or eight hours a day, and she herself works from school until bedtime, an hour that varies from nine until half past twelve—good preparation for profiting by the day’s lessons! The family income averages between six and seven dollars a week. Pietro, now on the bed, works, too, when he is not sick.

Maria herself is thirteen, and can go to the factory next year,—she says it eagerly. She is undeveloped, heavy-eyed, nervously shrill at slight provocation, and her back has the tragic, elderly look of wizened youth. She has never had time to be a little girl. It is a discouraged, joyless household, and the baby tugging at her needle is as old as her mother. A little arithmetic shows that, after providing for the rent, from fifty to sixty-five cents a day remains for the living expenses of five people, irrespective of what the father and Pietro may occasionally contribute; and you will remember having read somewhere that the “economic efficiency” of five people cannot be maintained in New York at a cost much less than two dollars a day; that is, they cannot be nourished and housed for their proper welfare at a smaller expenditure. Looking at the tired faces and the undeveloped bodies of the children, you wish you had not done that sum; and how you wish that Pietro would remove his measled person from the pants!

When this latter wish is finally suggested to Maria, she confides to you that that is nothing—that, when Mrs. Rosini on the floor below had smallpox, she went on making flower and feather ornaments for the hair just the same for a week, till she got so bad they had to tell the doctor, when he took her away. I could go down and ask her about it myself if I doubted it; they were lovely ornaments—for ladies’ hair.

* * * * *

Worse than arrested development, out of the nervous strain of too much work in childhood come disorders, moral as well as physical. It has been said, with authority, “Idleness in young years is not so prolific of immoral and criminal leanings as is premature employment.” Premature! This baby of four smoothing violet petals is already earning, perhaps, fifty cents a week; and they tell of an infant of eighteen months being found assisting at passementerie-making by splashing its little hands in a bowl of glue and beads, the mother fishing out the latter as they became properly coated: and there was published, recently, the story of a woman and six children under eleven years of age who lived in a basement and for four dark and filthy years kept body and soul imperfectly connected by folding paper bags—from one hundred thousand to one hundred and fifty

Going Home from the Factory.

thousand a week, and the price going steadily down from seven cents a thousand to four cents.

According to Dr. A. S. Daniel, who has been for many years a worker among the East Side poor, the remedy for these conditions must be drastic— forbid the manufacturer to have any part of his work done in a tenement house. With all this manufacturing transferred to factories, which could be properly inspected, the child worker would necessarily be set free; school, day nursery, and public playground must attend to his case when the mother is obliged to go. And now comes the inevitable protest—the poor widow who cannot live without her children's earnings! She exists, without a doubt,—we have just seen her in the paper-bags family; but do you realize what also exists, a product of this child-labor system? It is the parasitic father.

Both of these homes visited, the miserable one on the fourth floor and the more cheerful one on the third, typify the evil done by child labor. Maria's

father was earning good pay and doing well by his own until he fell ill, six years ago. To tide over, his wife took in sweatshop work, and thereby Pietro, senior, learned the fatal lesson that it is easy for women and children to earn money, and that the streets offer more attractions than the soap factory, to a convivial spirit. At intervals he obtained jobs, but his skill in losing them was yearly increasing. His wife had given up remonstrating: it was more profitable to bend steadily over the work.

Mrs. Rosini's husband was made of better stuff and worked faithfully in a paper-box factory; but the evil of child labor was hampering him in another way—that of competition in his shop, for it is an economic fact that the cheap labor of children reduces the wages of men. The children of others were competing with Rosini, and so his children had to work. That sunny room, gay with artificial flowers, was as much part of an injurious system as the dark and dirty hole on the floor above.

THE LAST WORD

HATTIE PRESTON RIDER

MABEL needn't think, because she lived in Martinsburg when she was a chit of a thing, that she knows more than I do about the folks that was born and raised there! For that matter, I can give her pointers on some of her own relations, and not so very far back, either!" The speaker's eyes flashed vindictively through angry tears. "I was bound to have the last word!"

Mrs. Morehouse ran her needle several stitches along the hem she was basting. Her brows puckered for an instant, but smoothed serenely before she lifted her eyes to her visitor's face.

"Things past and gone do get set clearer in the minds of us older ones, I think, myself," she answered, pleasantly. "Children seem to be more interested in up-to-date matters, nowadays. What was it you and Mabel disagreed so about, Miranda?"

The visitor bit her lips, a dull flush creeping into her cheek.

"I was telling Bertram that old Deacon Potts' first wife was a Mercer, and his second a Brown," she said. "That child caught me up in a minute, declaring that Mis' Potts who was a Mercer was a particular friend of her mother's, and she remembered settin' close between 'em with the mourners at the deacon's funeral. I wouldn't a-minded so much, if Bertram had took any interest in it. But he only said: 'Oh! bother! Why can't you let it go? Who cares who old Potts married, anyway!' But,"—tossing

her head—"I wouldn't run off the track that way. If I don't stand up for my rights, nobody will!"

"Why was it that you wanted to decide?" Mrs. Morehouse asked, bending to her hem to hide the twinkle in her eyes. "Was there any particular reason?"

The visitor plucked uncomfortably at her apron. She always squirmed, figuratively speaking, under her friend's direct way of getting to the bottom of things; yet as invariably returned to her for sympathy.

"I don't just remember what we were talking about, when the discussion started," she admitted. "But"—doggedly—"I don't see what that has to do with it. I guess I know. You're siding with Mabel, I s'pose,"—grimly.

"I'm 'siding' with you and Mabel both, for Love's peaceful sake," Mrs. Morehouse laughed, good-naturedly. "You don't want me saying unkind things about Bertram's wife, do you, Miranda?"

Half the cloud went off the other's forehead.

"I know Mabel is a good girl," she acknowledged; "but I do tell you, Sarah, it is awful exasperating to be contradicted when you're positive that you're right. You don't know how set Mabel is in her way!"

Mrs. Morehouse drew down the corners of her mouth in a brave attempt at seriousness.

"Miranda," she said, "you might tell her the story of the old woman and the scissors."

"What was that?" Miranda asked, curiously.

"Why," Mrs. Morehouse answered, "there was once an old man and his wife, both very firm in their opinions, who disagreed over the pruning of a certain currant-bush. The man insisted that a knife was the better implement to use, the woman, that a pair of scissors did the work more satisfactorily. After a heated quarrel, in which the arguments narrowed down to simply shouting: 'Knife!' 'Scissors!' at each other, the man in a rage threw his wife into the cistern. As the water closed over her head, smothering her cries, she stretched up her arm with two fingers of the hand rigidly extended, still signaling what she could no longer say: 'Scissors!'"

The visitor laughed, shamefacedly.

"Yes, but you see, Sarah, if she honestly knew she was in the right——"

The sewing slipped from Mrs. Morehouse's lap.

"That's just the point, Miranda," she interrupted, suddenly dropping her light tone for one of eagerness. "There's only one 'right' *worth* standing up for, and that's *the* right. It sorts out our 'rights' from our 'wrongs,' which is more than we generally do, with our little, narrow, near-sighted way of looking at things, and it always brings us up a-top of our troubles. And, as I tell Ezra, after you've once stated your opinion fairly, constant repeating weakens it, because that sounds as if you had to keep on arguing to make *yourself* believe it, after all."

Miranda rose, pulling her bonnet into place.

"I don't know but that's so," she said, doubtfully. "I'll think about it, I believe. If Mabel wasn't so positive, it would be a lot easier. And I'm just certain about the widow Potts being a Brown."

Half an hour later, soft footsteps pattered across the kitchen floor, and the elder Mrs. Morehouse, pink-face with her labor in the flower-garden, came into the sitting-room. She carried a towel in one hand, and a big bunch of roses in the other. Sarah looked up. "Grandma," she asked, suddenly, "do you remember what was Aunt Israel Potts' maiden name?"

"M—m—m—," replied Grandma, reflectively. "Mis' Israel Potts? You mean his second, I s'pose. Aren't these Crimson Ramblers perfectly beautiful, Sarah? I counted thirty buds on one cluster. Deacon Potts' second wife! Well, now, it has slipped my mind! If you really want to know, though, it's probably in your great-uncle's old family Bible up stairs. Why?"

"Oh! nothing," Sarah answered. She got the old Bible, though, and looked up the record. The first Mrs. Israel Potts, who died shortly after marriage, was in truth a "Mercer," her mother's own cousin,—a fact which had escaped the vaunted memory of Miranda Perkins. The second, surviving the deacon, was named *Mehitable Seraphina Jones*.

The Children's Corner

THE GIANTS OF EVERY DAY.

LOOKING up from the picture book he was eagerly reading, Teddie exclaimed: "I'd like to be 'Jack the Giant Killer' and frighten all the old giants away!"

The other children laughed heartily at Teddie's choice, and Bob remarked: "There never was such a man, Ted. It's only a foolish story, you know. There aren't any giants."

Teddie looked disappointed. This was taking away the charm from his book.

"There are giants, aren't there, Uncle John?" he asked, throwing down his book and coming over to his uncle's armchair.

"Giants, Teddie?" he repeated, gravely: "Yes, my boy, there are a great many giants all around us, and we have to learn to be good fighters if we do not wish to be overcome by them."

Teddie beamed triumphantly, but the other children opened their eyes in wonder, and Alice asked, "What do you mean, Uncle John?"

"My dear Alice," he answered, "there is one dreadful giant, named Intemperance, that is harder to conquer than any that the famous Jack ever vanquished; and there is another, called Selfishness, a terrible monster, with nine heads; and a third named Cruelty; and a fourth named Dishonesty. We might mention ever so many more."

"Oh, that kind!" said Bob. "I meant there were no real giants."

"Well, these are fairly real giants, Bob. Did you ever try hard to fight one?"

"I don't believe I've tried as hard as I might, sir," he confessed frankly. "I think my worst giant is Selfishness," he added, slowly.

"And mine is Idleness," whispered Alice.

"What is mine? It must be Quick Temper," admitted Nellie, blushing over memories of recent defeats.

Little Ted looked perplexed. They were talking in riddles.

"Has everybody got a giant?" he ventured.

The others laughed at this, but Uncle John answered, kindly: "I'm afraid so, Ted. Anything that keeps us from doing good is our giant that we have to fight. Have you one, my little man?"

The child's face flushed as he replied, after a moment's hesitation: "Yes, there are lots of them. There's my cross words to the nurse this morning, and I disobeyed mama, and I broke papa's penknife that he told me not to touch, and I, oh!"—there Ted stopped suddenly and hid his face on uncle's shoulder.

The children didn't laugh this time.—*Little Chronicle*.

The Quiet Hour

THINGS THAT SPEAK

D. D. THOMAS

IN the cemetery at Eagle Creek stands a gravestone that marks the resting place of a fond father and mother who died years ago. When approaching, one notices that it leans, owing to a faulty foundation, seemingly in an attitude of inquiry. The imagination need not launch out very far to hear it speak something like these words: "When are you coming this way? When will you lie down here to rest? See how silently these sleep. You say it is a dark and uncertain way. None return that go down its valley.

"It *was* dark but it has been lighted. That you must come is unchangeable, but that it is dark as your imaginations picture it, is not true since the day the angel sat on the stone at the risen Master's grave."

Well, at a grave is a good place to begin to meditate. From it arises hope, and at the giving up of life one remembers with gladness that death is conquered. It does not hold souls in prison any longer unless they forfeit that life. "The strength of sin is the law," but the victory is obtained through something stronger than the law.

In "As You Like It," one reads,

"And thus our life, exempt from public haunts,
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything."

That our great English author should have placed the most sacred form of intercommunication in "Nature's teaching" "in stones" is not so strange when one comes to consider.

There are found the staying qualities. It is firm, unyielding, immovable. It is impenetrable to anything ordinary, and aggressively teaches the judgment of God, to which the Savior alludes, speaking of it as "grinding them to powder."

The abiding qualities are there, not to be obliterated by time. Then, too, it is made to appear more sacred by Christ being spoken of as the Rock which supplied the Hebrews in the wilderness. The church is the pillar and pedestal of the truth, that which makes us free. Yes, "sermons in stones" is just the way to put it.

In them is embedded the history of the past. Animate and inanimate growths, held in death, declaring as loudly as any articulate voice could tell, "So shall ye likewise perish." But, with the Christ-rock voice, not encysted and petrified through all the ages, but revitalized and glorified through all eternity. To him who has not heard, its speech is as that of a little stranger child, not understood. But when one learns to hear, it is that same child voice in its parent's ear,—plain and intelligible. Not having talked one does not understand. So it is in nature, one must converse that he may understand.

See the leaf expectantly spread itself before heaven, teaching prayerful service and patient hope. And the flower opening its chalice to be fed and watered, telling that life and fruitage come from God. God's blessing to "the lily" beautifully "arrayed" and perfectly adorned teaches one the power there is in simplicity. The plant expands and lengthens itself, showing a yearning toward the Father who strengthens and makes it storm-enduring. It teaches the brotherhood of all nature. Not simply living to enjoy and propagate itself, but it has a broad, unifying concern for all creatures. It yields life to all, as the Christ did in a much higher sense. The dying that others might live yes, the luscious fruit is beautified by entrancing colors, as if inviting to partake, seeming glad to die that it might become a part of us, a basis of our life.

If one draw toward it in care, how it expands and improves and enlarges its fruit. An inverted parallel is taught by one authorized to speak, "Casting all your care upon him for he careth for you." If the fruitage does not enlarge, one is to blame. The "husbandman" does his part.

That nature speaks is not farfetched or imaginary. The sacred writings abound with references to it. The Father seems to have so ordained it. The Master once declared that if the people cried not out in praise to him, the "very stones" would. Job speaks of the time when "the morning stars sang together," and David says, "The heavens declare the glory of God."

The blood of Abel cried unto God from the ground

for vengeance. The blood that speaketh better things than that of Abel crieth not out for vengeance. It was given an offering for sin. The sins of his enemies were reached by it and obliterated. The blood of Abel was spilled by force, he gave it unwillingly. But the other was the offering of a willing mind. It speaketh better things.

And so one might continue. The days and the nights, the ever-changing seasons, the dreams, waking or sleeping, the rivers and the seas, the mountains and the valleys, and the hills and the lakes are things that speak. And their voice sounds down through the ages and echoes loudly where the great white throne stands at the judgment day, the retributive angel crying, "I have spoken and ye have not heard, I have declared and ye have not rejoiced."

THE BIBLE

FIRST, the Bible is the Book of Righteousness. It is the one book in the world for the tried and suffering man who finds it infinitely difficult to maintain self-respect and integrity amidst the manifold seductions of our modern life. In the Bible he finds the inspiration to renewed effort after righteousness, examples, precepts, promises, prophecies, helping him in his struggle, nerving him to conflict and assuring him of victory.

Second, the Bible is the Book of Faith, speaking to us of the reality of things unseen but eternal, planting within us the desire to hold on to the Invisible, nurturing that desire, assuring us of the eternal triumph of goodness, telling us that goodness is alone immortal, bidding us, in spite of "reason" and in the face of "facts" cleave to goodness as the one strong thing here below, and, in trumpet tones that stir the spirit that is within us to a faith divine, proclaiming that wealth and honor, prospects, ambition and conquest, and the world itself, are well lost if by reason of the sacrifice we have saved our soul alive.

Third, the Bible is the Book of Christ. The dominant note of all theology and criticism today is its demand for Christ. "Back to Jesus" is the watchword upon every lip. Renan saw that the reform of Christianity consisted in suppressing the graces which our pagan ancestors have added to it, to return to Jesus as he was. And all our theology today which has in it the promise of immortality takes up the cry, "Back to Jesus as he was!" It is the Christ of Galilee and Capernaum, the Christ of Olivet and Bethany, the Christ who had not where to lay his head, who loved to call himself the Son of Man, who now fills the thought of his Church; and the Book which is the Book of Christ is as immortal as himself.—*Charles F. Aked, D. D.*

"SECOND thoughts may be best, but they are often too late to be of any use."

GRATITUDE.

SHOW us a man who responds to the Lord with the same readiness with which some people say, "Thank you," when a small favor is bestowed upon them, and I will show you a man who not only greatly enjoys his Christian life, but who is whole-hearted in the service. A heart filled with gratitude is a heart filled with goodwill, sympathy, love, sunshine and cheerfulness. A heart filled with gratitude means a soul filled with a desire to do everything possible to repay and advance the interests of the object of gratitude. We teach our children politeness, and at least a show of gratitude toward those who show them a kindness. But how many of us teach our children to be grateful toward him who gives us all we have? How many of our children have learned prayers which in substance mean something like this? "Lord, we thank thee for the air we breathe, for our daily food and clothing, for houses and homes and friends and health and freedom to worship thee as thou in thy Book hast commanded us." How many of us often pray such prayers ourselves? How many of us act as if such prayers actually came from the heart? There is no need of becoming alarmed for the fate of any one whose heart is filled to overflowing with gratitude and praise toward an all-wise and ever-loving heavenly Father for unmerited blessings bestowed.—*Gospel Herald.*

UNKNOWN ANGELS.

She walks unnoticed in the street;
The casual eye
Sees nothing in her fair or sweet;
The world goes by
Unconscious that an angel's feet
Are passing nigh.

She little has of beauty's wealth;
Truth will allow
Only her priceless youth and health,
Her broad, white brow;
Yet grows she on the heart by stealth,
I scarce know how.

She does a thousand kindly things
That no one knows;
A loving woman's heart she brings
To human woes;
And to her face the sunlight clings
Where'er she goes.

And so she walks her quiet ways,
With that content
That only comes to sinless days
And innocent:
A life devoid of fame or praise,
Yet nobly spent.

—*Pall Mall Gazette.*

THE art of saying appropriate words in a kindly way is one that never goes out of fashion, never ceases to please, and is within the reach of the humblest.—*F. W. Faber.*

Echoes from Everywhere

Michigan's new constitution, lately ratified by the voters, grants women who pay taxes the right to vote upon questions involving the expenditure of public money.

More than \$25,000,000 has been paid out of the relief funds of the Pennsylvania Railroad Company—\$15,050,644 to members disabled by illness or accident and \$10,276,227 to the families of members who have died.

Work is to begin soon on New York City's first monorail to be built between Bartow Station, on the New Haven line, and City Island, between which points a horsecar line has been in operation several years. Three months hence may see the line in operation. The system to be used is called the American.

At her last election, twenty-eight additional towns were added to New Hampshire's "no-license" column, while only ten which had been without saloons voted to let them in. It is confidently claimed that after May 1, 1909, there will be but twenty-five license towns in the State.

The Illinois Hotel Commercial Association has planned to try to have the legislature place a limit on the damages which may be collected by hotel patrons for lost or stolen articles. It also was agreed that buildings shall be equipped with either iron or rope fire escapes, as demanded by the Illinois Commercial Men's Association and the Travelers' Protective Association.

Dr. Wiley, chief chemist of the Agricultural Department, after a week's work with his famous poison squad, has reached the conclusion that formaldehyde as a preservative of food is injurious to health. Formaldehyde is most commonly used as a preservative of milk. While it prevents the souring of milk it does not retard the growth of disease germs, and herein lies the danger as consumers have no warning of the presence of the germs.

Secretary Straus of the department of commerce and labor reports that the total net addition to the population of the United States by alien immigration between Sept. 30, 1907, and Oct. 1, 1908, was only 6,298, and even this number, he says, should be reduced by deducting the number of naturalized Americans who took up residence abroad. The actual number of aliens who arrived within the period mentioned was 724,112, and the number departing during the same time was 717,814. Secretary Straus says that all official figures as to the emigration of aliens prior to Sept. 30, 1907, were the estimates of the steamship companies. Last year official figures were kept as to the departure of aliens. The secretary estimated that figures on immigration, which have been accepted heretofore, have been at least 48 per cent too high.

Illinois is upholding the new cocaine law, and in so doing has dealt a solar plexus blow at the patent medicines in this State containing the drug. A case which has been decided was that of two Chicago druggists who had been fined \$500 after being convicted of having sold a catarrh powder which contained cocaine. The druggists held that a clerk in the store had sold the medicine, but the Supreme Court of the State held the owners responsible, as the law provides that cocaine shall not be sold in any form except on a physician's prescription.

Foreign ministers at Peking fear that peace is endangered by the recent dismissal of Yuan Shi Kai, grand councilor and commander in chief of the forces, and the appointment of Na Tung as grand councilor. The representatives of Great Britain, the United States and Germany view the regent's action as tantamount to an affront to the powers on account of Yuan Shi Kai's position abroad, he being recognized as the medium of fair and equitable treatment toward the nations. Japan concurs in the opinion that the dismissal is certain to result in international injury.

Russia has a dirigible, and negotiations are being carried on with the Wright Brothers for the purchase of some of their aeroplanes. The price proposed is \$100,000, with royalties built on machines built in Russia. The government requires a three-hour flight, but Wilbur Wright thinks a one-hour flight a sufficient demonstration provided he can carry fuel enough to remain aloft three hours. The Russian War Department has recently granted \$25,000 for the construction of a flying machine invented by H. Tatarinoff, who claims to have an apparatus that operates on neither the balloon nor the aeroplane principle. A small cigar-shaped model weighing about 30 pounds is said to have made successful tests recently.

George Washington Hough, one of the foremost astronomers of the world, professor of astronomy at Northwestern University and director of the Dearborn Observatory, died at his home in Chicago, Jan. 1. No astronomer of these times was better known than Professor Hough. In fact, he was considered by scientists one of the most learned of his time on astronomical subjects. The crowning feature of his life of study and invention was his contribution to science concerning the planet Jupiter, the most complete that any astronomer ever has given. Professor Hough also discovered and measured more double stars than any astronomer living or extant. Besides, his astronomical inventions have been many and valuable. Altogether, his life has been one of contribution to astronomy, meteorology and physics.

London, Jan. 1.—Postmasters throughout the United Kingdom have begun the payment of old-age pensions, under the act of the last session of parliament, to persons over 70 years of age. Seven hundred thousand applications for pensions have been received, of which 200,000 were disallowed, chiefly because the applicants have been in receipt of poor relief. It is estimated that the old-age pensions will cost the country \$35,000,000 annually. The highest pension is 5 shillings weekly, which will be paid to applicants having an income below \$105 a year. If their income exceeds \$105 but is less than \$153, small amounts will be paid.

One of the greatest engineering feats ever attempted in the construction of oil pipe lines is involved in the work that has been started by a Mexican petroleum company for the purpose of connecting Mexico City with the oil wells in the low coast country near Tampico. This line will have to climb the mountains to an altitude of 10,000 feet within a distance of not more than fifty miles. After reaching this great height it will be laid up and down the mountains for another 100 miles before it reaches the great central plateau. It will then drop to the valley of Mexico, which is a little less than 8,000 feet above the sea level. The object of building such a line is to supply Mexico City with fuel oil. Coal and other fuel are very expensive there, and it is claimed that the demand for fuel oil fully justifies the great expense of such a line.

The official total membership of the high schools of Chicago on the last day of October last year was 14,960, of the primary schools, 86,372, of the grammar schools, 149,891, or a total membership of 251,223. Compared with the same day of 1907 the gain for the high schools is 1,430, for the primary schools, 2,441, for the grammar schools, 9,783, for all three branches an increase of 13,554. To these figures must be added 11,000 pupils who are attending the normal school, the school for the deaf and the other auxiliaries, bringing the total membership on the last day of last October up to 247,263. The total gain over 1907 is about 14,000. The number of pupils on half sessions was kept down to 7,243 in October, which is the smallest number for October in years. In fact, there has been a steady decrease in the number of children who could not be afforded full school privileges. The total school accommodations during October for the high and graded schools were 268,311 seats.

In response to the Italian Red Cross suggestion that a vessel might be loaded with provisions and sent to the scene of the earthquake disaster, thus giving quick relief to the destitute, the American National Red Cross cabled \$150,000 with the suggestion that it could be used by the Italian Red Cross Society for the purpose of fitting out a ship with provisions and medical supplies. This amount is in addition to the \$100,000 and the \$70,000 previously sent by the American Red Cross. By sending the money instead of undertaking to provide for the shipment of supplies the American Red Cross officials adopted what they regard as the best method of meeting the emergencies that face the Italian Red Cross. They believe that the Italian society would be able to make these arrangements more promptly than could be done by anyone else. This is in line with the policy of the American society from the beginning of its relief work in behalf of the earthquake sufferers.

The board of trade, which has had an expert working for some time past on the copper output of Arizona for 1908, announces that the total output for the year will not fall below 274,000,000 pounds of finished copper. This makes Arizona again the world's leader in copper production. Horace J. Stevens places Michigan's output at 220,000,000 pounds and Montana's output is estimated at 244,000,000 pounds.

The forging of scimitar blades in Japan was once a flourishing industry, and the workers formed a close and powerful corporation. But the industry has declined for years, and now only two makers are left. No young Japanese has come forward to offer himself as an apprentice, and the question was referred to the mikado with a view of perpetuating the industry. The mikado has come to the rescue, and has founded two scholarships of \$500 to induce two lads to offer themselves for initiation into the art and mystery of making scimitar blades.

Chicago's population which serves as a new basis of estimate for 1909 for the health department, is 2,224,490, as against 2,166,055 for the year which has just closed, and this new population total will be used in figuring the death rate. The increase is in accordance with the United States census bureau's percentages for mid-year populations. Figures which are now in show that there was a total of 30,395 deaths in the city during the year, which would give a rate of 14.03 for every 1,000 of population—the fourth lowest figure ever recorded for the city. The department will wait until all of the deaths which occurred during December are reported and then figure its percentage from that basis. It is expected that the total will be increased by 200 when all returns are in.

Plans looking to the publication of a book to contain the national songs of all nations with words, translations and music and to secure the publication by the United States bureau of education of a pamphlet giving comparative rates of tuition and cost of living at the leading American universities for distribution in foreign lands were adopted at the second annual convention of the Association of Cosmopolitan Clubs at Ann Arbor, Mich., Jan. 1. The association has chapters at seventeen universities with a membership of 1,500 students. It is also planned to state the special advantages at each university. The countries represented at the convention here are the United States, Germany, Greece, the Philippines, Spain, Mexico, Japan, Brazil, Russia, Hungary, England and Jamaica.

Ten thousand employees of the packing firm of Morris & Co. in Chicago and other cities where the company has interests began Jan. 1 to reap the benefits of a pension system established by the company. The company has decided to establish a coöperative sharing scheme for employees. The plan went into effect Jan. 1. The pension disbursements to be allowed by the company will aggregate about \$100,000 a year. Among the employees who will share in the mutual investment scheme are those who will contribute 3 per cent of their salaries until the fund reaches \$500,000. Employees who have completed twenty years of service with the company are to be the chief beneficiaries.

Among the Magazines

EXPENSIVE EDUCATION.

Some interesting lessons are deducible from the San Francisco disaster. Of the great buildings, which survived in some form or other, there were thirty with fireproofing of steel structure, one with metallic trim, one with wire-glass windows, and none with all these safeguards. Had there been such a one it might well have come through undamaged, save for a little blistering. The splendid Call Building, with concrete floors and hollow-tile protection for its steel, stood undamaged so far as its integral structure is concerned. And, by the way, that much maligned type, the skyscraper, proved its worth both at San Francisco and Baltimore. In the western city, small and inflammable buildings standing to the leeward of the tall piles were protected by a sort of vacuum, and were seriously damaged only in the stories above the fourth. At Baltimore the spread of destruction in several cases was limited by these great barriers, from behind which the firemen fought as best they could with their puny water-sprinkling devices and the more desperate remedy of dynamite. It is hardly too much to say that a block of reasonably protected skyscrapers would, in any city, prove an absolute and impregnable barrier to the progress of the fiercest conflagration.

Again, Baltimore proved beyond question the value of adequate casings for the structural steel. Without this the steel buckles, and lapses into dismal spirals. Within the fire zone, at Baltimore, half a dozen buildings so protected stood, and continued to stand. Nothing else did. The Continental Trust Building was "swept by a blast like that of a chemical furnace." As the windows were insufficiently protected, the flames entered and seized upon everything burnable. From the melted chandeliers and typewriters, fused to masses of formless metal, it is estimated that the heat reached an altitude of 2,000 degrees, and not improbably 3,000 degrees. Yet the fireproof floor arches and column coverings remained intact. The expert afterward employed to inspect certified that the steel structure was "intact and as good as the day it was put up," and that every floor in the building was plumb to the fraction of a decimal. In all the genuinely fireproof modern buildings there was but one mishap to structure. One steel column, insufficiently protected, in the Calvert Building, buckled; the other two hundred and fifty-five columns were unaffected. Yet the edifices of this type cost but ten per cent more than other buildings in which the iron and steel, being without protection, were bent and warped out of all possibility of further usefulness.

Fireproof buildings, then, are a reality, not an impracticable ideal. Yes, more; they are, in a general sense, economically feasible and attainable. And if fireproof buildings, then genuine "fireproof districts," and eventually fireproof cities.—Samuel Hopkins Adams, in the January Everybody's.

FOR YOUR COUNTRY—PLANT TREES.

There is a great movement under way throughout the United States today. It is the marshaling of public sentiment for the preservation of the forests. We used to think that the great American forests were inexhaustible. And they were, for the generation in which our grandfathers lived. People of that day had all the wood they wanted to burn. But since their time we have been doing so many things with wood, besides using it for fuel, that forests of trees have fallen before the woodman's ax where one tree fell before. There are a dozen commercial purposes for wood which have developed today. It is used in the making of pails and dishes. And absolutely acres of trees are fed each day into the printing-presses that turn out the great newspapers.

We are now using as much wood in a single year as grows in three, and there is only twenty years' supply of virgin growth in sight.

It is this situation that calls for the application of the science of forestry. The national Government through the Department of Agriculture at Washington, as well as eleven States each employing a trained forester, is actively engaged in it. The United States Government has, for the last ten years, been busy acquiring forest lands until now it holds 165,000,000 acres, which it is carefully guarding and cultivating. Nurseries have been established for the propagation of stock for free distribution, and the newest feature is the creation of a patrol of one hundred men to guard against forest fires along the Adirondack railroads.

These are some of the Government measures to meet a national crisis. But there is more for public-spirited citizens to do. Everybody who has waste land ought to be planting it to trees. It is such a simple thing to gather seed from the trees on your own place and drop them into the ground! But you who do this will also serve your country as truly as those who answer its bugle-call to battle.—The Delineator.

PULLING THE LOAN-SHARK'S TEETH.

The salary-loan business in the United States as manipulated by the so-called "loan-sharks" of the large cities seems at last doomed to regulation. The strong drag-net of publicity, which the newspapers and magazines are weaving for this particular purpose, will, it is promised, slowly but surely inclose the activities of this ferocious feeder on the poor man's weekly income. Dr. Clarence W. Wassam, who has recently published an extensive study of the salary-loan business in New York City, states that as many as thirty different loan concerns of this character are known to exist and flourish in this city. It is estimated that at least 30,000 employees on the average are in debt to these concerns on assignment of wages. The rate of interest charged by these usurers is estimated by L. E. Theiss, in The Independent, as ranging from 50 to 400 per cent per an-

num. Many cases of suffering and imposition are cited by the writers as typical of the merciless plunder of the salary-loan shark. These examples Mr. Theiss vouches for as being ordinary occurrences. We read:

"Pitiful is the case of a telegrapher, the father of twelve children. With an income of only \$18 a week, it was necessary, whenever there came a demand for unusual expenditure, for him to resort to the loan-sharks. He could save nothing from his salary to repay these loans. So he borrowed from Peter to pay Paul. But every new loan put him more hopelessly in debt. His furniture was mortgaged, his salary assigned, and a default in payment meant loss of both his chattels and his employment. Obviously it was necessary for him to do extra work. As his financial burdens increased, so did his hours of labor. For months now he has been working nearly eighteen hours a day. Yet his family profits little by his extra efforts. Almost half of his earnings goes to the loan-sharks—as interest. The principal of his indebtedness he can by no human probability ever repay. He is sold for life.

"Among the papers in the District Attorney's office are the records of two policemen. The first one paid \$7 interest every two months on a \$100 loan. At the end of five years the usurers pushed him so hard for the principal—wishing to put their money out at a higher rate of interest—that he sought relief through the public prosecutor. The second policeman paid \$12 interest a month for three years on a similar loan. Then he died. He had paid \$432 interest, but still owed the \$100. Immediately the usurer came to seize the widow's furniture; and her few possessions were saved to her only through payment by friends of her husband's of the usurer's demands. . . .

"Recently a woman came into a New York police court hysterical with fear. Her furniture was about to be seized. For six months she had toiled early and late to save it. Worn out at last, she had defaulted in the payment of her interest, and now her furniture was to go—because she owed the paltry sum of \$25, although she had paid back \$48 in interest."

The remedy for the loan-shark business is believed to be first of all publicity for its dealings, and secondly, an adequate and honest competition to underbid it. Mr. Theiss continues:

"Already many movements are on foot to accomplish this end. In New York we have the Provident Loan Society, started with a gift of \$100,000. It lends money at the rate of 1 per cent a month, and cuts that rate in half for prompt repayment. Last year it made 286,000 loans. The Hebrew Free Loan Association is a similar organization. It lends money to any Hebrew who can get good indorsement. Then there are the St. Bartholomew's Loan Bureau of New York, the Collateral Loan Company and the Workingman's Loan Association of Boston, and similar organizations in other cities. Their object is not only to help the poor over slippery places, but also teaches them thrift and economy.

"Better yet, as showing an active interest in one's employees, is the system of lending money that a New York department-store has instituted. Small sums are advanced to employees without interest, the money advanced being deducted from the borrowers' pay envelopes in ten weekly deductions. Slight as is this assistance it is just the help that is needed—and it is assist-

ance without price. Many employers now help their employees in this way.

"Best of all is the movement toward self-help in the form of mutual loan associations that is spreading everywhere among the poor."

WEALTH IN BARRELS.

When a person speaks of "barrels of money" it conveys to the mind an impression of great wealth. How many, hearing or using this common phrase, however, ever gave a thought to the money represented by empty barrels? If you never have you may be interested in some figures compiled by the United States Forest Service.

The forest service statisticians show that the farmer with his potatoes and apples, the miller with his flour and meal, the hardware man with his nails, the cement manufacturer and the many other users of barrels other than those intended to hold liquids, consumed forest products last year having a value of \$15,800,253. In pursuance of its work of educating the country to the need for conservation of resources the forest service from time to time gives striking and, it might be said, sensational illustrations of the wealth of timber that annually goes into some form of commodity. Even the insignificant little match consumes forest growths to an almost unbelievable extent.

In this matter of barrels alone the output of the cooperage mills last year showed an increase of \$1,569,688, or 11 per cent over the value of the product for the previous year. Twenty-one species of wood contributed to the production last year, but nearly two-thirds of the output was manufactured from red gum, pine, elm and beach.

It is pointed out by the forest experts that an interesting movement in the barrel industry is the substitution of less expensive woods for those which for many years were drawn upon most heavily for stave material. The same trend from expensive to inexpensive woods is shown in the case of many articles of common use, and the process of substitution, based on economic conditions and systematic study of forestry affairs by manufacturers as well as by technical experts, is destined to play a large part in the conservation movement.—Chicago Record-Herald.

WHY SHOULD THE STATE CONTROL WATER-POWER DEVELOPMENT?

The first and greatest reason for State action is that only in this manner can a full, comprehensive, co-ordinated, and therefore truly economic development of our hydraulic resources be secured. No one company or individual would be able, as a rule, to undertake the complete development of any given stream throughout the region of its effective flow. The undertaking would be too vast to be feasible, even if a market for all the power could be assured. It would involve a wide exercise of the power of eminent domain, which would have to be delegated to the company for the purpose. Furthermore, co-operation among mill owners and other interests for such a purpose is peculiarly difficult to arrange. The State, on the other hand, retaining the control of the whole stream, could develop such portions of its power as might be salable from time to time, yet always with the ultimate plan for a complete development in mind.

Another reason for State supervision, perhaps more

local to New York, though potentially of wide application, is directly concerned with one of the most emphatic protests that has been made in this State against the building of power reservoirs,—namely, what may be called the esthetic objection. It is only too true that much bad reservoir practice has furnished good cause for the widespread notion that power reservoirs destroy the beauties of the natural river and result in scenes of destruction and desolation. Experience and the best engineering authority have conclusively shown, however, that proper reservoir building is only a matter of adequate expenditure under proper plans and careful supervision. It is not consistent with experience to hope that private companies, bent on immediate gain, will ever go to the extra, and to their minds unessential, expense of properly clearing reservoir beds of standing trees and underbrush before turning in the water. Only when the State does this work as a part of its general program, and with constant realization that this is a highly important aspect of any construction worthy of the State, can attractive rather than repulsive reservoirs be generally secured.

The State's great financial strength provides a third reason why the public authority may advantageously construct the controlling works for power development. The State can borrow the money needed for such expensive structures as storage reservoirs at a lower rate of interest than any corporation. A part of this saving may well be spent by the State in securing the adequate treatment and proper supervision necessary to insure attractive and healthful artificial lakes, which may be depended on to increase the property value of the whole surrounding region as a health and pleasure resort. The State can afford to take the long view and wait twenty or thirty or fifty years for the return on its money, whereas such delay in profitable result is prohibitive to the plans of the prospective manufacturers. —From "State Control of Water-Power," by Curtis E. Lakeman, in the American Review of Reviews for January.

Between Whiles

A Statesman Defined.

Shortly after Mr. Gladstone's death, says the Christian Register, a local politician delivered an address upon the life of the statesman before a school. When he had finished, he said, "Now, can any of you tell me what a statesman is?" A little hand went up, and a little girl replied, "A statesman is a man who makes speeches." "Hardly that," answered the politician, who loved to tell this story. "For instance, I sometimes make speeches, and yet I am not a statesman." The little hand again went up. "I know," and the answer came triumphantly, "a statesman is a man who makes good speeches!"

Couldn't Make Emerson Worry

Ralph Waldo Emerson was so much of a philosopher that he tried never to allow himself to be disturbed by the fear of events which he had no control over. Some people called him a fatalist, but rather he had an abid-

ing faith in ultimate good and in the eternal nature of the soul. The story is told of him that one day a fussy young fellow came running into his study to ask him what he was going to do in view of the fact that some scientist had predicted that the world was soon to come to an end by colliding with a comet. "I'm not going to bother about things like that," said the imperturbable scholar, "I can get along very well without the world."

Ellen (the nurse, to little girl of six, who is supposed to have an afternoon sleep every day)—Nancy, you are a naughty little girl not to have gone to sleep this afternoon!

Nancy (reproachfully)—Ellen! Ellen! Don't you remember the three times you looked over the screen, and I was fast asleep?

The little girl was up very early in the morning for the first time. "Oh, mama!" she exclaimed, returning from the window, "the sun's comin' out all right, but the angels have forgotten to turn 'off the moon."

WINTER WISDOM.

Yas, de rain soun' col' en gloomsome,

Beatin' on de cabin wall,

En de hail it stomp de shingles,

En de sleet it boun' tuh fall;

Yit I somehow laks de racket

Of ol' Wintah's rattlin' shot,

When de hick'ry logs is burnin'

En de skillet's sizzlin' hot.

Whut's de use, I wants tuh ax you,

Fussin' 'cause de snowflakes come?

Hustle up en stir de fiah—

Mek de blazes dance en hum.

S'pose you got no ham er cheek'n—

Fry de good ol' bacon-meat;

Go en tap de 'lasses barrel—

Sorgum mighty fine en sweet.

'Taters roastin' in de ashes;

Beans a bilin' kinda slow;

Caroliny, fat en happy,

Stirrin' up de dodger-dough.

Watch de coffee-pot a-steammin'—

Ain't it got de riches' smell?

Eat yo' dinner when it raidy,

Den set down en smoke a spell.

Little chaps a-singin' 'roun' you;

Bingo sleepin' on de mat,

Now I wants tuh ax you, podner,

Whut you got tuh grumble at?

Me, I wouldn' was'e no worry

'Cause my jeans is gittin' ol'—

Little tykes en Caroliny

Mo' tuh me den piles o' gol'.

Let de rain en sleet come zippin';

I don't care a picayune;

Reach me down de bano, honey,

Tell I rattles out a chune.

Dough ol' Wintah shout en holler,

He jes' bluffin' 'cause he know

Soon he gotto go a-hikin',

Totin' off his ice en snow.

—Harriet Whitney Durbin.

The International Sunday-School Lessons FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

BRETHREN PUBLISHING HOUSE

Elgin, Illinois

Do Not Procrastinate

If you have not sent in your subscription to **THE INGLENOOK** for 1909 do so now. Remember that we are determined to make this the best weekly magazine of its class. Read this issue of **THE INGLENOOK**, pass it on to your friends, tell them the subscription price, and send us three or four new subscriptions along with your own. A 32-page illustrated magazine for 52 weeks, only **ONE DOLLAR**.

THE LORD OUR RIGHTEOUSNESS

By Elder S. McCann.

The third edition of this book is having an unusually large sale. Brother McCann has visited and lectured in many congregations throughout the United States this year, always creating a demand for his book. The book is the result of a prodigious amount of earnest, thoughtful work and deserves the careful perusal of every Christian. The author enters upon the vital questions of our religion. He insists that the central truth of Christianity is "Christ our Righteousness." He uses many quotations from the Gospel and fortifies his position with the Word of Truth. This new edition is bound in beautiful cloth, with back and side titles in white foil, printed on fine quality of paper, and is in every respect a first-class-book. A book of 128 pages. Price, postpaid,50 cents

Winsome Womanhood

By Margaret Sangster

"A group of short essays divided into four parts. The first depicts all the relations to home and outside life of a young girl from fifteen years of age up to her wedding day. The other portions deal with High Noon, Eventide. The Rounded Life. The whole book is morally sound and thoroughly wholesome. The girl who reads it will be awakened to many of the minor ethics of life which engrossment in herself may have caused her to overlook. The mother, too, may

be reminded of mistakes on her side, even if they be no worse faults than those of too much self-effacement before her children."—The Outlook.

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully.

The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

The next party of colonists will leave Chicago about February 9. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

A SHADY TRANSACTION

If you should purchase lumber and upon careful examination you found that it was really not solid timber, but merely short pieces spliced together, you would call it a "Shady Transaction." That is about the kind of a proposition you are up against when you buy CUT-STAY FENCE.

It's really not a first-class, full strength product. About half of its strength is wasted—sacrificed to convenience and speed in manufacture. OUR STAY WIRE is NEVER CUT. It is an ENDLESS STAY. All the strength and service preserved and utilized.

THIRTY DAYS' FREE TRIAL

Let us prove to you that Advance Fence is the BEST MADE FENCE ON EARTH. We will ship you what fence you need on THIRTY DAYS' APPROVAL. Examine it carefully. Compare it with other fences. Stretch it up, turn your stock against it. Give it any test you wish. If you don't like it, send it back and we will return your money. WE KNOW ADVANCE FENCE WILL PLEASE YOU.

Real Fence Economy

consists in getting the greatest possible FENCE VALUE for the money expended. We are in position to offer you the best fence value obtainable, because WE SELL DIRECT FROM FACTORY TO USER of the fence. We cut out all go-betweens and are enabled to spend more for good material and first-class construction, while still saving you money. ADVANCE FENCE is WOVEN and not JUST "put" together. QUALITY IS WHAT COUNTS. We are fence specialists, and know how to make fence.

We Pay Freight

WE PAY THE FREIGHT on Advance Fence to any place in the United States and GUARANTEE SAFE DELIVERY. Our catalog and price list will describe fully and tell you exactly what any one of the 24 styles of Advance Fence will cost you, delivered to your nearest railroad station.

Note our address. If you want to know anything about our responsibility, the publishers of this magazine shall be glad to give you full information.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

Homeseeker Round Trip Rates are in effect on the first and third Tuesdays of January and February, 1909, as follows: From Chicago to Blackfoot, Idaho, \$42.50; Boise, Idaho, \$57.50; Butte, Montana, \$42.50; Caldwell, Idaho, \$57.50; Hailey, Idaho, \$53.60; Huntington, Oregon, second-class, \$57.50; Idaho Falls, Idaho, \$42.50; Ketchum, Idaho, \$54.60; Market Lake, Idaho, \$42.50; Mountain Home, Idaho, \$53.90; Nampa, Idaho, \$57.20; Ontario, Oregon, \$57.50; Pocatello, Idaho, \$42.50; Salt Lake City, Utah, \$39.00; Shoshone, Idaho, \$49.00; Twin Falls, Idaho, \$50.80; Weiser, Idaho, \$57.50.

Colonist One Way Cheap Rates will be in effect from March 1 to April 30, 1909, inclusive.

Write at once for printed matter giving full particulars about Idaho and its possibilities, climate and other attractions.

No. 3.

AN UNCHALLENGED LIFE INSURANCE

J. F. STUDEBAKER, M. D.

To many persons blood is a mixture of uncertain proportions. On the other hand scientists know that it consists of definite quantities of fluid (plasma), small uniform bodies, iron, various chemical salts, and principles which protect the body against disease and accidents, as hemorrhages from cuts or wounds,—the latter through clotting of the blood.

The quantity of blood in animals is equal to one-twelfth to one-fourteenth of the body weight. In a man of average size there would be about twelve pounds of blood or nearly six quarts.

The fluid part is of a light straw color. The round bodies are called corpuscles. Of these there are two groups: (1) red or erythrocytes and (2) white blood cells or leucocytes. Of the former there are in the normal state of health 5,000,000 to every cubic millimetre of blood in the male human subject and 4,500,000 in the female. To these the blood owes its red color, the coloring agent being called hemoglobin

1. Rough outline of a cubic millimetre.

which contains an appreciable amount of iron. Of the white blood cells there are from 7,000 to 7,500 to every cubic millimetre of blood. See figure for size of a cubic millimetre. (Fig. 1)

The red blood cells or corpuscles (Fig. 2-a) are biconcave discs, *i. e.*, they are concave or saucer-shape on each side. This makes them appear under the microscope transparent in the center and opaque on the edge (Fig. 2-a). Their diameter is 1-3200 of an inch. 1-32, of an inch is equal to the diameter of a heavy dot(.). Now can you imagine small bodies one hundred times smaller than this to leave your heart, pass through the body and return within twenty-five seconds? These cells have a tendency to arrange themselves in rows like dollars called rouleaux (Fig. 2-c). If these were one inch in diameter instead of 1-3200 of an inch and placed edge to edge in a single

column, those of a man weighing one hundred and fifty pounds would belt the globe, which is 25,000 miles in circumference, more than ten times. Can you conceive of such myriads of minute bodies, each

2. (a) The red corpuscles on the flat. (b) Same seen on edge magnified 1,000 times. (c) Red corpuscles in rouleaux, magnified 500 times.

one having a distinct work to do and being in constant progress without disorder somewhere? Truly man is wonderfully made.

The duties of the white corpuscles (Fig. 3) make them of unusual interest. Although of less number than the red cells in the proportion of 1 to every 666 of the latter, yet they have a greater service, being the "national guard" of the body. They are spherical bodies with a diameter of 1-2500 inch and unlike the red corpuscles contain one to five central bodies called nuclei. Their average number of 7,500 per cubic millimetre is not always constant but varies according to the time of day, food taken, habits and disease present. They are more abundant after a bath, after meals and in such diseases as pneumonia and erysipelas and less numerous during fasting and in such diseases as typhoid fever and malaria.

They have been heroes since the time the first heart began to beat. Their courage is undaunted while they march in battalions against the invaders of

3. All of above are white blood cells or leucocytes, representing different varieties. (a) The soldiers, with two or more central or nuclear bodies. (b), (c) and (d) Other forms, (e) being the most active in tuberculosis. (e) The most active leucocyte in scarlet fever.

the body—diseases of varied forms. Each one is a general in the campaign against the foe. They build walls about the intruder in many cases and when

reinforcements or the vitality and resistance of the body are sufficient, a death blow is dealt to the enemy by cutting off supplies. This is well illustrated by the furuncle or so-called boil. Pus-producing germs are the offenders. They invade the soft and superficial tissue. This has occurred only a short time until nature has detailed a regiment of soldiers to the field of hostilities. She is active to keep the advancing and growing army of microbes from excessive plundering and from getting too far inland to endanger her central resources and supplies.

She has the same methods of warfare as of primitive times. No Gatling guns are rushed forward. No revolving turrets are mounted with twelve and thirteen-inch cannon. The refinements of modern militarism do not enter into her tactics for her discipline is better than the best in the world. She calls no international peace congresses in which to sit and listen to diplomats of diversified opinions while at home the navy yards are building more formidable gunboats.

Her soldiers never retrench but die in the struggle to be followed by others. While they are in the encounter with bacteria, which happen to be pus germs in the case of an ordinary boil with their site of engagement in the tissues, the minute cells of these tissues called round cells are sufficiently irritated and stimulated so that they rapidly multiply and form an

4. (a) Dead soldiers. (b) The bacteria (staphylococci) producing a boil. (c) and (d) Dead soldiers who suffered the brunt of the fight more than (a).

outer and additional barrier to the column of white blood cells surrounding the would-be conquerors. This outer barrier is the well-defined border of a boil. The center finally softens (dies) because food supplies have been cut off by the maneuvers of the soldiers and the great number of round cells, the blood channels being occluded.

The dead soldier's uniform is usually badly torn, even into shreds, and his body full of wounds. (Fig. 4). If anyone should have a Carnegie medal, these soldiers (white blood cells) surely deserve it, for they are daily exposing themselves to hazards to protect us from all danger. It is through them that millions of lives have been saved. If it were not for them, no one would reach old age. They are so vigilant that foreign foes are usually kept from getting a camping ground and this makes up our immunity against disease, the ability to resist such maladies as tuberculosis, diphtheria, scarlet fever, and others.

If the pus bacteria of a boil were not walled off, there would be widespread infection in the body with

the formation of many abscesses in vital organs and large joints of the body. Chills, sweats, rapid wasting, exhaustion and death would often follow. When nature is unable to wall off an appendicitis the issue is sometimes fatal. These vast armies of soldiers are replenished by a rapid multiplication of the white corpuscles as soon as there is a call to the front for concentration of forces.

Your most valuable asset is your standing army of white blood cells. It is worth more to you than the possession of a banking institution or the ownership of great tracts of rich black loam. It means your health. It is the best life insurance you can have and the policy cannot be challenged.

DISCOVERY OF GOLD IN CALIFORNIA.

T. H. FERNALD.

ON the 19th day of January, in the year 1848, a man by the name of John W. Marshall was building a mill in the Sacramento Valley to supply pine lumber for the ranches and settlements far and near. On this particular day, Mr. Marshall picked up from the bed rock of the mill race a small piece of yellow malleable metal, weighing about seventeen grains, heavier than silver, and in every way resembling gold. He showed it to the others who worked at the mill, and the result of the discussion which followed, was that the gold theory was rejected by all but Mr. Marshall, who, not being satisfied, afterward tested it with nitric acid and found it to be actual gold. He also later found pieces like it in all the surrounding gulches wherever he dug for it.

The news of the discovery soon spread and in April reports of the finding of gold were published, and prospectors went to work at once. This mill soon became the center of attraction, and was afterwards named Coloma or Colluma, from a tribe of Indians who lived in the neighborhood. The prospectors from there scattered in all directions, and by June the discoveries had extended to all the forks of the river, and the news had gone almost to the ends of the earth.

Then followed the great "California Gold Craze of '49." Emigration began from all parts of America and even from Europe and Asia. In eighteen months one hundred thousand had gone from the United States alone to this El Dorado, where a fortune was to be picked up in a few days. Thousands made their way across the country amid hardships, which strewn the route with skeletons, and thousands more by vessels. (See INGLENOOK of October 13, page 962.)

The Bay of San Francisco was soon surrounded by a city of shanties and booths. All ordinary employments were laid aside. Ships were deserted by their crews, who ran to the mines, sometimes headed by their officers. Soon streets were laid out, and from this Babel, as if by magic, rose a beautiful

city. For a time lawlessness reigned supreme. But, driven by the necessity of events, the most respectable citizens took the law into their own hands, organized vigilance committees, and administered a rude, but prompt justice which soon brought order.

Belfast, Maine.

CHRISTMAS TREE CUSTOM UPHELD.

THE country's forests again have been called upon to supply about four million Christmas trees, and again many persons have asked themselves and have queried the United States Forest Service, "Is the custom a menace to the movement for forest preservation?"

In the million of happy homes over the country where the younger generation has made the Christmas tree the center of play since early Friday morning, there are many mothers and fathers who have given the question more or less thought. From Sunday schools and other organizations also, which hold an annual celebration around a gayly-trimmed evergreen for the benefit of the little ones, has come the question whether it is consistent to urge conservation of forest resources and then to cut millions of young trees every year to afford a little joy in the passing holiday season.

"Yes, it is consistent and proper that the custom should be maintained," has been the answer of United States Forester Gifford Pinchot in every case. "Trees are for use, and there is no other use to which they could be put which would contribute so much to the joy of man as their use by the children on this one great holiday of the year.

"The number of trees cut for this use each year is utterly insignificant when compared to the consumption for other purposes for which timber is demanded. Not more than four million Christmas trees are used each year, one in every fourth family. If planted four feet apart they could be grown on less than 1,500 acres. This clearing of an area equal to a good-sized farm each Christmas should not be a subject of much worry, when it is remembered that for lumber alone it is necessary to take timber from an area of more than 100,000 acres every day of the year.

"It is true that there has been serious damage to forest growth in the cutting of Christmas trees in various sections of the country, particularly in the Adirondacks and parts of New England, but in these very sections the damage through the cutting of young evergreens for use at Christmas is infinitesimal when compared with the loss of forest resources through fires and careless methods of lumbering. The

proper remedy is not to stop using trees but to adopt wiser methods of use.

"It is generally realized that a certain proportion of land must always be used for forest growth, just as for other crops. Christmas trees are one form of this crop. There is no more reason for an outcry against using land to grow Christmas trees than to grow flowers."

The Forest Service upholds the Christmas tree custom, but recognizes, at the same time, that the indiscriminate cutting of evergreens to supply the holiday trade has produced a bad effect upon many stands of merchantable kinds of trees in different sections of the country. Waste and destruction usually result when woodlands are not under a proper system of forest management. Foresters say that it is not by denying ourselves the wholesome pleasure of having a bit of nature in the home at Christmas that the problem of conserving the forest will be solved, but by learning how to use the forests wisely and properly. The ravages through forest fires must be checked, the many avenues of waste of timber in its travel from the woods to the mill and thence to the market must be closed, and almost numberless important problems demand attention before the Christmas tree.

Germany is conceded to have the highest developed system of forest management of any country, yet its per capita use of Christmas trees is greatest. The cutting of small trees for Christmas is not there considered in the least as a menace to the forest, but, on the contrary, as a means of improving the forest by thinning and as a source of revenue. It is therefore constantly encouraged.

There is little doubt that the time will come when the Christmas tree business will become a recognized industry in this country, and that as much attention will be given to it as will be given to the growing of crops of timber for other uses. This time may not be far off, for it is already understood that only through the practice of forestry, which means both the conservation of the timber which remains and carefully planned systems of reforestation, will it be possible to supply the country with its forty billion feet of lumber needed each year, as well as the few million little trees used at Christmas time.—*United States Forest Service.*

"America is the land of opportunity," said the patriotic citizen. "Think of the men who have attained greatness from humble beginnings."

"Yes," answered the European, who had been reading investigation reports; "but think also of the men who have attained humility from great beginnings."—*Washington Star.*

Around the World Without a Cent

Henry M. Spickler

Chapter XLI.

As usual, I slept up on deck, where I made a bed of canvas from the ship's stores. The sea was a glassy calm and the night run had been sweet and joyous to my first senses on awaking.

The *Letimbro* was slowing up and daylight had lighted up the blue sea. As at Messina, so here, the great, round orb of day came right up from out of Neptune, just like the Romans and Greeks saw him rise in their day. The crimson warmth of color about the sun as it rises here in the Mediterranean Sea is much more marked than is the rising of the sun on the Atlantic. The atmosphere is oriental and there is more color. But the air is soft and balmy and the shores are filled with fruit-bearing trees and gorgeous flowers that mature in perfect development.

The *Letimbro* ran right up to a huge stone wall or breakwater built out to sea and it was the easiest thing to step off and walk into the city. The captain told me he would lie here until noon on the following day. My! how glad I was. For it is so much better to take one's blessings by degrees. It is better to eat three *good* meals in one day than to eat all three at once, which is a physical impossibility. I was hungry for more sea, and I was just as glad to walk around on the land. So here I had another two days in a fair spot that would have many new sights for me, and I could enjoy the ecstasy of knowing that my boat was at my service, and that after I had seen everything in Catania, and fed fat on her peculiar foods, I was to go aboard my old friend and greet her jolly crew again for a longer sail to the island of Crete. Say what you will, no Yankee ever found things more to his advantage, no tourist ever took a plunge swim into the world's Edens with as much fun as I was having on my tour "Around the World Without a Cent."

As to my money, I had wisely laid up enough for my passage and had much to spare for an emergency. Now and then I sold a photograph or received a small sum for an elocutionary stunt. I was a traveling bank with manna-like capital, that while not boasting of any surplus stock could "make money" whenever a "draw" on the bank was necessary.

I found that Catania was about halfway between Messina at the north and Syracuse at the south,—by looking at my map. I wonder how many are referring to the maps they may have in the house, in their old

geographies or in the atlas, or in the artistic and attractive advertising that is sent out by steamship and tourist agencies when they read in their evening papers about the trouble in Hayti or the work our country is doing at Manila. It would be wise to nail all such maps on the wall where they could be seen as easily as the flowers in the wall paper or the cracks of the plastering. Every glance at these would familiarize us with the whole earth, which is small enough to compass quite easily from nicely-colored maps. I beg now that the good reader who has been favoring me with his companionship on my long journey will at once dig out the maps, old or new, at whatever cost to indifference, and follow me from place to place, using a red pencil to work out the exact route I take as described in the letters. This method will increase your interest many fold and the value you get by this special care will be equal, in some weeks, to the whole price paid for the subscription. Ever after this, when reading of occurrences in the distant lands, you will know right where they are located and know something of their nature, people, products, climate, and many other things. And God wants you to know this more than any man does. "Go ye into all the world," he said. Go with the mind, go with the information, go with the imagination, go with true sympathy, go with the mission money, go with the ship, yourself, if possible. That's what he meant. Take your civilization with you, take your good manners with you, take your purity with you, take your happiness with you, take your medicines and your surgical instruments, take your business energy and ability, your inventions for labor-saving and for developing natural riches of all the lands around his footstool.

Now, I am going. I feel that God has sent me, even me, and I think he wants to show gloomy Christians that a man can be happy in most any place and in adverse conditions, that this earth is to be the home of the great millennium, but that long before it is adapted to such an ideal condition, it will have to be plowed and cultivated by the plows and harrows of toilsome energy turned loose to help others.

With your map now on the clock shelf or in the library, you must follow me on my boat across the Mediterranean, and acting just as if you are thus honestly following, I will take you along and up through narrow and dangerous passages.

If you try to go alone or without the map, be you young and gay or old and handsome, you are liable to be left on some rocky isle of the sea where vultures with beaks of iron, shriek shrill above you.

I am at Catania, between Messina and Syracuse, in Sicily, just about to go out into the streets to see what I can see. Mount Etna is back of the city, her slopes reaching almost to the city itself. I am registered at Hotel Bretagne, Bretagne meaning Britain or England. The room assigned me is on the first floor above a large square room with glass doors opening out into a fancy veranda where I may rock and look down at the queer sights below, for the streets are full of children running in all directions, and donkeys and horses and cows ridden or driven about by hucksters. Fine carriages drawn by sleek blacks and bays with gold and

pears and peaches. The peaches were all pink-cheeked, and in packing needed no deceptive pink cloth to sell them. For one cent I bought six fine, deliciously sweet pears that would cost in Elgin or Chicago fifty cents. But pears as good as these couldn't be bought in the United States at any price. You must come to Sicily if you want pears at their best. Sicilian air and Sicilian sunshine can't be imported.

Crowds of fun-making youngsters gathered around me when I began to barter for fruit or curios. They followed me up, curious to see the man who had started around the world without a cent. At one spot they were grouped so symmetrically I snapped them, as they unconsciously formed a human frame or background around one little, angel-faced baby boy still in his loose wrapper. He looked like a model of the child Jesus, for an Italian, and I couldn't help squeezing him a little and smiling into his intelligent, quizzing eyes.

On going out from the hotel I noticed a face in the crowd on the other corner, looking at me. It was a striking face, the face of a man sleuth, long, lean, with big, long nose and protruding cheek bones, deep set eyes and wide forehead. The skin was so white it was of a yellow cast. When my eyes were turned to this face a second time, it shrank from my piercing eye, as if its motive was of evil intention. He at once changed his position, started as if to hurry away, then stopped suddenly, turned around and took exactly the same attitude as before, looking through and over the hundreds of moving people, at *me*. It was not a spy's furtive face, nor the studied negligence of a detective, yet it was a face that I knew would follow me wherever I went. I had ample time

"I took the picture of this donkey and then bought a cent's worth of figs from the baskets that swung on the sides of the animal."

silver harness glide through the medley crowds, the drivers on the high seats calling in Italian to the mischievous urchins to clear the way for them.

I must go down and mingle in these crowds. Hawkers of transparent, seedless grapes half ran, half walked, with the big pans or baskets of fruit balanced on the head. Little donkeys so lean they staggered, brayed along, bearing big loads of ripe figs. I stopped several of them and bought six or a dozen of the juiciest figs, and I can tell now by the looks of a fig whether it is a good one. The men shouted for buyers like madmen, their little, round, black eyes darting here and there in the hope of finding a purchaser.

For one cent I can buy as much fruit, plums, prunes, pears, peaches, oranges, figs or grapes, as I care to eat at one time.

Wagons rattled about at every corner filled with

to study the public buildings and see the parks of which the city boasted one back from the wharf some miles. I had gone into one of the shops and was coming out of the side door, feeling sure that I had escaped my white-faced friend. No, I had not. There he was, peering around the corner like a ghost, with more animation than before, but still with undecided mien as before. I appeared not to notice the face, and walked leisurely away, going down a side street that ran by the sea. When I got out of his view I ran for several blocks, hoping to escape him, for by this time my mind was excited about him. Along the sea ran for about a block a succession of boat or freight houses. Still out of sight of any one pursuing, I ran until I was too warm to run farther, changed my course and sought a small, shady park aside from the business portion of the city

that I could see by the trees appearing over the houses. Street cars were running, electric I think, for I was too excited to notice and too dim is my memory of what I saw as I now write.

I reached the little park in due time, had taken a seat on a long rattan bench and was rejoicing that the queer man had been left behind.

There was a slight rustle in the lower foliage of a small but exuberant fig tree just in front of me. My flesh "crept" over me as I watched to see whether it was one of the pet dogs running about that belonged

to some picnic parties not far away. Soon I saw the clothing of a man. Then the face, a white face, the face of this same man, with long, black hair, the same face I had seen at my hotel door, came out of the leaves, and focused its big black, but deep set eyes on *me*.

I sprang from my seat and rushed from the grove, making my way as best I could towards the fine park that lay back in the direction of Mt. Etna.

BORN IN EIGHTEEN HUNDRED NINE

JOHN W. WAYLAND

At the beginning of this new year, 1909, we are reminded that it marks the centenary of many famous men. The tercentenary of the great poet, John Milton, celebrated on the 9th of December, serves as a fitting prelude to that series of celebrations that extend throughout the succeeding twelve months.

The year 1809 is probably without a parallel in the history of the world in the number of famous men and women that were born in it; and now as we pause in this great centennial year it may be worth while to put down in a sort of catalogue the names of the more prominent of those who may be justly remembered, if not celebrated.

The list of literary figures is the most conspicuous and remarkable, and may first have our attention.

Famous Authors Born in 1809.

John Stuart Blackie (1809-1895).—A Scottish philologist. Born in Glasgow; educated at Aberdeen, Edinburgh, Göttingen, and Berlin. Translated Goethe's *Faust*, the dramas of Æschylus, and Homer's *Iliad*. Was a professor in the universities of Aberdeen and Edinburgh; was an educational reformer; and wrote numerous original works on language and literature.

Elizabeth Barrett Browning (1809-1861).—According to some authorities Mrs. Browning was born in 1806. Her birthplace was near the city of Durham, England. At the age of eleven she composed an epic poem, "The Battle of Marathon," an echo of Pope's *Iliad*. Her marriage with the poet Robert Browning took place in 1846. After 1849 their home was in Florence, Italy, where she died. By many persons Mrs. Browning is regarded as the greatest woman poet of England.

Mary Victoria Cowden Clarke (1809-1898).—An

English Shakespearean scholar and author. She was a pupil and an associate of Mary Lamb. Among her half-dozen or more books, her great work is her concordance to Shakespeare.

Edward Fitzgerald (1809-1883).—An English poet of Irish ancestry, born in Suffolk County. He was educated at Trinity College, Cambridge; and was an intimate friend of Spedding, Thackeray, Tennyson, and other distinguished men. His most famous works are translations from the Persian.

Giuseppe Giusti (1809-1850).—One of the most celebrated of the modern poets and satirists of Italy. Was educated at Pistoja, Lucca, and Pisa. After trying the law and serving at Florence as Minister of Justice, he entered the field of literature. His writings exercised a positive and telling influence in the struggle of his country for unity and freedom.

Nikolai Vassilyevitch Gogol (1809-1852).—One of the greatest of Russian writers. He was born in the Government of Poltava, of Cossack ancestry. From 1830 to 1832 he was a clerk in the Department of Appanages at St. Petersburg, and within the interval published a volume of home-life sketches. His works, which include *Mirgorod*, *Arabesques*, the comedy *Revizor*, and *Dead Souls*, deal in a masterful way with the social, political, and economic problems of Russia.

Oliver Wendell Holmes (1809-1894) of Massachusetts, the author of "The Autocrat of the Breakfast Table," "Elsie Venner," "Old Ironsides," and "The Chambered Nautilus," is too well known to need introduction.

Joseph Holt Ingraham (1809-1860).—An American novelist, borne in Maine, a graduate of Bowdoin College, and a teacher and preacher in Mississippi during the latter period of his life. He is probably

the author of more published works than any other American writer. His most famous books are "The Prince of the House of David," "The Pillar of Fire," and "The Throne of David."

Alexander William Kinglake (1809-1891).—An English historian, born at Taunton, Somersetshire. He was a friend and college mate of Thackeray and Tennyson. His chief work is a history of the Crimean War, in eight volumes. From 1857 to 1868 he was a member of Parliament, representing Bridgewater.

Robert Shelton Mackenzie (1809-1880).—An Irish-American journalist and writer of miscellaneous pieces.

Richard Monckton Milnes, Baron Houghton (1809-1885).—An English poet and politician, born in London. At Trinity College, Cambridge, he was a member of the famous "Apostles' Club," which included at the same time Tennyson and Arthur Henry Hallam. In Parliament he labored for public education, religious equality, copyright laws, and the establishment of reformatories for juvenile offenders. He traveled in the East, in Canada, and in the United States.

Frederik Paludan-Müller (1809-1876).—A Danish poet, educated for the law at Copenhagen. He wrote dramas and romances, and was skilled in both verse and prose; but his most important work is *Adam Homo*, a novel in verse.

Albert Pike (1809-1891).—An American author, editor, lawyer and soldier, born in Boston, but for the most part a resident of the South. He served in the Mexican War, and rose to the rank of brigadier-general in the Southern Confederacy. He wrote prose and poetry, his "Hymns to the Gods" being the best known of his work in the latter form.

Edgar Allen Poe (1809-1849).—An American poet, editor, literary critic, and writer of short stories; one of the leading figures in American literature. He was a student at the University of Virginia in 1826, during the second session of that institution, where he won honors in his classes, and whence he was not expelled, as some have supposed. At this time his home was with the Allan family in Richmond, Virginia, though Boston was his birthplace. "The Raven" is his most famous poem, though "Israfel" and others are probably better. Among his stories, "The Gold Bug" and "The Fall of the House of Usher" are familiar. He died in Baltimore.

Juliusz Slowacki (1809-1849).—An eminent Polish author, born at Kremenez. He wrote poems, dramas, etc.; and because of the morbid and misanthropic nature of his work he has been called the "Satan of Literature."

Alfred (Lord) Tennyson (1809-1892), born at Somersby, in Lincolnshire, August 6, 1809, died at Aldworth, in Surrey, on the 6th of October, 1892. He is one of the greatest and most popular of English

poets. His *In Memoriam*, by many regarded as his greatest poem, was written on the death of Arthur Henry Hallam. "Enoch Arden" and many of his shorter pieces are old familiar friends to every general reader.

A Famous Scientist.

Charles Robert Darwin (1809-1882).—Generally regarded as the greatest English naturalist of the nineteenth century. His name is linked with the modern theory of evolution, which has been much misunderstood and often misapplied. A wonderful and far-reaching system, it has been reduced by some to an absurdity, in the effort to apply it to everything, or to explain everything by it. Darwin was born at Shrewsbury, on the 12th of February, 1809; his death occurred on the 19th of April, 1882.

Four Famous Statesmen.

William Ewart Gladstone (1809-1898).—England's "Grand Old Man," perhaps the greatest statesman of modern times, was born in Liverpool and educated at Eton and Oxford. If he had not won distinction in Parliament, and as Prime Minister of the realm, he would still have had a title to fame by reason of his versatile scholarship and his prolific authorship. He stood for morality and liberality in life and in government. His bills in Parliament worked far-reaching and beneficial reforms.

Hannibal Hamlin (1809-1891).—An American political leader, and Vice-President of the United States from 1861 to 1865. He was a native of Maine; was a member of the State legislature, member of Congress, U. S. Senator, Governor of Maine, and Minister to Spain.

Robert Mercer Taliaferro Hunter (1809-1887).—A native of Essex County, Virginia, and a contemporary of Edgar Allan Poe at the University of Virginia. Having served in the State legislature, he was elected to Congress, and became Speaker of the House at the age of thirty. He was later Senator of the United States and of the Confederate States, and served awhile under the latter government as Secretary of State.

Abraham Lincoln (1809-1865).—The sixteenth President of the United States; and the most famous public man of his generation. He was born in Hardin County, Kentucky, on Darwin's birthday, February 12, 1809, and died in Washington City, April 15, 1865. He was the first "martyr President."

Two Famous Musicians.

Frédéric François Chopin (1809-1849).—A native of Poland, born on the anniversary of Washington's birthday, the son of a French father and a Polish mother. He is regarded by many persons as the greatest modern master of pianoforte composition.

Felix Mendelssohn-Bartholdy (1809-1847).—A great German pianist and composer, born at Hamburg,

February 3. His compositions include overtures, symphonies, and oratorios. Among the last are *Saint Paul* and *Elijah*.

There are doubtless other noted personages whose centenaries fall within this year; but this is not intended to be exhaustive. Enough names have been given, however, to prove that 1809 was a remarkable birth-year, and to suggest an interesting study to students of history and literature.

ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

XXIV. E. D. Yeomans.

EDWARD DORR YEOMANS was the son of Rev. John W. Yeomans, and was born in 1829 at North Adams, Mass., where his father was pastor of the Presbyterian church. He was educated mostly by his father, who was from 1841 to 1844 President of La Fayette College at Easton, Pa., where he graduated before he was fifteen years old.

He studied for the ministry, and preached from 1854 to 1858 in the Warrior Run church, Pa.; from 1858 to 1863 in the Fourth church at Trenton, N. J.; from 1863 to 1867 in St. Peter's church at Buffalo, N. Y.; and in Orange, N. J., from 1867 to his death in 1868.

He was an accomplished scholar and of more than ordinary proficiency in Latin, Hebrew, Greek and German, and was especially skillful in translations; his translations from the German having all the "earmarks" of the original. He translated Schaff's "History of the Apostolic Church," Schaff's "History of the Christian Church," Schaff's "Lectures on America," and at his death was working on Lange's bulky "Commentary of St. John." Princeton College gave him the honorary degrees of A. M. and D. D.

Worthy of mention: J. W. Yeomans, religious; Edward Young, poetry.

Bryan, Ohio.

ADVICE TO A YOUNG MAN.

REMEMBER, son, that the world is older than you are, by several years; that for thousands of years it has been so full of smarter and better young men than yourself that their feet stuck out of the dormer windows; that when they died the old globe went whirling on, and not one man in ten million went to the funeral, or even heard of the death.

Be as smart as you can, of course. Know as much as you can, without blowing the packing out of your cylinder-head; shed the light of your wisdom abroad in the world, but don't dazzle people with it, and don't imagine a thing is so simple because you say it is. Don't be too sorry for your father because he knows so much less than you do; remember the reply of Dr. Wayland to the student of Brown University who said it was an easy enough thing to make proverbs

such as Solomon wrote. "Make a few," tersely replied the old man. We never heard that the young man made any. Not more than two or three, anyhow. The world has great need of young men, but no greater need than the young men have of it. Your clothes fit you better than your father's fit him; they cost more money, they are more stylish, your mustache is neater, the cut of your hair better, and you are prettier, oh, far prettier than "pa." But, young man, the old gentleman gets the bigger salary, and his homely, scrambling signature on the business end of a check will bring more money out of the bank in five minutes than you could get out with a ream of paper and copper-plate signature in six months.

Young men are useful, and we all love them, and we couldn't engineer a picnic successfully without them. But they are not novelties, son. Oh, no, nothing of the kind. They have been here before. Do not be so modest as to shut yourself clear out; but don't be so fresh that you will have to be put away in the cool to keep from spoiling.

Don't be discouraged that your merits will not be discovered. People all over the world are hunting for you, and if you are worth finding, they will find you. A diamond isn't so easily found as a quartz pebble, but people search for it all the more intently.—*Exchange.*

SEASONING AND TREATING TELEPHONE POLE CROSS-ARMS.

THERE are used every year in the United States about 14,000,000 cross-arms for telephone and telegraph poles. Of these, perhaps one-fourth are now treated with preservatives to increase their durability, and there are at least five plants, at New York city, Norfolk, Va., New Orleans and Slidell, La., and West Pascagoula, Miss., at which cross-arms are treated. Because of their small size as compared with the strength required and the weakening effects of the holes for insulator pins, and their constant exposure to all kinds of weather, cross-arms should receive a thorough treatment. A good treatment with creosote will at least treble their durability.

A large portion of the supply of cross-arms comes from the South; they are sawed from the loblolly or old field pine, of which there is a large quantity throughout this region. This tree grows rapidly, but contains much sapwood, which is difficult to season. It has been said that "loblolly pine sapwood will rot before it will season in the warm, damp climate of the South." While this is probably overdrawn, it is necessary so to pile the cross-arms that the air may circulate freely about them, and to protect them from rain and snow by a roof of loose boards. By laying twenty cross-arms in a tier, two cross-arms at each side and two in the middle set on edge, and allowing a small space between each of the others, which are laid

flat, favorable conditions for seasoning are established and no rotting will occur.

Sapwood absorbs preservative so much more readily than heartwood that when both cross-arms in which sapwood abounds and those in which heartwood predominates are treated in the same run the former absorb an excessive amount before the latter have received what they require. This is not only a needless expense but a detriment, inasmuch as the excess of creosote in the sapwood later oozes out and drips on those who walk beneath. To solve this difficulty, the cross-arms should be sorted in three classes, as sapwood, intermediate, and hardwood, and treated in different runs.

Cross-arms are treated in large horizontal cylinders varying from 90 to 180 feet in length and from 6 to 7 feet in diameter. Into these the arms are run on skeleton trucks, and the doors are then bolted air-tight. Creosote is next run until the remaining space in the cylinder is filled. Pressure is sometimes then applied by pumps to force the preservative into the wood. In some instances before the preservative treatment the cross-arms are treated to a bath of living steam followed by the drawing of a vacuum, to remove moisture and secure rapid penetration of the wood by the preservative. It is the opinion of the Forest Service, however, that the bath in steam is not necessary or desirable if the arms are properly air seasoned. Other recommendations for seasoning and treating cross-arms, and a discussion of the methods now in use, are contained in Circular 151 of the Forest Service, which can be had upon application to The Forester at Washington.—*Scientific American Supplement*.

The Children's Corner

A CHILD'S HYMN.

Now the day of work is done,
Now the quiet night's begun,
And I lay my tired head
Safe within my little bed.

Savior, hear me;
Be thou near me;
Let me now thy mercy find.

I can see from where I lie,
Glitt'ring in the dark blue sky,
Here and there a little star
Shining out so clear and high.

Savior, hear me;
Be thou near me;
Keep me safe beneath thine eye.

If I've grieved thee through this day,
Let my sin be washed away;
Make me meek, and pure and kind,
Give me thy most holy mind.
Savior, hear me;

Be thou near me;
Let me now thy mercy find.

Thou art loving me above,
And I love thee for thy love;
Thou didst leave thy throne on high
And for me came down to die.

Thou wilt hear me,
And be near me,
I am safe while thou art nigh.

—Children's Companion.

CHARLIE'S PHOTOGRAPH.

"FATHER, Willie Morris had his photograph taken. I do want to have mine. Please let me. Wouldn't you and mother like to have one of me, father?"

"But I have a lot of photographs of you, Charlie—in fact I take one with me every day to town. I take a different one every day—sometimes they are very ugly; but they are always like my little boy."

"Oh, father! are you making fun? Why, I never had my photograph taken," said Charlie, his eyes staring wide with surprise.

"Ah, yes, you have; for I take one of you, though you don't know it, every morning when I go to town," said his father, as he hung his hat on the peg in the hall, and, sitting down in a chair, drew the perplexed little boy toward him. "This morning, when I started from home to go to my office, I took a photograph of you and put it in my pocket. I took it, not with a camera, but with my eyes, and the pocket I put it in was not in my coat, but I put it in the pocket called memory, which I carry in my head, and I have kept it there all day.

"Shall I tell you what the photograph I have carried about with me all day was like—the one I took this morning of my little boy?" asked his father, softly, as he drew him closer to his knee.

"Please, father," Charlie whispered low.

"It was a dark, ugly photograph. There was a frown on his brow, and an angry light in his eyes, and his mouth was shut up very tight indeed, so tight that he could not possibly open it to say 'Good-bye' to father; and all because he wasn't allowed to go out to the garden to play ball before breakfast because it was raining. So he let father go away to town with a very ugly photograph of Charlie to look at all day, instead of the bright, pleasant one he might have had."

Charlie's head hung so low it seemed as if he never would look up again.

"I don't know what kind of a photograph mother took of you when you were going to school. I hope it was nicer than mine; and I know she wants a nice one left with her every day while you are at school, just as badly as I want one to take to town. Will Charlie try not to give us ugly ones any more?"

Charlie looked up now and whispered, "I will try, father."—*Selected*.

Nature Studies

APPROPRIATION.

RICHARD BRAUNSTEIN.

The sun shone bright o'er hill and vale,
O'er waving field and grassy lea;
A little flower looked up and said:
"It shines for me."

The rain fell soft o'er all the land,
And washed the leaves of wood and tree;
A little thirsty grass-root said:
"It falls for me."

The wind blew gently from the south
And fanned the face of earth and sea;
Said each green blade and tender ear:
"It blows for me."

The Sun of Righteousness Divine,
The showers of blessing rich and free,
The Holy Spirit's quickening breath
Are all for me.

WONDERS OF ANIMAL SIGHT.

A WRITER in the *Chicago News*, mentioning the marvels of sight in animals, says:

The grayhound runs by sight only. The carrier pigeon flies its hundreds of miles homeward by eyesight, noting from point to point objects that it has marked; or so, at least, it is thought. The dragon fly, with twelve thousand lenses in its eye, darts from angle to angle with the rapidity of a flashing sword, and as rapidly darts back, not turning in the air, but with a clash reversing the action of its four wings, and instantaneously calculating the distance of the objects, or it would dash itself to pieces. No one can tell in what conformation of the eye this power consists. A thousand mosquitoes dance up and down in the sun, with the minutest interval between them, yet no one knocks another headlong on the grass, or breaks a leg or a wing, long and delicate as they are.

This is supplemented by the *Chicago Tribune* with these interesting facts:

The sharp-eyed hawk can spy a lark on a piece of earth almost exactly the same color at twenty times the distance it is perceptible to man or dog. A kite soaring out of human sight can still distinguish and pounce upon lizards and field-mice on the ground, and the distance at which vultures can sight their prey is almost incredible.

Recent discoveries have inclined naturalists to the belief that birds of prey have not the acute sense of smell or of hearing that has hitherto been accredited to them. Their keen sight seems to account for their action, and they appear to be guided by sight alone, as they never sniff at anything, but dart straight at the object of their desire.

Their counterparts in the ocean doubtless smell and see, but are more guided by smell than sight. In both sharks and rays the eyes are good and have a distinct expression though since they scent their prey from a short distance and swim up to it with greatest rapidity, smell may be called their real eye.—*Selected.*

PECULIAR BIRDS.

BIRDS without wings are among the strange creatures that may be found in New Zealand, and they are very interesting specimens to scientists. They are fast becoming extinct, and it is believed that in no other part of the earth could they have existed so long as they have in these islands. The reason for this is that in New Zealand there are no destructive animals to attack them. The kakapo, as it is called by the Maori natives, is also named the ground- or night-parrot, as it lives on the ground and is nocturnal in its habits. These birds are about the size of a raven, and are green, marked with black and yellow. They make their nests in holes in the ground, and breed only once in two years. They have almost disappeared from North Island and are rare in Middle Island.

The weka is the Maori name for another New Zealand bird that cannot fly. It is a brown bird similar to some species of American rail. One species frequents the seashore and feeds on shellfish, while the other inhabits the interior of South Island. They mate for life, and male and female take turns in hatching the brood. They, too, are rapidly becoming extinct.

The poyhoney-eater, sometimes called the "parson-bird," because of its white throat-feathers, is another native of New Zealand. It is a good singer and mimic. It has an extensile tongue which is forked at the tip, and has fibers which form a kind of brush useful in gathering its food.

One of the curious birds of South America is the

hoazin, which, as a birdling, has claws almost like hands attached to its wings. As it grows older the claws disappear and it becomes like other birds.—*The Circle*.

SOME LONG NAPS.

ALL animals have their own particular time for sleeping, says a writer in an exchange.

Human beings sleep at night, so do most of the insects and birds. But there are some little creatures that take very long sleeps! When they are all through their summer work they crawl into winter quarters. There they stay until the cold weather is over. Large

away in the winter that are not wholly asleep all the time. The blood moves a little, and once in a while they take a breath. If the weather is at all mild they wake up enough to eat.

Now, isn't it curious that they know all this beforehand? Such animals always lay up something to eat, just by their side, when they go into their winter sleeping places. But those that do not wake up never lay up any food, for it would not be used if they did.

The little field mouse lays up nuts and grain. It eats some when it is partly awake on a warm day.

The bat does not need to do this, for the same warmth that wakes him wakes the insects on which he feeds. He catches some and then eats.

The woodchuck, a kind of marmot, does not wake, yet he lays up dried grass near his hole. What is it for, do you think? On purpose to have it ready the first moment he wakes in the spring. Then he can eat and be strong before he comes out of his hole.

I have told you that his sleep lasts all winter. But with some animals it often lasts much longer than that. Frogs have been known to sleep several years. When they were brought into the warm air they came to life and hopped about in as lively a way as ever.

How many things are sleeping in the winter! Plants, too, as well as animals. What a busy time they do have in waking up, and how little we think about it all!

Mist on the Meadows.

numbers of frogs, butterflies, and spiders do this. If they were only to sleep for the night the blood would keep moving in their veins and they would breathe. But in this winter sleep they do not appear to breathe, or the blood to move. Yet they are alive, only in such a "dead sleep."

But wait until the springtime. The warm sun will wake them up again. They will come out, one by one, from their hiding places.

However, there are some kinds of animals that hide

A SPECIES of sheep common in Syria is so encumbered by the weight of its tail that the shepherds fix a piece of thin board to the under part, where it is not covered with thick wool, to prevent it from being torn by the bushes. Some have small wheels affixed to facilitate the dragging of these boards after them. The tail of a common sheep of this sort usually weighs fifteen pounds or upward, while that of a large species, after being well fattened, will weigh fifty pounds.—*The Boys' World*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

CARE OF DEPENDENT CHILDREN.

If our active President does not get around to look up every good cause and give it a helping hand, there will, in many cases, be those who will look them up for him and call his attention to them. In fact, it is no doubt through this method that he has come to give attention to so many things that have heretofore not been looked upon as belonging to the President's duties. However, his attitude first opened the way and made it easy for the advocates of a worthy cause to approach him.

One of the latest of these worthy causes to be brought to the attention of the President is that of the various charity associations interested in the welfare of dependent children. The President has taken hold of the subject with his characteristic energy and has sent a letter to about one hundred prominent men, inviting them to a conference in Washington to formulate a plan for his consideration, with a view to recommend congressional legislation.

Here is the President's letter:

"I am confident that you will be impressed with the very great importance of the subject touched in this letter and the desirability that there should be the fullest discussion of the propositions, a memorandum of which I inclose. Surely nothing ought to interest our people more than the care of the children who are destitute and neglected, but not delinquent. Personally, I very earnestly believe that the best way in which to care for dependent children is in the family home. In Massachusetts many orphan asylums have been discontinued, and thousands of the children who formerly have gone to the orphan asylums are now kept in private homes, either on board with payment from public or private treasuries or in adopted homes provided by the generosity of foster parents. Many religious bodies have within the past ten years organized effective child-placing agencies. I am accordingly inviting a number of men and women to a

conference to be held in Washington Jan. 25 and 26. The conference will open by my receiving the members at the White House Jan. 25 at 2:30 P. M. Can you attend? Will you please communicate with James E. West, 1343 Clifton street. N. W., Washington, D. C.?"

Of equal interest to our readers, we are sure, will be the letter of the charity workers which stirred the President to action. The letter ran as follows:

"The State has dealt generously with her troublesome children; but what is she doing for those who make no trouble, but are simply unfortunate?"

"Destitute children certainly deserve as much consideration and help as those who, by reason of some alleged delinquency, enforce the attention of the State and become objects of its care; but only a few States have defined responsibility for this class of children. Their care and protection is left in many localities to the fidelity of voluntary agencies without requiring proper standards of method or efficiency and without definite responsibility to the State or the community. According to a special bulletin of the United States census there were in orphan asylums and kindred institutions on Dec. 31, 1904, not less than 99,901 children. In addition to these there were probably some 50,000 dependent children in family homes, under supervision.

"In many States, however, little or no child-saving work is done, and in many States the organizations are greatly handicapped by the lack of appreciation and of adequate financial support.

"It is of the highest importance to the welfare of this vast number of future citizens that all child-saving work shall be conducted on a high plane of efficiency; that in the placing of children in families the utmost care shall be taken to exclude all undesirable applicants, that every precaution shall be taken in the subsequent supervision of the children to prevent neglect, overwork, insufficient education or inadequate moral and religious training, and that institutions shall be so carried on as to secure the best physical, mental, moral and religious training of each individual child, and to fit it for active and creditable citizenship."

Judge Lindsey, of the Denver, Colo., Juvenile Court; Jacob Riis, of New York City, Booker T. Washington, of Tuskegee Institute, and United States Commissioner of Education Brown are among those invited to the conference.

It will be clear to all noble-hearted, thinking people that the President is right when he says "The best way to care for dependent children is in the family home." But the granting of this statement as the truth does not insure the solution of the problem. There is still much left for this conference to do. And after the conference and Congress have done all in their power there will still be something left for those to do who

have established the family home with all its blessed influences.

May much good come from the noble work so well begun, and may all who should be concerned in the work discharge their duty as willingly and as well as those who have begun it.

WITH OUR READERS.

IN our efforts to secure writers for our magazine for this year we consider ourselves especially fortunate. Not only have we a list of names that promises much interesting and valuable reading matter, but the willingness with which these writers have agreed to do the work is bound to give an added value to their articles in particular and to the whole magazine in general. These writers belong to our family and they therefore write from a broader motive than that of the average magazine writer.

In the home department during the year there will be at least one medical talk each month. In the past a good many of us have had a wrong idea of the physician's work. His chief aim is not to *make* people well, but to *keep* them well, and in these medical talks we believe the people will see that this is true. Dr. J. F. Studebaker, of Fort Dodge, Iowa, will write on the following subjects: "Where Do You Live?" "When the Shadows Are Long," "My Nerves," and "American Dyspepsia." Dr. O. G. Brubaker, of Mt. Morris, Ill., will discuss The Great White Plague or Tuberculosis (two articles), Rebellion of Cells and Tissues in the Body or Cancer, and The Use and Abuse of Patent Medicines. Dr. O. H. Yereman, associate editor of *The Clinic* (Eye, Ear, Nose and Throat), and occupying a chair of clinical teaching in the University Medical College of Kansas City, Mo., will write on the diseases and care of the eye-sight, hearing and voice. Other topics, coming within the range of this department will be discussed by writers who are well known among us.

In the miscellaneous department there will be a wide range of subjects treated. Special articles have been promised along the line of biography and history. John W. Wayland, professor of history in the University of Virginia, will, at an early date, furnish us with a write-up of Poe, specializing his life at that university. Then there will be three or four articles on prison life, a series on various phases of seacoast life and conditions, and now and then a story and an article from foreign lands, besides those that will appear every week in the series, "Around the World Without a Cent." "Among the Sierras" and "The Big Trees" will give us an idea of some of the things that nature has done for California.

Three able writers will furnish articles regularly for the nature department. We hope to make arrangements with others. Every reader who is a lover of

nature is urged to send us accounts of the unusual or remarkable occurrences that have come under his observation in the plant, animal, or insect world.

A number of ministers of the Church of the Brethren have promised to write for the Quiet Hour department and a contributed article will appear in those pages every week.

Dear reader, is this not a foretaste of a veritable feast of good things? In giving a hint of what this year's INGLENOOK is to contain, the editor has not indulged in any dreams. We have the word of the contributor for every article mentioned. And this is not all. We are sure that some of the things that are yet in the dream state will become realities, for some of our arrangements are not completed yet, owing to the late date at which we began them. But we are persuaded that the above outline will appeal strongly to our readers,—so strongly, we hope, that they will convince others that they should have a share in the good things.

THE PARCELS POST.

AT present we seem to be about as far from realizing the benefit of a parcels post as at any time since the subject has been before the people. It was once said in Congress that there are six great reasons why the parcels post should not be established by the government, namely the Adams Express Company, the American, Pacific, Southern, United States, and Wells-Fargo. Evidently the reasons are powerful ones—insurmountable, it would seem, from the fact that the will of the people has not been able to remove them. Just what this power consists in only these giant companies and perhaps a few law-makers know.

Last year the express companies registered total receipts of \$128,117,176. Every postmaster-general, from the time of John Wanamaker, has tried to get Congress to accept the unanswerable argument in favor of the parcels post. The foreign service, which is now an established fact, is giving perfect satisfaction. "There can be no possible defense of a policy under which a package can be sent from Philadelphia to London cheaper than from Philadelphia to New York."

It is clear that the people of the United States have not yet taken hold of this subject by the right handle. We need a man with the conviction and the perseverance of a Charles E. Hughes to see that our welfare is considered and our wishes carried out.

"ONLY melted gold is minted; only moistened clay is molded; only softened wax receives the die; only broken and contrite hearts can take and keep the impress of heaven. If that is thy condition, wait beneath the pressure of the Holy Spirit. He shall leave the image of Jesus upon thee."

The Home World

FOODS FOR THE SICK

LENNA F. COOPER

THAT the diet of an invalid is oftentimes of more importance than medicine or treatment, is recognized by all physicians and nurses. Many a typhoid patient has lost his life not because of the neglect of the physician or the nurse, but through the carelessness of the cook.

A family in which typhoid fever was running once came under the writer's notice. Two stalwart young men were literally killed by their mother, one having been given fresh apples and the other cornmeal gruel from which the cornmeal had not been strained. As the result both young men were dead in three or four hours after having partaken of these viands. This illustrates the importance of careful preparation of foods for the sick.

Sickness usually resolves itself into one of two forms, acute or chronic. Acute illnesses are of comparatively short duration, and are characterized by a rise of temperature usually known as fever. This condition is brought about by poisons in the body of which nature is trying to rid itself by burning them up, thus producing the increased bodily temperature. At such a time the digestive organs, as well as the other functions of the body are somewhat disturbed, hence it is apparent that the digestive organs should not be given any more work to do than absolutely necessary; also that the food should be given in very small quantities since it is from our food that heat is derived.

The one thing needful is water in copious amounts. Water acts as a solvent and therefore helps to dissolve and to wash away some of the poisons that have accumulated in the body. Hence water and beverages should be given freely, indeed, only liquid foods should be given. The liquid foods are in a fine state of division, and thus are more easily digested. Fruit juices, preferably unsweetened, are one of the best things to give a person suffering from high temperature, since almost the only food principle found in the fruit juices is sugar, and that in a form all ready for as-

similation, hence the fruit juices require no digestion and are especially appetizing, which is a very important feature in the invalid's diet.

It is now a well-known fact that the appetite calls forth the digestive fluids which are necessary for the digestion of foods. Foods taken into the stomach when there is no desire for food remains in the stomach a much longer time than when there is an appetite for the article. The appetite may be appealed to through the three senses of sight, smell, and taste, hence it is important that all foods served to an invalid should be especially attractive in appearance, toothsome to the taste, and, if possible, give off a pleasant aroma. For this reason all hot food should be served very hot, since soups, broths, etc., give off an aroma when hot, thus appealing to the appetite through the sense of smell.

Food should never be served in large amounts to sick people. Small quantities may be served much more daintily, and in this way they appeal to the appetite through the sense of sight. No pains should be spared to make the tray and the foods of the sick one dainty. The best linen and china the house affords are none too good for the invalid.

Aside from being palatable and appetizing, the foods must be thoroughly cooked. It is especially important that all starchy foods should be well cooked. Gruels should be made from cereals which have been cooked several hours if made from the whole grain, rice being an exception. Rice cooks much more quickly than most cereals. All gruels should be strained before serving, allowing no coarse particles to be served. Thirty minutes is usually sufficient for cooking rice for gruel. What is still better than gruels made from cereals, as ordinarily cooked, is a gruel made from the so-called dextrinized cereals which have been thoroughly cooked in the manufacturing process, such as "Toasted Corn Flakes" and other cooked flake products on the market; since the cook-

ing of the starch is a step in the digestion of the article, it is important that the cooking should be very thorough. There are five steps in the digestion of the starch, and it is possible to accomplish three of these by cooking, providing the cooking is done at a very high temperature. This is accomplished in the baking of starchy foods which have lost most of their moisture. Bread may be dextrinized by placing slices of stale bread in a moderate oven, first drying it out by slow cooking and then increasing the temperature until the bread becomes a golden yellow throughout. Toast thus prepared is more easily digested than fresh toast which is only slightly toasted on the outside.

While it is very important that only appetizing foods should be given the patient, it is also important that their food should not contain substances which would only add fuel to the fire. Many are in the habit of feeding the invalid meat, broth, beef tea, etc. While these may be somewhat of an appetizer to some people, they also contain waste products of the animal organism from which the broth was made which are identical with those which the body is trying to burn up. Hence if these things are given at all, they should only be given occasionally as a mere appetizer, but should not be counted upon as a food. They contain practically no food value. Very delicious broths may be made from the various vegetables and legumes.

When the patient begins to convalesce the diet should be as carefully guarded as during the acute illness. There is more danger from over eating during this period than during the previous stage. The body is in a greatly reduced state due to the self-consummation during the fever. The loss of bodily tissue must be supplied through the foods, but it must also be supplied in very small quantities for the organs of digestion and assimilation are in a very weakened condition. Hence the body can only take care of very small quantities at a time. Such patients are usually fed every three hours—not oftener than two and a half hours. Egg-nogs, soft-cooked eggs, thoroughly-toasted bread, boiled rice, and other similar foods may be added to the dietary of the convalescent as the case may indicate.

The chronic illnesses are usually designated as some special disease; such as, diabetes, Bright's disease, tuberculosis, etc. The attending physician should carefully outline the diet for such cases.

Orange Juice.

Extract the juice of an orange the same way as that of a lemon, preferably using the lemon drill. Strain before serving.

Rice Water.

3 tbsp. rice. 1 qt. boiling water.
½ tsp. salt.

Wash the grain by holding under a hot water faucet for a moment or so, then rinse in several cold waters, boil thirty minutes and then strain.

Barley water may be made in the same way except that two tbsp. of barley are used and the cooking must be much longer.

Corn Flake Gruel.

1 cup toasted corn flakes. 2 cups water.
¼ tsp. salt.

Heat the water to boiling, add the salt and corn flakes to the water. Cook until smooth and strain.

Corn Meal Gruel.

2 tbsp. corn meal. ¼ cup boiling water.
½ cup cold water. ½ tsp. salt.

Moisten the corn meal and salt with the cold water and add to the boiling water, stirring meanwhile. Cook until well thickened over the flame, stirring to keep it perfectly smooth, then set in a double boiler and cook for 4 hours. Strain before serving.

Baked Potato Soup.

1 medium-sized baked potato. ½ cup hot water.
½ cup cream. ¼ tsp. salt.

Put the baked potato through the colander and add the hot water slowly. Next add the cream and salt, and heat. Serve. This soup may be made without cream by substituting water and adding 1-½ tsp. butter, also a little celery salt for seasoning.

Bran Broth.

1 cup white beans. 1 qt. cold water.

Put the beans to cook in the cold water and let simmer until but one cup of the liquid remains. Drain this from the beans, season with salt, celery salt, and butter, or if desired with cream.

Foamy Egg-nog.

1 egg. 2 tsp. sugar.
1 tbsp. lemon juice. 2 tbsp. cream.

Beat the egg yolk until light, add ½ of the sugar and lemon juice, also the cream. Beat the egg white until stiff and add the remaining half of the sugar. Fold the white into the egg yolk mixture leaving a small portion for the top.

Soft Cooked or Jellied Egg.

1 egg. 1½ pts. boiling water.

Have a porcelain pitcher hot, place the egg therein, and pour over it the boiling water. Cover and let stand on the back of range 5 to 10 minutes. Serve in a hot egg cup.

MAKING RUGS IN WINTER.

ONE woman last winter made the beautiful rugs that adorned her porch in the summer. They were all made of woolen goods cut from old dresses and since the goods was all light, with delicate shades mingled throughout the material, the rugs were unusually attractive. Burlap was tightly stretched in a wooden frame and the material, which was cut in convenient strips, was drawn through the burlap with an iron crochet hook made by the blacksmith. In having the needle made for this purpose, explain to the blacksmith that it should be short and half-covered with a

wooden handle. This is more convenient than the ordinary all-iron hook. To get the general scheme of a rug, one can put the burlap upon the floor and mark off the design with colored spermaceti crayons (ten cents a box). This gives the outline and one can provide a pretty border for each rug. Woolen rugs are prettiest, especially when clipped. Very light material can be used, however. One will be delighted with an all-brown rug, with a slightly mottled border of dark red. These are colors often found among old garments and a rug of the two colors can be made almost as beautiful as some of the purchased ones. There are rugs made entirely of fringed burlap. The burlap is first dyed and cut into convenient strips, usually about four inches wide. Each side is fringed and the strip is sewn through the center to a second piece of burlap, thus furnishing the rug foundation. The next strip is placed close to it. If dyed a deep green it makes a mossy-looking rug which is very ornamental. Despite the fringe effect over the entire surface, such rugs are durable and can be beaten and cleaned the same as any rug.—*The Woman's National Daily*.

THE BATTLEFIELD.

A mother's heart is a battlefield,
 A mother's heart is a nest
 Where love leans down with snowy shield
 And lips that sing to rest.
 A mother's heart is the plain where meet
 Through all her days of life
 The legions of the childhood feet,
 The glittering ghosts of strife.
 A mother's heart is a field of war
 Where none may know, may see,
 The wounds that bleed, the guns that roar,
 The anguished hours that be.
 A mother's heart is battle's home,
 But, oh, so few have knelt
 With her where shadows fill the gloam,
 Have felt what she has felt!
 A mother's heart is warfare's realm,
 In it, unseen of time,
 Rage the grim wars that overwhelm
 But for her faith sublime.
 A mother's heart is where she hides
 So much she never tells.
 So much that in her soul abides
 And conquering lovehood quells.
 A mother's heart—oh, sacred place,
 Oh, templed fane, how fair
 To kneel beside its shrine of grace,
 To kneel and worship there.
 A mother's heart is calm retreat,
 Is rest and love and song,
 And round it, oh, how tender-sweet
 The shades of memory throng!
 A mother's heart has seen so much,
 Has felt and borne and known
 The rugged blow, the tender touch,
 Within its wandering zone;

Has borne so much for those that lean
 Upon its help and trust,
 Has done so much to keep them clean,
 To lift them from the dust!

A mother's heart is a battlefield
 Where sacred strife has been,
 Where spear on spear and shield on shield
 Hath raged the battle's din!
 O holy shrine, inviolate spot,
 Where love and memory come
 When all the rest of life's forgot,
 When all the rest is dumb!

—Baltimore Sun.

HOW HE TABULATED HER RELIGION.

A NOTED evangelist was holding a series of meetings with the Grand Avenue church, and one evening when the topic had been the new birth, Mrs. Fessenden said to her husband as they walked briskly down the lighted street in the bracing air of the frosty night: "I wish you had decided for Christ to-night, dear; I thought you would, the speaker made it so plain and so many responded to the invitation."

"Would my rising to my feet there have made any difference with me in any way?"

"It would have put you and your influence decidedly on the side of right."

"But is not my influence already on the right side?" he interrupted. "What do I do that you do not do? You are a professing Christian and I am not."

"You remember the illustration that he gave," she interrupted now. "The moralist and the Christian are on the same street, but one is headed toward the kingdom of God and the other in an opposite direction."

"Yes, but I am not able to see why you and I are not headed the same way. I will try to state the matter more clearly to you later. Here we are now at home."

Presently, as they sat before the library grate with a bit of hot supper on the round table between them, he recurred to the matter as she poured the chocolate and laughed a little as she began reading the somewhat lengthy statement that he submitted for her inspection.

"How fearfully business-like it looks," she said.

"I do not use tobacco in any way. You do not.

"I do not use profane language. Neither do you.

"I am a teetotaler. So are you.

"I go to the theater. You go to the theater.

"I play cards. You play cards.

"I attend church irregularly. You do the same.

"I pay something for religious purposes. So do you.

"I dance. You dance.

"I associate with unbelievers. You do the same.

"I read trashy novels. You read trashy novels.

"I do not attend devotional meetings. You do not.

"I do not read the Bible. Do you read the Bible?"

"I do not pray. Do you pray?"

"Now what does your church membership add to your manner of living? Why are our ways different?"

The young woman began reading the list with a laugh, but ended in tears.

"O my dear!" he cried. "I had no intention of paining you! I am sorry."

"I am not sorry. I thank you. You make me see how far wrong I have gone in my endeavor to show you that religion need not make one stupid and poky. It is not strange that you hesitate to take your stand as a Christian, when you see how inconsistent I am to my profession of having been born to newness of life."

Again their lives flowed onward side by side. She was not less bright, sweet or companionable, but when the card clubs and the dancing clubs organized she did not join. She did join the mission workers' band, and was faithful in attendance. She no longer went to the theater, and every time she declined her husband put the expense for both, saved, into her mission box. She no longer read her Bible in secret. She took up work in the Sunday school. Her time was not more taken than before, but she was differently employed.

Soon the gay, thoughtless people with whom she had associated were no longer in sympathy. "What has become of Mrs. Fessenden?" was asked, and the reply came scornfully, "Oh, she's running her church now! Can't imagine what has come over her. She has always been a church member, but she was real decent about it. Did everything the rest of us did, and she didn't preach. She is really a bright, sweet woman, but now she has always some church engagement to attend to when we need her to make up our parties, and she does not hesitate to say, 'I have too long been regardless of the admonition, "Seek first the kingdom of God."'"

"And her husband?"

"Oh, he is loyal to her! He is a real lover. He goes wherever she goes; but the poor man must be having a dull time of it."

Mr. Fessenden meantime did not consider himself an object for commiseration. If his wife's new departure was an experiment he found it an interesting one. He found his new environment more refined, more intellectual, more congenial than the old, for earnestness took the place of frivolity, and he found himself awakening to a knowledge of a spiritual life.

When at length he made his decision he said: "I have at last through the influence of my wife found that the true meaning and purpose of life is to follow Christ and to do the work in the world that he left for his followers." And the happy wife often says:

"How near I came to making a fatal mistake. I tell my experiences that it may be a warning and a lesson for others. Do not sink to the level of the world. Bring the world up to a knowledge of Christ."

—*Oklahoma Baptist Journal*.

FUNGUS PINCUSHIONS.

JOHN S. FERNALD.

THE crescent-shaped fungi that grow around the base of the elm trees near the roots, have for some time been used ornamentally as groundwork for landscape and other paintings. They may also be used in a practical way as pincushions. When thoroughly dry they are excellent for this purpose, being soft enough to stick pin or needles into easily, yet firm enough to hold them securely. The fungus does not break away with use, but the holes close up after the pins are withdrawn. Needles do not rust in a fungus cushion, nor can they work inside and become lost as in the common kind. Hung on a wall by a bright-colored ribbon, these cushions are both useful and ornamental.

FILLERS FOR THE LUNCH BASKET.

It is hard to keep up a constant supply of cookies for the children's lunch boxes and yet have a variety. The following are good and perhaps new to many of our cooky makers:

Chocolate Wafers.—Grate a cup of chocolate and set the cup into hot, not boiling, water to melt. Mix together one cup of brown sugar, one cup of white sugar (granulated or powdered) and one cup of butter. When creamy, add one beaten egg and then the melted chocolate, stirring briskly. Finally add two cups of flour and one teaspoon of vanilla, mix lightly, roll thin and bake in a quick oven.

Fruit Cookies.—Seed and chop finely one cup of raisins. Flour these and set them aside. Beat together one and one-half cups of brown sugar and one cup of shortening, butter and lard mixed. When creamy, add one beaten egg, four tablespoons of sweet milk, one teaspoon of baking soda and enough flour to make a stiff batter. Add here your floured raisins with nutmeg (grated), cinnamon and ground cloves to taste. Add enough more flour to make a stiff dough, roll rather thin and bake in a quick oven.

Lemon Cookies.—Cream thoroughly half a pound of butter and half a pound of granulated sugar. Add two eggs beaten light, three-fourths of a pound of flour, the grated rind of one small lemon and the juice of two. Roll out thin and cut into disks or circles, sprinkle thickly with coarse powdered sugar, and bake in a quick oven. These should be pale-yellow, not brown.—*Selected*.

The Quiet Hour

THE BIBLE CLASS IN HEAVEN

IRA P. DEAN.

I took my blessed Bible, for I love to sit and read
And hunt the sacred Scriptures, which every day I need.
I opened to a passage, which I couldn't understand,
So I sought and prayed for guidance from my heavenly
Father's hand.

I sat and deeply studied; I read it o'er and o'er,
Till it seemed that I was standing at heaven's very door.
Again I prayed to Father that the help I need be given,
And the answer came that instant, from the Bible Class
in Heaven.

I know my blessed Father has somewhere in his Book
Recorded some sweet promise, for which he knew I'd
look.

Then when my heart is heavy with the dust of daily care,
I open up my Bible and find the blessing there.
And when I sit and ponder and study o'er it all,
The blessings seem reserved for me, I get them when
I call.

And when my life grows darkened and my soul seems
thunder-riven

There comes another promise from the Bible Class in
Heaven.

The Devil often tempts me; he's my soul's eternal foe;
But my blessed Savior holds me and he'll never let me go.
One time I disbelieved the things I couldn't understand,
But now I get my knowledge from the Wondrous Glory
Land.

And so I am so happy that all day long I sing,
And when I read the Blessed Book I never doubt a thing.
I've learned to keep my little heart unmixed with worldly
leaven,

And I get my daily lessons from the Bible Class in
Heaven.

WHAT IS CHRIST TO ME?

RICHARD BRAUNSTEIN.

Not long ago we joined in the celebration of the birth of Jesus, and very properly it was an occasion of great rejoicing. We were reminded of the fact that, among other names, he was recognized under the title of Immanuel, God with us. There are few who realize the significance of these few and simple words.

Let us repeat in our own hearts a sentence like this: "He who died for me and thus bore the judg-

ment and punishment of my sins was truly the Master of Life—God." His existence did not commence at Bethlehem. In the most simple and beautiful language he declared that he was with the Father from the foundation of the world. Though he took upon himself a lowly form, he was worthy to receive the worship of the angels (Luke 2: 13, 14; Heb. 1: 6). Yet he was also truly Man, and this point of my argument I am about to prove. He, like us, grew up from infancy to manhood, passing through every pang and bitter experience, but without sin. Weigh this carefully; for such facts as are here presented do not take hold of us, unless we give them thought.

We can then comprehend how this meets our need. If he were God alone you might hesitate to trust him. It was man who had sinned, therefore it was by man the punishment of sin must be borne. For this reason God became man in order to save us. It is a beautiful story. Stranger than fiction, but it is the "terrible truth," that bears witness of its terrible meaning and strength and purpose of existence; its moral and awful dread with which we must hold it. Truly, "Truth is stranger than fiction." The dream of Jacob and his ladder which he beheld therein is another example of the wonders of God. Jesus is the antitype of that wondrous ladder—the foot of it rests on earth, comes down to your level, and the top of it reaches into heaven. God and man are connected in Jesus. He is the Daysman whom Job desired, and who can lay his hand upon God and man (Job 9: 35).

Concerning the incarnation of Jesus, let us remember three important things, namely:

First: It does not alone save us. The incarnation, without the death and the resurrection, would leave us still dead in sin. The New Testament never speaks of men saved because God became man, but always because he who was God and man died for our sins and rose again (John 12: 24; 1 Cor. 15: 3, 4). The body that was prepared for him was in order to his one perfect offering (Heb. 10: 5, 10), by which judgment passed upon sin.

Secondly: Remember that Jesus is a manifestation of God. He reveals God not only in a few but in all

phases of his life. Not only when he performed wondrous miracles, but also when he suffered; he sighed and wept and groaned and the pangs of his crucifixion poured forth the bloody sweat. Jesus reveals not only God's power, but his tenderness, his sympathy, his love. How different God is from what we have imagined! Satan slandered God at first by representing him as hard (Gen. 3: 3) and he still is laboring in a, let us hope, vain endeavor, to make us think unkindly of him, as is in evidence when we realize the iniquities of the world. To be acquainted with God truly, study the life of Jesus,—engage in prayer and read your Bible, for through the first you speak to God, through the latter God speaks to you. God also speaks to us in human tones and expresses himself in human feelings and emotions in his Son. Does not such a revelation deepen our adoration of him, and quicken our affection for him? Worship and love him who is "God manifest in the flesh."

Thirdly: Remember also that Jesus is still a man. Though he is on the throne, he retains his manhood. It is an important fact to observe that a man is now in heaven as our High Priest. When he hears of your temptations, he knows what they mean, for he "was in all points tempted like as we are yet without sin." (Heb. 5: 15). You can never be in circumstances of difficulty which he cannot understand. Make full use of him. Count as confidently upon his sympathy as a child counts upon the sympathy of its maternal relation.

Remember that in him human tenderness is combined with divine power.

OBEDIENCE THE SECRET OF HIGHER KNOWLEDGE.

THE apostle John says, "Hereby we do know that we know him, if we keep his commandments. He that saith he abideth in him ought himself also so to walk even as he walked" (1 John 2: 3, 6). There is no real knowledge of God, no communion with him, without a straightforward, unconditional obedience to his will. John is here condemning that Gnostic teaching which made godliness to consist in mere intellectual enlightenment, culture and refinement. This false idea has prevailed through the entire Christian age. Separated from the true holiness of a regenerated life, John says, no enlightenment counts with God. In his teaching the apostle insists, no less than Aristotle, that in morals, knowledge without practice is absolutely worthless. Mere knowledge will not do; nor will knowledge touched by sentiment do. It is possible to know and admire, and in a sort of way love, and yet act as if we had not known. But John gives no encouragement to devotion without the Christ life. "If we say that we have fellowship with him, and walk in darkness, we lie and do not the truth"

(1 John 1: 6). There is only one way of proving to ourselves and others that we know God, and that is by loving obedience to his will.

Nothing can be more important to the understanding of the truth as contained in the Word of God than to practice it. "If any man will do his will, he shall know of the doctrine" (John 7: 17). Obedience to the will of God is the great origin of true knowledge. Doing the will of God is the one condition of light. Disobedience not only brings darkness, but is darkness. We must practice what we preach, otherwise our vision must be dimmed, and, if the blind lead the blind (and every one is a leader to some one), only the ditch is before both. To be doers of the will of God as well as learners is the great secret of teaching God's truth to others. Then it is that we "shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper."

The higher the products of unregenerate man's mind are exalted, and the more they are held in veneration, the more effectually do they serve to oppose the knowledge of God. Therefore, the most important phase of our Christian warfare is spoken of as "casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ" (2 Cor. 10: 5).—*Christian Monitor*.

THE DIVINE PARTNER.

THE late John McDonald, the merchant prince of Toronto, gave large sums of money to the Lord's cause. On one occasion a firm in England with which he had large dealings sent experts to Toronto to examine his books to see how he stood financially. On opening those books they saw his business accounts on one side and the Lord's accounts on the other, and they closed the books without further examination, feeling satisfied that a man who would deal honestly with his Creator would deal honestly with his fellow-man. One year Mr. McDonald saw a decrease in his business and said to one of his friends, possibly the reason was because he was not giving enough to God's cause. He said: "I will give an extra ten thousand dollars this year." This was the red letter year in his business history!—*Exchange*.

THE cross is the great center of God's moral universe! To this center God ever pointed, and the eye of faith ever looked forward, until the Savior came. And now we must ever turn to that cross as the center of all our blessing, and the basis of all our worship, both on earth and in heaven—in time and throughout all eternity.—*D. L. Moody*.

Echoes from Everywhere

The Government is in need of more American teachers in the Philippines and is asking the colleges and universities to send them.

In Chicago, where an uphill fight to uncover primary election frauds is being waged, there is no name of a brewer, distiller or saloonkeeper found on the list of those trying to protect the sacredness of the ballot.

The Chicago board of education will soon begin on a new special mental and physical training institution to be built upon a 240-acre tract in Riverside. It is intended to segregate children weak in body and mind. Gymnasium features will be the most prominent.

According to the Topeka "Capital" of October 2, the deposits of the State banks of Prohibition Kansas, after ten months of an unusual panic year, were eighty-three million dollars greater than ever before in the State's history and increasing at the rate of one hundred thousand dollars per day.

Chicago public school officials are rejoicing over the blow aimed at fraternities by State Senator Herman H. Breidt. The bill introduced by him at Springfield, which makes it unlawful for a public school pupil to join a secret organization, they say serves to strengthen their position against secret organizations.

Mrs. Russell Sage, of New York, has given \$25,000 toward the establishment of a college for colored youths in Kentucky, to be a branch of Berea College. This brings the fund up to \$450,000 from outside sources, leaving \$50,000 to be raised in Kentucky. The college will be modeled after the Tuskegee Institute.

A recent edict by the late emperor of China, in which Christians and non-Christians are placed on nearly the same footing, indicates a great change in the attitude of the Chinese government towards Christianity. Partiality on the part of officials in carrying out the laws is to be put down, and representatives from all Western nations are to be justly treated.

High school students in Iowa must decide between their "frats" and their studies if a bill proposed by the State educational commission is passed by the legislature. The commission plans to deal a death blow to all high school secret organizations by closing the schools to students who belong to secret societies. "Rushing" for frats will be an even more serious offense than belonging to them under the proposed law. The bill provides that any person who enters any high school building or grounds for the purpose of soliciting members for any secret society connected with the school shall be guilty of misdemeanor.

Estimates of the total loss of life from the recent earthquake in Italy place the number at 164,850. This estimation is necessarily incomplete in view of the wide region affected and the severity of the disaster. It does not include the deaths in hospitals. Four of the United States battle ships arrived at Naples Jan. 10 and will aid in the rescue and relief work.

The wanton slaughter of robins has aroused South Carolina to such an extent that the State is to have a new game law. A few years ago a modernized game law was passed in Missouri, but the pot hunters and illicit dealers raised such a roar that the game warden was deprived, by a new law, of the power to do anything. —Globe-Democrat.

A long step toward bringing the United States and Germany into closer relations was taken Jan. 1, when the two-cent postage rate between the United States and Germany became operative. The new rate of two cents an ounce applies to correspondence sent direct by sea, between the two countries, and not to that which is sent through an intermediary.

The expulsion of the Jews from Finland continues to go forward, the decrees of expulsion being directed against the poorer class of Hebrews. Scores of families in the last few weeks have been compelled to abandon their homes and flee from the country amid the arctic cold. Only a few days' preparations are allowed. No reason for the anti-Jewish crusade has been assigned except a blind hostility to Jews as such.

Abyssinia, upon the boundary of which Swedish missionaries have been camped for many years, has at last opened the door of entrance to Protestant mission work. The present king, who has read the printed Gospels distributed by the missionaries and declared them "good," is in favor of his people reading them, too. He has also issued an order that all children above seven years old shall go to school, promising to pay the salaries of any competent teachers the missionaries supply.

The principle of the spinning top has long been talked of as an effective means of preventing ships from rolling, the idea being to place in the vessel's hold a great, rapidly revolving flywheel, the tendency of which to keep its equilibrium would prevent the waves from pitching the ship. Recently a gyroscope of this description was fitted in a German vessel, and was tried on one of its regular ocean trips. While the steamer was rolling 16½ degrees on each side through a total angle of 33 degrees, the gyroscope was placed in operation, and the total angle of roll was decreased at once to 3 degrees. As the apparatus is driven by electricity, it requires little attention.

The first aeroplane port, which will be for airships what Cherbourg and Liverpool are for ocean liners, was opened at Juvisy-sur-Orge, not far from Paris, on Jan. 10. This landing place, which has been constructed by the Society for the Encouragement of Aerial Navigation only with the greatest difficulty, is about one mile square. It was necessary to clear the place of all trees and rocks before building the special tribunes for the judges. Guillaume Tronchet, the government architect, has been engaged to make the transformation. He has arranged the port in the form of a circle, and there is plenty of room for aviators to fly about without danger of being unable to alight. Already owners of aeroplanes are transporting their machines to the port.

It is reported that there will be an immediate new trial of the case against the Standard Oil Company of Indiana, in which the United States Supreme Court effectually knocked out the record-breaking \$29,240,000 fine imposed by Judge Landis. The case will be redocketed before Judge Landis, but probably will be turned over, according to a custom among federal judges, to some other judge within the same district. Judge A. B. Anderson, of Indianapolis, has been asked to hear the case, but has not yet replied to the request. While District Attorney Sims maintains that there still is opportunity of conviction and the assessment of a fine as high as \$10,000,000, under the ruling of the Circuit Court of Appeals, other federal officials and attorneys take a different view and declare that the only remedy is the enactment of a new law by Congress, under which the questions at issue can be definitely settled.

Yuan Shi Kai, the recently deposed Chinese statesman, it will be recalled, rendered very great services to every Christian nation during the Boxer uprising when, by secret means, he brought about communication between foreign governments and their representatives who were besieged in the compound at Peking. It was information that came from him which encouraged the European powers to join themselves with America and make that remarkable march of allied powers upon the Chinese capital which resulted in the liberation of the foreign legations. This man has been called the strongest man in China and he had far more influence than the famous Li Hung Chang. Thoroughly practical in all that he did, he adopted as his motto "China is capable of accomplishing just as much as Japan," and he worked his countrymen up to such a point of national patriotism that today his influence is doing much to efface the Middle Age superstition and rebuild the empire. Yuan Shi Kai organized a Chinese army which excited the wonder of the military men of the world who knew the conditions under which he worked; he obliterated all caste objections to military service, so that today sons of the nobility take a pride in wearing the army uniform. Under his regime modern textbooks have taken the place in the schools of the ancient classics; he brought about the abolition of torture, turned Peking from one of the filthiest places in the world into a well-paved, cleanly metropolis. Altogether he is the most progressive man in the empire, and the Manchus have acted hastily in trumping up an excuse for dismissing him.

An amendment to the legislative, executive and judicial appropriation bill increasing the salary of the President to \$100,000 and the salaries of the Vice President and speaker of the House of Representatives to \$20,000 was reported favorably to the Senate by Mr. Clark of Wyoming from the committee on the judiciary. The amendment was then referred to the committee on appropriations.

The board of education of St. Louis, Missouri, has decided to pay the car fares of children who live more than one mile from a public school. It is estimated that the cost of such transportation will amount to from \$2,300 to \$3,000 per year, but will result in a considerable saving through the discontinuance of small schools by consolidation with larger and better graded schools. Three buildings have been closed already at a gross saving of over \$3,000 annually. The fares of the children so transferred will amount to \$1,700, furnishing a net saving of \$1,300.

The Knights of Zion, now recognized as an independent western federation in the Zionist movement, closed a two days' convention in Chicago last week. The convention determined to send four delegates to the international congress of Zionists to be held in Hamburg next August, the delegates to be chosen later. Resolutions were adopted, in view of the programme of the Zionist movement, to encourage the acquirement of land in Palestine by Jews, urging the organization of groups who will seek to purchase Palestine property. Several associations of this kind already have been formed, one in Des Moines, Iowa, which is already negotiating for the purchase of 600 acres in the Holy Land.

Andrew Carnegie, in an interview given to the International Trade Bulletin, declares the time is coming when the greater part of the raw materials now forming the bulk of the exports of this country will instead be used here and their place in export trade be taken by manufactured articles. He adds that American manufacturers have been so busy supplying domestic needs that they have not been able to give the proper attention to export trade. That they can reach the markets of the world and compete in them with all other great industrial and commercial nations is his firm conviction, and he advises them to look seriously in the direction of foreign business.

In his biennial report to the governor of Kansas, Attorney General Fred S. Jackson recommends three important changes in the laws governing trusts in that State. One change provides a penalty be fixed for each day a concern continues to do business in the State after it is proved to be a trust. A second provision is that the corporations with headquarters in other States, but doing business in Kansas, must produce their officers on demand of the attorney general. The third is that the courts be given authority to determine whether a corporation has a monopoly on a certain line of products, and when it is so determined a public utilities commission be empowered to fix prices for the output in that State.

Among the Magazines

THE POSTAL DEFICIT.

Although Postmaster-General Meyer's report for the fiscal year ending June 30, 1908, records the heaviest deficit in the history of the Postoffice Department, the press show a tendency to dwell upon the department's increased efficiency rather than upon the growing gap between its income and its expenditure. Last year the deficit was \$7,000,000. This year it is \$16,873,222. "Eventually," says the Baltimore American, "there is reason to hope that the postal business may be brought to a self-sustaining basis." In spite of the deficit the Boston Herald finds the showing of the department encouraging. The Chicago Daily Socialist, surmising that the deficit "will form a text on which to preach sermons on the 'failure of Socialism,'" devotes space to an interesting discussion of the situation. No modern government, it says, looks upon the postoffice as a source of revenue, or a purely business affair. In Great Britain the postal deficit is usually in the neighborhood of \$75,000,000. To quote further:

"The postoffice, like most other governmental departments today, is conducted with other than business objects. No one expects a profit from the Army or Navy, or from the agricultural or census departments, yet who shall say that the service performed by the postoffice is less essential than that performed by the departments mentioned?

"The more this deficit is examined, however, the more it seems to be due, not to governmental mismanagement, but to interference for profit by private interests.

"The railroads all look upon the postoffice as a fat cow to be milked, and it has many times been pointed out that the railroads are paid the full cost of every mail-car used each year in its service, and that if the Government were given the same sort of a contract as the express companies enjoy, the entire 'deficit' would disappear. . . .

"The existence of the express companies debars the postoffice from that portion of the carrying trade which is found most profitable in other countries—the parcels post. It is today much cheaper to send a package from Germany to San Francisco than from Chicago to Evanston, because this country has a treaty with Germany which compels it to perform services for the citizens of Berlin which express companies will not permit it to perform for residents beneath the Stars and Stripes. . . .

"In short, wherever private industry touches the postoffice you will find a leak from which there flows a golden stream into private coffers. Close up those leaks and the 'deficit' will change into a surplus that would make possible a far greater extension of the services of the postal department."—Literary Digest.

REVISING THE TARIFF.

Every woman who has bought a new stovetop in the last twelve years, every farmer who has bought a plow, every boy who has bought a pocket-knife, has made an

unnecessary and forced contribution, by order of Congress, to the Steel Trust, and likewise to every other industrial trust in the United States, for I use steel only by way of illustration and because some of its best men agree with me.

The total wage cost to the Steel Corporation for mining, transportation, and conversion into rolling-mill products is 25 per cent of the selling price; the tariff is from 17 to 65 and 80 per cent of total costs. We may in a large measure attribute the foundation of a locomotive trust to the Dingley law, which gave locomotive builders 45 per cent tariff, although locomotives are shipped abroad freely and none can be imported. There are few builders, and they could not be expected to continue as independent and competing manufacturers with the invitation of Congress to combine and add what they wished of 45 per cent duty to their selling prices. Likewise the Linseed Oil Trust, formerly competitive, with only 3 per cent total wages in cost of refining and a 50 per cent tariff. The importations being practically prohibited, they graciously accepted the invitation of Congress and added 30 to 50 per cent to their selling prices.

Glucose, made of corn, and of course more cheaply here than elsewhere, bears a tariff of 55 per cent, the total wage 7 per cent, domestic production to the value of \$24,566,932, and the ability to do without protection manifested by exportations to the extent of \$3,000,000 per year.

It is clear beyond question that every big trust gets about one-fourth of its selling price by grace of Congress at the expense of the consumer, and that Congress must change its ways, or independent endeavor must entirely cease in the more important forms of production, as it is rapidly ceasing.

This does not mean that protection shall be withdrawn from trusts, for they and their workmen are as much entitled to protection as are others. It does mean, however, that one law, the Sherman act, shall not declare trusts and combinations in restraint of trade criminal, and another law, being the tariff, offer an extreme inducement for the formation of trusts in violation of the other law. When Congress stands upon its dignity in this matter and insists that it will do what its own members elect, it is time that the people speak with a voice that can be heard not only in Washington but perchance around the world. The question is largely whether Congress shall hear the voice of the people or shall listen to the insistent, and heretofore compelling, voice of great private interests. What has been every one's business has been no one's business. We must have a commission to control the tariff, or we must do away with protection, an impossible alternative. Tariff-making in its formative steps must be taken out of the realm of politics, away from selfish interests and secret influence, and placed in the hands of men selected for the work, high-minded, semi-judicial, non-partisan, acting with that judgment and integrity for which our courts are distinguished,

and, what is very important, with ample time to do the work well.—From "The Tariff, Its Revisers, and the Trusts," by Herbert E. Miles, in the American Review of Reviews for January.

EFFECT OF ELECTRICITY ON THE BLOOD.

Some light is thrown on the cause of death by lightning strokes and by contact with electrical circuits of high voltage by the result of experiments showing the peculiar changes in the blood which are produced by electric discharges.

Freshly drawn, uncongealed blood is so opaque that writing cannot be read through a thin film of it inclosed between two plates of glass. If a series of discharges from a Leyden jar is passed through the film of blood by means of tinfoil electrodes, the blood gradually becomes so transparent that the writing beneath it can be read with ease. What is the explanation of this change?

Blood consists of a nearly colorless liquid, the blood plasma or serum, mixed with solid bodies of organized structure, of which the most important are the red corpuscles which contain the red coloring matter of the blood. This pigment, hæmoglobin, is the principal agent of the so-called internal respiration of the body, which it effects by carrying oxygen from the lungs to the various organs and tissues. Under the action of electric discharges the hæmoglobin becomes detached from the blood corpuscles and passes into the serum, which it colors pale red, while the corpuscle, assuming the same pale tint, becomes invisible and transparent. The process is gradual and a certain number of discharges is required for its completion.

Before the blood corpuscle parts with its pigment it undergoes a series of characteristic changes of form. The normal human blood corpuscle is a disk with a thickened rim. The first discharge causes division of the rim into lobes so that the corpuscle presents a stellate appearance. Under the influence of the second and succeeding sparks the corpuscle expands, becomes globular and assumes successively the mulberry form with blunt prominences, and the thorn-apple form with sharp spines. Finally it becomes a smooth sphere, and with this change the loss of pigment and opacity begins.

I have discovered that the number of sparks required to produce these changes depends on the relative directions of the electric current and the axis of the corpuscle, and is smallest when they are parallel, probably because the corpuscle in that position offers minimum resistance to the current.

By a modification of the process I produced the bell form which was not present in the preparation before the discharges. This form is occasionally found in blood and Weidenreich and others have recently expressed the opinion that it is the normal form of the blood corpuscle and that the common disk-shaped corpuscles have already undergone modification due to cooling on removal from the body. From this point of view it appears very remarkable that electric discharges, which ultimately destroy the corpuscles completely, should begin by restoring them to their original form.

All these experiments led to the same final result, transparency of the blood caused by the diffusion of the pigment of the corpuscles through the surrounding plasma. That blood undergoes similar changes inside the human body is proved by the peculiar markings found on the bodies of persons killed by lightning. These branching and tree-like figures are due to discoloration of the skin

by pigment released from the blood corpuscles by the electric discharge.—Translated for the Scientific American from Umschau.

THE HIGHWAY OF THE AIR.

The average person regards air much as he regards water—as much lighter, of course, but like it otherwise. Calm air is precisely to him as calm water in a pool. If there is wind, he pictures the air as a flowing river. And just so long as all men looked at it so, just so long the birds kept their monopoly. For the only state in which water approaches the condition of air is when water forms a maelstrom. Even then, water in its mildest turbulence falls far short of the unstable, incessant agitation of the atmosphere. Air is never still. It is filled with warm waves ascending, cold waves descending, and through it race cross shoots and diagonal shoots, with corkscrew whirlwinds wandering hither and yon, as they list. The warm air off a cornfield creates one kind of a disturbance; off ploughed land it creates another. A layer of cold air may hold down a layer of warmer air. Consider what may happen when the warm air breaks through its envelope as a millpond bursts its dam. A flowing stream churned to and fro and round and round and up and down would give a feeble idea of the air's inconstancy.

Now a bird, circling with fixed wings, floats on a rising column of air. It maintains its altitude as to the earth, but it is constantly coasting down through the air's ascending volume. Once the bird loses the air column, it has to flap its wings, and it flaps till it finds another column, when it goes on wheeling again with fixed wings. Moreover, when it flies, the wind comes toward it in waves, rising and falling like the billows of the sea. It meets them, and then it does precisely what a boat does: goes over them, or goes through them. The Wrights learned this, and when they'd learned, they were about as near to flying as you and I would be to writing Chinese philosophy when we'd just learned the English alphabet. Furthermore, there were no teachers, living or dead, that could help them more than a few steps along the way.

The Wright machine must have gleaned something of its simplicity from its two creators. Orville Wright is a modest and unassuming person, as I am told his brother Wilbur is, as well. You would think him a plain business man, in his modest business clothes. Outside, two thousand onlookers gaped curiously, and he acted precisely as if he'd like to run around the corner of the shed and hide. And when the time came to fly—

"Haul her out," said he, casually, with a wave of his hand, as you and I might ask some one to bring out our bicycles. My Philadelphia friend raised his eyebrows. "Doesn't put on much lugs, does he?" he commented. "Now over in France —"

To be sure. They order this thing better in France.

"I saw it done over there," said Quaker City. "Some one blew a bugle, and a man in leather suit, racing goggles, leather skullcap, puttees, and rubber gloves came out and was photographed. Then he got into a kind of machine shop with wings and had his picture taken again. Afterward he made a short address to the crowd, looked up at the sky, shook hands all around, and then they let her go."

"What happened?" I asked, hanging on his words.

"Nothing. The machine did a hop, skip, and a jump across the field, and then stood on its head. The last I saw, they were taking it to the scrap heap, and the aviator was holding a reception in the grand stand."—Maximilian Foster, in the January Everybody's.

PLODDING.

"GENIUS is two per cent inspiration and ninety-eight per cent perspiration." This is the statement of an authority no less than Thomas A. Edison.

Native ability, training, environment, influence and unexpected opportunities may have much to do with the success attained in life; yet the necessity of earnest, persistent, careful work always remains. For

"Little by little all longing souls
Struggle up nearer the shining goals."

It is not difficult to deceive ourselves into thinking that men who have achieved great distinction have reached a state of freedom from the need of incessant effort. But the height which great men have "reached and kept" have been attained and held by toiling upward while those who railed at fortune were enjoying ease and slumber.

The author of a short story in the *British Weekly* entitled "Blackwater's Mother," writes of two young men in college. The one who was the brighter student, with the more attractive personality, and with, apparently, advantages greatly in his favor when compared with his companion, decided to leave college. This caused his parents much sorrow; which was the more acute because of other unwise actions by him at the same time. It became the duty of the student who had tried to hold his friend, and failed, to state the outcome to the authorities of the college. We here quote the words of the writer:

"Thank you my boy, for all you have done for your unfortunate friend," said the principal warmly. "I am sorry to see you look so dejected. At least, you will never occasion those belonging to you any anxiety in that direction. It has been a great pleasure to me, and also to my wife, to watch your life here, Dunstan, and you will never know what an inspiration it may have been to many."

"My life, sir! Why, I haven't done anything," cried Dunstan in surprise, "only plodded on."

The principal smiled.

"Only plodded on," he repeated. "Nobody will ever know what the world and what the kingdom of Christ owes to those who have only plodded on. God bless you, my boy, and make you a blessing. I am sure you will be one wherever you go."

Such was the tribute paid to the plodder. Scarcely necessary is it to say that Dunstan's life was the useful, helpful one which the principal believed it would be.

Many voices unite in saying, "Blessed is the plodder."—*Epworth Herald*.

AN Indian philosopher, being asked what were, according to his opinion, the two most beautiful things in the universe, answered: "The starry heavens above our heads, and the feeling of duty in our hearts."—*Bossuet*.

OLD-TIME HALF CENTS.

THE treasurer of the United States on May 6, 1903, redeemed two half-cent pieces. This is the first time in the history of the country that any such coins have been presented for redemption. It is more than a century since the first half-cent piece was coined, and it is hardly fifty years since the government discontinued minting them.

Possibly not one person in a thousand now living in the United States ever saw a half-cent piece.

The last annual report of the Director of the Mint, page 82, shows that 7,896,222 of these coins, representing \$39,481.11, were issued. For almost half a century each annual report of the Treasury Department has included them among the "outstanding" obligations of the government.

The half-cent piece was the coin of the smallest denomination ever made by this country. It enjoys the distinction also of being the first coin issued, and also the first whose denomination was discontinued. The United States Mint was established in 1792, and copper half cents and cents were issued in 1793. Half the total number of half cents issued were coined previous to 1810, after which year their coinage, with few exceptions, was limited. None were coined for circulation from 1812 to 1824, nor from 1836 to 1848. Finally in 1857 their coinage, with that of the big copper cent, was discontinued. On account of their limited issue in the last years of their coinage they practically had disappeared from the channels of trade.

The needs of adopting the half cent as the lowest value-computing factor for a coin existed in the early days of the republic. Colonial half cents and British farthings of the same commercial value were then in circulation, and many articles were priced and sold in half cents. With the progress of the nation value arose, and the needs for a half cent disappeared, and their use following the first decade of the century was almost entirely confined to multiples.

While all other discontinued types and denominations of United States coin have found oblivion, the half cent is the only one of which the Treasury reports do not record some portion of the issue redeemed. This singular and unexplained fact has been one of frequent comment and inquiry from Mint and Treasury officials.

Large quantities of the half cents are to be found in the stocks of coin dealers. The most common dates are sold at a good premium, and the extremely rare ones are worth their weight in gold.

Ferran Zarbe, of Saint Louis, was the man who sent the two half-cent pieces to Washington for redemption. He now prizes highly the little voucher calling for "one cent," which was sent to him with that amount of current coin in exchange for the two half-cent pieces he had forwarded.—*Gateway Magazine*.

Small Seedling Pines and Spruces as They Are Grown at Dundee Nurseries.

The Beautiful Concolor.

Block of Grafted Blue Spruce in Nursery.

Send for Hill's 61st Annual Catalog and Planting Guide

It is filled with careful description and beautiful illustrations of the largest stock of Evergreens in America. It tells how you can, with little expense make your home grounds more beautiful by planting Hill's Hardy Evergreens, Shade Trees, Street Trees, Flowering Shrubs, Roses, Climbing Vines, Hedge plants, etc. Hill's plants are low in price, because we grow them in such immense quantities, and high in quality because our "over half a century's experience" has taught us how to grow them right.

HILL'S 50 GREAT BARGAIN SHEET is sent with each Catalog. To show you how far you can make your money go in buying Hill's "Dundee Grown" trees, we print List No. 49 complete, as follows:

List No. 49.—Price \$10.
Freight Prepaid.

An exceptionally valuable collection for the southwestern States, southern half of Illinois, Indiana, Missouri, Kansas, Oklahoma, Texas and all the southern States. 900

A No. 1 strong, heavy Forest and Ornamental trees and 400 choice Evergreens—1,300 in all. Freight prepaid for \$10. Half the list for \$6. You can't afford to miss this bargain, as follows:

200 Black Locust	2 to 3 feet
200 American Beech	1½ feet
200 Hard or Sugar Maple	1½ feet
100 Black Walnut	2 to 3 feet
100 Diamond Willows	1½ feet
100 Soft Maples	1 to 1½ feet

Evergreens.

100 Red Spruce	1 foot
100 Chinese Arbor Vitæ	1 foot
100 Jack Pine	1 foot
100 Yellow Pine	1 foot

With reasonably good care and cultivation the above 1,300 trees will add to the value of any prairie farm thousands of dollars in a few years.

Do you want a beautiful Privet Hedge like this? Note how thrifty, strong and compact it grows. Our Catalog has a complete Hedge department. It tells all that you need to know in order to grow a Hedge even better than in this illustration. And this is not all—our new Catalog and planting guide gives practical information and cultural directions in regard to planting, care and cultivation of all trees, whether you are plant-

ing an Orchard, or a Wind-break or a Shrub Group, or a Rose Bed. It tells the best varieties to plant and the best way to plant them. This planting guide should be in every home.

Your Success With Our Trees

is a matter in which we are mightily interested. Good stock is very necessary to begin with, but that is not all. **Choosing the right varieties and giving them the proper care after you get them,** are quite important. Some firms say, "When we deliver them to you our responsibility ends." We go further and guarantee results; **First**—because we love trees and we want you to enjoy them also (entirely aside from any thought of commercialism on the part of either of us). **Second**—because we know our success is dependent on your success. Therefore we endeavor to do everything reasonable within our power to help you succeed with the stock we send you. This policy, which we have followed for over half a century, has built up our business to where "Hill's Big Nurseries" are known favorably throughout the world. We want every reader of "Inglendook" to have a copy of our new Catalog and Planting Guide. Write for it today. Address,

D. HILL, THE DUNDEE NURSERIES, Dundee, Illinois, Box 500.

The Twentieth Century Sunday School Record System

No superintendent can afford to begin the new year's work without the assistance of our new system of records and recognitions. This plan, first used in one of our own Sunday schools, has grown in favor until it is now recommended by Sunday-school workers of all denominations. It has increased the enrollment and secures the attendance of each scholar enrolled. Encourages systematic giving and discourages tardiness. Brings the Bible to the school and relieves the teacher of keeping class records. New scholars are enrolled and all records are kept and reported by the secretary of the school. The teacher is permitted to devote her whole time to the teaching of the lesson. Our new descriptive Record System Catalogue gives full particulars.

Holmes' Green Prolific Pole Lima Bean

Grows Green—Dries Green—Stays Green—Most Prolific

Equals the Early Jersey or any other variety for earliness. More productive than any other Pole Lima we have ever seen grow. Every Bean has that true, distinct, deep grass green color, and this color it retains when the Beans are shelled for market. The large pods hang in clusters of from five to eight, each pod containing from five to six beans.

Stock extremely limited. Positively only three papers will be sold to any one person. Pkts. containing six beans, **25 cents**; 3 pkts., **50 cents**.

Holmes' Delicious Early Sweet Corn

Entirely new and distinct. Very early. Ready for market in 55 days. **The most delicious Early Corn grown.** Has twelve rows to the cob, and each stalk bears two or three well-developed ears.

Stock extremely limited. Pkt. containing enough seed for three hills, **25 cents**; 3 pkts., **50 cents**. Positively not more than three pkts. sold to any one customer.

Fuller description of both above Novelties will be found in our Hand Book on Seeds which is sent free for the asking. **No other seed house can offer these two sterling novelties this year**

HOLMES SEED CO., HARRISBURG, PA.

NEFF'S CORNER

Thinking the Inglenook was to die soon, I had lost interest in it and so have not been saying much of late, but now I hope to be telling you all sorts of interesting things for some time to come. Fact is, I have a good many good things to tell. Everything is lively at Clovis now. All houses rented and town overflowing with people, and more and more coming. Many 'Nook readers have made investments here and are pleased. You see a property that rents for \$3.00 per month costs you but \$350, and one that rents for \$10 costs you but \$450, and tenants are falling over each other to get them even at these rental prices. Our investment association paid dividends of 21 per cent July 1 and 13 per cent Jan. 1, over and above all taxes and other expenses, or an average for the year of 17 per cent. My little folder, "New Mexico Investments," tells all about these matters, and is free for the asking.

F. H. Bradley, of Surrey, N. D., a man of much travel and experience, says our country offers the finest opportunities of any he has ever seen. He has bought a half section of land here and will locate. W. W. Horning, of Frederick, S. Dak., after looking over our town remarked that in my announcements and correspondence I had not told the half. He aims to arrange to build a number of houses here.

Others are moving in and our church is prospering (revival services now in progress), but we lack means for our church work and to this end am soliciting subscriptions to the Woman's National Daily, a clean, reliable, well-edited daily newspaper published in St. Louis. I will have it sent to you every day (except Sundays) for a whole year for only \$1, and besides, I will put one hundred cents of the dollar into our mission fund and pay for your subscription out of my own pocket. Will send you a sample copy first if you ask for it, but I assure you you will run no risk in sending the dollar now. Address

The Saloon Under the Searchlight

By George R. Stuart

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I would solicit for it a wide circulation, and a careful perusal. It cannot fail but do good."—P. J. Blough. Bound in cloth and paper, 64 pages.

Sunflower Stories and Lullabies

By Miss Olive A. Smith

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Low Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper.

The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

Price, prepaid,50 Cents

Brethren Publishing House

Elgin, Illinois

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully. The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

The next party of colonists will leave Chicago about February 9. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

More About Miami Valley, New Mexico

Are you seeking health?

We have it as sure as this pure, rare mountain air brings it.

Are you wanting wealth?

We can furnish you the resources for it.

Do you desire happiness?

We have the conditions that bring it.

A co-operative thrifty community
of neighbors for you.

Excellent church privileges.

A good school for your children

now in session, conducted in a good house built with the latest ideas of lighting and equipage.

Beautiful scenery

with its ever-shifting shades and tints to feast the eye upon.

Fine weather? Good roads? Yes, none finer.

Almost perpetual sunshine.

Just think! Nearly every winter day Old Sol smiles out warm and bright. Contrast this with the days and weeks of cloudy weather, rain, snow, sleet, slush and mud back East and North.

Thanksgiving Day finds us with a goodly harvest and thankful hearts for this our first year of prosperity.

Sickness has not been in our midst, death has claimed none of us and prosperity is inevitable for the future.

"Westward Ho" tells of our claims and resources.

Send for a copy. Come and see us.

No. 4.

THE SUPERFLUOUS BOY

ELIZABETH M. ROYER

Chapter I.

"FRANCIS, Francis, Francis Homer Peasley, get right up this minute if you want a mouthful of breakfast. I have called you five times already. Do you hear, Francis? Get out of there right away, or I will come up and then you will move. Are you coming?" Mrs. Peasley shrieked up the stairs to her nine-year-old son.

A noise between a yawn and a groan, muffled by the bedclothes, came sleepily and faintly down to her.

"Let me hear you put your feet on the floor. Now, jump up and run around so I know you are up. Are you up, Francis? Get right out. Don't you dare go back to sleep."

"I'm coming," floated drowsily down, but Francis only buried his nose more deeply in his pillow and nestled more comfortably under the soft, warm blankets.

"I can get him out. Just give me that glass of water," cried Sarah, who, having almost finished her first year in high school, was equal to the most critical need, even to that of arousing Francis, when, evidently, he was determined to sleep, at least, until noon, for with a bound, she was up the stairs. Three steps brought her to his bed where she held the glass brimming full of clear, icy water high above his head, waiting a moment in order to give him one last chance to escape retribution. Closely following in her wake, came ten-year old Tam, eager for an opportunity to crow over her brother, and standing in the doorway, with her black, mischievous eyes shining and sparkling full of suppressed merriment, she sung, beginning softly under her breath but steadily increasing the volume,

"Don't worry, keep smiling.

O Fanny, don't worry, keep smiling.

Don't worry, keep smiling."

"Get up, you lazy boy, or I will throw this water on

you. Hurry now. One, two, thr-ee, are you going to come? All right, then, here goes." The water began to drop on Francis' head. Like a turtle in time of danger, he drew it under cover. With a pull and a jerk Sarah had the bedclothes on the floor, exposing unprotected Francis to her merciless torture. Splash came the water on his head and he began to scream lustily.

"Don't worry, keep smiling.

Don't worry, keep smiling,"

sung out tormenting Tam from the door.

"Now are you going to get up, you lazy bones?" demanded Sarah, as she splashed the last water on Francis' neck. "You won't get any breakfast if you don't move faster."

"I won't get up. You can't make me. I won't get up until Tam stops singing that stuff."

"You will, too, young man." Sarah grasped his arm firmly, endeavoring to pull him out forcibly, but Francis was nine and beginning already to learn football. Swiftly out came his foot, finding a point of contact just below her belt. It took her breath but, staggering backwards, she hastily recovered, and went toward him with a look that meant war.

"Say, Sarah, don't worry, keep smiling. You are doing fine. Don't worry, keep smiling." Tam dived back in time to save her head from a pillow that came sailing at her. The stair door opened with a bang.

"What does all this noise mean up there?" came in the stern tones of Mr. Peasley.

"We are trying to get Francis out of bed," answered Tam in saintly accents, then in a triumphant whisper to Francis, she said, "Now, Mr. Fanny, you better hustle, papa is coming."

"Francis, get up at once. Sarah and Tam, come down to breakfast."

Sarah and Tam went down. Francis with one bound landed on the floor and began to dive into

his clothes. Before the door had entirely closed upon the girls, he heard coming up the stairway, gently, softly, hardly audible for justice was near,

"Don't worry, keep smiling,"

in the tantalizing tones of Tam.

When Francis came into the dining room where the rest of the family were finishing their breakfast, he fell into his seat by his mother, defiantly scowling across the table at Tam. Solemnly, Tam stared back, not moving a muscle, trying to decide by what act she could torment him to the greatest degree, and yet save herself. Drawing her attention by kicking her twin sister, Marie, under the table, she whispered something to her. They both suddenly exploded into a series of snorts and giggles, then just as suddenly regained countenance, long and solemn, and stared steadily back at Francis. It had the desired effect, for he slid farther down into his chair scowling blacker and more threateningly with every passing moment. This called Sarah's attention to the fact that Francis was up.

"Mama," exclaimed she, "look at Francis. He hasn't washed yet. If you would only make him do without breakfast once he would quit coming down late. We have to get up and I can't see why he can't."

"Now, Sarah, I guess I can run things here yet a while," returned Mrs. Peasley with dignity. "I have been doing it for something like seventeen years."

"Mama, look at Francis' hands. It makes me sick," and Marie buried her nose in her napkin.

To poor Francis, the round soberness thinly veiling the teasing, glittering exultation of Tam's eyes that unwaveringly regarded him, now from over the top of her glass of milk, now from above her plate as she continued her breakfast, combined with the added insult of Marie, laid the last straw on the load that broke the camel's back, for with an explosion of tears, mingled with disgust, anger, and self-righteous indignation, he blurted out,

"O-o-oh, I won't eat with those girls. They never have to wash. I won't eat if they are going to eat too. Make them quit laughing." He stumbled up from the table as he spoke and flung himself out into the kitchen where he fell sprawling into a chair.

Silently Mr. Peasley had been sitting at the head of the table during this commotion, but now he took matters into his own hands. "Francis," he commanded sternly, "go and wash at once. Then come and eat your breakfast. Girls, attend to your own breakfast and let Francis alone."

"Papa, we weren't doing a thing," whined Tam in injured tones, "we were laughing at a secret. Can't even laugh when he's around."

"Quit your laughing at anything, then. Try and

keep quiet a few minutes. You make more fuss than a whole boarding-school of girls."

In three gulps Tam finished her breakfast, and hurriedly excusing herself, she left the dining room. In a few moments she cried out, "Say, Francis never washed his face at all. He just rubbed his dry hands over it like I used to. Make him wash. I will never eat with him if you don't."

Francis was the baby of the family and Mrs. Peasley had kept him the baby as long as possible. Now she came to his rescue.

"Tam, go and make your beds and don't let me hear another word from you until school time. Here, Francis, let me wash you. Gracious, boy, how can you get so dirty over night? Didn't I tell you to wash before you went to bed?"

"Pooh, mama, you don't suppose he washed clean, do you? Anyway Scrub slept with him last night," came Tam's last killing shot before she ran upstairs.

"Did you leave that dirty dog sleep with you last night," demanded Mrs. Peasley in horror.

"I-I couldn't help it," whimpered Francis, "h-he whined to g-get into b-bed with me, and I had to l-let him. Ouch, you're getting soap in my eyes."

"Well, I will get more in if you don't stop this nonsense. Did't I tell you not to leave that dog sleep with you? On my clean sheet, too! For this you can have only one dish of breakfast food and then you will have to carry in kindling until school time."

"O mama, we are going to play football this morning, and I am captain. Can't I go just this once? They can't play without me," he begged.

"Yes, they can. They had better get a captain that isn't a baby. No, crying won't do you one bit of good. Hurry now and eat and get that kindling in. Be sure to come in and get washed before school time. Do you hear?"

Disconsolately Francis sat down, still angry, to his solitary dish of breakfast food. He finished it silently, tearfully, and departed to carry in the kindling, which was, to his mind, the most severe means of punishment that loving parents could inflict upon obedient children. With a hopeless, plodding diligence, he stumbled back and forth, back and forth, with armful after armful of splinter-clothed sticks, to and from the pile in the back yard and the neat rows in the basement. Scrub, his stub-tailed yellow dog, of many breeds, his chief joy next to football, his sympathetic friend and trusted confidant in every trouble, emotion, and joy of his short life, blessed with sweet sisters and loving parents, Scrub, his *own* dog, unshared by any treacherous partner, came bounding swiftly, like some toy run by uncertain machinery, from around the corner of the house from wallowing in the mud of the street and threw himself joyfully at Francis' face.

"Dear old Scrubbie," he cried, as he and the dog tumbled together in affectionate embrace over the tips of the new grass just peeping above the brown and withered skeletons of last year that had kept them alive through the cold winter. "Dear old Scrubbie, you can go where you want to, and I have to stay here with this old kindling and all because of those girls. Girls are awful things, Scrub. I don't believe they want me around. I believe they would have been glad if I hadn't been born. Mebbe mama and papa would too. They say that when I stay at grandma's there never is any trouble, so I must cause all the trouble then. Scrub, I wish I hadn't been born. I got to stay here and carry in this old kindling and those girls can do just as they please and I didn't have enough breakfast, either. If they hadn't been so mean, I would never got cross this morning and then I could have been playing with the boys. I think it's mean, so I do, Scrub."

Big tears came and rolled over the brim of his eyes, making little white rivers down his grimy cheeks. Scrub affectionately and sympathetically licked them away.

For some time, perched on the back fence had been a grinning urchin eagerly taking in the scene before him. He was not one of Francis' friends but belonged to "the bunch" who were opposed to Francis' being captain of the football team. In silent enjoyment he had been watching Francis and listening to him repeating his troubles to Scrub, and now, too full to longer hold in, he bubbled forth,

"Oh, yes, dear old Scrubbie has a cry-baby for a master. You bet, I knew you was a baby and I told the fellows so, and they are going to appoint me captain of the team, and you can't play any more. We won't have no babies on our team. Don't you wish you wasn't a baby? Don't you wish you wasn't a baby?"

Francis had arisen when he began to speak and stood listening with the tears still upon his face. Shamed at being caught crying to a dog drove his anger to a white heat, made him speechless with rage before his tormenting enemy who knew how to aim his poisoned arrows so they would hit the tenderest spots. When Tom Green paused for breath, Francis retorted with defiance shooting from his eyes,

"I tell you, Tom Green, I don't care what you do with your old team. I wouldn't be in it if you were anyway, and I can get up one that can beat yours until there won't be enough left to see, if I want to. If you don't believe it just come in here and I will prove it to you." He waited for Tom to accept his challenge. "Yes, I knew you was afraid. I knew you wouldn't fight me. You know very well I can knock you out and I will, too, if you come near."

"Huh," bantered Tom from his safe distance at the fence. "I wouldn't fight with a baby, a cry-baby,

that cries for its mama and girl-sisters. Suppose I would dirty my hands fighting with a little baby? I would be afraid I would hurt it."

"You would, would you? Well, let's see," and Francis started for Tom. But Tom dropped safely behind the fence, derisively shouting as he ran across the field,

"See the captain of the imaginary foot-ball team. Don't I wish I was on that team? Well, I guess not."

Down on the ground beside Scrub dropped Francis, sobbing into his willing neck.

"Scrub, nobody loves me. I haven't a single friend. Even the fellows are down on me. I wish I was dead. 'Tain't no fun living this way. I never have a minute's peace but what some of those girls or somebody is bothering me. They don't want me here. The fellows are going after that Tom Green. I wish we could get out of this, and then everyone would be satisfied."

(To Be Continued.)

THOUGHTS ON THE OLD YEAR.

J. C. FLORA.

THE deeds done during the year 1908 are now a part of history. The opportunities which it brought to each of us are past, and those which were unimproved are forever lost. The unkind and harsh words spoken are gone and can never be recalled. However much we may wish to recall them we cannot, but they will go on accomplishing their harmful work and all we can do is to counteract their influence by kind words in the future. The mistakes made during the year cannot be undone now; alas, they are done and we cannot change the record of the past. Our deeds, whatever they may be, good or bad, are written in the great book of time and its lids are forever sealed. We cannot erase one line from its pages.

Then the question for you and me to consider is, "Is my record what it should be?" If not let us strive to make the record for 1909 a better one. Let us not stop and worry over the past, but let's determine to improve every opportunity for doing good during the year that is before us.

While there has been much good done in the past there is much yet to be done. There is much distress among humanity to be relieved. There are many who are suffering for kind words. There are many who are in need of food and clothing. There are yet many places of vice that ought to be destroyed. There are many unhappy homes that could be made happy. There are many of our fellow beings who are in the depths of ignorance and superstition and do not know of the God whom we worship. Truly, there is yet much to be done. Then, forgetting the things that are behind, let us press forward.

Quinter, Kans.

Around the World Without a Cent

Henry M. Spickler

Chapter XLII.

It was a long distance to the big park which I found worthy of my efforts to reach. Great rounding hills or mounds were laid out in symmetrical designs with plants, both new and old to my botanical eye. Flowers, filling big spaces with their rich colors, bloomed without stint under the kind sky that bowed its arch a little lower to kiss them softly as they reddened or purpled or blued each day more deeply, as the hot sun,

of the few remaining volcanoes of the earth. From its summit, or near it, came smoke and fire. During the night, coming into Palermo and again when leaving it, the fire from the summit of Etna could be seen. I had time to make the ascent, but my experience with Vesuvius, under so dangerous and toilsome conditions, had taken away any further desire to get closer to a crater. On my asking some Italians about the volcano, I understood them to say that the fire I had seen had

come from some kind of furnace built in the higher slopes of the mountain. This did not dissuade me, however, from my opinion that the fire I saw was that which old Etna was vomiting up from its thickly-swollen neck.

Overlooking the city and bay, the big park afforded me a choice spot for meditation. There were few visitors in the part where I chose to rest, so I lay back in the swelling arms of the easy bench and threw my arms loosely over the ends, my head resting against a thick-twigged tree as against a pillow. Probably I dozed. How long I did not know, but the movements of some one behind me and the tree awoke me with a start. I knew

instinctively all was not right. And I knew that some one else was the cause of my wrong feeling.

"The face!" I said, hysterically. "It's the face."

But how that freak followed me here and found me I cannot tell. All the way over I looked back and across to see if he followed from the small grove. There was almost no one else on the streets I used in coming here, for I was in the residence portion of the town, and these dwellers stay in usually through the heat of the day. This is the latter part of August.

I was afraid to look around. I was afraid to get up. So I closed my eyes again and tried to make myself

"The hearse was covered with massive wreaths of flowers."

tempered by the mountain breeze, nursed them rapidly from small to larger size. I will give no names. A girl could do that, but this boy, never. I saw a big bed of light blue blossoms on stems or bushes about six inches high. It was one great mass of faded blue, the odor from the flowers as rare as the variety. My! how I breathed in that fragrance, there all alone at that bluish bed of unknown flowers. Large-leaved shrubs and strange palm trees, more shrub than tree, grew as if by accident in just the right place to add beauty and fitness to the park.

On a higher hill I could see the towering Etna, one

believe I had heard nothing. Then the tree itself began to quiver. Or was it my body that was shaking. No, it was the tree, which now began to shake with decided movement. With positive assurance I now knew that the strange face with the weird expression of sinister motive was behind that tree and was right now, bending his body and craning his neck so as to catch sight of me.

At once I arose, turned around and looked straight for the "face." Imagine the intensity of my pleased surprise to see standing there, with little arm raised about to throw a big red rose at me, a pretty little girl with a silk parasol that lay gracefully on her left shoulder in the other hand.

But I was not mistaken, I knew the face was back there, too. So I started down the little circling pebble path, and came up to the little one.

Behind the tree, on the other side, now, stood the self-same man with long lank face and coarse features and yellowish white skin, his black eyes rolling about beneath that peculiarly wide brow, his hat too small for so big a head, propped on one side by tangled masses of black hair.

I was too nervous to enjoy patting the soft, chubby hands of the dear child whom I would like to meet some day when her cultured mother is about ready to give her away.

I left the park without speaking to the man and wondered why I had done so.

At twelve, noon, the boat was to sail on the following day. Perhaps by that time I would have a better chance to meet the "face" face to face.

The next morning a funeral procession passed the hotel on its way to the cemetery. It was the most attractive and yet sensible I have seen in the distant lands. The black horses, drawing the hearse that resembled one of our own, were decorated with gay harness and the hearse was covered with massive wreaths of flowers, chiefly roses. Behind the hearse walked the friends or members of the order or church to which the deceased belonged.

I promised to tell the cause of the one trouble that Sicily suffers and keeps her from being an Eden. It is in Italian,—*diboscamento*, which means, deforesting, or wanton destruction of the forests and trees on a large scale. This is the great fault to be found with Sicily. She has allowed her timber to be cut down without having trees planted in its stead. It is one great bleak, bare landscape one sees at the points at which I touched. I have read that the interior is as

bad. With soil adapted to the growing of trees, with an eternal climate where the tree never halts its growth for six or seven months, as with us, with rainfall that would water them often if they were growing, the island could have been one splendid park that would attract thousands of tourists, leave money with her people and make for them a much more delightful life. The trees all taken away, the rain, too, passes by Sicily. For there are no condensers and rain producers like trees. These, retaining moisture, invite the summer showers.

But Sicily cared only for the present wealth. She allowed her few capitalists to rob her of her greatest natural asset. Now all the people—the masses especially—must suffer for an age or for ages, the wanton greed of a few. The rich man of Sicily can build a

"I stopped two boys with big baskets of the juiciest and most delicious of ripe figs."

palace and transplant trees and keep running the fountains to water his artificial grounds.

But he who holds the clouds in his hands would give the poorest owner of a parcel of land a fountain every week from the clouds above. Breaking his laws in haste to get riches, our own America, just like Sicily, is threatened with absolute deforesting. Not only are the half-grown trees cut down, but the billions and billions of feet of slab timber refused by the trust, lie and rot or furnish fuel for the great forest fires that each autumn destroy whole counties and drive hundreds of families into the cold or take the lives of helpless people.

Like the tobacco in the South, which is burned in order to increase the price, lumber kings care not how little they leave standing to grow up after them for the enrichment of other investors or for the comfort

of the humble people who need it, if only they themselves may filch from the land the cream of her output and retire with wealth untold. To burn *some* of the tobacco is good. To burn all of it, would be better. But to burn the green lumber, and to wantonly give it away to these unrighteous grafters and then be compelled to buy it back again at a fabulous price to replace the homes they are the cause of burning, is too much like turning the command of our Savior, "Be wise as serpents and harmless as doves," about, and have it read, "Be wise as doves and as harmless as serpents."

Diboscamento is the crime of the Sicilian. *Diboscamento*,—deforesting, is the present crime, or one of them, of the United States. *Diboscamento!* No rainfall. *Diboscamento!* No crops. *Diboscamento!* No lakes or brooks or ponds, no flowers, no fruit. Cold winters and hot summers. Poor people and rich lords. A great big country and nothing in it.

There should be planted along every roadway, on both sides of roads running north and south, and on the south side of those running east and west, fruit and ornamental trees. I would suggest that every other tree be a fruit tree, apple, plum or cherry. Fruit is essential to the highest health. It should be as plentiful as grain. The average family only tastes fruit as a delicacy. The best-ruled homes have it on the table in some form for every meal, breakfast, dinner and supper. The juices of fruit, either green or canned, kill the disease microbe of most diseases. The greatest amount of sickness and the biggest number of fatalities are in the late spring months, the months when little or no green fruit and but little canned fruit is used by many people.

I hope that some Lincoln will arise to give freedom, not to blacks, but to trees, and to cause to be planted along our public roads all kinds of ornamental and fruit-bearing trees. The fruit could be eaten by passers-by and gathered for shipment to the city. Against the argument that it would not pay to ship fruit if it were so plentiful and if its growth were costing the grower so little, I have estimated that contrary to this supposition of no good market, there would be so much more general demand and constant use for fruit as to keep the price, while low, at such a figure as to make shipments more profitable than today with high prices. Men would make a business of gathering, storing, preserving and shipping this public-road fruit. Special cars would haul it to market, special tradesmen would handle it. They would handle great quantities of it, so great that a profit of one cent a bushel would mean a good living for them. As it is now, the dealer must realize ten to fifty cents a bushel or one to five cents a quart box.

The ornamental trees could be of elm, oak, chestnut, walnut, hickory nut, hard and soft maple, catalpa,

poplar and others, so that thousands of acres of the richest land of the country might be bearing a crop of rain makers for the farmer's crops, and at the same time, producing riches in fruits, nuts and shade, as well as adding untold beauty to the landscape, and offering genial shade in summer for tired horses and warm drivers, and in winter breaking the wind and modifying the cold. The little care they would take after setting out is not sufficient to be offered as an argument against the scheme. The government herself should undertake to have this done.

The boat was to leave at noon. I took my lunch a little early and while eating at the hotel I glanced out toward the back yard. There was the same white-yellowish face. "Who is that?" I asked the waiter as I left the dining hall.

"Oh!" said he, laughing, "that fellow is a half-witted beggar that 'spots' tourists for some money. He follows them everywhere and is quite harmless." And he laughed.

I was glad to know he was only a half-witted beggar, for I neither believe in spooks nor am influenced, one way or another, by queer coincidences or antics of strangers.

Hurrying towards the boat I stopped two boys with big baskets of the juiciest and most delicious of ripe figs that had just been pulled from the trees that grew out of the lava slopes of proud Mt. Etna.

The price was low and I bought a big sackful for a few cents so as to have them while sailing. All I had to do was to carry them on to the boat as I walked out on the giant wall of stone and up the broad gang-plank, where I deposited them by my wheel and baggage on deck.

Ten minutes later our boat, the dear old *Letimbro*, was doing her best knots toward Crete. I laughed many times at the "face" and felt so sorry for his awful existence.

SONNET TO JANUARY.

MARTHA SHEPARD LIPPINCOTT.

Cold January! bleak month of the year!
The month which two-faced Janus claimed his own,
To backward look o'er passing year, just flown,
And forward gaze into the one now here.
For thee, unknown, new year, we hope and fear,
We know not yet for what thy course is sown,
Not whether good or evil fruit, be grown.
And in thy winds, we know not what we hear,
Yet, hear and feel thy piercing, north winds blow.
The children all are filled with wild delight,
When thy lips kiss and turn the rain to snow,
And they arise to find earth dressed in white.
To don thy bridal robe the wind did blow
The fleecy snowflakes down to earth all night.
Moorestown, N. J.

PASSING OF A UNIQUE CRAFT

JOHN S. FERNALD

IN no line of human industry is the march of modern progress more noticeable than in the business of those who "go down to the sea in ships." Within the memory of the present generation many models, rigs, methods and appliances of the seafaring life have passed into oblivion, and many others are rapidly passing. While the general change from sail to steam as a motive power is read and known of all men, there are many specific changes that are not generally known, but which possess more than ordinary interest.

The sailing vessel, while being crowded out of

the pinky. On account of her peculiar build the pinky was always in a class by herself, and now as her numbers become few she attracts attention even among seafaring men wherever she appears. The pinky, instead of having a stern square or nearly so is even sharper aft than forward. She has no "transoms," the timbers on which the square or curved stern of others vessels is built, but the out-board planking is fastened directly to the sternpost from keel to deck. This makes the stern pointed, and the appearance is accentuated by the rail, which is extended aft and turned sharply upward beyond

Pinky Maine.

many lines by steam-propelled craft, is still largely in evidence, and will continue to be so for many years to come. She can no more be wholly superseded by her powerful rival than the horse can be exterminated by the trolley car and the automobile. The sailing vessel and the horse have uses for which they will be in demand as long as man shall have dominion over the earth. But in the construction and handling of vessels improvement is the order of the day; or rather improvement along some lines, but at the expense of some good, reliable, old-fashioned qualities.

Prominent among the types of vessels once numerous on the Atlantic Ocean, but now rapidly approaching extinction, is the little fishing vessel known as

the sternpost, leaving a double triangular opening through which the rudder head comes above the deck. This permits of the rudder being hung wholly outside the hull, and does away with much calking needed where the rudder passes through the hull. The apex of the extended rail, or "pink," as it is called, is finished with a rest in which the main boom rests when the sail is furled. The bows are full and the stern pointed, the widest part of the vessel being abreast the foremast, which stands somewhat nearer the bow than in ordinary schooners. The pinky is narrower and deeper in proportion to her length than ordinary vessels, as will be seen by a comparison of the principal dimensions in feet and tenths, of two Maine vessels, each a fair type of her class:

Vessel.	Length.	Breadth.	Depth.
Pinky Maine,	46.4	13.6	6.6
Schooner Mary Eliza,	46.0	17.5	4.6

These dimensions are from the U. S. Government's list of merchant vessels, and the measurements are taken inside the hold. The Maine, with a registered depth of 6.6 feet, "draws" 9 feet of water, requiring the same depth of channel in which to float as the 2,000-ton passenger steamers plying along the New England coast.

But in her day and generation the pinky was deservedly popular with fishermen, being staunch and serviceable, and a great carrier in proportion to her tonnage. What she lacked in speed she made up in seagoing qualities, and often made quicker trips

than her more pretentious rivals on account of her ability to face weather conditions that others dare not.

MINNESOTA'S SOLUTION OF CONGESTION IN CITIES.

FOR a large city, St. Paul, Minn., is singularly free from congested districts of poor people. With the exception of the requirements for the satisfaction of that never-ending string of cases of temporary poverty, there is no large need in this city for the comprehensive organization found necessary in other cities. The secret of this beneficent state of affairs is found, probably, in the prosperous condition of the farming regions and the coöperation in a financial and social way of the people of the small towns. Thus, without knowing it, Minnesota has solved the problem of dependence in large cities and has attained that for which New York has been seeking in a blind way for half a century.

At the twenty-fifth anniversary of the founding of the Charity Organization Society of New York, the best organized charitable institution in the country, Mrs. Florence Kelly, a veteran in settlement and charity work, ruthlessly broke away from the verbal condiments in which other speakers indulged, and told the society that it had been spending its energy attempting to stem the tide with a broom. She declared that there is relatively more poverty, more dependence, and more crowding in New York now than a quarter of a century ago. The congested districts are not only larger but more densely populated. She said that the effort of the society should be directed primarily at the country, and while the city relief should be continued, the attention of the workers should be devoted to making life in the country more enjoyable in order that those now there should remain and others be attracted away from the city.

Expanding this idea in the *New York Independent*, N. O. Nelson of St. Louis suggests that charity workers take up their residence in the country and help organize social activities to make life so attractive as to overcome the appeal of the cash wages in the city. This has been accomplished in large part in Minnesota by the natural incentive of the residents of the farming districts. The development of the dairying industry and the erection of coöperative creameries has been a large factor in this sociological movement. The dairying business has raised farmers from the rank of mortgagors to that of bank depositors. Diversity of employment has been introduced by the creameries and has had not a little to do with compelling an inhibition of the tendency to seek vague fortunes in a different environment. Another force for good in holding young people to the farm, where, in general, their greatest happiness lies, is the union of school districts, and the formation of a social and

intellectual center about the village school. Lewiston, Winona County, has progressed farther in this line than any other town. Four school districts were amalgamated and the pupils are transported from their homes to the school, where a larger building and better instruction are possible. The development of a library, musical and intellectual entertainments follow in time, and there is something besides the monotonous drudgery of farm work for the young people.

Minnesota people are thus teaching themselves what Mr. Nelson would have the trained workers of the Charity Organization Society teach the people of the Eastern States. The enlarged financial advantages derived from improved methods of agriculture, with the concomitant of better means of communication and the development of that stimulus of the mind which springs from mutual pleasures, promise to prove sufficient to keep the young people of Minnesota at their homes on farms and in villages, until the city calls directly for their services.—*St. Paul Pioneer Press*.

JAPAN'S GREAT SEA WEALTH.

OWING to its geographical position, the direction of the ocean currents in its vicinity, and the numerous and well-protected harbors along the various coasts of Japan, it is not surprising that a large number of the population, almost 10 per cent, say 5,000,000, are actively engaged in or depending on the ocean for a livelihood, and that the value of the fish and other aquatic animals and marine products annually taken from the sea amounts to over \$50,000,000.

E. J. King, United States consular agent at Hakodate, writes that after the introduction of steam vessels and the consequent improvements in communication and a constantly growing demand from abroad for Japanese fishery products, it was but natural that the industry should rapidly increase; in fact, the value of the fishery products during the past ten years has nearly doubled. The government realizes the importance of the industry and is doing everything possible to improve the condition of the people engaged therein.

The bulk of the industry, however, is carried on in native-built boats, and the number of these is enormous. According to the latest statistics available, those for 1906, there were actively employed during that year 295,004 boats under eighteen feet in length, 106,803 boats from eighteen to thirty feet in length, and 24,622 boats over thirty feet in length. During the same year there were employed seventy-four steamers, ten of which were newly constructed, and 559 foreign style sailing vessels, of which eighty-three were newly constructed.

The statistics give the number of vessels lost,

wrecked and missing during the year at 949, and the number of lives lost at 1,230. These latter figures may cause surprise, but to anyone living in Japan and knowing the frail nature of many of the fishing boats, and also taking into consideration the number of people engaged in the industry, together with the frequent reports of where fleets have been overtaken by sudden storms, it is astonishing that the loss of life should be as small as given in the government statistics.—*New York Post*.

CURIOSITIES IN SHOES.

THERE is no article of dress in which more striking changes have been made in various ages than the covering of the feet. For a long time boots and shoes seemed to be the special field in which the whims of fashion manifested themselves. Coverings for feet must have been among the earliest articles of dress.

The primitive form of foot covering was the sandal, which was simply a flat sole under the foot and secured to it by a thong. These were made of a great variety of materials. The Egyptians used palm leaves and leather, while the Hebrews preferred linen or even wood. Some didn't make any objection to brass and iron, and a few who could afford it took gold and employed it in making sandals.

Like the sandal, the shoe grew out of physical conditions, the fundamental purpose of it being protection for the whole foot. Among the early Greeks and Romans shoes were not common, but the wearing of them once established an endless variety arose—law and fashion dictating special styles and finish for the several social ranks and classes.

A single hide, slit and looped into a purse-like pouch by a thong run through it, seems to have been the primitive form of the shoe in Great Britain.

Boots and shoes became common in Europe between the ninth and sixteenth centuries, and the fantastic forms which they assumed and the laws in restraint of them, show the prominent place they had come to occupy in the wardrobe and fashions of the day.

Among the shoes that were worn in the past an interesting specimen is the knightly footgear. This helped men fight when fighting was uppermost in the men's minds. It reached its most frightful form in the middle half of the fourteenth century, and the long horn on the shoes served men as spurs served fighting cocks. They were given a keen point, and if it came into contact with the body of an antagonist it had the same effect as a spear.

These battlepieces did as much to frighten away the enemy as they did to destroy him and, since in war as in peace prevention is better than cure, the shoe of the fourteenth century played an important part in history and warfare.

The shoes worn by the original inhabitants of the British Isles are said to have been made of raw cowhide, having the hair turned outward and coming up as high as the ankles.

The Germans wore a shoe made like that of the Saxons, open over the instep to the toe, and both these people as well as the French ornamented their shoes with studs.

From these old styles, long since neglected, in many instances long since forgotten, have modern shoemakers drawn their models.

With us, of the civilized world, shoes have taken on a mighty progress in the way of making them, but in their shapes, for the shapes ever touch on some original style, and the original style was introduced in the days when ancient history was being made.

In many parts of the world no progress has been made. Today men and women are wearing shoes as the ancients wore them, and doing no more to become progressive in the art.

In India the lower classes are wearing probably the oddest shoe in the world, being a flat block with a large knob, which slips between the first and second toes. They are so skilled in wearing these that they are able to keep them on and walk or run with great speed.

Although the poorer classes in Japan and China still wear the sandal and clog, among the wealthier and aristocratic people of the two countries shoes are preferred. These are being imported mostly from the United States.

In many parts of France wooden shoes are still worn. In France may be seen many outdoor shoe factories. These Breton peasants work all day in the forests on heavy wooden sabots, the men doing the heavier part of the work while the finishing touches are placed on by the women.

There are many relics to tell the history of the shoe and boot. Many men and women have collections, some of them worth fortunes, showing what kind of footwear our ancestors were supplied with. And all through these specimens is evident the one fact that the people of modern times have done little, if anything to speak of, in the way of introducing new fads in the shoe market.

The clogs that the Indians wear today were worn centuries ago. The Chinese and Japanese have worn sandals for hundreds of years; ladies wore what are now known as French heel slippers, a few centuries back; gentleman of the old world wore pumps in 1800, and long before Mary, Queen of Scots, wore a slipper that corresponds exactly to the house slipper worn by women today, and sold in any shoe house today; the sandals worn by children are patterned exactly after those worn by Greek and Roman and Gaul away back when they were shedding blood and making history at a terrific rate.—*Exchange*.

Nature Studies

THE WORLD OF NATURE.

JOHN H. NOWLAN.

Do the Bible and Science Agree?

How often do we hear the infidel base his argument against the verity of the Bible on the apparent discord between it and the revealed truths of science.

Like their great teacher, Tom Paine, they want to find a reason for all things and when they cannot reason it out discard it as untrue.

To all such say, "If you are an earnest seeker after truth, read the book of nature." God's laws never change, and nature is only the visible operation of those laws.

A fact is incontrovertible. It does not admit of argument. Our knowledge does not change the relation of the fact to us, only our relation to it. For illustration, it is a fact that fire will burn even though the child is not aware of the truth.

The relation of the fire has not been changed, but the child learns to avoid the fire because of the change of his relation to it.

However much we may believe or disbelieve a fact, our opinion does not change the truth.

Galileo was compelled to brand as heresy his belief that the world revolves around the sun. At the same moment the cardinals were demanding his recantation they were whirling through space in obedience to nature's laws.

"And Nature, the old nurse, took
The child upon her knee,
And said 'Here is a story book
Thy Father hath written for thee.'"

The book of nature points to, but does not go back to, the beginning. Just as the human race had a history before the invention of writing, so also nature was at work before any records in her book were made.

When man attempts to track nature to her lair he is met by the question, "Where wast thou when I laid the foundation of the earth?" (Job. 38: 4.) "Knowest thou it, because thou wast then born? or because the number of thy days is great?" (Job. 38: 21.)

As God said to the sea in the æons long past, thus says he today to man, "Hitherto shalt thou come but no further." (Job 38: 11.)

But back in the dim ages of the past there was a

man, not a philosopher, not a poet, not a dreamer, but a meek shepherd who had a power of vision beyond the ken of common mortals that he was able to look into the future and tell what is to be; and to read the story of the past and tell what has been.

"In the beginning God created heaven and earth." In the description following this statement he relates facts that men have recently proven from the great book of nature.

The claim is often made that the Bible is untrue because the time assigned to the creation is too small. Let us see. First, the Bible is not intended to be a textbook on science, and the account of the creation is only introductory history.

"In the beginning the earth was without form and void." This condition coincides with the azoic period during which geology teaches the earth to have been destitute of organic life.

During this period light appeared. What light? We do not know, but it certainly was not the sun for it was not created till later. What furnished the light of those sunless days?

The old philosophers sought an answer to the question of the origin of the earth. Aristotle said it was eternal; Plato said it had a mother; Moses simply says it was the production of one God and that he did it in six days.

What does this mean? The word in the original which was translated "day" means a distinct period of time, but not necessarily what we call a day.

God is unchangeable and so are his laws. The very laws that are in operation in the natural world today have been in force from the beginning. Today they are *changing* the earth; then they were *forming* it. Slowly, yea, exceeding slowly, these forces have been and are yet at work.

Water has been one of the chief agents of nature. Bare, grim, and uninviting the first rocks rose above the primeval sea to be slowly ground down and spread over the ocean's bed. Settling in layers it entombed all life that chanced to be borne to it and preserved it not only for *us* but perhaps many ages hence.

That huge monster picture in the INGLENOOK some time ago was taken from the stratum formed by the age in which he lived.

Along with him were buried other forms both animal and vegetable and from their preserved forms we may learn the story of his time.

And what a tale he tells! He tells of animals so monstrous that our largest living species are small and insignificant in comparison. He tells of continents and seas, of rivers and lakes, of plants and animals as they appeared upon that ancient earth.

Here may be read the history of life as it was in the ages long gone. If we read it not, the fault is in the *reader* and not in the *record*.

Today nature is at work just the same as in the past, and the forms she is now interring may be exhumed in some future age to convince some doubter of that day.

We need not tax credulity. We need not think of a Creator who fashioned a work and then abandoned it forever. Let us judge what was done in the past by what is being done today.

Moses merely gives us an account of the laying of the cornerstone of this mighty geological structure, and of some of the succeeding stories. Today we are erecting the top story on which, perhaps, other ages will build, adding not to the glory of the creator, but to the glory of his work.

When you read this do not say, "That cannot be, for my Bible says the world was created in six days of twenty-four hours each." "Let God be true, though every man a liar."

Friend, the trouble is not in the record. "Thou hast not read thy Bible aright."

Mulberry Grove, Ill.

PETTING A HORSE.

"NOT many people know how to pet a horse, from the horse's standpoint, at any rate," said a trainer. "Every nice-looking horse comes in for a good deal of petting. Hitch a fine horse close to the curb and you'll find that half the men, women and children who go by will stop for a minute, say 'Nice horsy,' and give him an affectionate pat or two.

"The trouble is they don't pat him in the right place. If you want to make a horse think he is going straight to heaven hitched to a New York cab or delivery wagon, rub over his eyes. Next to that form of endearment a horse likes to be rubbed right up between the ears. In petting horses most people slight those nerve centers. They stroke the horse's nose. While a well behaved horse will accept the nasal caress complacently, he would much prefer that nice, soothing touch applied to the eyelids. Once in a while a person comes along who really does know how to pet a horse. Nine times out of ten that man was brought up in the country among horses and learned when a boy their peculiar ways."—*New York Globe*.

HIRAM POWERS, THE GREAT AMERICAN SCULPTOR.

"I HAD [at Florence] one memorable conversation with the distinguished American sculptor, Hiram Powers, in which he expressed his firm conviction that *the great need of our country was more education of the heart*.

"*'Educate the hearts of the people,'* said he.

"*'Give in your schools rewards to the good boys, not to the smart ones.*

"*'God gives the intellect—the boy should not be rewarded for that.*

"*'The great danger of our country is from its smart men. Educate the heart. Educate the heart. Let us have good men.'*

"These were the words of that old man eloquent, with an eye like an eagle's and a face full of sunshine." —*Our Dumb Animals*.

BIRDS AND THEIR FOOD.

CHIPPING and song sparrow: Injurious insects in summer; seeds of noxious weeds in spring and fall.

Rose-crested grosbeak: Colorado potato beetle and other injurious insects.

House wren: Beetles, grasshoppers, bugs, caterpillars and spiders form its entire food.

Chickadee: Minute insects (bark lice) and insect eggs.

Robin: Beetles, grasshoppers, caterpillars, and wild fruit.

Bluebird: About twenty-five per cent grasshoppers, with many caterpillars and spiders. —*Exchange*.

"ABOUT 2,500 acres have been planted to forest crops in the six New England States this year by *private citizens*. This has been done on abandoned farms, which still comprise 10 per cent of the total area of Massachusetts, while even little Rhode Island has 228 abandoned farms. One owner in Massachusetts, who started a white pine plantation of 65 acres this year, expects to plant 50 acres annually for the next ten years. White pine is, of course, the species most generally planted, but other species which are being used more and more are Norway spruce, for timber and pulpwood; chestnut, for telegraph poles, posts, ties, and lumber; red oak, for piles and ties; black locust, for fence posts; and sugar maple for a variety of products."

IF I had my way I would build at least one warship less a year and with the five million dollars saved I would establish one thousand schools of agriculture.—*James J. Hill*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE GREAT LEVELER.

WITH all our endeavors, through government action and society's efforts, to bring people on a common level, recognizing no distinction but that of goodness, we have accomplished little. Evidently we have not gone about the task in the right way,—have not used the right means or argument,—for it has been proven again and again that people *can* be brought together on the same plane. As proof that cannot be controverted we point to the scenes that are now being enacted in Southern Italy in the relief work for the earthquake victims.

From the first the King and Queen of Italy have taken an active part in the rescue work. "The Queen attended to hundreds of wounded on one of the battle ships and assisted one of the royal doctors in performing a number of operations. Her majesty was assisted in her labors by women and girls of the people who had escaped." Many women of the aristocracy, following the Queen's example, have become nurses. Fifteen hundred wounded from Messina and Reggio, upon their arrival in Rome, were taken to the hospital belonging to the Vatican. The Pope, in his desire to bring consolation to these sufferers, entered the hospital which stands on Italian ground, beyond the area which, under the law, is considered papal territory.

And so the great leveler, distress, has gone on, breaking down walls before which governments have stood powerless. The cry of suffering has found its way into hearts that were adamant to the appeals of reason. Lily-handed aristocrat and horny-handed toiler work side by side to relieve the distress of their brother, and the flimsy, unreasonable distinctions of class are reckoned at their true value, which is zero, while the lives of all are broadened and deepened as they grasp, with some degree of understanding, the idea of the universal brotherhood of man.

But cannot these noble heights be gained except at this awful cost? We do not know. We know that their attainment is of the greatest importance to us, and we know that anything of great worth is secured only at great cost. The kingdom of God must be established. And if the principles of this kingdom do not find their way into the hearts and lives of the people as quickly as they should through the peaceable and quiet agents set to work by the Son, then it may be necessary to let the forces of nature help.

And, too, our puny minds cannot reckon the real effect of a disaster such as the recent earthquake. Perhaps the good will largely predominate. Perhaps it will have no appreciable influence one way or another. We know that to the compassionate One who looks out upon this little sphere from the throne of eternity it can hardly be a matter of the greatest importance if our little houses crumble down and our existence here is cut short by a few moments of time. Perhaps the most important thing to him in the disaster, and surely the most important to us, is how we are taking it to heart, to what extent it has awakened the fraternal feeling and how far it will go toward helping us to "watch"!

SOLVING THE INDUSTRIAL PROBLEM.

LONG years ago, before the time of inventions and modern improvements, the capitalist was the laborer and the laborer the capitalist. But with the coming of inventions and close competition a new order arose. The laborer was not always able to own his tools and material and so the man with money supplied them and bought the laborer's time. And so came about our present system,—the source of the discontent and complaints in the working world today.

While there are very few laborers that would want to go back to the "good old times," they are clearly justified in believing that there is a better way than the present one. The better way, however, must be just and fair to both sides—a point the labor organizations, following the capitalists' example, have been slow to concede. But the way is sure to be found, since it is being sought so earnestly by many fair-minded men of both classes.

Reason, backed by a few successful experiments, argues that the profit-sharing idea must enter largely into the plan that is to bring peace between labor and capitalist and prosperity to both alike. Andrew Carnegie, the great capitalist, believes that the labor problem is to be solved in this way. He writes on the subject in the January number of *World's Work*, and what he says is of such unusual and general interest that we quote several paragraphs from the article.

"In the future labor is to rise still higher. The joint stock form opens the door to the participation of labor as shareholder in every branch of business.

In this, the writer believes, lies the final and enduring solution of the labor question. Nothing can stand against the direct management of owners. We are only pioneers whose duty is to start the movement, leaving to our successors its full and free development as human society advances.

"Just as the mechanical world has changed and improved, so the world of labor has advanced from the slavery of the laborer to the day of his absolute independence and now to this day, when he begins to take his proper place as the capitalist-partner of his employer. We may look forward with hope to the day when it shall be the rule for the workman to be partner with capital, the man of affairs giving his business experience, the workingman in the mill his mechanical skill, to the company, both owners of the shares and so far equally interested in the success of their joint efforts, each indispensable, so that without their coöperation success would be impossible.

"The huge combination, and even the moderate corporation, has no chance in competition with the partnership which embraces the principal officials and has adopted the system of payment by bonus or reward throughout its work. The latter may be relied upon, as a rule, to earn handsome dividends in times of depression, during which the former, conducted upon the old plan, will incur actual loss and perhaps land in financial embarrassment."

In proof of this statement he points to the Filene stores of Boston which, he says, "has gone farthest of all in the direction of making its employes shareholders. The establishment employs seven to nine hundred men, the capital stock is held only by employes, and is returned to the corporation at its value should the employe leave the service. Every share of stock belongs to some one working in the stores. The most important advance, is that all questions are submitted to arbitration, not only complaints or disputes, but wages, scope of work and tenure of employment. More than four hundred cases of arbitration have arisen, and the result is that both managers and employes have been satisfied that this is the true plan. When an employe is discharged he has the right to appeal to an arbitration board composed of fellow employes of different grades."

Concluding, Mr. Carnegie says: "Whether the communist's ideal is to be finally reached upon earth, after man is so changed that self-interest, which is now the mainspring of human action, will give place to heavenly neighbor interest, cannot be known. The future has not been revealed. He who says yes, and he who says no, are equally foolhardy. Neither knows, therefore neither should presume to consider, much less to legislate in their day, for a future they can know nothing of. The writer, however, believes one point to be clear—namely, that the next step toward improved labor conditions is through the stage

of shareholding in the industrial world, the workman becoming joint owner in the profits of the labor. Payment to slaves and serfs by providing shelter and food and clothing for them, then by orders on the stores for articles up to payment by cash to independent workmen today, each a great step forward, have all been tried, and now the coming day dawns when payment is to be made wholly or in part by profit-sharing, the workman having the status of the share-owning official and a voice in management as joint owner. He will be guaranteed a minimum wage, when finally paid by profits entirely, to keep his mind easy and free for his work, the proper support of himself and his family being thus insured."

There will no doubt be many difficulties to overcome and many blunders made in trying to find the best plan by which this principle may be carried out, but we believe that it points to a fair settlement of the question. However there can be no satisfactory solution of this or any other problem in the social or business world until men have a greater experimental knowledge of the golden rule than they appear to have now. Justice in full measure will bring us no real enjoyment until we know that it is accorded to our fellowman in the same degree.

JUST FOR A LITTLE WHILE.

I'd like to be a boy again,
Just for a day or two.
I'd like to roam through the old home ways,
Just as I used to do.
Over the hills and far away,
Wandering mile on mile,
'Neath a sky as blue as it use to be—
Just for a little while.

I'd like to mingle with chums of old,
Just for a day or two.
Whistling the hours of day away,
Just as I used to do.
Over the fields and through the lane,
Down to the old, worn stile,
Hearing the "Whip-poor-Will's" shrill cry,
Just for a little while.

I'd like to fish in the clear, cold creek,
Just for a day or two.
Watching the cork as it sinks from sight,
Just as I used to do.
Over the bridge and through the woods,
Marching in single file,
Searching with chums for big nut trees,
Just for a little while.

I'd like to rest 'neath the old home roof,
Just for a day or two.
Dreaming dreams of the days to come,
Just as I used to do.
Over the ashes of yesterdays,
Sitting I dream and smile;
Wishing that time would take me back,
Just for a little while.

—The Commoner.

The Home World

THE BOY PROBLEM

CLARA NORTH RULEY

EVERY mother who has brought children into the world is confronted with two problems that will take a lifetime to solve. The "boy" problem and the "girl" problem. They cannot be evaded. We are responsible for their existence and therefore the world looks to us for their solution.

The boy if taken rightly is a most amenable being. He reasons instinctively. It is a part of his faculties, this reasoning power, and in that power we mothers have a strong ally. Besides that, if he is at all the right sort of a boy he possesses chivalry. In its crudest form no doubt and not always in evidence, but it is there nevertheless, and can be found and developed if looked for.

From their earliest years boys should be taught to be thoughtful of their mothers and sisters. It is indeed an unfortunate boy who has no sister. He should wait on them in ways that only boys know and should protect them because they belong to the weaker sex. The boy who sees the woodbox is always full, who dusts the rugs, moves the furniture on sweeping days and does all this with a cheerful willingness has already spelled the word "success." For such boys are in demand the world over. They are the ones in after life who always can find a "job."

Teach a boy to be "square." The golden rule invariably appeals to his sense of justice. "Do unto others as you would have them do unto you," makes for them a condition of things in which no one loses out. A boy I once knew had shirked his work in the garden and his mother wished him to do it over. The youngster dominated for the moment by an evil spirit, objected to what, down in his heart, he knew to be just, but the mother conquered him after this manner: "My boy, last week when I made your shirt waist I made the sleeves wrong. I did my best, but I didn't know how boys had their cuffs made nowadays and they did not suit you. So I changed them. It took the better part of an afternoon but I counted

it a little thing to do for you. It was my duty to please you in the matter of shirt sleeves as it is your duty to please me in the matter of hoeing the garden."

After a moment's struggle the boy's face cleared and he made for the garden with such industry that when night came there was not a weed in evidence worth speaking of.

Mothers should never demand impossibilities but then they should insist on the fulfillment of what they do demand. That makes one's word good at all times. Not long since I heard a loving mother tell her small son, who was a degree too insistent about a matter, and so had gotten on his mother's nerves, that she would throw him down the stairs if he didn't keep still. He knew she would not keep her word and she knew it perhaps better than he did. As his demands kept up, she finally told him that when he awakened in the morning he wouldn't have any mama, she was going away and never come back. He replied carelessly, "Oh, you'll come back all right." It is perhaps unnecessary to add that he got what he wanted, which was not at all good for him.

As we care for our sons in their infancy, we look into the dim future and we always see them as good men. But, alas, some mothers' sons fail to come up to the standard. Witness our crowded jails and almshouses. Something brought those poor unfortunates to such a state, and sorrowful indeed is the mother who must admit in her heart that her selfish, injudicious affection has been the means of making a failure for the one for whom she most coveted success.

When a boy begins to earn anything he should be made to have certain responsibilities in the spending of it. If he is earning a regular amount each week of any reasonable size he should pay board. Not so much, perhaps, for what the money will actually buy but so he will know that it takes something to live. That boy makes the poorest sort of a husband who has boarded at home and has never realized that

food costs money. It is his type who develops into the carping, fault-finding man who can't understand "how it takes so much for two to live when I always was able to have plenty of spending money before I married." Of course he did because his poor old father fed him and his mother washed and mended for him, so he was utterly without responsibility.

Nearly all boys have a period of deep religious feeling in their early youth and after that in a majority of cases comes a reaction. It is then our son needs all the reason, all the chivalry his early years of training have given him if he becomes a man in the truest sense of the word, for it is there his greatest danger lies. He is getting out from under our care as he must of necessity some day. In other words, he is learning to stand alone in this big universe and we cannot help him except as we have prepared him in earlier years. Then later, religion comes to mean much to him, a veritable wall to protect him from the assaults of the enemy.

There comes a time all mothers dread. The time when our boys are attracted by the opposite sex. Well it is for them, then, if they have lived lives of reason and sanity, for their future as well as others', may be made or marred by their course. The golden rule, changed to fit the case, is perhaps the best guide at this crucial time, "Treat all girls as you would have the other fellows treat your sister." This is truly an infallible test, and the boy who conscientiously follows this rule has become a man indeed.

YOUR MOTHER.

THE average boy is devoted to his mother, but at the same time careless with respect to her wish. He does not realize just how much she means to him because she is always on hand to help in every duty and difficulty. Now and then he wakes up to see just how much she means to him. Sometimes this awakening is too late—when she is gone out of his presence into the night of death. How much she meant to him is well brought out in the following poem, copied from the *Toronto Globe*. It is called "Left Alone":

It's the loneliest house you ever saw,
This big gray house where I stay—
I don't call it livin', at all, at all,
Since my mother went away.

Four long weeks ago, an' it seems a year;
"Gone home," so the preacher said—
An' I ache in my breast with wantin' her,
An' my eyes are always red.

I stay out of doors till I'm almost froze,
'Cause every corner an' room
Seems empty enough to frighten a boy,
An' filled to the doors with gloom.

I hate them to call me in to my meals;
Sometimes I think I can't bear
To swallow a mouthful of anythin'
And her not sitting up there

A-pourin' the tea, an' passin' the things,
An' laughin' to see me take
Two big lumps of sugar instead of one,
An' more than my share of cake.

There's no one to go to when things go wrong;
She was always safe and sure.
Why, not a trouble could tackle a boy
That she couldn't up an' cure.

I'm too big to be kissed, I used to say,
But somehow I don't feel right,
Crawlin' into bed as still as a mouse—
Nobody sayin' good night,

An' tuckin' the clothes up under my chin,
An' pushin' my hair back so—
Things a boy makes fun of before his chums,
But things that he likes, you know.

I can't make it out for the life of me
Why she should have to go,
An' her boy left here in this gray old house,
A-needin' an' wantin' her so.

There are lots of women, it seem to me,
That wouldn't be missed so much—
Women whose boys are about grown up,
An' old maid aunties an' such.

I tell you, the very loneliest thing
In this great big world today
Is a boy of ten whose heart is broke
'Cause his mother is gone away.

—The Mennonite.

AN INHERITANCE.

"I JUST can't help it," said Alice, impatiently. "I get my high temper straight from grandfather, and my blues from mother's side of the house. When a thing's born in you in that way, what are you going to do?"

"Well," said Mrs. Wharton, thoughtfully, "I should say that you could do one of two things. The first is to carry out your inherited tendencies, one by one, to their logical conclusions—to be just as angry and just as cross and depressed as you feel like being, because your grandfather and your mother's side of the house have had those faults before you."

"Oh, I don't exactly mean that!" cried Alice, rather startled.

"Still, that is really what you might logically do; especially if, as you said, you couldn't help doing it. The other way, though, I must confess, always seems to me the more reasonable one for a sane and responsible human being. That is, having ascertained your ancestral traits—the good as well as the bad—to go to work to shape out of them the character that you want. Of course, there will be some places rather hard to work into shape, but, knowing your material, after all, gives you a great advantage."

"Grandfather's temper an advantage!" cried Alice. "I never looked at it in that light, Mrs. Wharton."

"Your grandfather was a man of strong will and great energy, I have always heard," said Mrs.

Wharton. "Those qualities often go with a high temper. Suppose you fix your mind upon shaping a strong character out of your inherited temper. It will take thought and time and prayer, but it can be done, as dozens of people will tell you who have accomplished it. Take your Cousin Will—with the same ancestral temper."

"Oh, but I never saw Cousin Will angry in my life," said Alice. "When he doesn't like a thing, he just shuts his lips together and keeps quiet. I've often noticed it."

"Yet your Cousin Will told me once," said Mrs. Wharton, "that when he was a boy his temper was most ungovernable. 'But,' he said, 'I knew I had it, and that it was an inheritance, and I determined to watch it. 'Forewarned is forearmed,' you know, and I found it so. When I felt myself getting angry I went off somewhere alone and fought it out—and every time told. And when I got it once under control I was surprised to find how much power I had gained. I have often been thankful to my grandfather since for the moral gunpowder, so to speak, that he left to me—now that it doesn't explode any more, but drills holes in the rock for me instead.' You can appreciate that, Alice, for you know how many rocks of hindrance your cousin has met and overcome."

"It's a new idea," said Alice, slowly; "but I think it's a good one. Thank you Mrs. Wharton. I'll let the first way go and try the second, from this day forward."—*Selected.*

DIPHTHERIA AND ITS TREATMENT.

ONE of the numerous readers of *Health* wishes some one to write on the drugless method of treating that much-dreaded and fatal scourge diphtheria, and as I have had a large experience in the past fifty years, I will give a few facts, the result of my large experience in treating this as well as other diseases. I have treated hundreds of cases and have never lost a patient, nor have I ever used any form of drug, not even as a gargle. My method consisted of different kinds of baths, as the case indicated, to reduce the fever and promote purification, with cold water appliances to the throat—hot to the extremities and ice held in the mouth as far back as possible, if the patient was capable of so doing. I always insisted on no food being taken as long as there was any febrile condition, as I did in all forms of disease—and that the internal bath be given thoroughly. The air always to be kept sweet and fresh. I have by these simple rational methods rescued many from the jaws of death after their attending physicians had pronounced them incurable, and have never had any diseased sequel follow as is often the case with drug treatment.

Feeding to keep up their strength is the fatal mis-

take made by most medical practitioners, and it only adds fuel to the flame.

I have known a number of deaths caused directly by serum treatment, as I have many by drugs without it. It is a simple and easily cured disease where natural rational methods are employed, and I do not consider it contagious, as claimed.

Of course any one is more liable to have any disease if much with it if the health is not good, but one of the greatest causes of contracting any disease is fear, which makes one negative, hence acted upon instead of being able to resist any foreign enemy. The result of the drug method of treatment has made diphtheria one of the most dreaded of diseases. The medical fraternity with this as with most of its theories has put the cart before the horse, claiming bacteria to be the *cause* of, when, in fact, it is the *result* of the disease the same as all filth when moist and warm will develop vegetable and animal life. All the sickness and suffering in the world is the result of ignorance. *Knowledge and wisdom are the saviors.*—*Juliet H. Severance, M. D.*

"THE best way to keep a good balance on ourselves is to decide about how other Christians ought to live, and then meekly and humbly live up to the standard ourselves."

TO THE HOUSEKEEPER.

To keep windows free from frost rub the glass with a sponge dipped in alcohol.

A little flour sprinkled in the pan when eggs are frying will prevent the sputtering hot fat that is so disagreeable.

Mud stains may be removed from tan leather shoes by rubbing them with slices of raw potato. When dry polish in usual way.

Finger marks on paint can be easily removed by rubbing with a clean white cloth dipped in kerosene. The wood should afterward be wiped with a dry cloth.

Match marks on the kitchen walls, which have been caused by carelessly striking matches on them will disappear if rubbed first with the cut surface of a lemon, then with a clean cloth dipped in whiting.

To prevent eyeglasses from steaming in cold weather rub the glasses thoroughly on both sides with a little vaseline or cold cream, then rub with tissue paper or cloth to clear the glasses. Glasses treated this way will not cloud or steam in the coldest weather for twenty-four hours. This treatment of the glasses should be made once a day for outdoor use.—*Collected.*

"NEW" POTATOES AT CHRISTMAS.

THE acme of quality in potatoes, from the English point of view, is represented by the little round tubers, about an inch in diameter, which are sent in *early spring* from the Jersey and Guernsey Islands. An English gardening periodical tells of an ingenious scheme by which anyone can have quite as good potatoes at Christmas time.

First of all dig a hole three feet in depth, and procure some biscuit tins about nine inches long and four inches wide, having close-fitting lids. Tubers should be selected for storing. Snowdrop is a suitable variety.

As each root of potato is dug pick up the tubers and put them in a basket, which should be immediately covered with haulm or something to prevent the tubers from drying. When sufficient have been dug, take them to a shed and pack them quickly into the biscuit tins. No soil or any material is put with them. The tins should then be buried in the hole for them, and a stick put in the ground to denote their whereabouts.

It is best to select medium-sized tubers, just such tubers as are generally described as "new" potatoes. Remember that it is necessary to dig and store the tubers away in the tins before the skins are set, or they won't keep well, nor afterward scrape like "new" potatoes. A little green or dried mint should be boiled with the tubers.—*The Garden Magazine*.

"PEOPLE who depend on hot-air furnaces to heat their houses often find it difficult to get sufficient heat when the wind is in a certain direction, no matter how much coal they burn. The reason is that the supply of cold air to the furnace is not adequate. A scheme is now being introduced whereby an electric fan is placed in the cold-air duct, so that when required an extra quantity of air can be forced through the furnace. By wiring the fan so that the current can be turned on and off at will from the living rooms, the forced draft is within ready control. There is no patent on this idea, and any one who has the ingenuity can try it."

The Children's Corner

AT SCHOOL AND AT HOME.

My teacher doesn't think I read
So very special well.
She's always saying, "What was that
Last word?" and makes me spell
And then pronounce it after her,
As slow as slow can be,
"You'd better take a little care"—
That's what she says to me—
"Or else I'm really 'fraid you'll find,
Some one o' these bright days,
You're way behind the Primer Class,"
That's what my teacher says.

But when I'm at my grandpa's house,

He hands me out a book,

And lets me choose a place to read;

And then he'll sit and look

At me, and listen, just as pleased!

I know it from his face,

And when I read a great, long word,

He'll say, "Why, little Grace,

You'll have to teach our déstrict school

Some one of these bright days!

Mother, you come and hear this child."

That's what my grandpa says.

—Universalist Leader.

**"JUST BREAD."**

"JUST bread and butter and honey and milk for supper," said Doris. "Guess we're most to the starv'ing place."

"I am sorry," mother began, but grandfather interrupted: "I have seen the time when that plate of bread would have looked better to me than all the turkey in the world."

"Funny eyes you had," laughed Doris. "I'll always take the turkey, please."

"Yes," said grandfather, "a big dish of nice slices of turkey breast wouldn't have tempted me from one little piece of that bread one time. It was when this country was all new," grandfather went on, for Doris was listening for the story. "It was very different from now. We bought the land at a dollar an acre. Now it is worth more than a hundred times as much, but we worked hard and had none of the conveniences that are thought to be necessities now."

"The corn and wheat were ground at water mills run by the streams through the country. Well, one unusually cold winter all the streams froze, and for weeks no flour or meal could be ground. The nearest market was a hundred miles away, and could be reached only in wagons, and as nobody wanted to risk the trip in such weather, we did without bread for six long weeks. My! but the first hoecake tasted good after that. I never have felt like saying 'just bread' since. And what do you suppose we ate instead of bread? Why, turkey breast. There were plenty of wild turkeys, which are really the best kind. Mother put slices of the breast on a plate as she would bread, and we ate them with gravy, or molasses, or anything we had. It was good at first, and we children who had come from the East where turkey was not so plentiful thought we were living like kings. But soon we began to get fearfully tired of it. In fact, if you try to eat any one thing every day for six weeks you get tired, but when you stop to think, you always want bread. Just imagine not having even a cracker or a batter cake for six weeks, and see how good this bread and butter will taste."

"It's good without imagining such bad luck," Doris said, "and I'll not say 'just bread' again, either."—*Exchange*.

The Quiet Hour

I WILL GIVE YOU REST.

PAUL MOHLER.

THE Lord had done his best to reach the masses of the people with his teaching. They had come for the physical healing, and had marveled at his wonderful works; but they had not repented. They were satisfied with themselves, and he could not stir them. We can understand their attitude by our own. There is not one of us who responds today as fully as he should to the Master's word. How seldom we turn to the Lord for anything until we need it sorely, and see no hope of getting it elsewhere. It was to the needy ones that the Lord turned at last; and what a responsive chord he struck. Rest for the weary! What other need is so universal?

There is not a man on the face of the earth who does not have some burden, if it be nothing but the great burden of making the time pass away pleasantly. The most of us are spending our energies in a weary round of daily tasks that have to be done over and over and over again till our hearts are weary with the drudgery of it all.

How it takes the heart out of a man to know that the work he is doing will not stay done; that the next day, and the next month and the next year will bring again the same endless succession of dull, hard tasks with no apparent profit.

But the Lord says, "I will give you rest." What more could we ask? Rest from so many of the petty tyrannies that we have laid upon ourselves; the many extra steps we take because we think we have to; rest from the great burden of providing so many unnecessaries that the world has taught us to love; rest from so many things that the customs of the neighborhood have demanded; rest from the fancied necessity of living up to the limit of our resources of money and strength; rest from a thousand things that seem to control our lives and keep us from those things that we really desire.

Jesus offers to free us from these things; and how wonderfully he fulfils his promise. If a man comes to Christ, he is free from the necessity of doing anything but the will of the Father; and there is no

drudgery in that. It is a life of loving service; and love knows no weariness. Even the hardest tasks become easy when they are done in love; and under Christ's, all our deeds are born of love. "Owe no man anything but to love one another."

It is a great rest to be free from responsibility. I'd rather do two hours of work than bear one hour's responsibility for the success of any great undertaking.

Without Christ, each of us bears his own responsibility. He must plan his life and depend upon himself to make his life a success. Who can foresee the future event; who then can plan for the future? One man's strength is but little against a thousand; who then can bring to pass the things he has planned? How then can a man have any rest when he knows that he must both plan and bring to pass the successes of his life? Oh, the hours and days of anxiety, and care, worry and striving which tax our endurance to the utmost! What a rest and relief to be freed from such a burden! Christ alone can make us free, for he alone can plan our lives and bring us to perfection.

And has he not borne the burden for us? Has he not planned our lives, and is he not with us daily to guide us? His Gospel is nothing if it is not a plan of life; his Spirit is nothing if not a guide, and the very power by which we live the life. The man who gives his whole life over to the Lord that it may be used in the Lord's own way for the Lord's own purposes, can rest assured that he will not fail to accept it and use it. He may want me to work very hard: to farm or dig ditches or build houses or teach school or practice medicine, or to do any other of the hard things in life; or he may want me to do the still harder work of preaching the Gospel, caring for some church, teaching Bible classes, or face to face personal work in soul-saving. No matter what the work is, or how hard it is, I do not need to bear the burden of it. It is my privilege each day to give myself for that day, with all that I have and all that I am into his hands, that he may direct and use me for the day, as seemeth best to him. Then the responsibility for

that day's successes rests with him and not with me. That takes all the worry away; it is worry, not work, that wearies us. Neither should we worry about the future, for he, himself, has said: "Be not anxious for the morrow, for the morrow will be anxious of itself. Sufficient for the day is the evil thereof." What a rest to be free from anxious care and gloomy forebodings; what a rest to have our tasks set for us and to know that we are to succeed. Bless the Lord for his goodness and his tender mercies to the children of men. Praise the Lord, O my soul!

Chicago, Ill.

WHOSOEVER WILL.

RICHARD SEIDEL.

Born unto Christ's pure kingdom
Through rending of the veil
Of darkness and tradition,
Pure light and life prevail.
And he who will may enter,
'Twas our meek Savior's word,
Thus leaving man the power
Of choice to serve the Lord.

THE POWER OF A TEMPERATE LIFE.

It is one of God's kind laws that obedience in a lower sphere always brings rewards in a higher sphere as well. To obey God in the body finds recompense in the body, to be sure, but also in the soul. No one can be temperate without getting a clearer eye for it, a finer skin, stronger muscles, and a steadier pulse.

But then, too, it is impossible to be temperate and not see more of God, enjoy finer impulses, a quicker energy, a steadier will. God always pays at compound interest, a splendid return for a trifling service.

But is temperance a trifle, an easy matter, a slight task? Does it not rather imply great self-control, strenuous self-denial? One would think so to hear some men talk, but they are the intemperate men. To one that has never used tobacco it is no hardship not to use it; he loathes it. A man who has never used alcoholic liquors can pass the door of a thousand saloons with not the least desire to enter the vile dens. Daniel and his friends ate their simple fare with a greater relish than the other youths had for their richer viands, and so they grew fairer to the eye. No truly temperate man feels it a self-denial to be temperate; it is his choice and his pleasure.

But suppose that, as is the case with all of us some time at some points, we have already begun to be intemperate. How can we make our way into the power of a temperate life?

First, want to. No one can be cured of drunkenness—of any kind—until he really wants to be cured.

His body may be pumped full of gold-cure and other nostrums, but he will remain a drunkard at heart until he takes the will-cure, and ceases to look longingly after his sin and see how close he can get to it without falling into it again.

Second, keep away from temptation. If your sin came through the dance, do not even look at a dance again. If from gambling, do not touch a pack of cards even when no stake is played for. If from strong drink, do not even read the papers that advertise liquors.

Third, cram your life with healthy interests. Hard work is one of the best specifics against intemperance, a veritable gold-cure.

Fourth, and finally, though first of all in importance, do not trust in your own strength. Appetite is a fearful thing. God who made it, is the only one that can master it, as any one can prove. No drunkard has fallen farther into beastliness than many of those who have "stretched lame hands of faith" out of their pits, and have met the answering hands of God. There is no depth of sensuality, or passion, of folly and despair that his mercy cannot sound. No drunkard can enter the Kingdom of Heaven, but the Kingdom of Heaven can enter any drunkard, if he will.—*Selected.*

COURAGE.

Because I hold it sinful to despond,
And will not let the bitterness of life
Blind me with bitter tears, but look beyond
Its tumult and its strife;

Because I lift my head above the mist,
Where the sun shines and the broad breezes blow,
By every ray and every raindrop kissed
That God's love doth bestow;

Think you I find no bitterness at all?
No burden to be borne, like Christian's pack?
Think you there are no ready tears to fall
Because I keep them back?

Why should I hug life's ills with cold reserve,
To curse myself and all who love me? Nay!
A thousand times more good than I deserve
God gives me every day.

And in each one of the rebellious tears
Kept bravely back, he makes a rainbow shine;
Grateful I take his slightest gift—no fears,
Nor any doubts are mine.

Dark skies must clear, and when the clouds are past,
One golden day redeems a year;
Patient I listen, sure that sweet, at last,
Will sound his voice of cheer.

Then vex me not with chiding. Let me be;
I must be glad and grateful to the end;
I grudge you not your cold and darkness—me
The powers of light befriend.

—Celia Thaxter.

FAMILY DEVOTIONS.

"ALL the duties of religion," says Dr. Dwight, "are eminently solemn and venerable in the eyes of children. But none will so strongly prove the sincerity of the parents; none so powerfully awaken the reverence of the child; none so happily recommend the instruction he receives, as family devotions, particularly those in which petitions for the children occupy a distinguished place."

Echoes from Everywhere

Twelve thousand new suits have been filed in the federal court at Muskogee, Okla., against that many defendants to recover Indian lands in the Choctaw, Chickasaw, and Creek nations. Many of the defendants are prominent. Fraud is charged as the basis of each suit.

Twenty per cent of all the insane in the United States, or 30,000, owe their condition to alcohol. Their direct cost to the nation for support is \$18,000,000 annually, and, on the low estimate that the productive worth of each person is \$400 a year, there is the additional loss of \$12,000,000 more.

Figures made public at the Department of Commerce and Labor relating to Japanese immigration indicate that during the twelve months ended Nov. 1 last the total number of Japanese admitted was 6,017 and the total number which left was 5,832, an increase in the Japanese population of 185.

Miss Rose Fritz, the American champion typewriter, who accepted the challenge to write 100 words in a minute, came through the ordeal triumphantly in the test arranged a few days ago, accomplishing the remarkable record of writing 262 words in 2 minutes and 26 seconds, or at the rate of 107.6 words a minute.

Over a hundred farmers living along the Illinois-Mississippi Canal in Whiteside and Bureau counties have made demands for \$375,000 from the government, claiming that seepage from the canal has damaged their lands to that extent. If the money is not forthcoming they say they will file suit in the United States Court of Claims.

The Great Western Railway, England, is famous for its express trains. During the season of American travel, there are three expresses which run daily from London to Exeter, a distance of 173½ miles, without a stop, in three hours, at an average speed of just 58 miles an hour. A fourth express makes the same run at an average speed of 56½ miles an hour. It is not unusual for the total load back of the tender and expresses to reach 400 tons.

One hundred and fifty persons died of pneumonia in Chicago during the week ending Jan. 16—the largest number recorded for a similar period since May of last year. The result was that the total mortality was boosted to 726, as against 581 for the preceding week, and the death rate went to 17.05 per thousand, which is an increase of nearly 4 per cent. Impure air, the health department declares in its weekly bulletin, is responsible for this condition. "Evidently," it says, "there are many who are violating the simplest rules of health. Altogether too many are unmindful of the most important factor in health—pure air."

In the fourth news item on page 68 in Inglenook of Jan. 19 a mistake is made in giving the deposits in the State banks of Kansas. Sept. 1, 1908, the total deposits were more than \$83,000,000. This sum is greater than was ever before reached by the total deposits, but not "eighty-three million dollars greater" as stated in that item. The remainder of the item, telling of the gain per day is correct.

The Newark (N. J.) Board of Trade has offered three prizes of \$25, \$15, and \$10 for the three best essays on international arbitration by pupils of the High School. The president of the Board, Peter Campbell, ex-President George W. Tompkins, and Richard C. Jenkinson, a former presiding officer, have furnished the money for these prizes. The contest will close the last of April next, and the prizes will be awarded on the 18th of May.

A total of 33,000 shares of stock has been allotted by the United States Steel Corporation to its employees this year under its profit-sharing plan, according to announcement lately made. This is the first year that the privilege of buying the common has been extended to the employees. They may take 15,000 shares of this at 50 and 18,000 of the preferred at 110. Applications already received, it is stated, make it probable that the entire allotment will be oversubscribed.

Vice Admiral Rojestvensky, who died at St. Petersburg Jan. 14, was given a funeral with full military honors. The body was interred in the Alexander-Nevski Monastery, where rest many of the famous soldiers, authors and musicians of the empire. The obituary notices attribute the blame for the loss of the battle of the Sea of Japan to the ships and not to the commander, and they praise the admiral's conduct during his trial by court-martial in that he desired to assume entire responsibility for the catastrophe.

With a view to increasing the safety and efficiency of work in its mines, the Lehigh Valley Coal Co. has instituted an experimental night school at one of its anthracite mines in Pennsylvania. Should the experiment give the results expected, the idea will be extended throughout the company's coal-mining system. The school is unlike any other ever attempted in this country, and is for the men who actually do the work, for the foreman, the miner, the laborer, the driver, the door boy, and every other toiler helping in the production of anthracite. It is believed that one of the best results of the new school will be a decrease in the accident roll, while it is confidently expected that a smaller percentage of waste in the mining operations will also be noticed. The future foremen, superintendents and other officials will be taken from among those who attend the mining school.

Banks and other big houses of Chicago have been advised by local postoffice officials to affix the regular foreign postage, 2 cents for the first ounce and 3 cents for each additional ounce, to insure quick delivery of mail to Germany. Under the new tariff arrangement the mail carried to Germany at the domestic rate must be carried by steamers plying between New York and German ports. This causes delays at times of several days. Mail on which the old rate of 5 cents is paid takes the quickest route, often going by French and English mail boats.

Jan. 9 the liquor forces began an attack on the constitutionality of the Alabama State prohibitory law in the United States Court by seeking to have Judge Thomas G. Jones issue an injunction estopping all enforcement of the act pending a decision of the validity of its passage. The case is brought by the Cook Brewing Company of Evansville, Ind., which alleges that it has spent \$100,000 in building up a business in the State which is now taken away by the law. The State is taking the position that in the exercise of police duties it has a right to control traffic and that it is a State question purely.

"Opium causes half a million suicides a year," the Rev. A. S. Greeg of the International Reform Bureau declared recently with reference to the opium conference called by President Roosevelt, which begins its session at Shanghai Feb. 1. The statement is based on letters and reports from Dr. E. W. Thwing, special secretary of the reform bureau, who has been sent to China to attend the opium conference. Dr. Thwing states that he has obtained statistics from the provinces of Kueichau, Yunnan, Sz Chaun, and Anhwei, with a total population of 580,000, in which he says the proportion of the population using opium is from 20 to 80 per cent and the amount of money spent for the drug is \$200,000,000 a year.

Peanuts, or ground nuts, as they are locally called, form one of the largest crops over a large part of the northern provinces of China, and are one of the articles of native export entering rather heavily into both the China coast and foreign trade. Shipment is made in sacks, the nuts usually being in their native state, except when shelled, the trade in these hulled nuts predominating in some ports. Another large item, dependent directly on the peanut crop, is the export of ground-nut oil. Customs statistics unite ground-nut oil with tea and wood oils, the latter two naturally playing no part in the trade of the northern ports. In value the oil business is much more important than the nut trade, the total exports in 1907 being valued at no less than \$3,340,000.

Drink and poverty are given as the chief causes of crime in the annual report of the Central Howard Association, just issued. The association helps persons after their release from prison. According to the statistics given by the men themselves 321 persons ascribed their downfall to intoxicants. Two hundred and nineteen said that they were led to commit crime because they were poor and out of work. The association aided 1,275 men in 1908. Of these 983 were new cases. Seventy prisoners were paroled to the association by the prison authorities. Of these it is reported that 80 per cent are now good citizens. Twenty per cent were either sent back to prison or escaped. The association reports that besides these aided directly letters were sent and personal advice given to 50,000 others in various parts of the country.

John Bull is our best foreign customer. We are by no means his most aggressive provider, however. During the past ten years Great Britain's increase in imports has been 20 per cent per capita. But our own sales to John Bull in that time have slightly decreased per capita. An English statistician puts it thus: Every person in the United Kingdom consumed \$54.08 worth of imported commodities in 1897, of which \$11.35 worth came from the United States. But in 1906 each Briton—man, woman, and child—consumed \$62.74 worth of imports, of which only \$11.92 came from the United States. In other words, while John Bull's scale of living has risen nearly ten dollars in ten years on imported articles, we have succeeded in selling him an increase of only fifty-seven cents' worth.

To be a citizen of France is ordinarily to have a bank account. Nearly 2,000,000 persons in the republic have \$2,000 each, and 4,000,000 have \$1,000 each. The total wealth of France is divided among the inhabitants in a manner more nearly equal than is the wealth of any other nation. French thrift, with its wholesome effects, is fostered by the French institutions for saving. When the government postal banks were established in France in 1881, the private savings banks in that country had been in a flourishing condition for many years. Their existence and success did not deter the French government from adopting the postal savings bank system. Its beneficial effect on the habits of the people has brought new depositors to the private savings banks and new investors seeking safe investments into the money market.

The demand for cigarettes in China today is only exceeded by that for kerosene. Nor is this habit confined alone to the male portion of the population; the females of all classes and ages, from 10 years up, indulge as freely and openly in cigarettes as do their brothers. The introduction of this habit among the Chinese dates back but a few years, and its universal spread throughout the empire has been astonishingly rapid. The manufacturers say that their production is up to the standard and entirely free from opium. The small cost of cigarettes, which can be bought from one to a thousand at as low as one-fourth of an American cent each, may have something to do with their universal use. The spread of this insidious habit is so alarming that the authorities at Canton have just issued a decree forbidding students to smoke.

Perhaps there is in the course of construction no other enterprise, excepting the Panama canal, which will mean more to the commerce of the United States than the railroad from the Florida mainland to Key West. The work on this road is now nearing completion, but 32 miles of construction remaining to be done, and it is expected that within the present year cars will be running over the tracks above the water into Key West. If these expectations are realized, then it will be possible for passengers to take a Pullman car in New York and stay until they reach Havana, for after reaching Key West the cars will be loaded upon huge barges and towed right on to the Cuban capital, 90 miles away. The great advantage of such a road will be in the facility which it will give to freight transportation between Cuba and the United States, for when it is in operation the Cuban can load his fruits, sugar, and other products on cars in various parts of the island, and they need not be unloaded until they reach their destination in various parts of this country.

Among the Magazines

MR. TAFT'S NEW YEAR RESOLUTIONS.

"If I am elected," Mr. Taft has said, "I propose to devote all the ability that is in me to the constructive work of suggesting to Congress the means by which the Roosevelt policies shall be clinched." And in that work he adds, "My conscience shall be my final political counselor."

I will conserve the interests of invested capital for the welfare of the country and of the workingman.

Men who, to get rich, violate the law, moral or statutory, must be restrained. The statutory law should be amended where necessary so as to comprise the moral law.

I shall not interfere with legal combinations of capital that are beneficial and properly controlled; but I shall interfere with those made merely to control markets, fix prices, restrict output, kill competition.

I am against limiting the proportion of their output corporations may own, and fixing prices by government.

I shall take no steps to destroy great organizations that have a large wage fund when prosperous, and that add greatly to the prosperity of the country; but I shall do my utmost to keep them within the law.

I am interested in legislation against the railroads, that it shall be just and only properly restrictive. The whole country depends upon the prosperity of the railroads.

The principle of competition between naturally competing lines must not be violated. And I should approve an amendment to the law permitting useful traffic agreements when approved by the interstate commerce commission.

It will be one of my most pleasant duties to construct legislation that shall give labor a square deal and not more than a square deal.

I shall uphold the right of labor to organize for the purpose of making itself properly a power in the community, to maintain its level in the struggle of life, and for dealing with capital.

I shall oppose labor when, exercising its right to strike, it injures the property of its employer, and when it attempts by "secondary boycott" to compel a third and unwilling person to join the controversy.

Non-union labor shall be secured absolutely the same rights as union labor.

I shall endeavor to bring capital and labor into closer relations of confidence and interdependence, and shall seek peace between capital and labor by their mutual recognition of their respective unions and acceptance of the principle of mediation and arbitration.—From the January Circle Magazine.

THE MORAL OF HARD TIMES.

The morbid congestion of population in our great cities and industrial districts is now bearing fruits which are pitiful and at the same time logical. The story is as old as the history of civilization. In times of prosperity

people grow extravagant, thinking the good times will last forever. Wages are boosted and boosted, the cost of production is increased and increased, until there comes a time when the consumer balks and refuses to buy. Then consumption shrinks, factories close down, and thousands are thrown out of work or have to take reduced wages.

This is the condition now. Every one is suffering from the slump more or less, but the brunt of punishment falls on those who have not been forehanded, those who have cast to the winds the teachings of the ages. We hear of men all over the country who were receiving big pay during the prosperity period but who are now penniless, with their families in dire want. Remedies are proposed and tried, but they cannot reach the root of the trouble, for they are too superficial, and they come too late. When hundreds of thousands of unemployed and beggared people are massed together the task of relieving them becomes overwhelming.

Good advice does not take the place of a loaf of bread, but nevertheless the lesson of hard times is so old a one that it is hard to excuse those who refuse to learn it. In good times we must prepare for bad. The wise man does not build his house on the sands, where the storms that are sure to come will wreck it. The grasshopper that despises the ant for working so diligently during the season of plenty must pay the penalty. The prodigal after spending his substance in riotous living would indeed fain have "filled his belly with the husks the swine did eat," yet "no man gave unto him," and he had to realize how he had sinned against the laws of life before he could be relieved.

Throughout the reign of prosperity this paper uniformly counseled economy and saving thrift; we gave warning that the hard times would come, and urged those who did not want to suffer to lay up something for the rainy day. At that time we were denounced by some of the big newspapers for "knocking"; prosperity this time had come to stay, we were told. We claim no superior intelligence for being able to see through a millstone with a hole in it, to predict a sequence of natural events as well established as the rising and setting of the sun. But the fact remains that this paper foresaw the present conditions long before the crash.

As a people we must get closer to the land, avoid congesting in the cities, learn to acquire the habit of saving, curb our extravagance—and withal bow to the eternal laws of our being. Poverty and misery can never be wholly eradicated, but they can be vastly reduced by a proper reverence for the teachings of the past.—The Pathfinder.

"POLICY" AND POSTAL BANKS.

The Senate has taken up the postal saving banks bill, and several amendments—some of a rather important character—have been proposed. To honest efforts to render the bill less objectionable to the bankers opposing

it, or to prevent misuse of its provisions, there will be no disposition to take exception. But unfortunately correspondents have been intimating pretty plainly that some of the "discussion" is merely obstructive, that the ruling clique has no intention of permitting the bill to pass or even to reach a final vote.

Some senators, including Mr. Aldrich, contend that the question of postal banks cannot "scientifically" be settled save as part of the larger question of currency and banking reform. Others pretend that the idea has not received sufficient attention anyway, and that legislation at this time would be rash and dangerous. Still others affect to believe that there is little popular demand for such a measure. Finally, the open secret, referred to by Mr. Wellman in his letter on the President's message urging desirable amendments to the commerce act, that "Roosevelt policies" are to be coldly ignored between now and March 4, and even modest, constructive and necessary changes postponed out of spite and bitterness of a personal nature, is likewise to be taken into account in estimating the chances of the postal banks bill.

There is not a single good reason for "chloroforming" the bill. It has been very carefully considered, and the report of the Senate committee on it was emphatically favorable. There is no real connection between it and the problems under consideration by the currency commission—problems affecting circulation, bonds as a basis for it, elasticity, the future of the greenbacks, etc. The strength of the popular demand for additional and safe facilities for savings may be inferred from the indorsement of the idea of postal banks by the Republican platform and the positive promises of the speeches of Republican orators, from Taft down, during the late campaign.

Even with Congress in its present mood and temper the fact that Mr. Roosevelt has recommended postal banks surely ought not to be a fatal argument against sensible and proper action, against keeping faith with the people. It is too late to raise objections to the scheme itself; details can be attended to at this session.—Chicago Record-Herald.

NATIONALISM AND SECTIONALISM.

No one can have traveled much over the country without noticing a marked contrast between the Northern and the Southern States in their attitude toward sectionalism. There is vastly less expression of sectional feeling in the North than in the South. The Southern journals and the Southern people have much to say about the South and its special interests and feelings. In the Northern States such a sentiment about the North as distinct from the South is almost never to be observed. We do not talk about the South, we do not think about it as a section having separate interests from the North, unless in a political campaign we wish that there were great doubtful States in the Solid South, as there are in the North. Ohio and Indiana and Minnesota elect Democratic governors; that is almost unthinkable in Georgia or Texas, which have the intense Southern feeling, with a bit of rankling jealousy or even hostility toward the North. No similar feeling exists in the North.

The reason for the difference—or the apology—is easy to tell. It all hangs on the Civil War. We have not yet quite got over the friction of that conflict. The South was fighting for a section and a sectional institution. The North was not fighting at all for its section or for any of its institutions, but for national unity; fighting to preserve the whole country as one nation, and not

for a portion of the country to be set off by itself. It followed, necessarily, that in the South sectionalism should be the dominant thought, and that its influence would remain largely dominant after the close of the war. It followed with equal necessity that in the rest of the country the spirit of nationalism should rule. It follows that the Northern States do not think of themselves as separated in any sense from those States which fought against union, but have now heartily accepted its blessings.

Patriotism fights sectionalism. We need to develop more and more the love of the entire country, and to minimize any loyalty to a section which can possibly take the place of patriotism. This does not mean that one should not have a special love for his native town or his native State. That is regarded as one of the parts that make up the total country. There is in it no rivalry of loyalty or affection. But it is an error and wrong if schoolbooks on history or geography set section against section or are guilty of perpetuating the memory of the hostilities of the days of the elder generation. We cannot complain that the soldiers, the few that remain, delight to meet in annual reunions or in local posts and recall and maintain the old fellowships; that is beautiful. But let it be left to them. There is no good and much evil in the maintenance of Sons or Daughters of the Union Veterans—if there are any such, we do not know of any—or of Sons or Daughters of the Confederacy. All that we want forgotten, or left to the historians and the genealogists. We will not cease to be proud of our pedigrees, of the bravery of our ancestors, but we will not teach our children to retain and cultivate the sectionalisms of their grandparents. What do they know about the war? What have they known of slavery? Let the dead bury their dead, and do we follow the country's banner.—The Independent.

SCANT SLEEP FOR GROWING CHILDREN.

"Stealing candy from a baby" is popularly cited as typically the meanest, as well as the easiest, of crimes. It is hardly more despicable, it would seem, than robbing children of the sleep that they need to make them normal, healthy men and women. The baby may get more candy; but sleep once regularly lost for any length of time can not be made up. Says The Hospital (London, November 21), discussing some recent revelations in its own city:

"Difficult and obscure as are many of the problems connected with that suspension of consciousness, complete or nearly complete, which we call sleep, there are certain points of personal experience on which most people are agreed. One is that the quantity of daily sleep necessary lessens with advancing age; another is that the brain requires longer rest to recover full vigor than does the mere physical mechanism of the body. Both these points have a strong bearing on the hygiene of the school child, some very important facts concerning whose sleep time were revealed to the Child-Study Society last week by Miss Alice Ravenhill. She finds, by returns as to the hours of sleep obtained by over six thousand children in public elementary schools, that on an average they miss some three hours a day of the sleep suitable and necessary for their ages. Such a state of things is bad enough, but the lecturer further pointed out that even the quality of that which is obtained is very often defective. Overcrowding, with its usual accessory, bad ventilation, is one of the factors which is in special need of remedy; another is

noise, though it is probable that most town-bred children are too accustomed to this to allow it to affect their sleep. Defective home discipline is also blamed for part of the evil, probably quite correctly. Premature employment, both before and after school-hours, is another all too common form of parental selfishness, which is having an important effect in the deterioration of the race. Only a few weeks ago some shocking cases of this were exposed in one of the western suburbs of London; children were compelled to start milk-distributing at 5:30 A. M., and even to go on duty again after the completion of their day's school-work."—Literary Digest.

WORLD'S APPLE KING.

THE statement that one man owns over 1,600 acres devoted to apple trees sounds amazing; that more than 500,000 bushels of apples were sold by him from trees of his own planting for an aggregate above \$205,000 is likewise amazing; these figures convey but a slight idea of the operations of Judge Fred Wellhouse of Topeka, Kans., known to those familiar with horticultural matters as "the Apple King."

When, in the late '70s, he was planting 437 acres to apple trees in Leavenworth County, Kans., many of his neighbors looked upon him as well-nigh demented. Over 400 acres in orchard! It was astonishing! It was destined to be a flat failure! So said the croakers, but Wellhouse, undaunted and undiscouraged, worked on unmindful of the bantering and rallying, and the outcome justified his faith in Kansas and himself and forever silenced those who doubted.

Perhaps in no way can be conveyed a clearer conception of the immensity of these apple-growing operations than by citing the figures from the records. In all, the maker of this record has grown and sold twenty-six crops, amounting to considerably more than a half million bushels. The crop of 1890, approximately 80,000 bushels, was the largest, and it sold for more than \$50,000. This was perhaps the most valuable crop of apples ever grown by any one man in the middle West, and the total paid for it aggregated more than the earnings of the average citizen during his entire lifetime. The combined yield of the two largest crops, those of 1890 and 1891, was 142,868 bushels. The smallest yield was 488 bushels in 1899.

All these apples, if packed in barrels and loaded on the ordinary railroad freight car, averaging 20,000 pounds to the load, would fill about 1,250 cars, or make more than sixty-two trainloads of twenty cars to the train.

In picking, the men averaged forty bushels each per day—and packers and pickers were paid for 20,833 days' work, at the rate of \$1.50 per day of ten hours. The pickers worked in gangs of from ten to fifteen men.

For harvesting, \$31,250 was paid to pickers and packers; \$6,425 for hauling from the fields to the packing-house, and \$11,565 for hauling to the rail-

road and loading on cars. The barrels cost \$17,100 and about \$1,500 was spent for miscellaneous items, such as boxes, extra hoops, etc. The total outlay for gathering the crops and placing them on the market was \$67,480. You see, capital is required for a job like this one.

The gross sales amounted to \$205,903; this less the \$67,840 expenses, leaves a net return of \$138,063. But this amount doesn't represent all the profit; it doesn't include the value of the corn, which was grown between the tree rows from the time of setting out the orchards until they began to bear. The corn was grown by tenants, and the landlord received one-third of it for rent. Of the 161,000 bushels of corn grown he received 53,600 bushels, which sold for an average of 30 cents per bushel, netting about \$14,750, and paying all expenses of planting and growing the orchards to the time of their bearing. Added to that from the apples, this income from the corn brings the total net profit up to \$152,812. And then, too, its planter still owns this largest orchard and has every reason to hope for many more bumper crops.—*Interurban Life*.

Between Whiles

"I just love cake," said Johnnie feelingly. "It's awful nice."

"You should not say 'love' cake," corrected his mother. "You should say 'like.' And do not say 'awful'—say 'very.' And say 'good' instead of 'nice.' Now see if you can repeat the sentence correctly."

"I like cake," repeated Johnnie. "It's very good."

"That's better."

"I know, ma," complained Johnnie, "but it sounds just as if I was talkin' 'bout bread."—Everybody's Magazine.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Furnished home; 7-room house, stable, etc.; 100 feet front; cement walk; fruit and shade trees; one-half block from Campus, McPherson College. J. W. Webster, McPherson, Kans.

WANTED—For Wisconsin farm, a married man, 28 to 40 years old, as manager of dairy and stock farm. Must be a good manager and careful feeder of hogs, cattle and horses; also a good tiller of the soil and come well recommended. A good place is offered to the right man. Address INGLENOOK.

Map of the Southern Pacific Lines in Mexico.
Other principal Mexican railways are shown by the lighter, cross-hatched lines.

THE SOUTHERN PACIFIC LINES IN MEXICO

"Railroad Age Gazette."

The construction by the Southern Pacific Company of a main trunk line and various branches on the west coast of Mexico under concessions granted by the Mexican Government is one of the most important railway developments in America today. Six hundred miles of these lines are already completed and in operation; 170 additional miles will be finished and ready for operation by January, 1909, and the entire network of lines will be pushed to completion as rapidly as the best, most approved and most economic methods of building will permit. The enterprise is a gigantic one involving the expenditure of many millions of dollars. Perhaps the best evidence of its importance is the fact that the work has progressed continuously throughout the financial depression.

Besides opening up a new territory rich in natural resources, the completion of the main trunk line will establish a direct and continuous route connecting the City of Mexico, Guadalajara and other points in Mexico with Los Angeles, San Francisco, Portland and the ports

of Puget Sound. This will make possible a continuous train service of about 3,500 miles, the longest north-and-south line in America, and the longest in the world, until the Cape-to-Cairo line is built (if it ever is!) by the British Government. In order to understand clearly the significance of the various lines embraced in the enterprise the main line will be considered first, and then the branches separately.

Main Trunk Line.

This line enters the Republic of Mexico at Nogales, the twin American-Mexican city on each side of the international boundary between Arizona and the State of Sonora. From this point the line of the Sonora Railway extends through Magdalena and Hermosillo to the port of Guaymas, on the Gulf of California, a distance of 263 miles. This line, which has been in operation for many years, is now owned and controlled by the the Southern Pacific Company, and over its tracks the through trains will be run. The Government has recently granted a

THE INGLENOOK

concession for the reconstruction of this entire line and the Southern Pacific has already concluded arrangements for raising the track, putting in new ties, reballasting, replacing the old bridges with new ones, and substituting heavy rails for those now used, so that the road-bed of this part of the line will be raised to the high standard of construction which prevails on the new part south of Guaymas. By the terms of the concession this reconstruction must be completed within two years from the date of the concession.

From Guaymas south to Guadalajara the entire line, 860 miles in length, will be one of original construction.

Natives Clearing the Right of Way.

Leaving Guaymas, the road has a general southeasterly course passing through Corral, the point of crossing the Yaqui river, and Navojoa, the crossing of the Mayo river, entering the State of Sinaloa about half way between Navojoa and San Blas, at which latter place the Fuerte river and the tracks of the Kansas City, Mexico & Orient are crossed; thence to Culiacan, the capital of Sinaloa, crossing the beautiful Culiacan valley and river just before entering the city. From Culiacan the line proceeds to Mazatlan, situated on the Pacific Ocean at the mouth of the Gulf of California. This is the chief seaport city of the west coast of Mexico, and the only one which will have both a north and south rail outlet when the line is completed. Here the route gradually leaves the coast, passing through the territory and city of Tepic, thence to Guadalajara, the capital of the State of Jalisco and the second city of the Republic. The line between Guaymas and Culiacan, a distance of 340 miles, has been completed and is in operation; since the first of August a through daily passenger and Pullman service has been maintained between Culiacan and Tucson, Ariz., a distance of 750 miles.

The length of the line between Culiacan and Mazatlan is about 150 miles. The construction of this section is being pushed rapidly with large forces from each end and the section will be completed and placed in operation early in January, 1909, when a through daily passenger and Pullman service will be inaugurated from Tucson to Mazatlan, a distance of 900 miles. From Mazatlan to Guadalajara the length of the line will be about 360 miles. The construction of this section is now in progress from Mazatlan south and also from Guadalajara north and the work at each end is being pushed with all the despatch consistent with economic construction. By the terms of the concession the entire line must be completed by November, 6, 1912.

Branch Lines.

The concession to the Southern Pacific authorizes the construction of as many branches on either side of the trunk line from Navojoa to Guadalajara (each branch not to exceed 150 kilometers in length) as may be desired. The branches desired may be designated at any time prior to the sixth day of November, 1915. No concession for the construction of parallel lines within a zone of 30 kilometers on each side of the line can be granted to any other company prior to November 6, 1920.

This road will penetrate the heart of the region characterized by Baron Humboldt as "the mineral storehouse of the world." Heretofore the development of this section has been retarded on account of the lack of transportation facilities and the presence therein of bands of Yaqui Indians. The new railway will furnish the needed transportation facilities; and experience teaches that Indians are never a menace after the coming of the railway. This branch is destined to become one of the largest carriers of ore metal and mining machinery and supplies on the continent. It is completed to a point 20 miles north of Cumuripa, and 51 miles north of the junction with the main line at Corral. Construction is being pushed with a large force north of this point. Under the concession this line must be completed to the international boundary by May 11, 1924. Its length from Corral to the boundary is 388 miles. From Tonichi a short branch of 4½ miles will be built to the coal fields of Baranca.

Traffic Features.

Mention has been made of the mineral resources of the territory traversed by these lines. A large tonnage of ocean freight will be handled from Guaymas, the port

Tracklaying Gang at Work.

furthest north on the mainland of the Gulf of California, and from Mazatlan, which is at the confluence of the gulf with the Pacific Ocean. The latter, by reason of its geographic position, is the most convenient port on the west coast of America for the immense cargoes carried by the "trade wind" vessels plying between America and India, China, the Philippines and the Hawaiian Islands. All of this ocean freight is now carried 2,000 miles north to San Francisco. Upon the completion of the line to Mazatlan this will become the port of discharge and their cargoes will be carried by the railroad to Guadal-

THE INGLENOOK

ajara, Mexico City and other points in Mexico, and by the fast freight north to the United States and Canada. The traffic from Mazatlan to Guadalajara and the City of Mexico is sure to be very large because this route affords the best approach to these two great cities from any point on the Pacific.

It goes without saying that the through freight and pas-

Robert's Tracklaying Machine at Work.

senger traffic upon a direct line connecting two such cities as Guadalajara and Mexico City with Los Angeles, San Francisco and the Pacific coast of the United States will be heavy. Mexico City, like the tomb of Mohammed to the Mussulman, is the Mecca of all Mexicans, and the map shows an immense territory in Sonora and Northern Sinaloa, whose inhabitants can now reach the capital only by the circuitous route to Benson, Ariz., thence to El Paso, and from there over the Mexican Central to the City of Mexico. All this traffic will be diverted to the new line and its volume will be multiplied many times with the shortening of the distance and the increased facilities which will be afforded. The freight traffic which the country will furnish will be large in volume and will consist of live stock of all kinds, and a great variety of agricultural products, fruits, vegetables and timber. Among the agricultural products may be enumerated corn, beans, garbanzos (peas), sugar (crude and refined), alfalfa, sorghum cane (used as a forage for live stock), and agave, from which a fiber that is the highest-priced in the market is extracted. The fruits are of the finest quality and consist of the orange, banana, lemon, mango, chirimoya (known as vegetable ice cream), cocoanut, date aguate, papaya (an appetizing breakfast fruit similar to the cantaloupe and from which is extracted the purest form of pepsin known), zepete, plum, strawberry, black-

berry, melon, and in the mountainous sections the apple, peach and pear. The fruits which have been the source of such wealth to California are indigenous to the soil of the west coast of Mexico and are ready for market months in advance of the California product. The oranges grown in Sonora are the sweetest and have the most delicious flavor of any grown in America, with the possible exception of those of the Salt river in Arizona. The State of Sinaloa presents exceptional opportunities to the truck-gardener for raising winter fruits and vegetables. These can be produced there for the markets of the United States at a season when they cannot be supplied from any other section. Most fruits and vegetables may be grown there every month of the year.

The forests along the coast contain fine specimens of mahogany, ebony, maple, rosewood, *lignum vitae*, mora, willow and many other varieties of beautiful and valuable trees. In the hills and mountains are found the sycamore, cypress, spruce, pine, madroña, elm, walnut, cedar and oak, all similar to these species found in the United States, and in addition about 175 varieties of trees never seen in the forests north of this section.

The lands along the coast are for the most part covered with a dense growth of trees and underbrush and some grass, though the latter is not abundant. It is claimed that the forage from this underbrush will support more live stock to the same area than the famous bunch grass of the Northwest region. In the foot hills of the Sierra Madre range are magnificent grazing lands where conditions for stock breeding are ideal and the

Type of Concrete Bridge Used.

climate unsurpassed.

All the lines built or under construction will compose a system of 1,785 miles.

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully. The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

The next party of colonists will leave Chicago about February 9. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

Sunflower Stories and Lullabies

By Miss Olive A. Smith

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Low Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper.

The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

The International Sunday-School Lessons FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

Holmes' Green Prolific Pole Lima Bean

Grows Green—Dries Green—Stays Green—Most Prolific

Equals the Early Jersey or any other variety for earliness. More productive than any other Pole Lima we have ever seen grow. Every Bean has that true, distinct, deep grass green color, and this color it retains when the Beans are shelled for market. The large pods hang in clusters of from five to eight, each pod containing from five to six beans.

Stock extremely limited. Positively only three papers will be sold to any one person. Pkts. containing six beans, 25 cents; 3 pkts., 50 cents.

Holmes' Delicious Early Sweet Corn

Entirely new and distinct. Very early. Ready for market in 55 days. **The most delicious Early Corn grown.** Has twelve rows to the cob, and each stalk bears two or three well-developed ears.

Stock extremely limited. Pkt. containing enough seed for three hills, 25 cents; 3 pkts., 50 cents. Positively not more than three pkts. sold to any one customer.

Fuller description of both above Novelties will be found in our Hand Book on Seeds which is sent free for the asking.

No other seed house can offer these two sterling novelties this year

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

Homeseeker Round Trip Rates are in effect on the first and third Tuesdays of January and February, 1909, as follows: From Chicago to Blackfoot, Idaho, \$42.50; Boise, Idaho, \$57.50; Butte, Montana, \$42.50; Caldwell, Idaho, \$57.50; Hailey, Idaho, \$53.60; Huntington, Oregon, second-class, \$57.50; Idaho Falls, Idaho, \$42.50; Ketchum, Idaho, \$54.60; Market Lake, Idaho, \$42.50; Mountain Home, Idaho, \$53.90; Nampa, Idaho, \$57.20; Ontario, Oregon, \$57.50; Pocatello, Idaho, \$42.50; Salt Lake City, Utah, \$39.00; Shoshone, Idaho, \$49.00; Twin Falls, Idaho, \$50.80; Weiser, Idaho, \$57.50.

Colonist One Way Cheap Rates will be in effect from March 1 to April 30, 1909, inclusive.

Write at once for printed matter giving full particulars about Idaho and its possibilities, climate and other attractions.

No. 5.

KAI FENG FU, CHINA

C. F. APPLETON

THE city of Kai Feng Fu is situated about one thousand miles northwest of Shanghai and about four hundred miles south of Peking, and six miles south of the Yellow River. It is the capital and principal city of the Province of Honan. Although the Yellow River is one of the principal waterways of China, it is comparatively useless for navigation on account of its lack of depth and treacherous shoals.

Kai Feng Fu is reached from Shanghai, the leading port for the Celestial Empire, by a trip of four days on a river steamer up the mighty Yangtse River a distance of six hundred miles to Hankow, the Chicago of China. From Hankow the balance of the journey may now be made in two days—a trip which formerly required several weeks. The railway recently constructed by French and Belgian capitalists from Hankow to Peking—about seven hundred miles—now has daily trains in operation and is a great help in the development of the country, although it is a sore spot to the Chinese government, as it is still in the hands of foreign capitalists.

The city of Kai Feng Fu is enclosed by a wall about forty feet high, thirty feet wide at the top and sixty feet wide at the base. A layer of extra large well-burnt brick, laid in lime, forms the outside, but the inside is earth with a coat of cement on the top, thus keeping a roadway on top of the wall in good condition and preserving the wall from decay. The outer brick work rises some eight feet above this cement wall and every few feet has alternate loopholes and rectangular indentations. The city has five gates which are carefully closed every night at dusk. On the wall above the gateways large two-story buildings or towers are built for protection and for the artistic effect. The main wall is said to be fourteen miles long and encloses an area of twelve square miles, two-thirds or more being covered by the brick buildings, streets, etc. The streets, which are wider than those of most Chi-

nese cities, will compare favorably with the narrow streets of some American cities.

Instead of the street car, however, the traveler need walk but few steps before he will find a rickshaw ready to carry him much faster than he can walk. The rickshaw, which was introduced into this city about two years ago, much resembles a small covered buggy except that it is drawn by a man. The fare is usually about two cents a mile. If the passenger is nervous or afraid of an upset, the far-famed wheelbarrow or the native cart is still at his disposal. The latter is a two-wheeled springless vehicle with a cloth cover over a wooden frame. There is usually a small window on each side. It is drawn by a horse, a donkey, or a mule. It is not an uncommon sight to see a horse, a donkey, a mule and a bullock all hitched up together to an uncovered country cart. For special occasions, such as marriages and funerals, the sedan chair is used. It is also proper for officials to use these chairs when traveling in the city. This is a covered frame work, about three feet square and five feet high, to which two long poles are fastened for being carried on the shoulders of two, four, six or more men, according to the rank of the person and the significance of the occasion. The chair is usually decorated with cloth or silk of various colors and other ornaments. The chairs of officials are preceded by a bodyguard of soldiers. In case of marriage, in conducting the bride from her father's to her husband's home, the chairs occupied by the bride and groom are usually preceded by a company of boys or men, some wearing gay, odd-shaped hats and carrying signs, flags, musical instruments, etc. Many other strange sights meet the eye of the foreigner who has spent any length of time in a heathen city.

Some of the most notable places of this provincial capital are the following that are worthy of mention:

The "Long Ting," or old palace, formerly occupied by the Emperor when this city was the capital of the

Middle Kingdom. The buildings are now being used as a Buddhist temple. Travelers may still see the massive stone on which the Emperor's throne was formerly located. It is a solid rock cube of about six feet on each edge and has dragon figures carved on four sides. In many places it is now as smooth as glass on account of having been rubbed by the hands of so many sight-seers for several centuries.

During the reign of "Kong Uh" in the fourteenth century, his majesty built a magnificent pagoda in the northern part of this city which still stands as a memorial of his reign, and is one of the wonders of the city. It is built of brick, the outside being of colored pressed material which has resisted the storms of many ages and is now in excellent condition. The pagoda has thirteen stories; is about two hundred feet high; is octagonal in shape with a diameter of perhaps fifty feet. By winding stairs on the inside the traveler may ascend to the pinnacle of this guardian angel of the city and secure a good view of the surrounding country. At the top of each flight of steps is an idol, the one at the summit being of iron and bearing the name of the Emperor at whose expense the pagoda was built. In a separate building in front of the tower is a large brass image of Buddha about twenty feet in height and five feet in diameter.

Another interesting sight is a stone monument in one of the Buddhist temples, or court connected therewith, which commemorates the three great floods which have swept over the city, carrying death and destruction in their track. The city is scarcely more than six miles from the Yellow River which in times of unusually heavy rains overflows its banks and covers the whole valley which is a low-lying, sandy territory. It was after one of these floods that the imperial family left the city and sought a safer place of residence. The population is not more than half of what it formerly was in times of greatest prosperity.

Another interesting monument is a stone tablet erected by the Jews many centuries ago. It is the last trace of their old synagogue which once was in a very flourishing condition. The site is now a dumping ground for rubbish and filth of the vicinity, but is still made certain by this memorial stone. Chinese characters are engraved on it and the writing gives some idea of their doctrines and of the establishment

of their religion in the heart of this vast empire. Eight families of Jews still remain to remind the world of the certainty of the fulfilment of the prophecies of God's Word relating to his ancient people, predicting their dispersion among the nations.

The Mohammedan temples in the city are also worthy of mention. Of these the principal one is located near the east gate where a large per cent of the people are followers of the false prophet. They claim that three thousand families come under the sway of this one temple. They have a very strong hold upon the people and seem to be adding to their numbers in this section of the country.

The city was opened to foreign residents after the Boxer troubles of the memorable year of 1900 in which so many martyrs loved not their lives unto the death but sealed their testimony with their blood. At present there are three Protestant missions working in the city; also a Roman Catholic and a Greek Catholic mission. Some from the multitudes have accepted the Christian faith and the gospel influence, bringing light to those who sit in heathen darkness.

THE race of mankind would perish did they cease to aid each other. From the time that the mother binds the child's head till the moment that some kind assistant wipes the death damp from

the brow of the dying, we cannot exist without mutual help. All, therefore, that need aid have a right to ask it from their fellow mortals; no one who holds the power of granting can refuse without guilt.—*Sir Walter Scott.*

STEAM OCEAN TRAVEL.

T. H. FERNALD.

IN steam ocean travel there has been as great advancement as in other industries. To prove this statement, let me mention two ocean steamers which show great advancement along this line.

The *London Times* (England) of May 18, 1819, contained the following item in regard to an expected event, which actually occurred:

"*Great Experiment.*—A new steam vessel of 300 tons has been built at New York, for the express purpose of carrying passengers across the Atlantic. She is to come direct to Liverpool."

The North Gate of Kai Feng Fu and Tower. Entrance Is Through the Dark, Semi-Circular Opening in the Front. The Small, Side Gate Leads Up on the Wall. Closed Every Night.

This steamer, named the *Savannah*, was the first to cross the Atlantic. She was built at New York by Francis Ficket, and her engines built by Stephen Vail, and she was launched August 22, 1818. She carried only seventy-five tons of coal and twenty-five cords of wood.

Under the command of Capt. Moses Rogers, of New London, Conn., the *Savannah* sailed from the port of Savannah, Ga., May 25, 1819, bound for St. Petersburg, via Liverpool, reaching the latter port on June 20, having used steam 18 days out of the twenty-six. She was also bark-rigged, and used sails most of the time.

We will next refer to the *Etruria*, of the Cunard line, which made the fastest time of any ocean steamer up to her time (1885). She was 520 feet long, 57 feet beam, and 41 feet deep to upper deck—49 feet to promenade deck—of 8,000 tons, and 14,500 horsepower, built of steel throughout, and was "not classed in any of the books, as her construction exceeded by far the requirements of any of the book surveyors."

She was divided into ten water-tight compartments; most of the bulkheads were carried to the upper deck. She had three steel masts, bark-rigged, and could spread a very large area of canvas when required. The *Etruria* carried 3,000 tons of coal, and burned, on an average, 320 tons every twenty-four hours.

She left Queenstown, Sunday, August 16, 1885, arriving in New York, Saturday, August 22, at 3:35 P. M., making the passage in six days, five hours, and forty-four minutes. The first day's run, counting from 2:26 P. M. Sunday, to the following noon, was 424 knots, followed by 464, 450, 465, 464, 464, and 70 knots from noon to 3:35 P. M. the last day.

The distance the *Etruria* traveled—2,801 knots, or 3,250 statute miles—shows that she maintained the unusual speed of twenty-one and one-half miles per hour continuous steaming the entire voyage. The best single day's run was made on the second westward voyage when she steamed 481 nautical—557 statute—miles, at a speed of more than 25 miles per hour.

The cost of running these great ocean liners is something enormous. We are told that "many on the Atlantic Ocean cost from \$600,000 to \$800,000 per voyage, while some of the Pacific mail steamships have an expense of from \$800,000 to \$1,200,000 per voyage." This expense, of course, includes, provisions, fuel, help, etc.

Belfast, Me.

A DISAPPOINTMENT FOR THE DEVIL.

IRA P. DEAN.

If there is any part of Harrisburg that has had a hard fight with "Demon Alcohol," it is the east end, "Allison Hill." Nearly every year there is a hot fight over the saloon question.

But the best part of it all is, the devil will have to put up a better fight than he did a few years ago or he will never win out. Allison Hill has over five thousand homes, a population of over twenty thousand and not one saloon. Some years ago the devil took advantage of the small number of people on Allison Hill and succeeded in placing two saloons just at the foot of the hill at Tenth and Market Streets, but he has never got up the hill yet.

About two years ago a representative of the devil put in his application for a license for a saloon to be located in the heart of the Allison Hill district near Reservoir Park in a beautiful residential district near one of the finest parks in Pennsylvania. He argued that in order to make the park more up-to-date there should be a hotel near it, and since the farmers attending the Hill market were obliged to find their accommodations at restaurants and livery stables, a hotel was absolutely necessary. A hotel was necessary to accommodate visitors who desired to stay near the park and many other reasons he put forth.

Now Allison Hill had fifteen churches and they were awake too; they had committees at work with remonstrances, who succeeded in getting the farmers to sign them, stating they were willing to abide by the present order of inconveniences rather than patronize a hotel or see one on the Hill. One Sunday afternoon a great mass meeting was held in one of the big churches. The building was crowded, everything went against the saloon. The saloon representative had over four hundred on his petition for a license and on the following day the license would be granted. Over 2,100 names were filed against the saloon, but the judge need pay no attention to that if he chose to grant the license.

When the meeting was about closing an old gentleman got up and said, "This saloon fight has become an annual occurrence and it is time for the church people of this section of the city to rise against it as final and let the devil know that he cannot put his shop on the Hill under any circumstances. I would therefore suggest that all who have signed that remonstrance and any one else who opposes the saloon, who can, assemble at this church tomorrow morning at eight o'clock and march in a body to the courthouse and personally protest against the granting of the license for this saloon."

The entire audience was in favor of it and plans were at once made to carry out the suggestion. When Monday morning came the applicant for the license got the news of the forming of an army to march against him and before the army had a chance to start for the courthouse, the devil's representative hurried to the courthouse and withdrew his application. The news of his withdrawing his application and the action and victory of the church was heralded

(Continued on Page 105.)

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLIII.

A BLACK hearse, drawn by black horses and followed by a long line of mourners, or by a few, is one of the most universal sights common to us all, yet it is the one that always causes us to look twice and think thrice.

Some one in Catania had lost a dear friend. Some one was sadder for the loss. Though I am voyaging around the world I, too, must pay the price of living—death. It is the one common fate of us all. Sicily is fading from view as the sea comes between us and I will not forget the passing of the solemn cortege with brilliant garlands flying heavily to hide the marks of death. I am full of happy, expectant life. Back there in Catania, where ripen sweet oranges and hang bursting figs of seedy sugar, a family is in sorrow. The good father, brave for life's battles and eager to care for his children, the true husband, closely twined in human affection to the

maker of his home, has gone into the silent world of spirits. I must take back my statement that Sicily might be an Eden if her forests had been spared. That is not her worst enemy, for she still has sin and death, the first, last and worst enemies of the race. Though the dead man rode in a hearse covered with flowers, and appeared thus to be riding to his coronation and not to endless night, he was still the victim of the dread plague that shall smite the strongest of us down.

* * * * *

The more I sea of the sailors the better I like them.

They are more religious and sincere in their work than sailors often are on the northern routes. The days pass all too swiftly, for my eyes never tire of the blue Mediterranean. The delight of sailing on a small ship where the sea is usually calm is also a point in my favor. I feel more at home here. I can get over the boat more quickly. It is closer to the water. It rocks more gently. There is less tremor in the machinery. The few passengers aboard make the ones who are here more interesting to the crew and officers. They are more solicitous for our welfare, and we can

have what we like, when we like it, and in as great quantity.

In fact, my passage does not include food, as I think I stated, but I am getting it just the same. I am paying about a dollar a day for the ride, and while the company could not guarantee my meals in the dining-room, I did have a hint that the sailors would not let me starve.

These sailors usually take their meals up on deck, eating from one big dish. When they gather about the foredeck thus, they whistle for me, and I go up and join them. The boy who brings up the food gives me a dishful also, counting me as one of the *crew*. And I am. For don't I pull at the ropes and work the machine and get the loading devices out of fix? But I talk to them and sing for them and walk on my hands and do various things to amuse them. These sailors live well on board. They are served plenty of the best fruit, with all the macaroni they like and well-cooked beef. The dessert is always a bottle of wine of better quality,

"For don't I pull at the ropes and work the machine and get the loading devices out of fix?"

they tell me, than that usually given at meals. So I am living *with* these sailors and am learning their life. Their kindness to me is so great I wonder sometimes why they are so thoughtful. But I like them, and am not afraid of them, even if they are made up of Italians, Greeks and Turks. Only one of them speaks English, for he was in America for some time and now has returned to his native land. But his heart longed for America and he was always speaking in praise of her wonderful institutions. "Yes, sir," he would say to his sailor fellows, "I've been in that man's country." Then he would draw in a full breath and say, "That's the place to be—Chicago. My, ain't that town great?"

Every sailor not on duty (and usually at evening most of our crew not working at the furnaces or engines) was free to sit on deck and engage in the various games usual to sailing. As the sea was perfectly smooth and the wind a calm, the least order from any part of the boat could be heard distinctly; the sailors had much more leisure than could be granted them on a big liner. Then, too, they had their "shifts" on and "shifts" off, when a set of them could sleep or read, and a set went about their duties.

With all of this ideal leisure to myself, I was not idle. I was busy reading from the Bible, a good book on travel or other subjects, and the magazines carried by every ship. Especially was I studying what maps of the Mediterranean and the world I could find, looking intently at that spot over which I knew I was sailing, for long moments.

When this picture appeared in a former letter I was wrong in saying that the dark fellow with cap on, near the center, had been to America. It was the bare-headed, coatless one leaning against him. You will see that he has caught part of the Yankee expression of face, for there is more power, more independence and more hope in his face than in the faces of those around him. The sailor at the extreme right is a fine fellow, a gentleman, but he is still a son of the Levant. No Yankee would thus hold his cap and manifest the easy surrender of bearing which this sailor shows. The little boy with pretty, round face and full cheeks, wearing a broad sailor hat and holding a slender pole, is the crew's mascot. He was our angel and the idol

of all. This uneducated boy had the most wonderful voice of any child I ever heard. He sang from the great masters like a student. Operatic selections requiring trained vocalists of mature development he handled with greatest ease. I believe his voice was a real *virtuoso*. Long through the moonlight evenings he sang for us on deck. No matter who had been singing, or what story was being told, or game played, everything stopped the second his voice rang clear in song. He had that catching something that only occasional singers have, a charm that cast a soothing spell of romance over your whole being.

The sailors are now gathered on the "poop," just "fore" of the foremast near the "hatch" hole, under the big loading derrick.

At night there was a dance on board with good music from Italian instruments. The men danced alone, or with men, but never with women. The sailors were captivated with this form of recreation and they swung around the curving deck and embraced each other with the ardor and with as much fondness as do men dancing with women. It was the music of motion and the poetry of motion that brought their tired bodies relief in the daily dance. When it was all over they returned to their important posts of duty, as one man, filled with glad cheer and glad they were

"The boy who brings up the food for the sailors brings me a dishful also."

serving as sailors on a Mediterranean vessel. There was almost no roughness. There was no fighting, no drunkenness and no stabbing. I would not call them "dagoes," and it always pains me to hear these countrymen of ours spoken of in that way. "Dago" is the "nigger" of the colored race, and good-hearted, thoughtful people never say "nigger." "Nigger" pushes down. "Colored man" helps him up. "Italian," pronounced with musical tone due the vowels used, and in syllables,—I-tal-i-an,—sounds well, is well.

No one aboard speaks English but myself. The American sailor uses a few words as also does the captain, in necessity.

While the captain and mate were "looking out" on the bridge I went up and with his permission took their picture. There was no foolishness in this man as in most sea captains. He was a noble man, attentive to his duties and paying strict attention to business.

His daughter and the daughter of the mate, both from college in Geneva, are aboard with their fathers on a health excursion. I tried to talk to them, but they knew only a little French and much less English. They were both eating nearly all the time. I don't see any sickness about them, and they seem full of spirits. We are passing some beautiful little islands that rise out of the sea high into the blue above them. These isles are vestiges of volcanoes that once spouted fire, mud and lava. On the ship's chart these little islets are marked and named. But you never see them in your geography. A captain must know a thousand times more than any geography teaches. It is amazing to see how his skill at navigation enables him to shun these rocky dangers and pass, now on one side, now on the other of them, or between them, or on one side only, as he desires. For the sea is known pretty well, and the location of every projecting rock or island in the well-traveled waters is known exactly.

When the fog comes down or cloudy storms beat the sea into fury, the captain steers by distance already come and by the last known points. Some of this is guesswork and then the vessel sometimes strikes a rock or runs aground, with loss to the ship and sometimes to all on board. If but the faintest glimpse of the sun can be seen, or if its exact location in the heavens is known, the captain can tell just where his boat is on the sea. We have just passed between two islands that did not seem to be more than a half mile apart. In the darkness I can't see how he could just miss, and not hit, one or the other of these islands. I see no lighthouses.

We are running into Crete. Acts 27 tells of Paul's shipwreck here, how the sailors ran close to the shore of Crete for fear of the high seas and storm, and were driven to a small island, called Canda, and were washed up in the sands. I suppose I saw this island, but I am not sure which one was Canda.

All Rights Reserved.

PROVERBS AND QUOTATIONS.

WHEN you have done a really good thing, do not stop to talk about it, but do another.

Doing the little things has caused many a man to get big.

Sometimes a minute of thinking is better than a hustle. Who so cuts a straight path to his own living by the help of God, in the sun and rain and sprouting grain, is a universal working man. He solves that problem of life, not for one but for all men of sound body.

Take things easy if you want to have a hard time. Even the man who is truthful in the daytime may lie awake at night.

Cool judgment doesn't come from a hot head.

Be accurate in all you undertake, remembering that slipshod feet will surely produce blistered heels.

Always buy thermometers in cold weather, while they are down.

A just man can run up his own business without running his neighbor's business down.

He who broods over troubles is sure to hatch many new ones.

"With malice toward none, with charity for all, with firmness in the right." This immortal quotation was made by

Abraham Lincoln in his second inaugural address. This is a very befitting motto for every Christian as a guidance for the new year and henceforth.

"God bless my mother! All I am or hope to be I owe to her," is another quotation of this noble son.

There is an eye that never sleeps,
Beneath the wing of night;
There is an ear that never shuts,
When sink the beams of light;
There is an arm that never tires,
When human strength gives way;
There is a love that never fails
When earthly loves decay.

Heaven is above all! There sits a Judge that no king can corrupt!

The Captain and Mate.

THE SUPERFLUOUS BOY

ELIZABETH M. ROYER

Chapter II.

FROM the distance the summoning schoolbell came toning forth. Francis got up and started out of the back gate across lots to school. He did not go far before fate met him in the shape of Tam.

"Francis Homer Peasley," she exclaimed in horror, "don't you know better than to go to school looking like that? Just look at the dirt on your face. You haven't any tie, and your waist is something awful. And your shoestrings——!" She paused for lack of adequate words to express herself,—“And your shoestrings are something *monstrous*. You have not tied them up at all. They are just around your ankle. Do you suppose I am going to have a brother in school looking like that? Come right back home and get cleaned up.”

"We will be late," weakly interposed Francis. A guilty conscience needs no accuser, and he felt doubly guilty at the truthful onslaught from Tam. He followed her back, meekly submitting to her scoldings and pulls at his clothing all the way. It was fate; what was the use of doing otherwise, since he couldn't be happy anyway?

"Mama," exclaimed Tam, "just look at this boy. Did you ever see anything like it? He was on his way to school, too. Do you think we are going to have our reputation spoiled by our brother looking like this? I don't see why he couldn't have been a girl anyway. Just look at him now. What do you suppose the teacher would say if she saw him?"

Francis stood in guilty silence, defenceless.

"For pity's sake, child, you don't mean to say you were going to school looking like this? Haven't you any respect for your parents and sisters? What do you think the teacher would think of us if we let you go like that? Didn't I tell you to come in and get washed? Answer me. Didn't I?"

"I forgot," was the faltering reply.

"Forgot, well, you won't forget again in a hurry. Go on to school, Tam, I will see to Francis. Here, hurry up and get clean. Tonight when you come home you are to go straight to bed and not have any supper for this. Do you understand?"

Francis nodded in tearful silence.

"Well, go on now. Likely you will be late. Tell the teacher the truth. Don't say I kept you. It's your own fault."

As she had been scolding, Mrs. Peasley had also been vigorously applying soap and water to his stained face and begrimed hands. She hurriedly sent him away to school, after she had hustled him into clean

clothes, with the command "to be a nice good boy and a credit to his parents and dear sisters."

That evening, as Francis returned home, the pleasures of the young spring never, it seemed to him, had appealed to his senses so strongly. To pass a group of boys shooting away at marbles on a damp mound of bare earth, to go around others spinning tops on the hard walks, to feel his sling-shot pressing against him in his hip pocket uncomfortably, yet having no thought of the discomfort, as he saw the first robins flitting about the trees, and to have to go straight home without once stopping at the football ground made his lagging footsteps lag more slowly and his heavy heart weigh more heavily as he climbed the stairs to his room and sat down on a chair by the window which overlooked the kindling pile. His head dropped on the window-sill as he stared out, unseeing, through tears that rolled, one by one, unheeded, down his cheeks. After a while he dozed off to sleep.

He was awakened by Scrub, barking coaxingly under the window. As he raised it and looked down, he could see by the light of the stars that had pierced the blue darkness the indistinct form of his pet, making little dashes from the window to the gate that led into the meadow. There smoke was curling up and lines of fire pictured forth grotesque figures flashing to and fro. Could it be that the sun had dried the spongy ground enough during the day that they could have prairie fires? He heard the faint, distant shout of the boys. There at the head of the "gang" was his place. He must fill that place. The voices of the family floated murmuringly up from the parlor. The stair-door had been left open so that they could easily detect any sound he might make, for once he had emptied the bureau drawers on a like occasion. On going into the hall and listening he heard Tam and Marie laughingly telling some girl friend of his enforced imprisonment. And the girl was Annette, his "lady of love and beauty." After hearing this, she would turn up her independent, little stub nose at him and give her smiles to Tom Green, who also greatly desired to find favor in her eyes by laying his conquered heart at her feet. The only way for him, now that this last vanquishing blow had come, was to gain all possible fun from the prairie fire before his disgrace would become public.

Stealthily he crept across his room and slid over the window-sill on the roof of the kitchen. Then with careful steps, he climbed down the trellis of the grape arbor that had been built against the kitchen.

Scrub came bouncing up, and together they slipped through the back gate and ran away to the fire.

When the last grass had been burnt, when they all had been thoroughly perfumed with the smoke, sweet to their nostrils but repulsive to the more fastidious, when the last borrowed broom had been blackened to the handle, and when the last boy had gone home, Francis sat down on a stone to think. Troubles had been forgotten during the excitement of seeing who could come nearest without harm; girls and sisters were far from his thoughts when he was gallantly protecting the fence from the crackling, devouring flames; a supperless stomach had little sympathy in the intoxicating pleasure of starting new trails of fire; but now he must face life in earnest. Times come to all when none can decide for them, when only they, themselves, are capable of seeing clearly both sides of the questions that, when settled, lead to the crises of life. So it was with Francis as he sat considering the easiest way out. The stolen pleasure had given him encouragement, had driven from his mind much of the melancholy that had made him hopeless so few hours before.

If he went back, they would smell the smoke on his clothes in the morning, at least Tam would, and punish him. Now he had no desire for punishment, and he sat with his chin buried in his singed hand, looking carefully at all sides of his trouble in his efforts to plan a way out. If, in some way, he could arouse sympathy for himself, they would forget his sins and he would stand the petted and indulged favorite. Once when he had almost died with the measles, he remembered that even Tam had set aside her much-loved dolls to entertain him. He didn't see how he could get the measles or any other disease over night, and to break a leg or arm was out of the question. But, here was an idea. Why not go to his grandmother who had many times befriended him, and, he knew, secretly sympathized with him and staunchly stood up for him before the family? Should he not appear at breakfast in the morning, they would probably think he had been kidnaped. That was the thing to do, go to his grandmother and throw himself on her mercy. Without more ado, he called Scrub to heel and started a mile or more across the town to where his spry, jolly grandmother lived alone.

(To Be Continued.)

BUSINESS PHILOSOPHY.

PLAY is work that you don't have to do.

Never hire a traveling man whose waistcoat is more insistent than his personality.

Don't rise so high in your calling that you see only one side of your fellows.

It's true that a marble statue has no faults,—but then it has no friends, either.

There are plenty of doors labeled "Pull," but the majority, after all, bear the legend "Push."

There are self-made men in this world who ought to be suffering from remorse.—*Lippincott's*.

IT TAKES COURAGE.

To live according to your convictions.

Not to bend the knee to popular prejudice.

To say "No," squarely when those around you say "Yes."

To be what you are, and not pretend to be what you are not.

To refuse to knuckle and bend the knee to the wealthy, even though poor.

To remain in honest poverty while others grow rich by questionable methods.

To speak the truth when, by a little prevarication, you can get some good advantage.

To live honestly within your means, and not dishonestly upon the means of others.

To stand firmly erect while others are bowing and fawning for praise and power.

To refuse to do a thing which you think is wrong, because it is customary and done in trade.

When mortified and embarrassed by humiliating disaster, to seek in the wreck or ruin the elements of future conquest.

To face slander and lies, and to carry yourself with cheerfulness, grace and dignity for years before the lie can be corrected.

To do your duty in silence, obscurity, and poverty, while others about you prosper through neglecting or violating sacred obligations.

To be talked about, and yet remain silent when a word would justify you in the eyes of others, but which you cannot speak without injury to another.

To throw up a position with a good salary when it is the only business you know, and you have a family depending upon you, because it does not have your unqualified approval.—*Success Magazine*.

THERE WILL BE NO CHANCES THIS YEAR FOR—

The idler.

The leaner.

The coward.

The wobbler.

The smatterer.

The indifferent.

The educated fool.

The impractical theorist.

Those who watch the clock.

The slipshod and the careless.

The young man who lacks backbone.

The person who is afraid of obstacles.

The boy who shirks at school.—*Exchange*.

CHINA BATTLING TO BE FREE.

WE of the United States, who are making some slight progress in our fight against the liquor traffic, need not suppose that we have a monopoly on virtue or that no other nation is waging a battle for righteousness. China is fighting also, a much harder battle against a more terrible foe. On the outcome of her contest depends the freedom of one hundred million people who are now held in bondage to the opium traffic. It is easy to start a reform in China, far easier than here, for it is necessary only to convince the rulers of its righteousness to have it ordered at once.

The measures which the government has adopted are systematic. In the first place, all dens have been ordered closed. They are not all closed, for a prohibition is usually ineffective except as backed up by public opinion. And public sentiment is no easier to mold in China than anywhere else. A missionary, the Rev. Charles L. Storrs, Jr., describes a ceremony to which the missionaries of Shao-wu were invited, to celebrate the opening of an opium refuge. They were there by special invitation and were requested to bear some part in the ceremony. They wasted an hour and a half waiting for "his placid slowness," the prefect, to arrive, but when it came to a part of the program in which they were most interested, the local dignitaries would stand only ten minutes of it. "We saw some official fidgeting while we sang a Christian patriotic hymn," he writes, "although we had been invited to do this very thing; and, then, after a few remarks by the foreigner, while our cultured teacher was making some very good and appropriate points, the whole group up and waddled out without so much as a courtesy." As a matter of fact, the whole performance was undoubtedly ordered by some of the officials higher up and the little local dignitaries, anxious to have something to report, asked the missionaries and all the foreigners to join in the dedication exercises. But the hearts of the natives were not in the reform and it will proceed but slowly there and in many other places.

In addition to this order closing the opium dens, China has commanded the poppy farmers to reduce their crop 10 per cent per year. It is from poppies that the drug is made and China means to do all in her power to blot out its manufacture as well as its sale. Agricultural experts are being sent to those farmers whose land has been used for the growth of poppies in the past to show them what other crops can be profitably raised, so that no one will be deprived of his living by the reform, if the government can prevent. And with the agriculturists go also missionaries, showing lantern slides and holding mass-meetings with the purpose of educating the people and explaining the baneful influences of the drug. Surely it would seem as though this were enough to

make it clear that the government is in earnest. What more can China do?

She can do this much more: she can absolutely forbid the use of the drug by any of the multitude of government officers. And she has done it. When the edict went forth closing the dens, every government employe was allowed six months to free himself from the habit. Those who were known to be still addicted to the drug at the close of that period were immediately discharged. There was no fake about this reform. Those affected by the edict came from every rank of life, up to and including some of the very highest officials in the kingdom. These can never again enter the government employ. Their names are prominently posted in company with those of all men who are known to use the drug. China has no jobs for them.

It must not be supposed from the single instance of failure quoted above that the people of China are not tremendously in earnest for the reform and for the introduction of Western learning and light. To the shame of the Anglo-Saxon, it must be said that China would have taken up the struggle long ago, had she not been thwarted rather than helped by England in her efforts. Three-fourths of the world's poppy crop are raised in India, where it is a government monopoly. For the sake of the twenty millions' revenue which its production has brought her in the past, England has refused to stop the manufacture of opium, carried on though it is in her own mills. Since the days of the slave trade history has not presented a sadder spectacle than this of a Christian government drugging a race. It was with the purpose of putting an end to this nefarious business that the international congress met in Shanghai in the early days of the present year. Secretary Root deserves the largest credit for organizing that convention and the United States took the lead in advocating the good measures which were proposed there. It was a tardy assembling on the part of the nations, but it came better late than never. It served, at least, to assure China that she has the support of her sister people in the mighty struggle for freedom which she is waging.—*Home Herald*.

**A DISAPPOINTMENT FOR THE DEVIL.**

(Continued from Page 99.)

all over the city. "Upon this rock I will build my church; and the gates of hell shall not prevail against it," Matt. 16: 18. This is the way the church should do business. Resist the devil, and he will flee from you. Jas. 4: 7. There is not a saloon on Allison Hill yet and not another attempt has been made to put one there since. Is it because Christianity is better on the Hill than in other parts of Harrisburg? No; but the Christians are braver. How about saloons around your place? Do you need them? He that is not for me is against me.

Nature Studies

NATURE IN WINTER.

MRS. M. E. S. CHARLES.

"WHEN the bride of the Canticles sleeps her 'heart waketh' and she listens, through her dreams, for the voice of the beloved, and for his knock upon the door."

Somewhat akin to her light slumber is the winter sleep of nature—the woods and fields, as they wait for the sun to return from the South. In their silence there seems a feeling of expectancy, as if the trees listened and the earth waited for spring. Nature is not torpid. It is only asleep and its slumber is but a light one.

In the woods under the shelter of many boughs, the snow lies deep even when winds and sunshine have well-nigh laid the pastures bare.

Over the snow go the tracks of the little shy creatures, showing how much active, hungry life is abroad although danger faces every foot of the way.

Here are seen the delicate tracks made by the birds' light feet. Here, perhaps, is the track of a fox much like that of a dog, but with sweep of brush among the tracks. Scattered fan-shaped prints show which way the rabbit wandered for his food. The little shrew and field mice, creeping over the surface, leave their dainty marks which look like a double row of stitching on a piece of white linen. The little pairs of footprints show which way the squirrels ran.

If one does not care to go abroad to find all these things, much may be done by studying the trees near the home, and if all the peculiar characteristics of one or two species are mastered, a tramp of some distance to find one different will not seem so great a task. When you contrast the light, delicate twigs of the beech with the sturdy ones of the hickory, the long, pointed buds of the former, with the short, sharp pointed ones of the latter which are covered with two outer dark brown scales beautifully colored inside, nothing but lack of time will keep those who love trees from further pursuing the study of them, not stopping with their winter characteristics.

January is a good time to study the roots of plants. When a seed germinates it sends forth a sprout, placed perpendicularly. This is the stem which will produce leaves, flowers and fruit. This stem also produces roots for the purpose of supporting the plant,

also furnishing moisture and food. All the surface of the root absorbs moisture, and this moisture holds in solution mineral foods, which are converted into vegetable substances by the plant. Every plant is a wonderful laboratory.

At the tip of each root is a hardened scale-protected point to enable it to work its way into the ground, just as the toes of moles do, and like those of digging animals are protected by nails. The root-tip has also a sucker for drawing up moisture. This is the chief mouth of the root. Although the pores of the entire root surface absorb freely, the ends of the rootlets are the chief feeders.

When we walk abroad in January and see the earth frozen, or covered with snow, we need not fancy all is still and dead under ground. There are millions of mouths below the surface taking their rest and feeding but little; there are other millions of plant store-houses, full of food for the coming summer. In this cold month the plant world does not refuse to unveil to us some of the romance, and some of the mystery and economy of its life.

Pull up from some unfrozen plot of ground a few living roots of grass or weeds and hold them against the light, after giving them a slight shake. Tiny particles of earth are now seen about the lower part of the roots, not adhering to the epidermis, but held, perhaps, a line away. Examine closely with a microscope and you will find each atom of earth is held by a minute hair.

These hairs are of great importance in the economy of the root. They adhere so very closely to the soil that they absorb from it the slightest trace of moisture. In times of great drought these very fine hairs enable the plant to gather moisture enough to survive, and when the drooping plant is watered the hairs most speedily gather up and distribute the precious drops.

Hairs are not found merely on roots. They occur on every part of the plant. Wandering a little farther afield in search of vegetable hairs, we may find a tall, rough, dead rod, set with seed vessels at the top—the dried stalk of a mullein. At its base we find a rosette of greenish gray, thick leaves; some dry and dead, after a summer's growth; some young and still suc-

culent, having unfolded late in the season. All these leaves are covered so thickly with hairs that they resemble leaves cut out of coarse flannel or felt.

Exactly why a plant of so little value and attractiveness as the mullein should be so carefully defended, we cannot understand. Many seeds are hair-clad, fur-wrapped, thus protecting them from the wet and cold. So, whether vegetable hairs grow beneath or above the ground they have a mission to fulfill, and it takes centuries for the finite mind to understand some of the minor problems.

Spiceland, Ind. * * *

SINGING AND SPEAKING STONES.

MAN's love of the marvelous and mysterious has been gratified by the discovery, at various places and epochs, of stones and sand from which issued sounds, apparently of supernatural origin. The phenomena exhibit so great a variety that the vocal stones may be separated into a number of distinct classes.

One of the most remarkable of these groups is exemplified by a sand bank about 60 feet high, on the southwest coast of the island of Hawaii. According to W. R. Trink a tone like that of a melodeon is produced by moving the hand in a circle through the loose sand. If the observer kneels, with both hands in the sand, and slides down the bank the sound becomes louder and louder until it resembles distant thunder and alarms horses tethered nearby. The loudest sound was produced when a native lay prone on the sand and another native dragged him by the heels down the bank, carrying a large quantity of sand down with him.

Dr. James Blake discovered by examining with a microscope thin sections of the grains of sand, which are of volcanic origin, that each grain was perforated by a narrow canal which, as a rule, was closed at one end. These peculiarly formed grains of sand appear to act as resonators, the air inclosed in them being set into vibration by the mutual friction of the grains. When the sand is damp the sound is not produced, because the friction is diminished and many of the tubular cavities are filled with water.

The singing sands of Mt. Sinai probably admit of a similar explanation. Wellsted describes the sand as yielding beneath the feet of a Bedouin climbing up the slope, not flowing down in a continuous stream, but breaking away in large masses. At first the sound resembled the faint tones of an Æolian harp stirred by a gentle breeze, but as the motion became more rapid the sound was like that produced by a wet finger rubbed on the brim of a wine glass, and when the sand arrived at the foot of the mountain it made a noise like thunder, which shook the rock on which the traveler sat and so terrified the camels that it was difficult to hold them. This description is so similar to that of the singing sands of Hawaii that the presence of hollow grains of sand would account

for the phenomenon of Sinai as well as for the other. But Schubert writes: "The Djebel Nakus or Bell Mountain, 400 feet high, is composed of sandstone boulders loosely thrown together and covered with loose sand. When disturbed by the foot this sand falls into the interstices between the rocks, producing a sound that resembles a distant chime of bells and terminates in a roar." From this it appears that the falling of the sand between the boulders is at least a contributory cause of the sound, and it may account for the whole phenomenon.

Sounds of a very different character and origin are emitted by certain cliffs in the Harz Mountains and in the Pyrenees. Two precipitous cliffs in the Harz, near Schierke, are called "The Snorers," from the peculiar sounds which the southwest wind draws from them. The faces of these cliffs are marked by deep gullies, which roughly resemble organ pipes open in front, and occasionally the front is practically closed by a stratum of air held motionless between the cliff and the trees which graze it, while the wind blows freely through the gullies, or organ pipes, behind. Similar phenomena, due probably to a similar cause, are observed on Mt. Maladetta, in the Pyrenees, where at sunrise certain cliffs emit plaintive sounds, which resemble those of a harp, and are known locally as "the matins of the damned."

Singing stones of a third category are found in various parts of the world. Fraas, journeying from the Red Sea to the Nile, saw a round, thin fragment an inch in diameter, resembling a shell, split off, with a peculiar sound, from a flint which lay baking in the hot sun at his feet. This observation is very remarkable and perhaps unique, for flints split gradually as a rule, but the violent and noisy rupture of the last bond under the influence of the sun's rays and in the presence of an observer does not seem impossible. Broken flint are common in the desert. Many persons have heard the noise caused by similar fractures of hard rock and have seen the fragments roll down mountain slopes. Behm writes of the basalt columns of the Bamangwato hills, in South Africa: "In the evening, after a hot day, it was not unusual to hear the basalt crack and fall with a peculiar ringing sound, from which the natives inferred that the rock contained much iron." Here we undoubtedly find the most frequent cause of the singing of stones and the explanation of many of the observed cases. The phenomena are most conspicuous in hard rocks, which ring under the hammer, and especially in basalt and granite. They have been observed mostly in Egypt. Jollois, Devilliers, and the younger Champollion often heard ringing, cracking sounds issuing from the huge granite blocks of the great temple at Karnak. Similar sounds have been heard in the temple at Philæ and in the granite quarries at Assuan.—*Scientific American Supplement*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress.

Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THOSE RESOLUTIONS.

WHAT of those New Year's resolutions, are they forgotten, or broken and discarded? We trust not. There was a sense of their need or they would not have been adopted, and until that need is satisfied the resolutions should be kept in force.

Passing over a resolution through forgetfulness or breaking it through weakness does not hopelessly "spoil the game" and compel one to wait for another New Year to get on the right track again. If there is first a determinate will, a forgetful memory can be wonderfully refreshed and a broken resolution can be patched up so as to do duty for a whole year.

One thing we need to do is to keep bright in our imagination the vision of what these resolutions will do for us. This will often help us over the hard places. Again, we make a mistake when we think we can make resolutions on New Year's day and they will stay "made" for the whole year. While we need to see to their enforcement for only one day at a time, we need to renew them or remake them for that day in order that we may be sure they are strong enough to carry us over that period.

Living by the day is the surest way of keeping up our courage and making growth in the desired direction.

THE CHURCHES AND CHARITY WORK.

RECENTLY a report was submitted to the Carpenters' District Council of Chicago as the result of a special investigation into the causes and extent of poverty in the city. The report makes some serious charges against the churches of today, to the effect that they are not fulfilling their mission as charitable organizations.

The Scriptures make it plain that one of the chief duties of the church is to care for the poor and those who need a helping hand. A glance at the conditions of today when organizations outside of the church

carry on most of the charitable work done will show whether there is any ground for the charge. The report says in part:

"Churches are neglecting the industrial masses. The clergy are in society, politics and reform, while organized charity is compelled to do the work the churches are neglecting. Charity organizations are assuming to themselves work that the law provides should be done by the proper public officials, and are paying in salaries and office expenses as much as thirty-five cents on every dollar collected to feed and clothe the poor.

"If the public would do its full duty there would be no need for a great many so-called charitable organizations. Improving bad social, sanitary and civic conditions and trying to build up character is very praiseworthy, but the first should not be done with the money which has been given for the purpose of feeding and clothing the poor and the second should be done by our schools and churches. The industrial masses have not left the churches. The churches have neglected them."

These statements should be studied and the conditions looked into. We cannot blame the outside organizations for taking up the work that belongs to the churches. Evidently the work was not being done or they would not have entered the field. Neither can we shift the responsibility by urging that the charitable organizations are especially equipped for the work. The churches can afford any equipment that will fit them to discharge their duty. The work itself will develop skill and experience. "Ye have the poor with you always, and whensoever ye will ye may do them good."

TEMPERANCE AS A LIVE ISSUE.

As yet there has been no reaction in the temperance movement and we trust there will be none until its principles are so thoroughly established in the life of the community and the state that there can be no going back. While we have gained many victories we cannot afford to rest on the strength of these while greater obstacles remain to be overcome.

A strong indication of the permanence of the temperance movement is seen in the way it is forcing the question upon the attention of every one. People are compelled to consider the question and consequently to take a stand. And as in all questions where right is so largely involved, the more thought given to the subject the greater will be the gains for the right.

A man in public office ought to stand by his convictions the same as in private life, but many of them owe their position so largely to special interests that they dare not be themselves. When, therefore, a man is brave enough to take his political life in his hands and do and say what he believes to be right, we give

him great praise. And the number who thus declare themselves and repudiate all claims but those of the people as a whole is growing all the time. In this way the temperance cause has made wide gains.

To prove that the temperance movement is a live issue and to show how public men are compelled to line up on the question, we give extracts from the recent messages of two State governors. The first is from the message of Governor J. Frank Hanly to the legislature of Indiana:

"I am aware there are some who have already celebrated the county option law's repeal, but I beg to remind all those who contemplate its repeal that it is the livest wire in the political machinery of this commonwealth and is charged with enough electricity to electrocute the party that repeals it."

With this strong declaration with its challenging note, the Governor closed his appeal in behalf of temperance. Some of his statements leading up to the above were as follows:

"Alcohol must be held responsible for about four-fifths of the anti-social propensities that make necessary the huge paraphernalia of police systems, criminal courts, jails, prisons and reformatories.

"The general relation between alcohol and pauperism is everywhere recognized.

"The same cause is responsible for the mental overthrow of fully one-fourth of all the unfortunates who are sent to the asylums for the insane; for the misfortune of two-fifths of the abandoned children, and for the moral delinquency of at least one-half of the convicts in our prisons, and not less than four-fifths of the inmates of our jails and almshouses."

In marked contrast to this we have the action of the Governor of Tennessee. Early in January a sensation was created in legislative circles by the introduction of a resolution in the house asking an investigation of the "whiskey lobby" and alleged attempts to defeat temperance measures. Following this on the same day came two prohibition bills, "one signed by fifty-seven and the other by fifty-five members," which would insure their passage through the lower house and a sufficient number of votes to pass either one over the Governor's veto should he decide to disapprove of them. But the Senate and House had both received word from the Governor asking that no action be taken on temperance till he could prepare and send them a special message on the subject.

Three days later the legislative bodies were in possession of the special message. In substance it was as follows:

State-wide prohibition is wrong as a governmental policy, and does not accomplish the result hoped for. (In that dress you would hardly recognize the worn-out statement, "Prohibition doesn't prohibit." One would think it would be beneath the dignity of a

governor to take notice of such a harmless thing.) The use or nonuse of liquor should be left to the individual. (The wife and children are to take the biggest share of the results and say nothing.) States cannot prevent the manufacture of liquor in other States and the shipment from other States. (One of Speaker Cannon's lessons well learned.) Until the United States forbids the manufacture and sale of liquor it is not possible to have a prohibition law.

It is to be doubted whether such a message, coming from a man who has bound himself to guard the welfare of the people, can do any great damage to the temperance cause. It is said that hindrances may be made stepping-stones to success, and it is our opinion that this opposition of the Governor of Tennessee will work out as a long stride toward that goal for the temperance workers.

REST.

Let us rest ourselves a bit.
Worry?—wave your hand to it—
Kiss your finger tips and smile
It farewell a little while.
Weary of the weary way
We have come from yesterday.
Let us fret us not, instead,
Of the weary way ahead.
Let us pause and catch our breath
On the hither side of death,
While we see the tender shoots
Of the grasses—not the roots.
While we yet look down—not up—
To seek out the buttercup
And the daisy, where they wave
O'er the green home of the grave.
Let us launch us smoothly on
Listless billows of the lawn,
And drift out across the main
Of our childish dreams again.
Voyage off, beneath the trees,
O'er the field's enchanted seas,
Where the lilies are our sails
And our seagulls, nightingales.
Where no wilder storms shall beat
Than the wind that waves the wheat,
And no tempests burst above
The old laughs we used to love.
Lose all troubles—gain release,
Languor and exceeding peace,
Cruising idly o'er the vast
Calm mid-ocean of the past.
Let us rest ourselves a bit.
Worry?—wave your hand to it—
Kiss your finger tips and smile
It farewell a little while.

—James Whitcomb Riley.

"'Tis a very bad habit to get to thinking with the mouth and, likewise, a perversion of nature's plans. The mouth has other and better uses and, besides, such thinking is apt to be rather cloudy and illogical."

The Home World

WHERE DO YOU LIVE?

J. F. STUDEBAKER, M. D.

It shall not be the object of this talk to hold up one State above another, to say that Iowa or Illinois, with their great fields of corn, is superior to Colorado or Washington with their productive, irrigated lands; or to assert that one country excels another, that the United States, with its varied and enchanting scenery, growing commerce, and matchless liberties, triumphs over Siberia with its cold, bleak, barren plains imprisoned in ghastly lonesomeness, or Germany with its frowning bluffs and castled Rhine, or Switzerland with its defiant snow-capped mountains overshadowing its quiet homes in the valleys, or Italy with its dreamy slopes and plains basking in the sun.

My question is not directed to what commonwealth you belong, but where do you live in your own town, on your own eighty, quarter section, or section, in your own township, in your own county, in your own State? I live on the crossroads near a beautiful, sparkling spring on a southern slope to break the northern winds in winter and beneath dense shade trees to break the southern sun in summer. A home site of this kind is most usually chosen when a country is first settled for the convenience of protection against the boisterous side of nature and for the certainty of a water supply.

For example, take Kansas. The pioneers of this State selected locations for their homes in the most rolling and rough country, or among wooded hills along the streams of the eastern portion, counting the gracefully undulating upland as worthless except for light grazing. Their poorly-built huts were put up under overhanging timber. The plains were not productive on account of the lack of moisture but in late years the rain belt has extended west and what was once a dry and quite desirable place among the trees near a brook is now really an unfit place to live because of the great amount of dampness.

This matter of selecting a sheltered site close by water without digging for it has led in many instances

to the founding of a home on the unhealthiest spot on the farm. If a spring or stream is not within a stone's throw, a well of water is easily obtained at a few feet in depth in the hollow or lowland. The site is unsanitary for obvious reasons. The water teams with bacteria on account of surface drainage into the well. This is particularly true where the rainfall is abundant or after the thawing of heavy snows, the latter being a great factor in making Chicago's water occasionally impure which is pumped into the mains from a distance of four miles out in Lake Michigan. Bacteria certainly do not contribute anything good to drinking water. If those representing some of the serious diseases are present like typhoid, they menace the entire household. A deep well on the upland, securely banked with ground, with drainage away from it on all sides, is a valuable resource to a home anywhere.

There is no known reason whatever for having the house and well at the bottom of a hill and the barn and other outbuildings on its summit. We all would shrink from the application of water from a well so situated to our bodies,—much less than to take it internally, providing we are aware of its impurity.

While speaking of water, I wish to state that there is a delusion about cistern water. It may pass through the best of filters but it is not wholesome even then, particularly after standing a few days unless kept ice cold. Only the grosser obnoxious elements are kept back. All the germs floating in the air, as tubercular germs and others finding lodgment upon a roof, find their way through filters and you are sure to digest countless numbers of bacteria (if they don't digest you) before the cistern becomes dry towards the end of a rainless season. Any questionable water may be freed of microbic life by boiling it fifteen or twenty minutes. Water regains its taste by exposing it to the air two or three hours. A cistern

under the house is almost equal to a cellar full of water.

The foliage of trees in some yards is so compact that the ground is continually moist and so shut off from light that no spear of grass is seen and weeds become sick and fail to mature. Then, too, the proper circulation of air about and through the buildings is obstructed. Probably the worst practice is the planting of trees on the south side of the dwelling house to intercept the rays of the sun. The boarded walks rot, the well-curb decays, the house feels cool from the dampness of its saturated timbers, the cellar draws moisture, and for the "housewife" the day is shorn of the awakening of a brilliant dawn, of the splendor of a noonday and the golden tints of a setting sun. Those handsome cottonwood trees make what should be the most beautiful the most dark, dismal and isolated place on the premises.

In town or in the city the same condition is found in the crowded districts where houses are either built against each other or too close for a decent alley. Diseases of the air passages and rheumatism are fond visitors to such places just as animals and insects who prefer darkness and dampness resort to such a rendezvous. The farmer would not think of planting his corn under a clump of trees. The human body in such confined quarters will not do any better. Many diseases thrive best in the absence of dryness, light and fresh air. This is particularly true of tuberculosis which still may be considered the white plague.

All large trees near the house should be cut down. It is important that all underbrush and low-hanging limbs of the orchards should be removed to insure the passage of rarefied air about the buildings. A complete circuit of air (doors wide open) through the living rooms should be established twice daily. Then fungi, as molds, will perish.

The living near ponds and swamps is to be condemned especially in malarial (ague) and in southern districts, since malarial and yellow fever owe their dissemination largely to that small tormenting agent, the mosquito, which spends its time about watering places of its own peculiar choice.

We refuse to live with dogs, cats, chickens, swine (Ireland), flies, mosquitoes, and most bacteria after learning their habits. Not all can be fenced out; but all can be kept out of the home. In a large measure, this thought is superfluous to NOOK readers, particularly in regard to our visible visitors. The writer knows a family of father, mother and nine children only a few miles from his town (considered civilized), residing in a small house but none too small for them and their domestic fowl, the latter roosting on the roostable part of the beds of their superiors. They are all happy, practically of common stock. The only difference is that the one claims the right to kill and eat the other.

This illustration, though crude, shows how one, if not familiar with a few principles of sanitation, can overlook the intimate association with folks who should live outside of the house occupied by human folks. Myriads of disease-producing bacteria are permitted to live in our midst; yes, with us behind bolted doors because of a lack of knowledge in regard to their development, multiplication and habits.

No matter whether the home is on the farm or in the city, everything should be favorable for unobstructed sunlight, invigorating fresh air, moderate dryness, pure water and the proper inhibition of germ growth.

THE CAUSE OF THE INSUBORDINATION.

I WONDER how many mothers and fathers realize that it is their part to coöperate with the school teacher? Some reason that schooling, of course, is necessary for boys and girls, and, moreover, it is a relief—to the mother particularly—to get the children out of the way for the greater part of the day. For this they feel indebted to the county for building schoolhouses and paying teachers and making it compulsory by law that all children between six and fourteen shall attend. At the same time they seem to assume or allow their children to assume that the teacher is the natural enemy of the child, and such are not sparing in their admonitions to their offspring to stand up for their rights. And it is this very coaching that is responsible for most of the insurrection that is all too common in all, but the more so in city schools.

One wee girl, of six, with a most angelic expression, disobeyed her teacher, saying she didn't have to mind—"Because you didn't borned me and haven't any right to boss me. Only my mother has." Back of that reasoning the mother's teaching was plainly visible. Another attractive looking little girl—she was a midget of eight—once informed me, "I've got it over all the teachers on the top floor. They are all afraid of me, they are. I never let a teacher think she's it." Which of course, was not true, but it showed the attitude in which the child had been trained to stand in regard to those who should have had her respect.

If this was the bearing of the small fry of the gentler sex, what would I hear from the boys, I wondered, and I was not very long in learning. In a certain room where years ago I had commenced my school career, the naughtiest boy in the grade, we thought, was one who would rush up and kiss the teacher right in school hours; when he was very, very horrid he would take a turn at kissing the little girls, which led to much mortification and many tears on their part. Today, in that same room, I discovered that the youngster who is "baddest" is the one who throws books at the teacher whenever she corrects him and he has even said he'd "smash he good" if she tried any of her

hand-spatting on him. And his "father'd back him up" if she made any "spiel" to the board. And he was less than seven!

Not long after that my investigations led me down to the quarters of the school board, and while awaiting my turn to speak to the superintendent, I heard a father, who led by the hand a dull-eyed, thick-lipped boy, asking for the transfer of his son to another school. "His teacher over there at Number Ten has got it in for him, and I won't stand for that," was his excuse. The transfer was refused, for it was written all too plainly on the father's and the boy's faces that insubordination in that family was called "standing up for your rights," and the boy would not have gotten along with any teacher except one who had the traits commonly attributed to jailers. The next person in line was a mother who also asked for a transfer, and in spite of the fact that her manners were gentle and her boy a fine, manly-looking little fellow, the look of weariness that had settled on the superintendent's face did not leave it as he asked the reason for the request. It was hastily dispelled, however, by the answer, "Because my boy's teacher was transferred to the new school at the beginning of the year—the teacher he has had for two terms. He is very devoted to her and I feel that I owe her a large debt for her solicitude for my son's progress in his studies and the fine influence she has had on him in many other ways. Not that he does not like his present teacher, but he really grieves deeply for the loss of the other." That transfer was readily granted, and the superintendent, I am sure, breathed a prayer for the coming of the time when all mothers would be just to the teacher and give her her dues.—*Investigatrix, in Exchange.*

GIFTS TO OUR CHILDREN.

THE conventional season for giving gifts to our children has come and gone again. We have hung the tree and filled the stockings; we have joined with keen delight in the joy of giving and receiving. And though the candy is soon eaten and the toys are soon broken or outgrown, we would not forego the wholesome pleasure of the Christmas time. But we will not allow the feverish delights of this passing occasion to blind our eyes to the more abiding and real gifts which it is our pleasure and duty to give to our children. Can all the toys of Christmas compare in value with the gifts of a healthy body? Can all the gustatory joys of candy and sweetmeats outweigh the permanent satisfaction of a sound stomach and a robust digestion?

Our first great gift to our children, then, should be a strong and healthy body, with eye to see and ear to hear, with red blood and responsive nerves, with muscles quick and supple in work and play, tiring in a wholesome, natural fashion and rebounding with rest and sleep. Great souls have existed and

struggled and triumphed in frail bodies, but it is not the rule. Physical health underlies and supports mind, strength and soul power. Therefore, blessed is the child whose parents have hung his tree of life with the great gift of a strong and healthy body.

It is ours also in no small measure to give to our children a wholesome view of life. Neither health nor wealth nor the place and power they bring can match this priceless gift of a wholesome mind. For right emotions, right feelings, right attitudes, right ideals *within* mean the right sort of a world *outside*. In order to see straight, to think straight, to act straight, we must be straight. It is a blessing to have the gift of the natural eye, but it is incomparably better to have the gift of right mental vision, of the wholesome point of view. For we see with all that we are and with all that we aspire to be. The mind reaches its spiritual hands out through the physical eye and lays hold of the things of beauty or the things of ugliness as it chooses; it reaches its vibrant hands out through the ear and catches the harmonies and the discords of life, of the things of good or bad report as it wills. If our child is to see and hear "tongues in trees, books in running brooks, sermons in stones, and good in everything" it will be because he has the gift of tongues and books and sermons and good in his mind's eye. Therefore, blessed, twice blessed is that child of man whose future is hung with that bow of promise, a sound body and a wholesome mind.

To name a good home, a good church, a good school as gifts within our power to confer upon our children may be speaking too large, yet within certain limitations these are precisely the things which we may give or deny to our children. Rugs on the floor and tap-stries on the wall are not essential to a good home. Massive piles of stone and mortar do not constitute the goodness of a church. The spirit of a good school lies quite apart from styles of architecture and swollen financial budgets.

A fairly decent father and mother make a good home; the devotion and sweet reasonableness of pastor or priest do most to create the atmosphere of a good church; and a good teacher is the very heart and life of a good school. Is it, then, speaking too large to say that the essentials of a good home, a good church, a good school lie within our power to give or to deny to our children? The gifts of toys, of clothing and food, of houses and lands, of social standing, or a great name are not to be compared with these. Well may our sons and daughters rise up to bless our memories if they shall find that with all our givings we gave them the gifts that are worth while; a healthy body, a wholesome mind, a good home, a good church, and a good school.—*F. G. Blair, Illinois State Supt. of Schools.*

"He gets the kingly character who works for the kingdom."

SELECTED HELPS.

To boil spots of mildew in water made very tart with cream of tartar and lay while damp in the sun will entirely remove the sprinkling of dark spots.

Sprinkle on the spot of iron rust some powdered alum and arrange the spot exactly over the spout of a boiling tea kettle. Wash the alum out of the cloth at once, else the alum will eat a hole in the fabric.

Wind a soft stout string around the neck of the bottle twice, and while someone holds it draw the string back and forth at great speed. This friction heats and expands the neck, so that the stopper is easily removed.

A satisfactory substitute for a brass rod is a piece of narrow band elastic drawn through and securely sewed at each end and catching in a loop of narrow tape. The length of the elastic should be about two inches less than the width of the window and the loops caught over a hook, nail or screw at each side of the casement. This will keep the top edge of the curtain in a straight line.

To make good home-made syrup: To one cupful of sugar, granulated or brown, but preferably the latter, take a half cupful of cold water. Put into a glass jar a day or so before the syrup is needed for use, and stir it occasionally with a spoon. If the cover is tight, it may be shaken instead. A little vanilla may be added if it is liked for a change. This is much less work than the old cooking process, tastes just as well, and does not "go back to sugar."

The Children's Corner

GLADYS BROOKS' PARTIES.

YOU have heard about parties without "fuss and feathers," have you not? Well, I want to tell you about a dear little girl who gave parties without any "fuss," but with a good many "feathers." It came about in this way: Gladys Brooks noticed the little sparrows hopping about on the cold snow crust and on the frozen ground, vainly seeking for a bit of grain.

"Mama," she said, "I think the birdies are hungry. See them hunting and hunting for something to eat, and all they can find is snow. Poor little creatures! What can I feed them, mama?"

"Ask Dinah for a piece of stale bread," was the answer, and "you can crumb it up for the sparrows."

That was Gladys' first party. She put on her coat and went outside where several English sparrows seemed to be searching vainly for a meal. When she crumbed some bread and scattered it on the snow crust they flew away as though fearful that an enemy was at hand. Gladys went inside to "watch and wait." Presently the birds reappeared, one, two, three, four,

five, six of them. Gladys laughed aloud to see how happy her "guests" were, hopping around and picking up the crumbs from the unexpected feast. Soon more company came—three native sparrows. They found plenty to eat. The following day was cold and blustering, but Gladys gave another party. To this one there were still more guests, mostly English and native sparrows, but there came also a beautiful bird in a blue jacket, which Mrs. Brooks told Gladys was a bluebird. The bluebird apparently enjoyed the party as much as the sparrows did. For refreshments the guests had in addition to the bread crumbs a big piece of stale cake broken into bits.

The next day it stormed so hard that there was no party; there were no birds to be seen. Gladys told her mother that she was afraid the birds would starve, but Mrs. Brooks said:

"No, my dear, they will not starve; they had plenty to eat yesterday." The storm lasted two days, and during that time not a bird was to be seen. The third day dawned clear and bright, but very cold. There was a glistening coat of ice on the snow. The birds came early to the party; in fact they were on hand before the feast was spread and as "hungry as hunters," Gladys said, laughingly. They ran about over the shining snow crust expectantly, picking here and there as if to find a crumb.

"I guess they will not be afraid of me any more," said Gladys. "I guess they know I will give them something to eat."

Gladys looked like a "red bird" herself, at least so her mother said, as she ran out in the yard in her Red Riding-hood cloak and her basket of good things in her hands. Gladys was right. The birds were not afraid of her. To be sure, they scattered about when she began to distribute the refreshments, but they did not go away.

This was an unusual feast "after the storm," for when Gladys told Dinah that the birds must be quite hungry after their long fast, the cook had answered, "You might give them all those green tops of the celery—birds just love celery." And so, in addition to the usual crumbs of bread, crackers and cake, there were tiny bits of green at the party. How the birds enjoyed it!

There were some new guests at the party that day. Beside the English and native sparrows and two bluebirds, there came a jay and several little snow birds, and lastly, a cardinal bird with its warm glow.

Just one thing more I want to tell you about Gladys Brooks. She did not get tired of giving these parties. All winter long there was not a hungry bird in the vicinity of her home. Not until the snow and ice had gone and the green things had begun to grow did she give up her parties for the birdies.—*Christian Intelligencer*.

The Quiet Hour

TWO WAYS.

AGNES NEFF.

Two ways there are, and these two ways
Lie very far apart;
The one gleams bright with heavenly light;
The other way is dark.

One way there is that leadeth up,
'Tis narrow and 'tis straight;
It leads its pilgrims safely on,
To heaven's pearly gate.

The other way is broad, 'tis wide,
We know its end full well;
A serpent's coiled beneath the path,
It leadeth down to hell.

THE WAVES OF GALILEE.

D. D. THOMAS.

BENEATH the level of the Great Sea, on the uncertain waters of Galilee, some of the very important and far-reaching acts of the Master occurred. It is somewhat cause for wonder why he should have come down here, away from the Holy City, to perform some of his greatest miracles. Seemingly it teaches us that in a great city is not a good place to do mission work in a short time. For he had only a short time to stay.

These days when our young people are rushing to the city, we might well pause and note the wisdom of Jesus; for the grace and truth of the Master changed the history of the world by being implanted in the simple hearts of the fishermen of Galilee. And though the transformation of their lives was miraculous yet it can not be denied that Jesus made the best choice of vessels for his use. The temptations of the city strengthen prejudice and weaken every moral virtue. Tenacity of principle and constancy of purpose are lost, and lives are wafted hither and thither by every wind that blows. Confessions cannot be regarded as lasting. Constant support must be given that they may stand, or taken from the beginning of life with the children that they may be fortified against these surroundings.

So Jesus went down to Galilee. It can be seen that he helps only when we need him, and feel that we

need. He could sleep in the stern of the little boat placidly until they could no longer manage the boat. Yet he was not deaf to their cry when it came. One of those quick storms had swept down upon the little craft. To know his power is to cry unto him in distress, and they knew his power. The swell of the waves was lifting the boat, and almost dashing it to destruction. It was grand enough to awaken the faculty for the appreciation of the sublime, but there was death in it. "Lord, save us or we perish," cried they. And he arose and spoke the word. The storm lifted, the hollow of the waves was filled. The crests subsided. The swells ceased to strike the shore, the pebbles to roll with the swish of the waves, "and there was a great calm."

Who could not draw from this a precious lesson; one that comes very near?

It is evening. There was much anxiety all day. The little one breathed out her life moment by moment. The watchers grew weary. The hand of help was stayed. The tear of distress rolled down the cheek and dropped on the form of the little sufferer. Rushing to the secret chamber, falling upon weary knees, pouring forth the cry, "Lord, save or I perish,"—ah, how near the breakers are! It is a struggle for life. All night long you hear the ceaseless tick of the clock, the hours marked by the stroke. Will it never come?

The morning breaks. The sun pours forth his glorious light. A knock at the door. A messenger comes. "She sleeps." There is a great calm.

There is a sort of spirit of affiliation between animate and inanimate things even, that sometimes seems wonderful. The waters of Galilee are sweet, clear and cool. The surrounding hills are bare and bleak. So he the pure-hearted, pure-lived among a generation of impure men, sought the purest natural location to breathe forth his lessons of life.

The waters were clear. His life seemed only to the cloudy-minded not so. Prejudice like mud makes every good thing obscure. But to the fishermen it was evident he was none other than "the Son of the living God." How much of a pleasure it must have

been to the Immaculate One to walk on the waves upon which the curse of God rested not. For God cursed the ground, not the water. It is that which cleanses the filth away. So the miracle of walking upon the water showed the same affinity of the pure for the pure. Though darkened and storm-tossed, the Master sought it in this hour of vigil.

The disciples on the tumultuous waves saw and feared it was not he. Their terror became so great that they cried out. But from the gloom he called to them in the same words of power as he used in speaking to the sea, "Fear not, it is I. Be not afraid." And as to the waters so to their hearts there came a great calm. Such as was not given to man since "the Spirit of God moved upon the face of the great deep."

Lafayette, Ohio.

TELLING TESTIMONY.

AN unknown writer tells this story. On one occasion, R. Ingersoll was announced to deliver a lecture in the city of Pittsburg on the subject, "The foundations of the Christian faith." There happened to be living in the city of Pittsburg, at that time, a lawyer who had been a schoolmate and friend of R. Ingersoll. When he had graduated he had started in his life's profession with bright promises, and had married a lovely girl. Two children had come into their home, and then there fastened upon him that awful habit of drink, which was dragging him down to the very lowest depths of hell. It broke up his home; it sent his children into the street; took the roses from the cheeks of his wife; took from him his good name, character and friends. It left him one night lying in an alley in New York City, poor, friendless, hungry, sick and alone.

There came to this man a slum worker. He was taken to a house where he was washed, put to bed, and, in the morning, he was fed. This slum worker pleaded with him that he would change his mode of living. The young man lifted his hand to heaven, and said, "By the help of Almighty God, I will make one more effort; this time it is heaven or hell, life or death for me. For God's sake, for my own sake, I will change." He never drank another drop; he brought his children in, and he painted the roses again on the cheeks of his wife, and then went down again to the city of Pittsburg, where he was practicing his profession. When he read in the newspapers that R. Ingersoll was to speak, he wrote him a little note, something like this:

"My Dear Old Friend:—I see that tonight you are to deliver a lecture against Christianity and the Bible. Perhaps you know some of my history since we parted; perhaps you know that I disgraced my home and family; perhaps you know I lost my character, and all that a man can hold dear in this world almost. You may know that I went down and down until I

was a poor, despised outcast, and when I thought there was none to help and none to save, there came one in the name of Jesus, who told me of his power to help; of his loving kindness and his tender sympathy, and through the story of the cross of Christ I turned to him. I brought my wife back to my home, and gathered my children together again, and we are happy now, and I am doing what good I can.

"And now, old friend, will you stand tonight before the people of Pittsburg and tell them what you have to say against the religion that will come down to the very lowest depths of hell, and find me, and help me up, and make my life happy, and clothe my children, and give me back my home and friends—will you tell them what you have to say against a religion like that?"

R. Ingersoll read the letter before his audience, and said: "Ladies and gentlemen, I have nothing to say against a religion that will do this for a man. I am here to talk about a religion that is being preached by the preachers."—*Exchange*.

REVELATION OR UNDERSTANDING?

A VERY necessary distinction is drawn by a well-known teacher between "progressive revelation" and "progressive understanding"—a distinction which, generally, is not so carefully made as it should be. Nearly all the odd religious fancies which obtain currency amongst our modern Athenians, ever agog for "some new thing," shelter themselves under the much abused term "progressive revelation." On the other side, those who adhere to the one revelation given "once for all to the saints" are accused of deliberately closing their eyes to "new light." It is well, then, that we should distinguish between God's revelation and our understanding of it. His revelation has been given *finally* in Christ; we shall never have another; for the sufficient reason that no other is necessary.

In the time of darkness men's invention of light is progressive, but when the sun is up the last word on light has been said; it is then a question of blinds. We may admit the light partially or completely, but our admission of it is not "revelation" on the sun's part. What is needed is the drawing back of the curtains of the soul to admit all the light that is shining in the Divine Word. But this is a different thing from making lights of our own and calling them progressive sunlight.—*London Christian*.

SOLOMON, the prince of peace, alone could build the temple. If we would be soul-winners and build up the church, which is God's temple, let us note this; not by discussion nor by argument, but by lifting up Christ shall we draw men unto him.—*J. Hudson Taylor*.

Echoes from Everywhere

Coal ashes are being washed in spaces in Pennsylvania mines from which the coal has been removed. As the water recedes they form a solid mass, strong enough to hold up the earth and prevent cave-ins.

A volcano near the city of Colima, Mexico, is in eruption and is throwing out a great quantity of ashes and stones. There is no lava flowing and the people are not alarmed. Within the past few days there have been a number of slight earthquake shocks.

The house recently passed a bill granting the franking privilege to Frances F. Cleveland, widow of the late President Grover Cleveland. This is a courtesy that has been extended to the widows of all the Presidents. Sometimes there has been objection to the passage of such bills, but since it has become a custom no question is raised.

Bessbrook, a town in the north of Ireland, the oldest place in Ireland connected with the flax spinning and weaving trade, having about four thousand persons employed, has no public house (saloon), no police force, no poorhouse, no paupers and no pawnshop. The people of Bessbrook have condemned the sale of strong drink by a vote of six to one.

The Maryland court of appeals has just held the blacklist illegal. An employer who discharged a man because he was a labor agitator and then used his influence with other concerns to prevent the man's getting employment was held to be exceeding his rights. Both workers and employers have the right to organize, said the court, but if either maliciously went out of their way to injure the other side they became liable for damages.

In Missouri there are sixty-one counties that have voted dry as a whole. There are three others that have not voted dry, but have defeated petitions for license and have no saloons, making a total of sixty-four counties without the dramshop. Besides these there are sixteen counties that have voted dry outside of the cities, but each of these sixteen has one or more cities where the saloon is licensed.

Mrs. Robert Douglass, of Pocahtontas, Ill., has filed five suits against saloonkeepers for damages aggregating \$11,000. Mrs. Douglass alleges in her suit that her husband, who formerly earned \$100 a month, has become an habitual drunkard through the instrumentality of saloons and that she has been deprived of his company. The owners of the property on which the saloons are located are made parties to the suit. Her attorney promises to spring something new in law, and the outcome of the litigation will be watched with interest by temperance advocates.

The enactment into law of the anti-racetrack gambling bill for California now seems assured. With its passage by the lower house by a vote of 67 to 10, it is thought the senate will take similar action. The supporters of the bill claim 24 votes in the senate, when 21 is enough to win. Gov. Gillette will sign the bill.

Federal Judge Anderson has set February 23 as the date for the beginning of the retrial of the \$29,000,000 Standard Oil case in Chicago. The government attorney demanded an immediate trial and the Standard counsel wanted delay until May. The court declared the case would have to begin before March or the parties to it must get another judge. He then set February 23 as the date.

Unless the Legislature increases the borrowing capacity of New York City, subway construction and other public improvement work will have to be halted for at least two years, according to a statement made by Mayor McClellan before the legislative committee which is investigating the municipality's finances. The mayor declared that he felt bound by the report of William M. Ivins to the governor that the present margin of borrowing capacity is only \$8,000,000. He believed private capital could not be interested in extensive subway building at the present time.

Another step in the fight of the Federal government to recover possession of the land included in the grant to the Oregon and California Railroad Company was taken Jan. 23 when B. D. Townsend, special assistant to the Attorney General, filed in the Federal Court in Portland thirty-five suits in equity against the Oregon and California Railroad, the Southern Pacific Company and over one hundred other defendants. These suits are supplementary to those previously filed against the Harriman companies. The suits involve more than \$15,000,000 and also more than 353,288 acres of land. All of the land is located in Oregon.

During the past year nine additional national forests were created and ten reduced in area. There are now 165 national forests, embracing 167,976,886 acres. There were surveyed 5,801,934 acres. There were entered in 1908, 19,090,256.78 acres of public land, a decrease of 1,907,209.80 acres over the preceding year. There were embraced in entries completed during the year 8,068,044.85 acres which had been reported in original entries made in previous years and are not included in the above statement. Entries of all classes made last year numbered 205,459, a decrease of 2 per cent over the preceding year. The aggregate expenditures and estimated liabilities of the public land service were \$2,381,359.79, leaving a net balance of \$10,334,349.67 in the treasury.

Pennsylvania will be the possessor soon of the largest stationary engine in the world. It is now being erected at the Carnegie Steel Company's plant at Sharon. Without foundation plates or flywheel, the engine weighs 550 tons. Two of the castings weighed 118 tons each, and to transport them, special flat cars had to be built. The engine's capacity is 25,000 horsepower, yet only one man will be required to operate it. As the engine will be used for operating the rolling machines it will be subject to great strain. At the end of each run it will have to be reversed quickly and the load will vary from nothing to its maximum power.

Governor Magoon has recommended that the United States remove the Maine from Havana harbor, declaring that the Spanish element in Cuba believes America neglects to remove the wreck for fear such action would show that the ship was sunk by an interior explosion and not by a mine. The sunken battleship is a serious menace to the shipping of the harbor, as it occupies a portion of the best anchorage. The obstruction has increased annually during the past ten years by causing a shoal. The moderate tides prevailing in the harbor are hardly sufficient to prevent a gradual filling up, and this shoal seriously interferes with the action of the tides, and therefore the entire harbor is rapidly filling.

Six lives were lost and two persons were injured when the Florida of the Lloyds-Italiano Line cut her way through the sides of the Republic, the White Star Mediterranean liner, in the fog-bound waters of the Atlantic off Nantucket early on the morning of Jan. 23. Despite valiant efforts on the part of half a dozen other vessels to save her, the Republic sank at half-past 8 o'clock on the night of Jan 24 off No Man's Land, near Martha's Vineyard. The passengers of the Republic, who displayed great self-control and presence of mind, were first transferred to the Florida where they remained till the Baltic, summoned by the wireless telegraph on the Republic, came to the rescue, and the passengers of both the wrecked ships, over sixteen hundred in all, were taken on board and carried to New York.

A system of old-age pensions, the beneficiaries of which are to be employees who have served for twenty consecutive years and who by reason of old age or physical infirmities have become incapacitated, has been established by the board of directors of Butler Brothers. This concern, with 10,000 employees, is said to be the first mercantile house to adopt the pension system as an inducement to the rendering of faithful and efficient service. The pension system adopted will not constitute a tax upon the workers in the company's employ in New York, Chicago, St. Louis, Memphis, Baltimore, Dallas, Omaha, San Francisco and Seattle, as it will be maintained wholly at the expense of the stockholders. Its benefits will flow equally to the men and women who have complied with the conditions specified. The annual payment to each pensioner of the company will be "1 per cent for each year of active service on the average annual salary during the five years preceding retirement," providing only that no annual pension shall exceed \$1,000. If the pension should fall below \$300 a year the board of directors may at its discretion increase the sum to that amount. It is to be paid monthly as long as the recipients are deemed worthy of such bounty, but may be discontinued if they are found to be assigning it in advance. The age of retirement is fixed at 60 years.

Ninety-three of Kentucky's 119 counties are now totally "dry," twenty-one are partly "dry," four are wholly "wet," and the case of one county which recently voted as a unit on prohibition is to be settled by legal process in court.

Persons venturing on the unusual forms of amusement devices at Coney Island do so at their own risk and cannot expect to recover damages for injuries sustained under general conditions, according to a ruling of the Appellate division of the Supreme Court. The decision was handed down on an appeal from a jury verdict in a lower court awarding Mrs. Phoebe Lumden \$3,000 for injuries received when thrown from a car plunging down an incline on the scenic route. Justice Ingraham says: "The accident was the result of one of the dangers that the plaintiff had been warned against and the existence of which was the attraction which induced her to take the ride."

Japan is singing the praises of President Roosevelt again as a result of his protest against the proposed anti-Japanese legislation in California. Just as the President's interference two years ago prevented the exclusion of Japanese school children from the public schools, so his action this time, leading Japanese believe, will put an end to the threatened trouble. Roosevelt's declaration to Gov. Gillette that Japan has fully complied with the terms of the immigration agreement with America and that any adverse legislation under the circumstances would be a national dishonor is particularly pleasing to the Japanese. They believe that if the question of the alleged "Japanese peril" can be avoided during the present session of the California Legislature it will never arise again.

The danger of caverns under the Gatun dam is not the only thing in the canal zone to cause trouble, as Washington is again finding out. There is a high degree of feeling existing between business men of Panama and the government commissaries. The merchants charge that vast quantities of all sorts of luxuries and other goods are imported into the canal zone on which no duty is paid, and that these articles are sold, not only to American employes, but to any one who asks for them. Consequently the merchants are unable to compete, as they have to pay a heavy duty on these things. They declare in a set of resolutions forwarded to the executive department at Washington that a system exists whose purpose is to stifle the isthmian trade in behalf of the commissaries; that the Panama railroad is rebating to the commissaries against the merchants; that the finest kinds of silks, articles of luxury not needed, such as French perfumeries, German soaps, pictures, and artists' materials, are supplied in competition with the merchants. The Americans admit on the face of the complaint that the Panama merchants have a right to complain, but they add that this right should not be allowed to apply, as the merchants look upon the Americans as legitimate prey. Before the commissaries were established, they allege, the Panamanians charged anything they thought they could get for their goods, the price sometimes being 500 per cent higher than in the United States. The matter will be decided by the government at Washington, to which two sets of resolutions, drawn up by the Panama merchants on the one side and the unions and other organizations of government employes on the other, have been forwarded. The employes claim there is nothing to prevent the merchants from resorting to high prices again if the government checks the commissaries.

Among the Magazines

ADULT PROBATION IN ILLINOIS.

Entirely apart from Judge Cleland's experiments in adult probation in certain classes of cases the subject of giving first offenders a chance to reform without the brand and disgrace of a term in jail has been a live one for some years in this and other States. There are adult probation systems in Massachusetts, Connecticut and New York, and the judgment of the competent is that they have worked well and benefited not only the individuals affected but the community as a whole.

Where there is no express statute for probation in the case of adult offenders the judges have the authority, by suspending sentence during good behavior, to institute limited probation on their own account. This power ought not to be abused, for if public sentiment is ripe for a real system of probation the thing to do is to pass a well-considered act and establish the requisite machinery for the guidance and firm control of the probationers.

Here in Illinois adult probation should be considered in connection with the parole law and the indeterminate sentence. Sound administration is essential in both cases, and if we should despair of securing it in the one direction the opponents of adult probation would use that despair as an argument against further experimentation with crime, though, fortunately, even among those who hold that the indeterminate sentence has failed here there are supporters of probation for those who give actual promise of complete reclamation.

In thousands of cases, it is notorious, men convicted of first and minor offenses are "ended," not mended, by imprisonment. Most of these can be saved to society by supervision, encouragement to return to the path of thrift and honesty, and the deterrent or coercive influence of a suspended sentence. And to say that an offender can be saved is to say that it is a duty to save him—a duty to ourselves, to him and to his family or kin.—Chicago Record-Herald.

PRESIDENT ANGELL.

Four score years old and the wheels of life are not yet weary. President Angell is celebrating the eightieth anniversary of his birth by attending the meeting of the Association of American Universities at Ithaca. It is a characteristic way with him. During a long life of varied experiences he has set an example of sturdy industry for thousands. What he has accomplished all the world knows.

He had abundant opportunity to show his strength while he was serving as editor of the Providence Journal during the exciting years of the Civil War. But it was an auspicious event in the history of American education when he turned his attention to college administration. If he had remained at the head of the University of Vermont he would have made a place for himself among the honored presidents of New England colleges.

In a smaller circle of influence his power would have been commanding.

The central West congratulates itself and him as well because he heard the call that came from Michigan. The story of President Angell and that of the University of Michigan for nearly forty years are one. No one hearing his name and title ever needs to ask of what he is president. No one hearing the name of the University of Michigan ever asks its president's name. What "Michigan" has done in educational lines for the central West and for the United States is difficult of estimate. If nothing else were considered except the astonishing development of the State university idea in the United States since the president of "Vermont" became the president of "Michigan" in 1871, that would be sufficient to write large the word "success" upon the record of an honored career.

The people of the United States are obligated to President Angell for distinguished services to it in the field of diplomacy. The army of educators throughout the country pays its tribute to the Nestor. The thousands who are proud to call themselves sons of "Michigan" rejoice in one who "by reason of strength" has reached his fourscore years. That he may return late to the skies is the birthday wish of a host of friends and admirers.—Chicago Tribune.

DON'T- YOU NEED A CHILD?

Is it possible to work successfully "for the child that needs a home and the home that needs a child"? In other words, can a great number of unfortunate boys and girls be saved from public institutions by the system of finding havens for them in places that are "homes" in the best acceptance of the word? A year of practical experimentation has proved that remarkable results can be accomplished by a child-rescue campaign conducted on the principle that universal mother-love can be awakened to a sense of responsibility for the neglected children of the world.

Not only have many childless women adopted boys and girls, but many careless and temporarily helpless mothers have been aroused to a sense of their highest duty. The secondary influence of this work—this stirring-up of latent maternal solicitude—may be productive of the most widespread reforms, which will reduce institutional work to the minimum. A letter from California, published in the February Delineator, tells its own story. The writer says:

"It is through your child-rescue articles that I have my three children out of the Home in which I had been forced to place them for a year. Your first article touched me to the depths, and each succeeding one. They told me what I knew to be the truth—it's far, far better for the little ones to be in a private home. I could not see my way to have them and also to work for them, but your precious articles strengthened me and finally, last

March, I took my two children out and home and worked for them, sewing, etc.; and last July my youngest one also came back to me. I am now in charge of a day nursery that has just been started, so you see I am working for my little ones and at the same time with them.

"It is you, dear friend, that has really done that for me, and also, maybe, for many others. Your influence is, indeed, widespread and is a power for good."

This letter opens a vista of possibilities to the philanthropic mind. When women of all classes come into a knowledge of what motherhood means, as the highest privilege of life, there will be little need of institutions and child-rescue campaigns, but until the better understanding comes there is much to be done. Let all who can help in bringing together the home and child.

THE PRESIDENT'S MESSAGE AND THE NAVY.

In his recent and last annual message to Congress the President has devoted much less space to arguing the necessity of increase of the navy than in any of his previous messages. He has confined himself to simply recommending, in a single sentence, the increase proposed by the Navy Department, which is in substance the four-battleship program of last year. But he gives considerable space to urging the reorganization of the whole naval management, in order to increase its efficiency, and makes it perfectly clear that his views on the subject of the navy have not in the least changed.

Only in July last he was reiterating at Newport, in the most emphatic language, before the most notable conference of United States naval officers ever called together, his well-known views on the subject. These he declared that he uttered, not to the naval officers, but to "the great bulk of his fellow countrymen," whose opinions on the navy he wished to guide. He is unalterably opposed to "a purely defensive navy," "a mere coast defense navy." He demands one that can "hit hard," that can "hammer the opponent until he quits fighting," that shall be "footloose to search out and destroy the enemy's fleet." He is opposed to our country's assuming an "attitude of meekness" toward other countries; we must be "aggressive" because we have great responsibilities and a great role to play. The Monroe doctrine is an "empty boast" unless backed by an efficient navy. But even if we are to stay at home, mind our own business, and maintain the "right to administer our internal affairs as we think best," we must have "a strong fighting navy." He still keeps alive his suspicion that other nations are cormorants, only waiting a favorable moment to pounce upon us. He thinks our country, because of immigration, has more points of friction with other governments than any other nation, and hence we must have an "efficient fighting navy," a navy that can "hit." "A first-class fighting navy is the most effective guarantee of peace that this country can have."

Those, therefore, who may think that, because he devotes so little space in his last message to recommending the four-battleship program, the President will cease working for it, in season and out of season, are very much mistaken. He may be expected at any time to send a special message to Congress on the subject, as he did last year. Up to the time when the final vote on the navy bill is taken, Congressmen will be invited to the White House and lectured on the absolute necessity, for the safety of the country, of adding four huge Dreadnaughts and the necessary number of little monsters to the navy.

Those who believe, therefore, that both the safety and the honor of the country depend chiefly upon other and higher agencies and means than suspicion and fear, and the slugging and hitting and hammering of brute force, must bestir themselves. Let remonstrances against further increase of the navy be sent to Congress from all the cities and communities of the nation, signed by clergymen, by business men, by educators, by members of labor organizations, by women's societies, by everybody who believes that the time has gone by for the continuance of the enormously costly competitive armaments which still burden and disgrace our civilization. Send them, with a brief note, direct to your Congressman, who will be glad to know what his constituents are thinking on this most urgent question of the hour.—The Advocate of Peace.

THE PROHIBITION FLOOD.

The political protection of the saloon, says Harris Dickson in the January Circle Magazine, gradually aroused public sentiment and arrayed against the saloon thousands of men who had no prejudice against the moderate use of liquor. Patriotic citizens regarded the whole system as the greatest stumbling block in the path of honest government. No matter what plan might be proposed for the reform and advancement of the city, the allied liquor and criminal elements stood beside the machine politicians, musket in hand, to defend the old system. Liberal-minded men came to believe that the saloon, as a social and political institution, must be wiped from the face of the earth before anything whatsoever could be accomplished. After the saloon is destroyed it will be easy to uproot the weaker evils which have found shelter behind it. Thousands of gentlemen say they had rather see the liquor business in the hands of a few confessed outlaws, dodging from bush to bush and hiding in the alleys, than to see it controlled by political tyrants who boss the town. They cannot understand why the liquor business should go hand in hand with every form of vice and crime. The hardware trade and the grocery stores do not find it necessary to enter into such partnerships. The drygoods trade does not continually fight the law. If this antagonism to law and decency be necessary for the success of the liquor business, then there must be some inherent wrong in the trade itself, and that trade should be stopped.

Such reasons as these have drawn into prohibition ranks thousands of reluctant recruits; originally they did not want to be prohibitionists, but are none the less enlisted for the war and mean to fight it out to the last ditch.

ENGLISH BAN ON SUNDAY THEATERS.

King Edward has issued an edict forbidding public entertainments in a theater or music-hall on Sundays, Christmas Day, or Good Friday, "unless under very exceptional circumstances." The King of England thus perpetuates a mediæval privilege still adhering to the crown and exercised through the office of the Lord Chamberlain—a post that has been more or less under fire in recent years. The writer for the New York Tribune, who signs herself "Marquise de Fontenoy," gives these reasons for the King's action:

"King Edward has been led to issue this edict with regard to Sunday performances by the growth and deterioration of these Sabbath entertainments. As in this country, they commenced with concerts of sacred music. Then followed cinematograph displays of biblical sub-

jects. The latter, as well as the sacred music, have long given way to much more frivolous and more worldly features; and whereas twenty or thirty years ago all theaters and music-halls throughout Great Britain were shut on Sundays, today they are nearly all open and doing a rushing business, the houses being often rented on Sundays for so-called private entertainments of a class which would not pass muster with the mass of the general public on a weekday.

"Prompted, it is said, by Queen Alexandra, who is a very religious woman indeed, and urged by the leading ecclesiastics, not only of the Church of England but of other denominations, the King has now turned to good account the survival of the mediæval despotism which excited so much criticism at the time when it was invoked by subordinate officials of the Lord Chamberlain's department to prevent the performance of Gilbert and Sullivan's comic opera, 'The Mikado,' during the state visit to England of several members of the Japanese imperial family a couple of years ago. The step taken by the King is meeting with the warm approval of the vast mass of the population in England, where it is construed as furnishing another striking illustration of the intimacy of his constant touch with public sentiment. The latter, as in all English-speaking countries, is ever in favor of a respect for Sunday, and so keenly alive is the King to this that, although passionately devoted to racing, he has never in his life been present at the Paris Grand Prix, which is always run on a Sunday, and which is the greatest of races on the Continent of Europe, being equivalent to the English Derby."—Literary Digest.

THE WINTER CARE OF HENS.

IN comparison with records one often reads in farm journals, my hens are very ordinary winter layers; but in comparison with those of all my neighbors who have provided the modern conveniences for their layers, my hens are truly remarkable.

I converted an old cow shed, 11 x 13 ft., with leaking roof, into shelter for the hens by covering the roof with tarred paper, and lining the inside with building paper. There were three small windows, two on the south side and one on the west side, out of which most of the panes of glass were broken. Over the casings I stretched heavy unbleached cloth. I put in a wooden floor eight inches above the ground as the drainage was poor. A place on the floor, 4 x 4 ft., was kept covered with sifted coal ashes, replaced monthly. Another space was filled with excelsior and straw for scratching. The roosts are all two and one-half feet from the floor to prevent crowding in the highest roost.

About November 1 seventeen White Leghorn hens and one rooster, and seven Plymouth Rock hens were put in this enclosure and not allowed any outdoor freedom. The three-year-old hens, nine in all, and the May pullets, did not begin to lay until about the middle of December. They steadily increased the number of eggs until by February they averaged fifteen eggs a day, and this record was not lessened by the cold weather so unusual for the vicinity of

Philadelphia. Other people's flocks averaged five and eight eggs from fifty to seventy-five fowls.

January 1 I put the seven Plymouth Rocks in a shed, 9 x 7, with a window of cloth, 2 x 1¾ ft., dividing the floor into a dust bath and a scratching pen. These seven hens have averaged five eggs a day all through January.

These twenty-five fowls did not have the variety of food recommended in poultry guidebooks, but only such as every housewife can provide, namely, wheat and cracked corn (heated during the coldest days) thrown into the straw morning and night, all the scraps from the table, a little clover hay, a pan of skimmed milk, and occasionally apples, potatoes, or onions chopped fine and fed at noon. A box of charcoal, groundbone, and oyster shell was kept before the fowls, fresh straw or excelsior was put in the scratching pen once a month, the roosting part was cleaned every three or four days, and the roosts brushed with coal oil once a month.—H. O. Duerr, in *The Garden Magazine*.

Between Whiles

Limited Understanding.—"It does seem strange," remarked the party who seemed to be thinking aloud.

"What seems strange?" queried the innocent bystander.

"That after getting a man in hot water a woman can't understand why he should boil over," explained the noisy thinker.—Chicago News.

"What is this peculiar key on your typewriter? I never saw it on any before."

"Hist! My own invention. Whenever you can't spell a word, you press this key and it makes a blur."—Boston Transcript.

A Tale of Two Cities.—"Say," queried the would-be humorist, "where is that place, Atoms, that so many people are blown to?"

"It's just the other side of Effigy, the place in which so many people are hanged," answered the solemn person.—Chicago News.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Furnished home; 7-room house, stable, etc.; 100 feet front; cement walk; fruit and shade trees; one-half block from Campus, McPherson College. J. W. Webster, McPherson, Kans.

Literary Activity of the Brethren in the Eighteenth Century

By Prof. John S. Flory, Ph. D.

An intensely interesting volume dealing with the history of Educational Work and Literary Endeavor in the Church of the Brethren during the first century of their existence as a denomination. Owing to the careful and conscientious research on the part of its author, this book will be referred to as an authority on the subject for years to come. This book should find its way into 20,000 Brethren homes before the Holidays.

Here are two of the many testimonials we have received:

One of the Most Interesting.

I consider "Literary Activity of the Brethren in the Eighteenth Century" one of the most interesting books outside of the Bible for the following reasons: (1) It brings to view so many of our earlier literary productions, all of which are in such good harmony with gospel principles as held by the church today. (2) It shows the early church to be really in advance of the times, religiously. The book is most inspiring and encouraging to him who loves the church, and her posterity.—L. W. Teeter, Member of the General Mission Board.

A Thorough Treatment of the Subject.

I wish to express my appreciation of "Literary Activity of the Brethren in the Eighteenth Century." I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes.—T. T. Myers, Instructor in Juniata College, Huntingdon, Pa.

If you have not already secured a copy of this book, place an order with our nearest agent, at once. A cloth bound book of 335 pages.

The Sunday-School Calendar

Issued annually. Enlarged and improved. Beautiful cover design containing reproduction of Hofmann's famous painting of the boy Jesus.

In addition to the International Daily Bible Readings, the calendar contains International Sunday-school lesson titles and references for every Sunday in the year, also the Golden Text for each week, printed in full. Each leaf contains choice selections from the best writers, helpful thoughts for everyday living. A calendar for the entire year is printed on the back, and an extra leaf is inserted containing Scripture selections, etc., arranged for easy memorizing.

This calendar is endorsed by the leaders in Sunday-school work and has proved very helpful wherever used. As a Christmas gift from teacher to pupil it is extensively used. Many schools distribute them at the Christmas season to every scholar. They are especially valuable to Home Department members.

The Twentieth Century Sunday School Record System

No superintendent can afford to begin the new year's work without the assistance of our new system of records and recognitions. This plan, first used in one of our own Sunday schools, has grown in favor until it is now recommended by Sunday-school workers of all denominations. It has increased the enrollment and secures the

attendance of each scholar enrolled. Encourages systematic giving and discourages tardiness. Brings the Bible to the school and relieves the teacher of keeping class records. New scholars are enrolled and all records are kept and reported by the secretary of the school. The teacher is permitted to devote her whole time to the teaching of the lesson. Our new descriptive Record System Catalogue gives full particulars.

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully. The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

The next party of colonists will leave Chicago about February 9. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

"Mention Inglenook When You Write"

"THE OTHER HALF OF THE GLOBE" TO EVERY GOSPEL MESSENGER SUBSCRIBER WHO HAS NOT ALREADY RECEIVED A COPY OF THE BOOK FOR ONLY 45 CENTS. This book is a regular \$1.50 publication and can be had only when ordered with the Gospel Messenger for one year.

"THE OTHER HALF OF THE GLOBE" is undoubtedly one among the best of D. L. Miller's many works and discusses countries and people that we know very little about. Much time has been given to the preparation of this work, and it is well written throughout. More than 100 illustrations are woven in, which makes the book exceedingly interesting.

An excellent quality of book paper has been used in order to bring out the illustrations to the best possible advantage. The type is large and clear,—the same size as that used in the reading columns of the Messenger.

It contains 398 pages and is bound in good substantial cloth. In every way it is a much better book than the ordinary premium book. It is easily worth \$1.50 and would retail at that or more were it placed on the market.

CAN'T BE BOUGHT.—This book can't be bought in any other way than with a year's subscription to the Messenger. Don't ask for it.

The Unfolding Life

A study of development with reference to religious training by Antoinette Abernethy Lamoreaux. This book is one in a thousand for parents and Sunday-school teachers who desire conscientiously and intelligently to nurture the unfolding child life. It discusses untechnically the great facts of childhood development, physical, intellectual and moral, but with the supreme underlying purpose of furnishing definite guidance and direction to the parent and teacher in the sane and wholesome religious nurture of the child.

As the skilled gardener knows just how much watering, pruning and training each plant in his garden needs, so ought you to know just what care and treatment is necessary for the growth of the human plants in your garden of children.

Indorsed by such leaders in Sunday-school work as: Marion Lawrance, I. B. Trout, J. Wilbur Chapman, W. B. Jacobs, M. G. Brumbaugh, W. C. Pearce, Joseph Clark, W. N. Hartshorn, Mary Foster Bryner, A. F. Schauffler and Jesse L. Hurlbut.

If you are seeking "the most practical, most natural, and most spiritual book ever written along the line of child study," order a copy.

Told at Twilight; or Bible Stories That Never Grow Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The

author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

The Lost Brothers of the Alleghanies

By Eld. Jas. A. Sell

On the morning of April 24, 1856, Joseph and George Cox, aged respectively 5 and 7 years, wandered from their home in the mountains of Western Pennsylvania.

Thousands of men, women and children searched for the boys, until, on the fourteenth day their whereabouts was made known through the dream of Jacob Dibert.

Eld. Sell, who conducted Memorial services on the Fiftieth Anniversary of the occasion, tells the story in all its details. The illustrations consist of five portraits: Mr. and Mrs. Cox, Jacob Dibert, Harrison Wyson and the Author.

A sad but true story of life in the mountains. Intensely interesting and instructive.

Price, postpaid,10 cents

No. 6.

ABRAHAM LINCOLN

WHEN the compiler of the dictionary of Congress was preparing the work for publication in 1858, he sent Mr. Lincoln the usual request for a sketch of his life to which he received in June of that year the following reply:

Born February 12, 1809, in Hardin County, Kentucky.

Education defective.

Profession, a lawyer.

Have been a captain of volunteers in Black Hawk War.

Postmaster in a very small office.

Four times a member of the Illinois Legislature, and was a member of the lower house of Congress.

Yours, etc.,

A Lincoln.

A modest statement indeed which had in it very little intimation of the real greatness of its author who was so soon to be called to guide a great nation through the darkest period of its history.

Was his education defective? Measured by the

conventional standards of society, it certainly was. He attended school only about four months in all, according to his own statement.

If, however, education is to be measured by ability to think profoundly upon the greatest problems of both personal and national life; to state clearly and forcefully the results of such thinking in language whose beauty and simplicity still charm two continents; to feel so deeply the wrongs of an enslaved race that

life becomes one constant struggle for their freedom; to perform such deeds of exalted patriotism as will inspire the loyal people of a divided country to fight on through four years of civil war to a victory which forever settled the question of national supremacy; to live a personal life so clean and pure and wholesome that all admire and none criticise—if these achievements be the test of education, rather than the standards set up by society and schools, then Abraham

Lincoln was the most thoroughly educated man America has produced.

In this connection it is interesting to note the following statements of Lincoln as found in a speech on "The Improvement of Sangamon River," delivered in 1832 when he was a candidate for the State Legislature of Illinois:

"Upon the subject of education, not presuming to dictate any plan

or system respecting it, I can only say that I view it as the most important subject which we as a people can be engaged in. That every man may receive at least a moderate education, and thereby be enabled to read the histories of his own and other countries, by which he may duly appreciate the value of our free institutions, appears to be an object of vital importance, even on this account alone, to say nothing of the advantages and satisfaction to be derived from all

Lincoln's First Home in Illinois

being able to read the Scriptures, and other works both of a religious and moral nature, for themselves.

"For my part, I desire to see the time when education—and by its means, morality, sobriety, enterprise and industry—shall become much more general than at present, and should be gratified to have it in my power to contribute something to the advancement of any measure which might have a tendency to accelerate that happy period."

By profession Lincoln was a lawyer. The methods of study pursued by him in preparation for his chosen profession would not be recognized by the courts as at present constituted. Associate Justice David Davis of the Supreme Court, in his fine eulogy of "Lincoln as a Lawyer," delivered in 1865, says:

"In all the elements that constitute the great lawyer, he had few equals. . . . He seized the strong points of a cause, and presented them with clearness and great compactness. His mind was logical and direct, and he did not indulge in extraneous discussion. . . . The framework of his mental and moral being was honesty, and a

wrong cause was poorly defended by him. . . . He read law books but little, except when the case in hand made it necessary; yet he was usually self-reliant, depending on his own resources, and rarely consulting his brother lawyers, either on the management of his case or on the legal questions involved. . . . He was not fond of litigation, and would compromise a lawsuit whenever practicable."

Lincoln's own high ideals of what the character of a lawyer should be are expressed in the following, taken from "Notes for a Law Lecture," delivered in 1850:

"There is a vague popular belief that lawyers are necessarily dishonest. I say vague, because when we consider to what extent confidence and honors are reposed in and conferred upon lawyers by the people, it appears improbable that their impression of dishonesty is very distinct and vivid. Yet the impression is common, almost universal. Let no young

man choosing the law for a calling for a moment yield to the popular belief—resolve to be honest at all events; and if in your own judgment you cannot be an honest lawyer, resolve to be honest without being a lawyer. Choose some other occupation, rather than one in the choosing of which you do, in advance, consent to be a knave."

Lincoln's election as captain of volunteers in the Black Hawk War is referred to by him as being a great surprise and as giving him more satisfaction than any success which came to him in life.

His short experience in this was referred to in his speech on "Military Heroes," delivered in the United States House of Representatives July 27, 1848, in which speech he defended the Whig candidate for President,

General Taylor, and ridiculed General Cass, the Democratic candidate.

The following paragraph from this speech furnishes a fine example of Lincoln's humor:

"By the way, Mr. Speaker, did you know I am a military hero? Yes, sir; in the days of the Black Hawk War I fought, bled, and came away. Speaking of General Cass' career re-

minds me of my own. I was not at Stillman's defeat, but I was as near it as Cass was to Hull's surrender; and, like him, I saw the place very soon afterward. It is quite certain I did not break my sword, for I had none to break; but I bent a musket pretty badly on one occasion. If Cass broke his sword, the idea is he broke it in desperation; I bent the musket by accident. If General Cass went in advance of me in picking huckleberries, I guess I surpassed him in charges upon the wild onions. If he saw any live, fighting Indians, it was more than I did; but I had a good many bloody struggles with the mosquitoes, and although I never fainted from the loss of blood, I can truly say that I was often very hungry."

The following amusing incident is related as an illustration both of Lincoln's ignorance of military matters and also of his ready wit:

When his troops, formed by platoons, confronted a gate, Captain Lincoln ordered:

Lincoln's Home in Springfield.

"This company is dismissed for two minutes when it will fall in *on the other side of this fence*." (He characterized this as "an endwise" movement.)

To serve as "postmaster at a very small office," as Lincoln stated it in the outline of his biography on which the comments of this article are based, would mean little to an ordinary man, but to Lincoln this service furnished another opportunity for the education for which his soul hungered. The newspapers he handled in the office provided him with reading matter, and from this source he kept himself fully informed on topics of both local and national importance. He was appointed to this office, located at New Salem, by Andrew Jackson and served from May 7, 1833 to May 30, 1836. Those were stirring times in our national life, and to Lincoln's mind the study of the newspaper reports of the speeches of Calhoun and Webster, on the burning issue of nullification, must have meant much in his preparation for the responsibilities which were to come to him when, as President of the United States, he should lead the nation through its four years' conflict brought on by those who taught that both the law and the constitution could be nullified at their pleasure.

That must have been an interesting Legislature which met in Vandalia, the old capital of Illinois, December 5, 1836. Stephen A. Douglas and Abraham Lincoln were both there and both served as members of the penitentiary committee. Lincoln was one of the nine members from Sangamon County—two senators and seven members of the House—the delegation being known as the "Long Nine" on account of their size.

Lincoln's great "hit" at this session was the success won by his delegation, under his leadership, in securing the removal of the capital to Springfield. With only nine votes in the beginning, and with the "field" against him, Lincoln so adroitly managed his campaign that the bill locating the capital at Springfield was finally carried, and as a result, Lincoln was given the credit of a great triumph—in one sense a victory over his great future rival, Douglas, whose home town of Jacksonville was one of the leading competitors. On the question of internal improvements—the building of canals—these two men, who were to wage such a political warfare later, were in perfect accord.

On March 6, 1837, the session closed and the "Long Nine" started home. All save Lincoln had horses to ride. He walked, or rode "Shank's mare," as he described it. It is not difficult to picture in one's imagination this delegation as it moved homeward with Lincoln on foot carefully picking his way by the roadside and walking so fast that he kept up with the procession. It is related upon good authority that Lincoln was so thinly clad that he actually shivered, and said, "Boys, I'm cold." The reply from his mounted companions was: "No wonder, there's so much of you on the ground."

The following word picture from the pen of Robert L. Wilson, one of the "Long Nine," written shortly after the adjournment of the session just referred to, is full of interest:

"Lincoln was a natural debater; he was always ready and always got right down to the merits of his case without any nonsense or circumlocution. He was quite as much at home in the Legislature as at New Salem; he had a quaint and peculiar way, all his own, of treating a subject, and he frequently startled us by his modes—but he was always right. He seemed to be a born politician. We followed his lead; he hewed the way for us to follow, and we gladly did so. He could grasp and concentrate the matters under discussion, and his clear statement of an intricate or obscure subject was better than an ordinary argument. It may almost be said that he did our thinking for us, but he had no arrogance, nothing of the dictatorial; it seemed the right thing to do as he did. He excited no envy or jealousy. He was felt to be so much greater than the rest of us that we were glad to abridge our intellectual labors by letting him do the general thinking for the crowd. He inspired absolute respect, although he was utterly careless and negligent. We would ride while he would walk, but we recognized him as a master of us in logic; he was poverty itself when I knew him, but still perfectly independent. He seemed to glide along in life without any friction or effort."

While a member of Congress, Lincoln lost no opportunity to express his sentiments on the slavery question, voting, as he afterwards often said forty or fifty times for the Wilmot Proviso in various forms during his single term. He closed one of his carefully prepared speeches with these words: "Under no circumstances would I consent to the further extension of slavery in the United States, or to the further increase of slave representation in the House of Representatives."

For several years after the expiration of his term in Congress, Lincoln devoted all his time and attention to the practice of law. In fact he himself states that "in 1854 his profession had almost superseded the thought of politics in his mind, when the repeal of the Missouri Compromise aroused him as he had never been before."

Then followed the great debates with Douglas which made him a national character and paved the way for his nomination for the Presidency to which office he was elected and in which he became, under God, the savior of the republic. The joy which came to the loyal citizens of the nation with his triumphant reelection and the deep sorrow which still lingers with us because of the awful tragedy of his assassination in the hour of victory which brought to him relief from the terrible strain of four years of war, can never be forgotten by those who lived through them.—Prof. O. T. Corson, *Editor Ohio Educational Monthly*.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLIV.

THE anchor has splashed through the calm surface of the little bay and run on down a dozen fathoms to the shallow bottom. Crete lies a mile on the right. The captain says he will lie here for four or five hours and then steam for Athens. For *Athens*, mind you! Not Milwaukee or Baltimore, but *Athens*! I am so ecstatic about it I would like to have everybody here so as to enjoy with me my glorious expectations.

It's midday and we have just finished our luncheon. I could go ashore but am too eager to go on, and the boat may leave before I get back.

The island is of high mountains, apparently of bleak and weathered limestone. Orchards and vineyards fill the valleys but there is no pretty effect. The deep blue sea kisses its rough edges and cools the heat of a tropical sun that quivers in violent pulsations over every foot of ground. I wonder if Paul saw the color of the sea here, for in a storm the waves are leaden and sombre. From my notes made right on the spot I write: "The sea is wonderfully blue and looks like a magic sea. The dreary island, brown and gray, is not a fit setting for beauty. A painter, by coloring the hills with his imagination, could make the combination artistic."

Now the boats are coming. They should have been here. Yankees would have been out and ready to climb up the ship's sides before even the stairway had been let down. There are three boats and they are racing. Each wants to get to us first. What lusty pulls at long, heavy oars. The long boat, with the baggy-trousered Turk, wins. How quickly he runs up the ladder, followed by the others. Behind him comes a Greek with heavy, dark face. Then come the boys with baskets of long-bunched, purple grapes. Passengers and sailors at once begin to lay in a supply of fruit. The boy motions me to taste them. I do. Umph! I should say I do want some of them. He weighs out a penny's worth and so pleases me by the quantity as also with the quality, I motion to him to put on more, while I get twice the amount of money. I give him four cents, or two Italian pennies. Others are hurriedly buying the fruit and carrying it to their staterooms. Some of the venders have figs and I hurry to get a lot of them, too, for sea travelers are

always wild for fresh fruit, and when they land after a voyage that is usually what they first seek.

I bought *sixteen* big, bursting fat, purple and green figs for two cents, making six cents for enough fruit to keep me for two whole days. But poor Paul and his companions nearly starved here. No one came to their boat with fruit that flooded the mouth with saliva as in our case. But I suppose he was happier in his famished, toiling shipwreck than any of us who enjoyed the calm sea at her best. In getting back my change from the two-lire piece, which is forty cents or two francs, I asked for some Greek coins in five and ten lipta pieces,—about five and ten cents—so that when I reached Athens in the morning I could hire a Grecian to take me ashore and pay him with his own coin. Athens is the greatest of all Grecian cities, and I do want to walk along her streets and see the Acropolis.

From Athens we will sail directly to Asia Minor, landing at Smyrna after a cruise among scores of little islands I find dotting my map. From there I will get down to the Holy Land. Just how I will go I do not know, whether overland through the cities visited by Paul, or by sea. But I am not troubled about it. The eye that guided Abraham will guide me. Crete is settling into the sea behind us, her bleak hills still visible, showing how the fertility of her once strong soil has been taken from her by the murder of the forests, that probably, like Sicily, once grew luxuriantly over her now bleached form.

The sea, during the afternoon, rolled somewhat and at evening the breeze was still strong and cool. At Genoa the *Letimbro* had taken on a big cargo of flour ground from wheat shipped from Russia. This was left at Crete. The boat, thus lightened, rolled more severely, but I had no intimation of seasickness.

Paul's captain was compeled to throw his cargo, perhaps of wheat, overboard at Crete that he might get away alive. My captain threw it overboard,—into a "lighter"—in order that he might gain money by the transaction. The other captain lost his boat, we are saving ours. But the world will always tell about Paul's captain and his little ship of sail, while the description of my visit to Crete will perish with the hand that writes it. He who but follows the wake of

another vessel on life's sea may ride in a palace of comfort and brush the ruby wine from ruddy lips of sensual indulgence, but he will leave no lasting germ of good to sprout and grow and increase with the cycles of time.

In a paper I just read that back in Messina, Sicily, a professor in the university there, after a long, exhaustive study and experimenting with the cancer microbe, had discovered the cause of the cancer and a treatment for it. The world will look towards Messina, made famous by the sweet oranges shipped from her harbor, for the sweeter message of cure for the hitherto incurable cancer.

The name of the professor is Francisco San Felice. Were I suffering from the cancer I should enclose a small sum of money in a postoffice order for his trouble, and write him a letter, asking him to tell me how I could be benefited or cured. But as this is only a newspaper report, there may be no truth whatever in the item. But some one *will* unlock the right medicine chest of God's remedies, some day, for the cure of cancer. Any disease that *gives* a doctor so long a time, and the patient so much strength and opportunity, to get at its cure as cancer, is bound to be throttled sooner or later. The half has not yet been told of the curative properties of the earth, for every disease, but that of sin, has its remedy right here. It is for us to find it. When it is found, we will know it. Quacks will not advertise it in half column or whole page lies. Patent medicines will not contain it at the drugstores. Your home doctor, who ought to be paid for keeping you well rather than for keeping you sick, will get it for you. The cure will be found, just as the sure cure for diphtheria has been found. When the cry for help goes up to the highest heaven of distress the voice of the sufferer will be heard, and in God's wonderful way, of having us work out our own salvation, some doctor in a country town or student of research in the city hospital and laboratory, will find the simple remedy or mix the required combinations in such a way that our heroic sufferers will be healed, for once and for all, of the ugliest cancer, as easily as though it were a fever sore or a boil.

I do not want to be fanatical or to appear as not having good sense, but I believe that we, the readers of this paper, have it within our power, by prayer, whether we believe in it as much as we ought to or not, to bring about, instantly, or to cause to start, at once, principles and truths relating to the best conditions of health, that will go on and on with ever-increasing ability to combat the problems offered by this arch foe, not only of those who have cancer, but of the millions more who tremble lest they also may find it developing upon their body, until the cure, positively certain, will have been found. This will not come about, by "dreaming" it in day-dreams,

though dreams at night, coming into the mind, or rather evolving or coming *from* the mind that has been entirely taken up with the subject all the day, are often the keys, unlocking the way before us. It *will* come about when we all get right down to the hardest kind of prayerful toil and put forth such life-giving energies from a live-giving body, laughing in the splendor of overabundance of strength as to create life because there is life,—the life that is original, the life that finds bits of clay and leaves a new metal, the life that sees the kingdom of heaven in a dirty child or a radiantly-transformed society in a Burbank prune.

Listen, people, I believe I have it. *I have it.* The reason things don't happen is because we have been "resting on our oars." The church has been "resting on its oars." Paul has come and gone. *His* captain threw the wheat *overboard* in order to save the bread itself that was in chains in that boat. *We* have been tumbling *the chains* overboard and then throwing out life preservers and professional swimmers to rescue whatever or whoever might be fettered by those chains. Hidden under the tobacco smoke of selfish indulgence and dreaming the irrational dreams of the opium eater of stupid indifference, those world workers who should be leaders of the new impulse to discovery, have squatted, Indian style, on the breaking ship of civilization, counting the sacks of wheat in the hold for their present sustenance, regardless of sowing broadcast the seed that will enrich all others and leave them with more than at first. Once enough people think and work and pray together for some one thing, the thing will be born.

The child thus brought into the world will be father to a thousand similar blessings.

LINCOLN'S AUTOBIOGRAPHY.

I WAS born February 12, 1809, in Hardin County, Kentucky. My parents were both born in Virginia, of undistinguished families—second families, perhaps I should say. My mother, who died in my tenth year, was of the family of the name of Hanks, some of whom now reside in Adams and others in Macon County, Illinois. My paternal grandfather, Abraham Lincoln, emigrated from Rockingham County, Virginia, to Kentucky, about 1781 or 1782, where a year or two later he was killed by the Indians, not in battle, but by stealth, when he was laboring to open a farm in the forest. His ancestors, who were Quakers, went to Virginia from Berks County, Pennsylvania. An effort to identify them with the New England family of the same name ended in nothing more definite than a similarity of Christian names in both families, such as Enoch, Levi, Mordecai, Solomon, and the like.

My father, at the death of his father, was but six years of age, and he grew up literally without education.

He removed from Kentucky, to what is now Spencer County, Indiana, in my eighth year. We reached our new home about the time the State came into the Union. It was a wild region, with many bears and other wild animals still in the woods. There I grew up. There were some schools, so-called, but no qualification was ever required of a teacher beyond "read-in', writin', and cipherin'" to the rule of three. If a straggler, supposed to understand Latin, happened to sojourn in the neighborhood he was looked upon as a wizard. There was absolutely nothing to excite ambition for education. Of course when I came of age I did not know much. Still, somehow, I could read, write and cipher to the rule of three, but that was all. I have not been to school since. The little advance I now have upon this store of education, I picked up from time to time under the pressure of necessity.

I was raised to farm work, which I continued till I was twenty-one. At twenty-one I came to Illinois, Macon County. Then I got to New Salem, at that time in Sangamon, now in Menard County, where I remained a year as a sort of clerk in a store. Then came the Black Hawk War; and I was elected a captain of volunteers, a success which gave me more

pleasure than any I have had since. I went through the campaign, was elected, ran for the legislature the same year (1832), and was beaten—the only time I have ever been beaten by the people. The next and three succeeding biennial elections I was elected to the Legislature. I was not a candidate afterward. During this legislative period I had studied law, and removed to Springfield to practice it. In 1846 I was once elected to the lower house of Congress. Was not a candidate for reelection. From 1849 to 1854, both inclusive, practiced law more assiduously than ever before. Always a Whig in politics; and generally on the Whig electoral tickets, making active canvasses. I was losing interest in politics when the repeal of the Missouri Compromise aroused me again. What I have done since that is pretty well known.

If any personal description of me is thought desirable, it may be said I am, in height, six feet four inches, nearly; lean in flesh, weighing on an average of one hundred and eighty pounds; dark complexion, with coarse black hair and gray eyes. No other marks or brands recollected.

Yours truly,

A. Lincoln.

—*Interstate Schoolman.*

THE LINCOLNS AT LINVILLE

JOHN WALTER WAYLAND

Most persons are familiar, at least in a general way, with the leading facts in the life of Abraham Lincoln, sixteenth President of the United States, the centenary of whose birth will be celebrated on the 12th day of this month (February). However, most persons think of him as a product altogether of the West; and but little is known of the family before they went to Kentucky, just at the close of the Revolution. It has occurred to me, therefore, that something about the history of the Lincolns in Virginia might be welcome to the readers of the *INGLENOOK*, the more so because such facts are generally unknown.

It was my privilege a few years ago to have a most delightful conference with a representative of the family in Virginia, Mrs. Elizabeth Lincoln Pennybacker, who has since died at the advanced age of 78. She had spent all of her long life in close association with the scenes and traditions of her ancestors, and related to me many facts of interest concerning the family history. What I shall have to say will be in substance what she told me.

John Lincoln, the first of the name to settle in Virginia, came from Pennsylvania some time prior to the

Revolution and located on the fertile lands bordering Linville Creek, now in Rockingham County, then a part of Augusta. It may be of interest to note in passing that "Linville" seems to be a modified form from "Lenvill," or "Lenivell," a family name. In 1746 William Lenivell purchased 1,500 acres of land near the head of the stream, and about the same time the name Lenivell appears to have been first applied to the beautiful rivulet that collects the water from the surrounding springs. John Lincoln's tract, or at least part of it, was purchased from a grant of 7,009 acres made by the Virginia colonial council in 1739 to Hite, Duff, McKay, and Green. Hite (Jost Hite) was perhaps the most prominent leader in the settlement of the Shenandoah Valley.

John Lincoln gave a considerable body of land to each of his five sons, Abraham, John, Jacob, Thomas, and Isaac; but in time all of them except Jacob left Virginia, going for the most part to Kentucky. John finally got to Tennessee. Abraham, who went to Kentucky about 1782, was the father of Thomas, Mordecai, and Josiah; and Thomas was father of Abraham, the President.

A strong reason why the Lincoln boys went to

Kentucky is doubtless to be found in the fact that they were intimate friends of Daniel Boone. About the year 1751, when the youthful Boone, with his parents, was moving from Berks County, Pennsylvania to Carolina, he is said to have spent a year or more on Linville Creek, some six miles north of the present town of Harrisonburg. Now, from this location he must have been a near neighbor to the Lincolns; and I am of the opinion that the Boones were probably the guests of the Lincolns during this sojourn. At any rate, the association of Boone with the Lincoln homestead on Linville Creek gives the place a double interest.

According to the statement of President Lincoln himself, made in a letter written in December, 1859, both his parents were born in Virginia. His father (Thomas) must have been about four years old at the time his grandfather (Abraham) moved to Kentucky; and since he moved from the Linville Creek neighborhood we are able to establish a close association between the President's immediate ancestors and the old Virginia homestead.

Jacob Lincoln, the President's great uncle, who remained in Virginia, attained distinction in the Revolutionary army, rising to the office of lieutenant or captain. He was called Captain Lincoln by Mrs. Pennybacker. Shortly before going to the war he had married a young lady, Miss Robeson, much against the will of her father, who accordingly avowed his intention of disowning her. The patriotism of young Lincoln and his wife was more abundant than their wealth: in fact, they appear to have been very poor as yet; so after the husband's departure from home the wife and mother had a hard struggle to keep the wolf from the door. Taking her young child she went out into the field, where with her own hands she cut the grain that was to furnish them bread. At last her father, either from pity or moved by a sense of shame, sent her a young negro girl, to be her servant. With the slave girl's assistance she managed to get along until her husband returned at the close of the long struggle.

But in time Captain Lincoln and his wife succeeded in mending their fortunes. About the year 1800 they erected a good, large brick house, which is still standing in good repair. Captain Lincoln was succeeded as owner by his son Abraham, who added a substantial east wing to the structure, which is at present the comfortable home of Mr. Samuel M. Bowman, a worthy member of the Church of the Brethren. The house stands half way up the long slope on the east side of Linville Creek, at a distance of a couple hundred yards from the stream. Several miles beyond the latter, toward the west, the first ranges of the Alleghany Mountains are in plain sight. On the slope above the house, two or three hundred yards to the east, is the old family graveyard, surrounded by its

high iron fence, in which Captain Jacob Lincoln (1751-1822), his son Abraham (1799-1852), and other relatives are buried. Mrs. Pennybacker was a daughter of Abraham, just mentioned, her maiden name being Lincoln. In certain parts of Rockingham County the family name is frequently met with at the present day.

It may be interesting in this connection to observe that the Pennybacker family is also one of distinction in the valley of Virginia, as well as elsewhere. Elizabeth Lincoln's husband, Colonel John D. Pennybacker, was some time member of the Virginia State Senate; and his father, Isaac S. Pennybacker, was United States Senator from Virginia from 1845 to 1847, having previously been a member of the House of Representatives. Ex-Governor S. W. Pennybacker of Pennsylvania is a near relative.

Abraham Lincoln, the President's grandfather, was killed by Indians a year or two after he settled in Kentucky, and a tragedy also marked the old homestead on Linville Creek. Captain Jacob's son, Abraham, by accident cut his brother John so severely with a scythe, while the two were mowing together, that the injured man bled to death.

The young trees for the large orchard which Jacob Lincoln planted soon after 1800 were brought from Pennsylvania. Some of these trees were still to be seen only a few years ago. About the same time that he planted his orchard, Captain Lincoln engaged a German artisan named Schultz to make him a bookcase, corner cupboard, desk and other articles of furniture for his house. The mahogany for these articles was hauled by wagon from either New York or Pennsylvania, Mrs. Pennybacker was not certain which. The writer had the privilege of examining the identical cupboard and desk, which are remarkably well preserved, and which are really marvels of workmanship. They bid fair to last another hundred years.

THE SUPERFLUOUS BOY.

ELIZABETH M. ROYER.

Chapter III.

"WELL, if here isn't Francis! Why, child, how comes you are out so late? I was almost ready to go to bed. Come right in and rest a bit and have some of my fresh cookies before you go back. How are all the folks? I haven't seen any of you for quite a little spell. One of our neighbors has been sick and I have been looking after her now and then." While she had been talking, Grandma Peasley had Francis seated in the most comfortable rocking-chair with a plate of cookies at his elbow and another of apples. In blissful content, he munched away, sure of her sympathy in the tale he had to tell.

"Well, now, you poor dear!" grandma would exclaim.

"Well, well, those girls certainly do make things lively. I guess I had better take you."

"And, grandma," he concluded, "I just decided I wouldn't go back there and stand all of their fussing in the morning. It's more than I can take. I thought I would come over here and maybe when they found it out in the morning they would be sorry and treat me better. I tell you, grandma, I have been having some pretty hard times. I can't be captain of the football team any more just because of that, and I bet Annette has gone back on me." No one knew of her but grandma. No one else could understand. "I just reached the limit, and I thought I would give them a good scare once, and mebbe they would appreciate me better." The cookies and grandma's cheerful face made it possible for him to talk of his troubles without tears. Somehow, since he was here they did not seem so large.

"Well, well, that's just right. Always come to your grandmother when in trouble. She will never desert you. You can depend on her. I like boys and I like to have them around. Now don't be afraid of eating those cookies. They won't hurt you and there are plenty more in the crock. Now, you say they don't know that you left at all?"

"Yes, I climbed out the back window and ran through the back gate and got out just as easy. They never thought of a thing. I bet they will be good and sorry in the morning. Mebbe they will get out the police and put my name in the paper. Now, wouldn't that be fun?"

"Yes, of course, that would be lots of excitement. I don't suppose they will worry much, do you?"

"They don't worry much when I am there and I guess it won't hurt them now. I bet that Miss Tam will be glad enough to see me coming back tomorrow and she won't tease me any more. When she sings, 'Don't worry, keep smiling,' I feel like I would have to-to knock a hole right through something, it makes me so mad." His burdens were lightening with every word. To find someone to sympathize certainly did lots to help lift the trouble.

"No, I guess they won't worry too much," said grandma half to herself. "Once when your father was young, he ran off and I felt pretty bad. I got a good many of my gray hairs that night. I stayed up all night and hunted and hunted but couldn't find a trace of him anywhere. In the morning we found him asleep in the haymow. His father had whipped him and he had gone out there, but that didn't keep me from worrying. But you said your folks didn't think very much of you so, of course, they won't worry."

"No, I don't think they will," answered Francis, thoughtfully, "but if you think there is any danger of mama feeling awful bad, maybe you had better telephone over. I guess they wouldn't come clear

over here tonight, and in the morning perhaps they will be feeling better."

"Well, well, now that's a kind, considerate boy. That's the way I like to hear boys talk. We will see. I think you had better be getting ready for bed if you have had enough to eat. Let me think a minute. I believe I have a chicken leg left from supper. Do you think you could eat that yet?" Grandma looked a little doubtfully at the empty cooky plate.

"I guess I could, grandma. You see I haven't had very much to eat today and I got pretty hungry. I did manage to get a few extra things and hide them at noon so I wouldn't quite starve, but they didn't go very far."

"You come right along out in the kitchen and I will get that for you," answered grandma, heartily.

"Say, grandma, maybe I ought to wash up a little bit before I go to bed. I got kind of dirty out playing." Francis looked doubtfully at his grimy hands.

"Now, don't you wash unless you feel like it. I know how boys hate to wash, and I don't want them to do anything they hate to do. I don't suppose I will mind washing a couple extra sheets and pillow slips. My rheumatism doesn't often strike me on wash-days."

"I think I better. I wouldn't want to make you so much work. I don't believe I would mind washing here if I knew Tam wasn't looking."

"All right, sonny. Right here is the basin and here is the water, and over there hangs a towel. Just go right along and wash all you want," directed grandma, as she bustled about getting the necessary things ready.

"Your water feels better than ours," commented Francis, as he displayed a shining face and clean hands for grandma's inspection. "If you see any dirt around the corners you take that rag and wash it off, please. I can't always get to all the corners."

"Now, that's a pretty fine job for a boy your size. I don't believe Tam herself could do that well. Let me get my specs a minute." Grandma looked him carefully over. "Here's a little speck mebbe I ought to doctor some. Now, you are as clean as a new pin. I will be proud to have such a fine boy sleeping in my bed."

"I tell you, if they would give a fellow at home a little encouragement like that I wouldn't mind washing so much," confided Francis.

"Francis, do you suppose you could go down those steps and bring up that plate that sets at the bottom on the floor, the one with a cover on it? I will hold the lamp for you."

"Sure I can. I used to be afraid in the dark, but I ain't any more."

He started down, but grandma's steps were treacherous affairs and had to be understood. The lamp

gave little light and when he was half way down, he stumbled and fell to the bottom.

"O Francis," cried grandma in alarm, as she hurried to help him, "are you hurt?"

"Boo-oo-oo, it hurts awful. My ankle. I can't stand it."

With infinite labor, grandma succeeded in getting him upstairs to the lounge in the sitting-room, and found that he had given his ankle a severe wrench. She bathed it tenderly and tried to soothe him, while he manfully fought back the tears that insisted on coming. All thought of telephoning was forgotten, and neither did she think of it after Francis had fallen into a troubled sleep, as she sat patiently beside him listening to his restless mutterings. The ring of the telephone startled her. She arose at once to answer it. Mrs. Peasley's peevish voice came complainingly over the wires telling that Francis had gone and they couldn't imagine what had become of him. They had looked all over the neighborhood and had gotten everyone out of bed, and had even called up the police. They couldn't find any trace of him at all. There had been gypsies in town and they were afraid he had been kidnaped. They were dreadfully worried. The girls were all crying and she was almost distracted. What in the world were they going to do?

"Well," replied grandma, "I guess you won't have much of anything to do. Francis is over here. You sent him upstairs without any supper and for an unjust reason and he thought he would come over to see me."

"Yes, I know," Mrs. Peasley answered in relieved tones. "I am so glad you have him. Girls, Francis is at grandma's. Stop crying. Yes, I know, mother, I was too stern. I admit that now. I have been sorry for it ever since. Well, you send him home in the morning. Tell him he won't get punished."

"I don't know as I shall send him home in the morning," replied grandma with little sympathy for them. "He fell down the cellar stairs and hurt his ankle. I guess he will be over here for a couple of weeks yet."

"O mother, is it serious?" distractedly inquired Mrs. Peasley. "I will be right over. The poor child!"

"Now, don't fret yourself, Maud. I have done all that can be done for the child."

"I haven't time to talk a minute. I will be right there as soon as I can get my things on."

The receiver was hung up with a clash. Grandmother went back to her post. Francis had awakened and listened to the conversation. Grandma told him what he could not hear.

"They do love me a whole lot, I guess, don't they, grandma? I am sorry if they worried about me. I would hate to have them feel as bad as I did this morning."

"Tut, tut," enjoined grandma with tears in her eyes, "lie down and go to sleep."

"I want to wait until mama comes."

"No, no, you must get some sleep. Does your ankle still hurt?"

"Not so bad as it did, but it's pretty bad still."

Francis, at grandma's command closed his eyes, but he did not sleep, for as soon as his mother's step was heard on the porch, accompanied by others, they were wide open, searching the doorway for a glimpse of his family.

"O Francis," cried his mother on her knees with her arms about him, "I am so sorry. You poor child! How your ankle must hurt!"

"The pa-i-n don't bother mu-much i-if you st-t-ill lo-love me."

"Love you, you darling child, of course, I love you. My! How worried I was when I thought you were kidnaped."

"Yes, we do love you, Francis," avowed Sarah, "you can sleep all day if you want to."

"I don't care how dirty your hands get," conceded Marie.

"I am going to try awful hard to get up early and keep clean after this," he answered in broken, smothered sobs from his mother's neck.

"You dear boy," chorused all of them.

"Yes," announced Tam, "I saw that Tom Green tonight, and mebbe you think I didn't give it to him. The boys don't like him and they want you back for captain as soon as you can get there. Fred said so tonight when we were hunting for you." Then in a whisper she added, "Annette is awful sorry you were lost. She don't like that Tom Green one bit. Don't you worry about her. I tell you, I'm not going to tease you any more either."

"You are all so good," murmured Francis, as he fell asleep with a smile on his face.

The End.

A POOR boy, who by dint of hard work had succeeded in getting an education, decided to try for a vacancy in a Chicago bank. While he was in the office the bank president touched a button and the bank's detective stepped in. He looked at the boy and then went away. The president said, "Come back in a week." At that time the president said, "There are forty-six applicants for this place. All have been watched for a week. Only two boys passed the character test, which touched particularly the points of extravagance, vice, where evenings were spent, and the Sabbath day. All this is strictly business and not at all an inquisition into private character. This bank must take account of these things for its own sake. Of the two you have the best qualifications, and the place is yours."—*Home Herald*.

Nature Studies

THE HUNTER WHO WAS CURED.

WITHOUT any nature-faking or any mawkishness, Dr. Henry Smith Williams describes the drama of a wounded bird.

"The bird at which the boy had fired thrust down its legs and wobbled as if about to fall; then recovered itself and flew on, its legs dangling. A chance shot had apparently broken its back, paralyzing the legs, but leaving it still strength enough to fly a certain distance. Trained hunter as he was, the boy watched the wounded bird, and marked the exact spot where it finally dropped just at the edge of a cornfield half a mile away.

"'I think I'll go after it,' said the youth.

"'Nonsense,' said Luther; 'it's a half mile away and you have all you want without it.'

"'But the bird is wounded. I hate to have it lie out there and suffer.'

"'Oh, it's probably dead; or if it isn't some skunk or weasel will kill it tonight. Come along.'

"It was nearly sunset, and the youth was tired after the long tramp of the day. It would be a long trip over to the cornfield for weary legs—and then perhaps to find the bird dead. Already it was supper time at home, and he had a hunter's appetite. So he allowed himself to be overpersuaded, and the two tramped homeward.

"But the grouse that had fallen over in the cornfield was not dead. Nor, as it chanced, was its wound of a kind to produce speedy death. The injury did, however, render the bird utterly helpless. Once it dropped to the earth, it could not rise again. Nor could it move about on the ground, for its legs were paralyzed completely. It lay on the bare earth, sheltered by the cornstalks from the eyes of hawks, and where there was not much danger that a marauding beast would find it. But there was no food at hand. It was doubtful even whether the bird would be able to sip a few drops of dew from a cornstalk to quench the thirst that its wound must develop.

"Quite obviously fate had marked the grouse for a lingering death of torture. Its wound, already painful, must become more so with the lapse of time. Insects would come in phalanxes to pester it. Hunger and thirst would add their modicum of agony. The

greatest mercy it could hope for would be the coming of some skunk or weasel, as the hunter had suggested, to put it out of misery. But no such messenger of speedy death chanced to come that way."

Dr. Williams describes the church service the following Sunday morning, and the awakening of the boy's mind to a fear that the wounded grouse might not have died all these days, and he goes on:

"The youth's soul was undergoing development in that half hour. He was making one of those short cuts from point of view to point of view. He was passing—little as he realized it—from the barbarian-hunter stage to a plane of broader sympathies.

"All through the lesson he sat brooding the same thoughts, and as he left the church the idea of the wounded bird had taken full possession of his mind. Instead of going home, he set out for the field where he had shot the grouse. He believed he might find the bird even yet. At least he would try.

"A good memory and a keen eye enabled him to go about the point of the field from which the grouse had flushed; and over by a peculiar fence post—where the wounded bird had gone down. He went directly to it, and scarcely entered the cornfield when his dog came to a point. There ahead on the ground lay the bird, stretched at full length. It made no effort to escape as he came up. It was too near death to fear him or anything, its eyes half closed, its bill agape, as it feebly gasped for breath.

"In an instant the youth was on his knees beside the bird, a great lump in his throat, his eyes straining as if they would start from their sockets. The meaning of it all came to him with the force of a blow. Mechanically, he brushed away the insects that gathered about the wound in the bird's back. He stroked the soiled plumage tenderly. He found himself calculating the hours that the grouse had lain there suffering. It had happened Wednesday and this was Sunday—24, 48, 72, about 90 hours; yes, fully 90. What a cruel stretch of torture! The youth recalled an occasion when he had had a toothache for two hours that had seemed interminable; and the meaning of that 90 hours of pain came home to him yet more vividly. In an agony of remorse he knelt there, thinking, thinking. He closed his eyes, and

when he opened them a few moments later the grouse had ceased to breathe.

"The youth rose suddenly and walked to the verge of the cornfield. He selected a spot in a fence corner, and began to dig a hole. The ground was hard, and he had nothing but his knife and a piece of a stick to aid him; but he persevered the more stubbornly as his fingers become sore from digging. When the grave was deep enough, the youth went after the body of the grouse and took it up very tenderly, as if so much suffering had given it sacredness. He laid the poor thing carefully in the ground, smoothing its every feather. Then he resolutely scooped in the dirt till the grave was filled and carefully smoothed over.

"It was a thoughtful youth who walked slowly homeward across the fields that autumn day. He was asking himself what right he had to inflict such suffering as that. What manner of friend to the birds was he that could wish only to kill them? What pleasure could he get in future in shooting always with the possibility of reenacting the tragedy of the cornfield?

"Long before he reached home, the youth had made up his mind. He knew that he should never shoot his gun again. He had entered a new phase of life. The desire to kill was no longer strong in him. The instinct of the hunter had left him forever."—*Our Youth's Friend*.

DENIZENS OF THE TREES AND EARTH IN WINTER.

A FEW days ago a small mob of English sparrows was seen chasing a frightened bird from one building to another. The fleeing bird proved to be a brown thrasher.

The poor thing while migrating at night had probably become dazed by the city's lights, and had dropped down into the streets to await daylight. Then, chased by the sparrows, it had become too frightened to rise over the tops of the buildings, and was fluttering against the sides of houses, alighting on a bay window or catching on an opened blind, where it would remain, panting for breath, until its tormentors compelled it to move on.

During the bird migrations it is not uncommon to find shy and often rare denizens of the forests flying about the crowded city streets or searching for food in the treeless courts of business districts.

With most birds and mammals fall is a season of preparation for the coming winter. Most of the mammals and birds that do not migrate to a warmer climate where food abounds must either hibernate or lay in a stock of provisions.

Now they may be found building their winter houses and carrying in stores. In fact, every animal seems to be hurrying and bustling, lest nature catch it un-

awares and kill it with cold or starvation before its work is done.

The robins have long since left the villages and taken to the fields, the brush lots, and the margins of the groves and woods. All through the day flock after flock passes southward, and scattered bunches flying high hurry to their roosting places in the groves and dense forests as evening approaches.

The casual observer sees little bird life just now, but if he knew where to look he would find the woodlands and meadows well populated with feathered people. The reason he is misled is that, save for the call notes and once in a while the soft, subdued song of a robin or a song sparrow, the birds are silent now.

It is strange how birds of different species seek one another's society at this season of the year. In the thick willows along the streams and lakes purple grackles, red wing blackbirds, rusty grackles, and cowbirds silently feed together.

But the mammals are even more active than the birds in preparing for the winter. Most of the birds migrate, and but few mammals do.

The woodchuck or ground hog made hay before the farmer cut his crop. He has spent his entire time from late in August, even during moonlight nights, eating the clover heads and stealing the farmer's vegetables.

The result is that he has filled his contract with nature, and has clothed himself in a layer of thick fat that will not only keep him warm, but will nourish him while he sleeps. During the Indian summer days, after the crops are harvested, leaving exposed the entrance to his burrow, he will crawl to the mouth and, seated on the mound of earth, take a farewell look at the world before retiring for the winter.

Along the streams and in the marshes the muskrat is busy building his winter house. He piles clots of dirt, sticks, weeds, and other rubbish, gathered along the water's margin and the bottoms of the streams or lakes.

Swiftly and silently he swims along, carrying the nesting materials in his mouth. In the rushes in shallow water he deposits his load and returns for more. In a month's time he will have made a mound house several feet high.

In the center of this mound there is a room, wet and small, to be sure, but large enough and high enough above the water to house his family comfortably. From here he will make excursions after food, and, no doubt, in time of storms he will go hungry, but somehow he usually manages to survive until spring.

The gray squirrels have left their summer nests of dried leaves and taken quarters in the hollow tree trunks. They, like the red squirrels, chipmunks, and many other smaller rodents, are busy laying in their winter's harvest of nuts, grain, and seeds.—*Selected*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

A GREAT MAN REMEMBERED.

IN many parts of our country the public schools for some years have observed Lincoln's birthday, Feb. 12, with appropriate exercises. This year, which marks a full century since the birth of the great man, the observance of the event in the schools is to be more widespread. Extra efforts are being made to place high in the estimation of the pupils the man who lent himself so fully to the cause which he believed to be right. In addition, through an act of Congress, giving him the authority, the President has issued a proclamation "setting apart Feb. 12, 1909, as a special holiday in recognition of the centennial anniversary of the birth of Abraham Lincoln."

Many of us are firm in the belief that for every great occasion there is some one who has fitted himself to meet it, and we have no better example of this than that of our first martyred President. The lesson we can draw from his life is this: Make the best of our opportunities and devote the results to the welfare of our fellow-men. This may not bring us before the world, as it did Abraham Lincoln, but it will make us truly good and great. Whether we are ever known outside our own neighborhood is a matter of little importance. Whether we have "made good" in the humble as well as in the high place is a matter of deep concern to the very angels in heaven.

"EASY" DIVORCE LAW CONDEMNED.

Not long ago we quoted the words of Mrs. W. H. Taft on the evils of the modern divorce laws. Now we give our readers the opinion of a county judge on the same subject. It was during the process of dissolving the union of a certain couple recently that Judge John Gibbons of Cook County, Ill., took occasion to speak of the sanctity of the marriage relation. Here is what he says:

"Although I grant hundreds of divorces annually

in obedience to the statute of this State, I nevertheless believe that divorces should not be allowed, except possibly for one cause, and this, I think, should be the policy of the State, whether viewed from the standpoint of divine or human law. When Adam and Eve entered into the bonds of holy matrimony before God himself, it was proclaimed in the morning of the world: 'Therefore shall a man leave father and mother and shall cleave to his wife; and they shall be two in one flesh.' And Christ, speaking on the same subject, declared, 'Have you not read that he who made man from the beginning made them male and female, and said, For this cause shall a man leave father and mother and shall cleave to his wife and the two shall be one flesh? What, therefore, God hath joined together, let not man put asunder.' Whereupon the Pharisees said to him, 'Did not Moses command to give her a bill of divorce, and put her away?' And Christ answered, 'Moses from the hardness of your heart suffered you to put away your wives; but from the beginning it was not so,' which means that under the old law but one cause for divorce was recognized, and I believe that to this fact largely may be attributed the stability of the Jewish home and integrity of the Jewish family.

"By reason of the many causes for divorce under the laws of this State, marriage is reduced to the level of commercialism, and the consequences are more baneful to society than Mormonism. Whenever a man prefers another woman to his wife he usually finds a way to compel her to take refuge in the divorce courts, and it not infrequently happens that the husband retains and pays for the lawyers on both sides of the case, and in this manner there is little difficulty in securing the divorce. This is why there are apparently so many more women than men seeking divorces."

Judge Gibbons further says it is his belief that "an enlightened public sentiment will gradually correct this defect in the social system." Considering that divorces are becoming more and more common and that people are seemingly growing more and more indifferent to the evil, it is hard to see when that turn will be made. Would that all those who recognize the evil might agitate the question so that a reform would set in before the condition of society became so corrupt that the country would be forced to take drastic measures for self-preservation. When anything opposed to the eternal principles of right runs its full course, destruction is the end; and all right-thinking people must confess that the divorce evil has gone far on its way.

BLOW TO PARTY SPOILS SYSTEM.

THE saying that has been put in practice by both the big parties since the time of Andrew Jackson, "To the victor belong the spoils," will likely have to

be changed, if not in word, at least in meaning. Henceforth, if we retain the present wording, we will understand the "victor" to be the one, of whatever party, who has proven himself most competent to discharge the duties of an office in the gift of the party in power. President Roosevelt has adhered to this idea in some degree throughout his administration. But the most decided stand taken on the subject is that of Governor Hughes of New York.

During his first term the Governor made it pretty plainly felt by "the organization" that he had no debts to discharge with fat-salaried or influential positions. This term he is emphasizing the fact even more plainly than before. William E. Curtis, writing for the *Chicago Record-Herald* tells about it thus:

"Acting upon the principles he has declared so frequently and plainly, Governor Hughes took particular pains in his inaugural address to proclaim his independence of the Republican State Committee and the leaders of that party, and emphasized his attitude immediately on the first day of his second term, by placing under the civil service laws about two thousand appointments as county superintendents, county engineers, surveyors and other officials authorized by the new highway law. He announced that all of them, without regard to political connections, will be appointed from lists of eligibles, to be prepared by the State civil service commission after examinations to test the qualifications of candidates for the actual construction and maintenance of roads.

"The Governor's action withdraws from patronage of the Republican machine about one hundred positions paying salaries of \$2 500 and upward, whose incumbents will have the employment of large numbers of men in carrying out the expenditure of \$50,000,000, in the construction of new roads. This fund has been raised by the issue of bonds voted by the people, and is to be expended pro rata among fifty-two different counties of the State, an average of nearly a million dollars to the county, which as you may judge, placed a tremendous political influence in the hands of the president of the commission.

"The loss of the control of this patronage is the hardest blow that has been struck at the Republican party for many years, particularly as its majority in the Legislature included a provision making all these officials exempt from the competitive system of appointment under the regular civil service regulations. The action of the Governor does not violate this provision, because it does not require competitive examinations, but it does require a severe test to prove the qualifications of candidates who present themselves."

When we come to think what a fruitful source of corruption this spoils system is we wonder why it was not thrown out long before this. Perhaps it was because a man bound himself to it by the mere act of entering the political field. And now that that field

has been made to assume a more decent appearance of late years, the bands have been weakened. However that may be, much honor is due Governor Hughes for the action he has taken. The country will benefit by it all around. The duties of these offices will be more fully discharged because the worker will be more competent and because he knows the quality of the work done is of chief importance. Then, too, the earnest worker everywhere will be encouraged, knowing that faithfulness and competency are the strongest "pull" a man can have.

ABRAHAM LINCOLN.

Oh, slow to smite and swift to spare,
Gentle and merciful and just!
Who, in the fear of God, didst bear
The sword of power—a nation's trust.

In sorrow by thy bier we stand,
Amid the awe that hushes all,
And speak the anguish of a land
That shook with horror at thy fall.

Thy task is done—the bond are free;
We bear thee to an honored grave,
Whose noblest monument shall be
The broken fetters of the slave.

Pure was thy life; its bloody close
Hath placed thee with the sons of light,
Among the noble host of those
Who perished in the cause of right.

—Bryant.

He knew to bide his time,
And can his fame abide,
Still patient in his simple faith sublime,
Till the wise years decide.
Great captains with their guns and drums,
Disturb our judgment for the hour,
But, at last, silence comes;
These all are gone, and standing like a tower,
Our children shall behold his fame,
The kindly, earnest, brave, foreseeing man.
Sagacious, patient, dreading praise, not blame,
New birth of our new soil, the first American.
—James Russell Lowell.

THE CENOTAPH.

(On the final burial of Lincoln at Springfield, April 14, 1887.)

And so they buried Lincoln. Strange and vain!
Has any creature thought of Lincoln hid
In any vault, 'neath any coffin lid,
In all the years since that wild spring of pain?
'Tis false—he never in the grave hath lain.
You could not bury him although you slid
Upon his clay the Cheops pyramid,
Or heaped it with the Rocky Mountain chain.
They slew themselves; they but set Lincoln free.
In all the earth his great heart beats as strong,
Shall beat while pulses throb to chivalry
And burn with hate of tyranny and wrong.
Whoever will may find him, anywhere
Save in the tomb. Not there,—he is not there!

—James Thompson McKay.

The Home World

THE GOOD OLD DAYS

ELIZABETH D. ROSENBERGER

"GIRLS had no time to idle away when I was young," said Aunt Zebudah, musingly.

"Then I am glad I am a girl now, instead of long ago," said Nora who was busy with the week's mending.

"Of course our spinning and knitting took up so much time that we had but few leisure moments. And then each girl was an accomplished housekeeper besides, so how could there be any parties or good times?" asked Aunt Zebudah.

"I am sure I don't know," answered Nora. "It seems as if I have all I can do, and if you had more work than this, why, I am sorry for you, that is all."

"I wish you could see the linen spun and woven by my own grandmother," continued Aunt Zebudah. "Her loom gathered up the threads of the finest wool or cotton and made the most beautiful fabrics. Her linen spun and woven would in these days be worth its weight in gold."

"And I suppose she grew round-shouldered working at it," said Nora, who had but little veneration for the past. It was good to be alive now and enjoy life to the full, but if Aunt Zebudah liked to talk of bygone days Nora was willing to listen, so she said, "Tell me something about those days. Were you ever at a quilting party?"

"Yes, indeed," answered her aunt. "We girls would quilt an entire afternoon and then eat supper, and later in the evening the boys of the neighborhood would come in. Then we had games and afterwards it was as the old song has it,

"'An' 't was from old Aunt Dinah's quilting party,
I was seeing Nellie home.'

and we girls lived over again in dreams the pleasures of the evening."

"I am afraid our set would require some time to get used to a program for a party like that," answered Nora.

"Our work was harder because we had no con-

veniences," went on Aunt Zebudah, reminiscently. "We always had to carry our water from the spring. Sometimes the spring was a long distance from the house, and the bucket of water grew heavy before we reached the kitchen door. And then look at the old way of beating up eggs for cake. It used to be a knife or a spoon, a pan or a shallow dish and the eggs. I know I have watched my mother beating up eggs until I thought her arm would drop by its own weight. Beat, beat, beat with regular and equal strokes, until the dish seemed filled with the lightest and most delicate foam."

"Yes, and then some one put two cogwheels together with a little machinery and now a child can beat up in a few minutes all the eggs needed for the biggest bridal cake you ever saw," said Nora.

"Lucinda used to bake the most beautiful bride's cake and it was a pity she never needed any for herself; she was the old maid of the village. She was tall and angular. Her black hair never changed its color. Like a guidepost to the passing generation she held her place. She lived alone in a house exquisitely kept. Oh, yes, Dutch John wanted to marry her but she regularly refused him," and Aunt Zebudah smiled at the thought of Lucinda marrying anybody.

"And the men too had many things that were hard to manage. There was the refractory stovepipe with which they wrestled periodically. No invention has yet lightened that difficulty. In one instance, however, inventive genius has been kind to our fathers in the manner of putting up bedsteads. This generation may not have any recollection of the acrobatic achievements accomplished by an agile man in properly putting in order a bedstead that had cord to sustain the bed instead of slats or wire. It was an effort from the start, in which the best judgment and the greatest activity were necessary to get the bedstead fixed, so that it would stand, ready for the cord or rope. If you had successfully coaxed the end of

one side into one post, it would certainly fall out while you were at work on the other corner, and even if you had got round to the final corner, an unlucky move would pull the whole thing apart, and drop it, sides, foot and head, in a heap on the floor. Even with the posts all firmly set and the sides screwed in, the end was by no means yet. Stringing the cord or rope through the holes in the sides and then crossing them from the head to the foot, the real amusement and interest began in tightening the cords. You could only do it by getting on with your feet, grasping the row of cord with both hands and pushing and pulling until the tension was complete. The man who thought of the little catches or iron slots that drop into the holes in the posts and hold the sides there without bolt or wrench was a benefactor of the race."

But Aunt Zebudah was speaking again: "I wish you could have gone sleighing with us in those days, Nora. The snow rose over the rail fences and the bells rang everywhere. The young people managed to get sleds of some kind and I can hear them laugh as the snow crunched under our feet and the sleighbells kept time and tune to our happy thoughts. You have no such sleighing parties now."

And she was right, for we seldom have enough snow in these days. We never see the winter prairie, bound by the edges of the world, a whole circle of eternity cold and awful, lonely and mighty. The roads across the country were like white marble canals.

But we find that in the old days people lived without window glasses or matches, kerosene or illuminating gas. And we in turn, probably, are not living as comfortably as our children and grandchildren will live. We are living in the best age, that the world so far as we know, ever saw. Whatever mooning or regretting there may be over the past is simply nonsense and also false. The mistaken sentiment, "Oh, those good old times," was frowned down upon by King Solomon. He says, "What is the cause that the former days were better than these? for thou dost not inquire wisely concerning this."

KEEP THE ATMOSPHERE PLEASANT.

THE daughter of a busy housemother, who one day expressed the fear that her mother was working too hard, received an answer that told in a few words one of the secrets of happy and successful work.

"I don't mind working, and working pretty hard, dear," her mother said, "as long as the atmosphere is pleasant."

"As long as the atmosphere is pleasant!" Anybody who has worked under disagreeable or trying conditions realizes how much those words mean. To the busy mother who carries on her shoulders the burdens of the home it means everything if the members of the family circle are contented, happy, and

harmonious; her work, hard enough at best, is doubly so if there is grumbling, faultfinding, or ill nature to contend with. The teacher in the schoolroom looks with keen interest at the class which has come from the room below; for she knows that the personality of those boys and girls will determine in a large measure whether her year's work will be a source of pleasure or unhappiness to her. One unruly, mischievous, disobedient boy, one lazy, impertinent girl may easily rob her of all enjoyment of her work, and leave her at the end of the year with nerves completely unstrung.

No one person can make up entirely the atmosphere in which another person lives and works, but each of us can do more than we realize to make the atmosphere pleasant or unpleasant for another. The member of the home circle who is pleasant and even tempered, easily satisfied, quick to praise when things go well and equally ready to give others an opportunity, does much to keep the home atmosphere pleasant and to make the work of the housemother as easy as possible. In the schoolroom the boy or girl who is pleasant and friendly, but who respects the rules of the school and realizes that study should come before play, is the one who helps to lighten the teacher's burden and the one whom she thinks of with pleasure.

Wherever we may happen to be placed, whatever we may be doing, it is worth while to remember that we are helping to make the atmosphere in which others are living and working. It is not our fault if others in the same circle make that atmosphere irritating and disagreeable; it remains for us to offset their influence as far as we can by our own cheerfulness, courtesy, and unselfishness. We are to blame if, through our lack of these qualities, we make the atmosphere unpleasant for those about us, and so make it harder for them to go through the round of their daily duties.—*Friend for Boys and Girls.*

A PARENT'S PLEA.

My little boy is eight years old,
He goes to school each day;
He doesn't mind the tasks they set—
They seem to him but play.
He heads his class at raffia work,
And also takes the lead
At making dinky paper boats—
But I wish that he could read.

They teach him physiology,
And, oh, it chills our hearts
To hear our prattling innocent
Mix up his inward parts.
He also learns astronomy
And names the stars by night—
Of course, he's very up-to-date,
But I wish that he could write.

They teach him things botanical,
They teach him how to draw;

He babbles of mythology
 And gravitation's law;
 The discoveries of science
 With him are quite a fad,
 They tell me he's a clever boy,
 But I wish that he could add.

—Peter McArthur.

AMERICA'S NEED.

"WHAT America needs more than railway extension and western irrigation and a low tariff and a bigger wheat crop and a merchant marine and a new navy is a revival of piety, the kind mother and father used to have—piety that counted it good business to stop for daily family prayers before breakfast, right in the middle of harvest; that quit fieldwork a half hour early Thursday night, so as to get the chores done and go to prayer meeting; that borrowed money to pay the preacher's salary, and prayed fervently in secret for the salvation of the rich man who looked with scorn on such unbusiness-like behavior. That's what we need now to clean this country of the graft, and of greed, petty and big; of worship of fine houses and big lands and high office and grand social functions.

"What is this thing we are worshipping but a vain repetition of what decayed nations fell down and worshiped before their light went out? Read the history of Rome in decay and you will find luxury there that could lay a big dollar over our little doughnut that looks so large to us. Great wealth never made a nation substantial or honorable. There is nothing on earth that looks good that is so dangerous for a man or nation to handle as quick, easy, big money. If you resist its deadly influence the chances are that it will get your son. It takes greater and finer heroism to dare to be poor in America than capture a battery in Manchuria."—*Wall Street Journal*.

APPRECIATE YOUR MOTHER.

"OH, I never do housework!" we heard a young girl say, in a crowded car. "Mother doesn't expect me to. I keep my hands nice for my practicing. Mother's used to work; she doesn't mind. I never do the dishes."

Never help the weary mother who toils early and late to keep her precious daughter in school? Never lift one finger to lighten the heavy burden of her who has never spared herself for your comfort, from the time you were a tiny, helpless infant in her arms?

And this from a well-dressed and well-appearing girl, otherwise! Ah, well, there can't be many such, we think, whose eyes are thus so blinded that they cannot see the marks of time and toil on the one whose individual place could never be filled, should she be called away.

The remark was not intended for our ears, but, catching it as we passed, we thought of the many,

many girls who would be glad if only they had a mother to help. And so we say, Appreciate your mothers, girls, while you have them. For when you are older and wiser, you will realize that there is nobody in the world like mother.—*Selected*.

FASTENING WARDROBE HOOKS.

JOHN S. FERNALD.

MANY houses are deficient in closet room, and it is the exception rather than the rule to find one properly supplied with wardrobe hooks. The putting up of hooks by the usual method, by screws, is troublesome, and in many houses but few can be used in any given space on account of the unequal distances between the studding. Nails are unsightly, and wear the clothing badly. A good plan is to take long strips of thin board about three inches wide, and set the hooks as you want them. Then cut the strips to fit the space where you want to use them, and fasten them up securely with good screws. By this plan two screws will hold up a dozen hooks, more or less, and save a good many holes in the wall when a change is made.

Belfast, Me.

HOME-MADE SCRAPPLE.

GET a good piece of pork with enough fat to it to make the scrapple rich. Cook it until the meat falls apart. Drain the meat from the liquid, and when it is quite cold chop it with meat chopper or run it through the food chopper. Boil the liquor again, and dilute it with water if there is not enough liquid to make the mush. When it boils, add sifted yellow meal and make a thin mush. Stir constantly to prevent it from burning. When it is done, it should not be too stiff and the meat must be put in and thoroughly mixed with the mush. Take it out and put it into shallow pans. When cold it can be cut and fried the same as mush.

Chicken scrapple is made with the white of chicken or all of the meat and is thickened with white meal. It is very delicious, though not so rich as the pork scrapple.—*Exchange*.

SHEETS, pillowcases, towels, tablecloths—all folded linens—should be laid upon the shelves with the open and hemmed ends toward the wall, the round folds outward. The effect is neater to the eye, and articles are more easily taken out.

THE man who stands upon his own soil, who feels, by the laws of the land in which he lives—by the laws of civilized nations—he is the right and exclusive owner of the land which he tills, is, by the constitution of our nature, under a wholesome influence, not easily imbibed from any other source.—*Edward Everett*.

The Children's Corner

ALL I HAVE.

If I had a lot of money,
I will tell you what I'd do;
I would pay it out for teachers
For the heathen; wouldn't you?

But I have only a little—
Just a nickel, new and bright,
And a dozen copper pennies—
Isn't that a sorry plight?

But I'm thinking of a story
Mama read to us one day—
How a crowd of hungry people
Followed Jesus in the way,

And a little boy among them
Had some tiny loaves of bread
He had brought to eat when hungry,
And two fishes, some one said;

And he gave them all to Jesus,
And the Savior multiplied
Them until they fed the people,
And much food was left beside.

Maybe if I give my pennies
And my nickel for his sake,
Out of them a lot of dollars
For the heathen he might make.

But supposing that he shouldn't—
I will give them, anyway.
They will surely help a little;
Maybe I'll do more some day.

—Author Unknown.

MOTHER'S HERO.

"I'd like to have been Alexander the Great," said Charlie, dropping his book with a sigh. "Just think of the wonderful things he did! Wouldn't it be splendid to conquer the whole world?"

"I know who I'd rather be," said Josie, looking up from her book. "Joan of Arc! She was splendid if she didn't conquer the whole world. I think it's a mean shame they treated her as they did while she was alive, and now make a great fuss over her."

It was a stormy afternoon, so all three children were reading by the fire to pass away the time till Charlie started the subject of heroes. Mother was patching Joseph's trousers and listening to the conversation as it waxed warmer and warmer, and the young people grew red in the face as they defended their favorites.

"They weren't either of them half as great as King Alfred," said Joseph, emphatically. "He was a good man, too, and your Alexander wasn't. Our teacher said he drank, and did lots of other wicked things, but Alfred was great and good, too. And your Joan of Arc——"

"What about her?" demanded Josie. "I guess she was greater than——"

"Children, children!" said a gentle voice.

"You decide for us, mama," said Charlie. "Which one of us is right?"

"That is a matter of opinion," said mother, wisely. "Different people have different ideas about those things. I will tell you about my favorite hero, and then you can see what you think of my choice. I will not say a word against the ones you have chosen, so you must try to like mine."

"We will! We will!" cried the children, drawing their chairs nearer mother as she took a new patch.

"I can guess who," said Josie, with a knowing look. "It's George Washington!"

"I'll guess Abraham Lincoln!" put in Joseph.

"I think it's King Arthur of the Round Table," said Charlie, remembering the stories mother had read to them so often.

"All missed," said mother, patching away. "This man I'm going to tell you about had to stop going to school when he was only twelve years old to work for his mother and little sister. He studied hard in the evenings, and when he was sixteen he went back to school and graduated, doing his work night and morning at the store where he clerked. An uncle of his father's wanted to send him to college when he saw how well the boy had done, but would do nothing for the family, so he gave up the plan, and went to work again for them. You may be sure it was hard to do this, but no one ever heard him complain.

"His sister was married when she grew up, but soon died, leaving three little ones for her brother and mother to care for; so my hero had to work harder than ever. He brought up the children as well as he could, and took care of his old mother when she grew childish and fretful—for no one would help him when they found out how peevish the poor old lady was. He might have put her in a hospital, where she would have been well taken care of, but he began to be better off when he was middle-aged, for he took care of her himself till she died. He is free now to do as he pleases, but living as he did all those years kept him from making friends like other people. His work at home and away from home filled his life completely till a few months ago, but no one could have done that work more cheerfully than John Aiken. Now you know who my hero is."

"John Aiken! I am so disappointed!" said Josie. "It sounded as if he were some great man while you were telling the story."

"Well, I don't know that he isn't a great man," said Charlie, stoutly. "Our heroes had lots of praise and honor, but mother's is unknown. I think hers is best, after all. Some of us boys say 'Crooked John,' when we see him, but I never will again."—*Selected.*

The Quiet Hour

WHAT IS THY LIFE?

S. S. BLOUGH.

THE problems of life are many. Life and how to spend it becomes the greatest. It is one that concerns each of us. How shall I spend my life? This is a question on which we should not—yea, must not—go wrong, for do not the issues of eternity hang upon the workings of life? We need not go wrong for have we not the Good Book to direct us? Have we not in it the teaching of our blessed Lord? Is not his blessed example set therein? If we only look, listen and obey, the problems of life will all be solved aright. We need not go in the dark. The life of the blessed Jesus becomes our light and enables us, also, to live and do acceptably.

But, seriously now, will you meditate with me? Is my life all that I want it to be, all that it ought to be, all that my Savior wants it to be? Does it turn a bright or a dark side toward those who follow me? Have my words been as "apples of gold in pictures of silver"? Are the deeds of my life golden? Am I doing as near as I know how as Jesus would were he in my place?

Already several weeks of the new year have passed and we surely realize that time is fleeting. God has given us these precious days, each moment of which should somehow count for him. How do we spend them? As are the moments so are the hours, as the hours so the days, as the days so your life. What shall be your life?

There are all too many who do not realize the value of time. In every land there have always been those who stand "idle in the market place." Somehow, they fail to grasp the tremendous influence of idleness on the issues and results of their lives. It is a bad thing for a man to be idle and be alone. "Satan finds work for idle hands to do." "An idle brain is the devil's workshop." If our life is to be satisfactory, we must have employment for these precious moments. It is the moment, the hour, the day, when one is pursuing no fixed purpose that he is most likely to fall into temptation. His will is more or less relaxed, his attention is not fixed, and almost unconsciously he seeks

amusement of some sort. Then come the idle words, wasted energy, and the talent misdirected. There is a mistaken notion or practice, at least, that when a man loses his regular employment, that wherein he earns his living, that he must necessarily be idle. This is a great mistake, and has prevented many a man from making the most of himself. Instead of this, such times should prove actual blessings. If we take them as opportunities to look about us and survey our possibilities and capabilities for better work, they may indeed be a means of stepping to a higher plane of usefulness. And why should it not be so? "There is always work, and tools to work withal for those who will." There is always room for those who do their duty. Life is always worth while for those who are anxious to make it worth while. There is very seldom any excuse for idleness pure and simple. Many have become eminent and successful by the wise employment of leisure. Go thou and do likewise.

If the work of such moments will not bring immediate financial results, it will at least make your life richer by doing some good to your fellows. What is thy life? Shall those who follow after you on life's stage of action call you blessed for the example which you leave? Shall the hearts of those around you warm at thought of your good deeds? In eternity shall you meet the treasure laid up in time? The question is worth pondering. It deserves your deepest meditation and wisest action. What is thy life?

"THERE STOOD A MAN OF MACEDONIA."

Through midnight gloom from Macedon
The cry of myriads as of one,
The voiceful silence of despair,
Is eloquent in awful prayer,
The soul's exceeding bitter cry,
"Come o'er and help us, or we die."

How mournfully it echoes on,
For half the earth is Macedon;
These brethren to their brethren call,
And by the Love which loved them all,
And by the whole world's Life they cry,
"O ye that live, behold we die!"

By other sounds the world is won
Than that which wails from Macedon;

The road of gain is round it rolled,
Or men unto themselves are sold,
And cannot list the alien cry,
"Oh, hear and help us, lest we die!"

Yet with that cry from Macedon
The very car of Christ rolls on;
"I come: who would abide my day
In yonder wilds prepare my way
My voice is crying in their cry;
Help ye the dying, lest ye die."

Jesus, for men of man the Son,
Yea, thine the cry from Macedon;
Oh, by the kingdom and the power
And glory of thine advent hour,
Wake heart and will to hear their cry;
Help us to help them, lest we die.

—S. J. Stone.

GOD'S PROMISES.

God's promises are all lamps to light up dark places; and I know of no brighter one than this: "As thy days so shall thy strength be."

But maybe you are already in the long, dark passageway. Or possibly the valley through which your steps are leading is a very dark and shadowed one. Then gladly I bid you look up and catch some of the light which God sheds down from this blessed assurance.

"When the sun withdraws its light,
Lo! the stars of God are there;
Present host, unseen till night—
Matchless, countless, silent, fair."

If we never had nights, we could never see the stars. And so if you and I never had any trouble, we could never enjoy such a promise as this of which we have written. We do not love nights, but we do love the stars. We do not love sorrow and trouble, but we do bless God for sustaining grace. We do not love weakness, but we rejoice in such promises of God as will uphold us when weakness comes.—G. B. F. Hallock.

GROVER CLEVELAND AND THE BIBLE.

THE following is reportel to be one of the late Ex-President Cleveland's last written messages. It is worthy to be cherished with other choicest sentiments of great statesmen about the Bible, which General Grant once said is "the sheet-anchor of our liberty":

"I very much hope that in sending out this Book you will do something to invite more attention among the masses of our people to the study of the New Testament and the Bible as a whole. It seems to me that in these days there is an unhappy falling off in our appreciation of the importance of this study. I do not believe as a people that we can afford to allow our interest in and veneration for the Bible to abate. I look upon it as the source from which those who study it in spirit and truth will derive strength of character, a realization of the duty of citizenship,

and a true apprehension of the power and wisdom and mercy of God."—*Bible Record*.

A FRIVOLOUS CHURCH-GOER.

WE asked a friend who had recently moved to another city, whom he went to hear on Sunday. "Oh, almost anybody," he replied with candor. "The fact is that I never attend the same church twice in succession. I have been to hear every orthodox divine and every heterodox lecturer in the city. I have run the gamut from old-fashioned Calvinism to new-fashioned ethical culture. And I am not through the list yet."

The man who said that would not stay a week in a boarding-house where he could not have his particular breakfast food every morning with his coffee. But when it came to feeding his soul he would change the "menu" every day and the "chef" once a week.

"We learn our creeds," said Mrs. Browning, "as we do our alphabets, by iteration." It you wish to believe a thing listen to its repetition often enough and it will stick. The experienced angler knows that if he can put his bait before the nose of a trout often enough the trout must leave the pool or take the bait. There is no fad so absurd but that the philosopher himself will snap it up if he persists in playing with it. Go and hear what you really wish to become, for you will become what you hear in the end.—*The Interior*.

THE MACHINE WITHOUT THREAD.

"I LIKE to sew when there is no thread in the machine, it runs so easy," said a little girl just now.

A good many people, I think, are pretty fond of running their machines without thread.

When I hear a boy talking very largely of the grand things he would do, if he only could, and if things and circumstances were only different, and then neglecting every daily duty, and avoiding work and lessons, I think he is running his machine without any thread.

When I see a girl very sweet and pleasant abroad, ready to do anything for a stranger, and cross and disagreeable in her home, she, too, is running her machine without any thread.

Ah! this sewing without a thread is very easy indeed, and the life machine will make a great buzzing, but labor, time, and force will in the end be far worse than lost.—*Exchange*.

THERE are some people who object to letting their left hand know what their right hand does because their right hand does so little that they are ashamed to let it be known how little it does.—*R. M. Weaver*.

A MAN to be conscious of divine leading must make spiritual things his chief business.—*Dr. McBryde*.

Echoes from Everywhere

It has been estimated that the cost of the U. S. battle-ship fleet cruise around the world will be \$27,500,000.

In an election Jan. 23, La Rue Co., Ky., Abraham Lincoln's native county, voted "dry" by a majority of 1,085, the vote being over 4 to 1 against license.

West Virginia prohibitionists are making a splendid fight at the State capitol for the passage of a prohibition amendment bill. Governor Dawson in his message advocates the submission of an amendment, at the same time urging the Legislature to pass a local option law.

The public schools of Bloomington, Ill., operate a savings bank, and the children have deposited about \$2,000 this year. It was found that they had money to draw out for buying Christmas presents. That is a useful lesson in the direction of independence.

A bill has been introduced in the Missouri Legislature which limits the number of foreign-born employes to 10 per cent of the total number employed. The bill is directed against the lead mine operators of St. Francois County, who employ 2,000 foreigners in preference to Americans.

In accordance with the instructions from Senor Alcantara, Venezuela's minister of the interior, the attorney general will bring suit in the high federal court against Cipriano Castro, the former president of Venezuela, on the charge of having instigated the assassination of President Jose Vicente Gomez.

The printing presses are working overtime these days grinding out the Lincoln postage stamps, commemorative of the one hundredth anniversary of the great emancipator's birth. Like the recent Washington and Franklin stamps, a profile of Lincoln, taken from the standing figure by St. Gaudens, was chosen for the new stamps.

In accordance with the suggestion of President Roosevelt and Gov. Gillett, of California, Speaker Stanton introduced a bill into the Assembly appropriating \$10,000 to gather data regarding the number and occupation of Japanese in California. A similar measure will be presented in the Senate, and it is believed the Governor will sign it when passed.

Instead of shipping three carloads of silver dollars into Texas to pay the big fine ordered by the State court and affirmed by the United States Supreme Court, the Waters Pierce Oil Company will send a motion for a rehearing. Preparation of the motion has already begun and it is expected it will be ready to submit to the court February 15. Final action will probably be taken by March 1.

At the close of a farmers' institute at Huntington, Ind., the seed corn raised by the boy members of the Huntington Corn Club was sold at auction. The corn brought \$6 a bushel.

Representative James Burke of Pennsylvania has introduced a bill requiring all ocean-going vessels which carry as many as fifty passengers to be equipped with wireless telegraphic instruments and carry an operator.

Feb. 1, at the beginning of the second semester in the public schools, an addition of 1,500 pupils to the attendance roll of the various high schools throughout the city of Chicago was reported to officials of the board of education. This is an increase of 50 per cent over the record of last year and is regarded as the best showing made by any public school system in the country.

In Pennsylvania a test is being made as to the legal rights of a board of education to pay the fares of pupils to and from the high school. We do not know the law in Pennsylvania, but wherever in other States a test has been made the board of education has won its case. Cheltenham is the township in which the test is being made. There are twenty-seven pupils who are transferred from two to three miles.

Besides fitting its pupils for employment and training them for useful lives, the Hebrew Technical School for Girls of New York City has shown for the year an income exceeding expenses of nearly \$4,000. There are 354 girls in daily attendance at the institution, at Second Avenue and Sixteenth Street. It is estimated that as a result of the work of the school's employment bureau 971 former pupils are earning a total of \$560,274 a year.

President Gomez of Cuba has sent a message to Congress in which he says that not much advance in legislation was made under the recent government of intervention, although it is true that organic laws were promulgated which merit approval. He specially recommends revision of the penal code and the law of criminal procedure, and advises Congress to exercise the utmost care in incurring financial obligations, in view of the small sum now left in the national treasury.

Register of the United States Treasury W. T. Vernon, the noted Kansas negro, is making some speeches in Oklahoma on the race question. In order to avoid the humiliation of the Jim Crow car law in Oklahoma the negroes there have chartered a special car for Mr. Vernon, which he will use in all his travels in the new State. He will take the car at Caldwell, Kans., and keep it until he reaches the Kansas line again. He will speak at El Reno, Oklahoma City, Guthrie and Muskogee.

A professor in the University of Chicago states that John D. Rockefeller will devote \$50,000,000 to the promotion of education in Oriental nations. He says Mr. Rockefeller will await the reports of Prof. Ernest Burton and Prof. Thomas C. Chamberlain, who have been commissioned to investigate conditions in the Orient. Prof. Burton is now in India, and Prof. Chamberlain will start for China next month.

The December graduating class of the University of Michigan shows present tendencies in higher institutions of learning. There were as many men as women, 17 of each. This is the fourth time in six years that this has occurred. The membership of the senior college is 219 men and 201 women. The enrollment in the medical school has risen from 44 last year to 53 this year. The law enrollment was 47 last year, this year 40.

Senator Dolliver, as chairman of the Senate committee on education and labor, is preparing a plan to aid country districts to give effective instruction in agriculture. It is Senator Dolliver's purpose in some way to connect the country school with the State College of Agriculture. The national government will contribute a large part of the money to make the plan effective. The most feasible plan seems to be to encourage the States to undertake the establishment and control of these elementary agricultural schools.

Feb. 1, without amendment the Senate passed the House bill making Feb. 12, 1909, the one hundredth anniversary of the birth of Abraham Lincoln, a legal holiday and recommending its celebration throughout the United States, for which purpose the President was authorized to issue a special proclamation. The bill also declares that as a part of the national memorial to Lincoln there may be built a highway from Washington City to the battlefield of Gettysburg, Pa., to be known as "the Lincoln Way." An appropriation of \$50,000 is made for a survey of plans and estimates for such highway.

There are now 75,000 of the aboriginal population in Australia. Of this number there are about 20,000 in the colony of Queensland. Queensland has an elaborate system for looking after the welfare of the blacks by means of "protectors" stationed all over the colony to see that the natives are fed and clothed and shielded from interference of white people. Many of the natives are over six feet in height. Like most savages they are polygamists, but they are not cannibals. The natives under civilization have developed habits of economy and saving. They have made good progress in both reading and writing, but missionary reports state that teaching them arithmetic is hopeless.

Over seven million dollars was spent by New Jersey last year on her dependents and criminals, says Collier's Weekly. In the last thirty-three years the population of the State has increased only 12 per cent, but its insanity has increased over 300 per cent and its crime almost as much. There now exists in the State a commission to investigate dependency and criminality, and one to investigate the excise question. At the head of the Crimes Commission was placed Michael T. Barrett, son-in-law of Peter Hauch, a brewer who owns outright or in part, seventy of the seventy-one saloons in Harrison, New Jersey, and who last year paid the license fee for forty-eight of the seventy-one. On the Excise Commission is John Howe, manager of the Feigenspan's Brewery real estate business.

The first steps in a gigantic colonizing scheme were completed with the sale of the "Long S" ranch, embracing 300,000 acres near Big Springs, to the W. P. Soash Land Company of Waterloo, Ia., for \$3,000,000. This ranch was formerly the property of C. C. Slaughter of Dallas, Tex. It is located in three counties and has grazing room for 40,000 cattle, which Slaughter will sell at once. The land is to be cut into quarter sections and sold to settlers from the North and East. The sale is said to be the biggest land deal ever made in Texas.

In the big desert of Chili there is a considerable amount of brackish water, but no water that either human beings or stock can drink. Science, however, says Popular Mechanics, has come to the aid of this rainless section of the country in the form of an ingenious desert waterworks consisting of a series of frames containing 20,000 square feet of glass. The panes of glass are arranged in the shape of a V, and under each pane is a shallow pan containing brackish water. The heat of the sun evaporates the water, which condenses upon the sloping glass, and, made pure by this operation, it runs down into little channels at the bottom of the V, and is carried away into the main canal. Nearly 1,000 gallons of fresh water are collected daily by this means.

After they had lain in the ruins of the American consulate at Messina 18 days the bodies of Consul Arthur Cheney and his wife were recovered by the sailors of the American battleship Illinois. It was evident that they had been killed instantly, while they slept, as they were found side by side in what had been their bedroom. The bodies, prepared for burial, and the caskets, draped in American flags, were sent to America on the supply ship Culgoa. It is believed that Mr. and Mrs. Cheney were the only native Americans killed in the Italian earthquake. It is now estimated that 5,000 of the quake survivors have died since the fatal disturbance, and that the total deaths resulting therefrom is 250,000. Duke Litta has offered to colonize 5,000 of the survivors in Florida, south of Tampa.

That the subject of land frauds has not yet been exhausted is shown by a report made by Secretary Garfield of the Interior Department to the appropriation committees of the House and the Senate. He declares in this communication that discoveries of more wholesale and astounding frauds have been made, and that approximately \$110,000,000 worth of lands in States principally west of the Mississippi have been fraudulently acquired within the past two years by individuals and corporations. Secretary Garfield asks for an additional appropriation of \$500,000, which, if granted, will give his department, with that already asked for, \$1,000,000, with which to endeavor to regain lands, prevent depredations, etc. He considers that there is a reasonable hope of recovering much of the alleged fraudulently acquired land if the appropriation is promptly made, and points out that while \$1,000,000 seems a large appropriation, it is not one per cent of the commercial value of the land which the government may hope to recover.

This, the first school year since Kansas City, Kans., closed out her saloons, finds six hundred boys and girls between the ages of twelve and eighteen able to attend school for the first time. In former years these children were unable to attend because—through the frequent drunkenness of their fathers—they were compelled to assist in supporting their respective families.

Among the Magazines

LINCOLN'S MENTAL SUPERIORITY.

There are three charges intimated, rather than directly made, against Lincoln's mental superiority. These are his ignorance of financial matters, his poor judgment of men, and his failure at the very first to unite all the Union armies under one field commander. The first charge is true. Lincoln, when a member of the famous "Long Nine" in the Illinois Legislature, voted for wildcat financial schemes as cheerfully as any fiat money champion of more recent days. But if unsound views on the money question are proofs of mental inferiority, half the country at any time in the last thirty years would be ready to consign the other half to the imbecile asylum. There is just one clue that will guide a man through the wilderness of financial quarrels, and that is the historical clue. Money is merely a highly specialized and standardized form of weight. All ancient coins were named after earlier weights—shekel, drachma, mina; and we can faintly imagine something of the debasement that currency has undergone when we recall that five dollars' worth of gold in England, and twenty cents' worth of silver in Italy, bear the name of a "pound." But I really do not know how Lincoln could have found this clue in the half-faced camp where he spent his early days; and later, he was too busy with immediate duties to spare time for researches in the history of finance.

And I hold the charge of not knowing men to be flatly untrue. With very rare exceptions, Lincoln found the best men available with little delay. He was obliged to pick most of his political associates from his own party ranks. And the Republican party was then a new party, long on principle and short on practice, as every new party must be. Lincoln found the best that offered; and if his political advisers made mistakes, at least they helped their chief put through a gigantic and heart-breaking work. To the charge that Lincoln did not immediately unearth some dazzling military genius to rid the land of its woes, I would answer that there was no such genius to discover. We had a number of men who proved themselves good generals; but we had none who stood out so clearly from the common run as to warrant either haste or irregularity in raising him to the chief command. We had in our ranks no second Washington, no Clive, no Moltke, no Napoleon. The generals who finally finished the war were simply sound, capable workmen; who walked round their task, sized it up, and then with unflinching tenacity put it through. Thomas was indeed passed by, and he was the second, if not the first of the Union generals. But Thomas was a Virginian; whose loyalty was under natural, though most unjust, suspicion—and one must add that when he had a chance to supersede Buell, Thomas declined with a chivalry that showed no basis in common sense. Grant was found early and supported heartily. It took no common courage in Lincoln to turn a deaf ear to the clamor of the generals of the antechamber, and give the silent, iron soldier a chance to work out things in his own stern way. Lastly, it would have been

the height of folly to give the supreme command to a general of unknown value, or perhaps known incapacity. When Lincoln found the right man to exercise that command, it was conferred without delay and without reservations.—Geo. L. Knapp, in February Lippincott's.

MARQUIS KATSURA'S MESSAGE TO THE PEOPLE OF THE UNITED STATES.

[Our readers will all remember the remarkable articles which we published last spring by Dr. De Forest, in refutation of the miserable slanders and misrepresentations made in this country by certain newspapers, and especially by Congressman Hobson, against the Japanese government and people in respect of their attitude toward this country. Since his recent return to Japan, where he had already spent thirty-three years, Dr. De Forest has been granted an interview with the Prime Minister, Marquis Katsura, of which he sends to Secretary Trueblood the following account. The Marquis' statements fully corroborate all that Dr. De Forest had said and written about the friendly feeling of Japan toward our country, and ought to close for all time the few remaining mouths that still persist in reiterating the falsehoods and misrepresentations.—Ed. Advocate of Peace.]

"In talking of peace I am well aware that my signboard is bad; for I am a soldier. I've been in the thick fights and have killed a number of men. I have witnessed the horrors of war, and it makes me wretched—this bitter, cruel, mad war between human beings. From the bottom of my heart I became a man of peace, longing for nothing so much, and working for nothing so hard, as for peace. You know our history, and you know how in feudal times, when circumstances forced men to kill one another, our victorious warriors were often so heart-stricken with the blood they had shed that they shaved their heads, became Buddhist priests and entered monasteries, never again to draw the sword. And often the victors gave posthumous honors to the brave dead against whom they had fought. It runs in us to hate war, just as your great generals Grant and Sherman did. In spite of our signboard, we long for nothing so much as for peace.

"Now that your nation and ours have been at peace for over half a century, you having been our teacher and sympathetic friend during all this time, we want above all things to deepen and make perpetual the peace between us. I have never had a doubt of the sincere friendship of the United States. Of course, there are worthless, unprincipled fellows in every country, but I'm speaking of the vast majority of your people.

"Here also in our land both government and people are absolutely one in their friendship for the United States and belief in your friendship for us. We of the Far East are responsible for peace in this part of the world, and I will guarantee that my government and people, in the

years to come as in the past, will not only keep this great historic peace, but will do all that is possible to deepen and enrich this friendship of half a century. Our glad welcome to your fleet and to the Commissioners of Commerce from the Pacific Coast is but the natural expression on the part of our government and people that no misunderstandings shall weaken the glorious friendship between our two nations. You may make this known as widely as you like—that the government and people of Japan are one in their friendship for the government and people of your republic. We have adopted and put into successful practice all those precious liberties for which your people stand, and we desire to strengthen this traditional friendship beyond the possibility of its ever being broken."

STOP MARGIN GAMBLING.

"If you prevent, or even restrict, the selling short of stocks, you will manifestly, and in equal degree, restrain gambling on the long side of the market," says Frederick S. Dickson, in "The Poison of the Street," in Everybody's Magazine for February.

"Let the law then compel him who would sell short to describe in writing and with particularity the thing that he would sell. If it is stock, let him give the number of the certificates, and state in whose names they are registered, and let him also aver that he is the rightful owner of the stock which he offers for sale. Punish him if he states that which is false, and punish also the broker who accepts an order that does not comply with these conditions. The same course can also be pursued in sales of wheat, corn, oats, cotton, pork, and the like commodities, and he who would sell them should be able to state where the thing sold is stored, and what markings there may be on barrel, bale, bin, or car-lot. What hardship would this work on the man who simply wishes to sell for future delivery that which he owns? And why should the law be tender to him who strives to sell what he does not own, to the injury of the real owner?"

"Most of the legislation that has been proposed for the regulation of stock-gambling evils contains only general prohibitions against margin trading. Buying more stock than one has the money to pay for is no more an evil than buying real estate subject to mortgage, or borrowing money for the extension of a manufacturing plant or the development of a railroad. If a man, therefore, wishes to buy stock or commodities of any kind and pay but a portion of the cost, the law should not interfere with him. The evil of stock speculation, as now indulged in, grows out of the fact that the gambler is able to borrow more than the real loan value of the stock, the excess being furnished by the broker out of his capital as an encouragement to gambling. The control of the loan end of the collateral remains wholly in the broker, who uses both as if he were the sole party in interest. Let the law then, while in general prohibiting margin trading also in particular prohibit the broker from lending any additional sum beyond the bank loan, and insist that the broker shall inform his customer of the number and description of the certificates which he has bought, the amount of the loan, and the name of the bank where the loan is placed. Make it clear also that the ownership of the stock is wholly in the customer, and that it will be grand larceny for the broker to use this collateral for his own advantage. Such provisions as these would make the prohibition against margin trading instantly effectual, and nothing short of this would."

RUM ON THE RUN.

The liquor interests—from the doggery to the trust—have fought the prohibition movement at every step. They used every art known to practical politics. They tried the campaign of brass band and skyrocket, the gum shoe and still hunt, the hard drive and the soft pedal—and got whipped. In the beginning they fought the placing of any tax whatsoever upon liquor. They fought every proposition to increase the license; they fought the Sunday-closing laws; they fought in California for their inalienable right to sell whiskey to minors and to known drunkards. They fought the Five Mile laws; fought county local option; they fought State-wide prohibition. They are now fighting, tooth and toenail, against the law proposed in Congress that the Federal Government shall no longer issue internal revenue licenses in communities where the sale of liquor is prohibited by local law. They are now fighting to maintain Uncle Sam's partnership with the blind tiger, wherein the majesty of the United States is held up as a shield to the dive keeper and a protection to the outlaw. At practically every step they have been beaten.

Thoroughly aroused at last to the danger that threatens their trade, the brewers and wholesalers are beginning to announce a general house cleaning. They say—in articulo mortis—that they want to put the dive out of business and keep their trade respectable. Laudable, but late. Years ago all good people would have welcomed the brewers' aid in stifling the dive. Now they will attend to the job themselves, asking permission neither of the dive keeper nor the brewer. And they will do it in their own good way and time.—Harris Dickson, in the January Circle Magazine.

DIVORCE IS A HOME PRODUCT.

Increase of divorce in the United States cannot be attributed to the influence of aliens. It must be recognized as one of the developments of national life for which the native-born American must accept responsibility, if statistics are to be believed. In the February Delineator, Charles A. Ellwood, professor of sociology, University of Missouri, says:

Divorce is not an evil which the foreign-born and the negro have brought to us, for it especially characterizes the native white, that is, the preëminently American element in the population. It is about twice as high among the native whites as among the foreign-born. This leads one to suspect that divorce has something to do with the individualism of the American people, the tendency among us for each one to do as he pleases, to be a law unto himself. This is borne out by the fact that in those sections of the country in which individualism is most highly developed, the divorce rate is highest, namely, in New England and the Western States. It is borne out also by the fact that divorce is more than four times as common among Protestants as among Catholics. The Protestant element in the population is the element in which individualism is more highly developed; besides, the Roman Catholic Church refuses to sanction absolute divorce upon any ground.

Finally, two-thirds of all divorces are granted upon the demand of the wife. This suggests that the standards of morality of the male element of the population are not what they should be, and that husbands too often give ground for divorce by immoral conduct. Higher standards of morality are necessary as civilization advances, and conduct which the wife overlooked in the husband

a half-century ago, or here in silence, now becomes a ground for divorce.

This last statement suggests another cause for increasing divorce in this country, and that is the emancipation of woman. Woman has now almost equal rights with man, and has achieved her economic, intellectual and moral as well as legal independence of man. This has been a good thing in itself, but many women have used their freedom to emphasize their rights rather than their duties, and consequently have rendered the family life less stable. In so far as the movement for "woman's rights" has been simply an expression of growing individualism or selfishness on the part of our women, it has tended, like all individualism, to destroy the home.

STORY OF THE CRANBERRY.

THE history of the cranberry can be told on a bit of parchment no larger than the fruit itself; but to judge its interest by its length would be like ranking the berry's importance by its weight. The cranberry, to begin with the day of its christening, was so named because its sponsors fancied that its bud resembled a crane; and, in truth, just before the bud expands into the perfect flower with stem, calyx, and petals, it resembles the neck, head, and bill of that ungainly bird. Hence it was originally dubbed "craneberry," popularized into cranberry.

Like all families of importance in the agricultural race, the cranberry has an imposing genealogy; its European forbears belonged to the clan of the *Vaccinium oxycoccus*; how long the American branch, or the macrocarpon, has been established here nobody knows, but it began to attract attention about one hundred years ago. Its acquaintance was first cultivated in the Cape Cod region of Massachusetts—New England has ever been ready to pay respect to ancestry.

It gradually worked its way out of obscurity until today the cranberry occupies a place of no mean industrial importance in the community; yearly it adds to the wealth of our nation all the way from \$3,000,000 to \$4,000,000. The family is exceedingly prolific, 1,300,000 bushels being produced in the United States, leaving Europe far behind in quantity as well as in quality.

About sixty per cent of the family are born and reared in Massachusetts—far the greater part in the districts of Cape Cod, Plymouth, and Barnstable. New Jersey, which devotes more of its territory to the cranberry than any other State in the Union save Massachusetts, rolls up twenty-four per cent, and takes second place. Some years ago forest fires destroyed the marshes and dried up the streams of Wisconsin—a calamity which reduced the production of the Wisconsin berry to eleven per cent, and forced that State to assume third place; but Wisconsin is gradually recovering, and is striving for a position at the head. The rest of the cranberries hail from Connecticut, Illinois, Indiana, Iowa, Kansas, Maine, Michigan,

Minnesota, Nebraska, New Hampshire, New York, North Dakota, Oregon, Rhode Island, Washington, and West Virginia.—*Pearson's Magazine*.

Between Whiles

The old landlord of a small country hotel was sitting listlessly before the fire in the office when the door opened and a loud-voiced young fellow exclaimed:

"Halloa, granddad! Get your frame in circulation. Don't sit around here like an old woman! I want accommodation for man and beast."

"Where's the man?" asked the old landlord in a flash.

Cynic—Pity all these verse writers cannot be strangled like Anacreon.

Klinic—How was he strangled?

Cynic—A grape stone choked him.

Klinic—Ah! A grape stone. Well, that's in the regular order of things. These poets mostly run to seed sooner or later, you know.—*Chicago Record-Herald*.

Exchange Editor—"Let me see—Mark Twain had a degree of some kind conferred on him, didn't he?"

Literary Editor—"Yes; since he incorporated himself I believe he has taken the degree of Ltd."—*Chicago Tribune*.

"Yes," said the prospective purchaser, "I always select an automobile by its motors." "But don't you pay any attention to its finish?" asked the salesman, who had been showing the unholstering and brass trimmings. "Oh, no! All my automobiles generally finish up in a tree or in a haystack."

The Practical Kind.—He (savagely)—"So another judge has decided the same old thing—a wife's right to search her husband's pocket."

She (suavely)—"Don't say 'same old thing.' I am sure that is a matter in which there is seeking after a great deal of change."—*Baltimore American*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED:—On a farm a middle-aged man of good habits to work with boys, good with horses and a willing man.—Box 17, Rock Lake, North Dakota.

FOR SALE:—Good improved sixty acre farm located 4½ miles from Warrensburg, Mo., where the best Normal School in the State is located. For particulars address H. B. Boyer, Warrensburg, Mo., R. F. D. No. 8.

Post Card Albums

Our albums are of the most popular size and shape and will please you. They are of the substantial kind and yet neat in appearance. All we ask is that you send us a trial order.

No. 1101.

No. 1101.—Handy Style. Bound in **black silk cloth**, plain, side title stamped in white. Size, $5 \times 7\frac{1}{2}$ inches. Holds 100 cards, 1 to the page.

Price, prepaid, 45 cents

No. 2201.

No. 2201.—Small quarto style. Size $7 \times 9\frac{1}{4}$ inches. Bound in **black silk cloth**, plain side title stamped in white. Holds 200 cards, 2 to the page.

Price, prepaid,70 cents

No. 2202.—Same as No. 2201 only bound in **olive green cloth**, with assorted stamping.

Price, prepaid,70 cents

No. 3301.

No. 3301.—Medium quarto style. Size, $9 \times 11\frac{1}{4}$ inches. Bound in **black silk cloth**, plain, side title stamped in white. To hold 300 cards, 3 to a page.

Price, prepaid,\$1.15

No. 7101.

No. 7101.—Royal Post Card Album. Bound in black "Viennese" Imitation Leather. Walrus Grain. Holds 100 cards, 1 to a page. Size, $5\frac{1}{2} \times 8$ inches. Gilt title on side.

Price, prepaid,65 cents

No. 4922.—Royal "Viennese" Post Card Album. Bound in black Viennese Hornback Alligator Grain Binding. Holds 200 cards, 2 to a page. Size, $8\frac{1}{2} \times 10\frac{3}{4}$. Gilt title on side.

Price, prepaid,\$1.25

No. 4922½.—Same as 4922, only holds 300 cards.

Price, prepaid,\$1.50

No. 7004.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words. This is the Only New and Complete Webster Dictionary issued since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the Best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

Full Sheep Binding with Patent Index.

BIRDS, BEASTS AND REPTILES.

By Frederick Loonkvist, Ph. D.

A Natural History for the young. This is an up-to-date, brand new book, written especially for children in language which they will easily understand, and is both instructive and entertaining. It appeals to their imagination and interests them in all animal life, including interesting stories of the homes

and habits. Animals, great and small, strange and curious, and the common animals which are our daily friends and companions. The animals are grouped in their natural families that the children may learn that many animals quite unlike in appearance and habits are yet cousins—and become interested in all.

Bound in Genuine Cloth with cover ornamented with the most beautiful colored pictorial design worked in gold and colored ink. 250 large pages, 3 lithograph pages, 16 full-page halftones and numerous text illustrations.

Regular Price,\$1.00

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully. The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

The next party of colonists will leave Chicago about February 9. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

"Mention Inglenook When You Write"

Aids to the Systematic Study of the Bible

BIBLE OUTLINE.

By E. S. Young.

Written in four parts. (1) The Books of the Bible. (2) The Old Testament History. (3) The New Testament History. (4) The Institutions of the Bible. All the Scripture, important events and chief characteristics are given in their proper order. 98 pages.

Price, cloth, postpaid, . . . 40 cents

OLD TESTAMENT HISTORY.

By E. S. Young.

An excellent aid to the study of the Old Testament, a good understanding of which will prepare one for a better understanding and a clearer conception of the New Testament. Cloth-bound. Illustrated.

Price, postpaid, 50 cents

NEW TESTAMENT HISTORY.

By E. S. Young.

Enables the student to obtain a clear knowledge of the history of the New Testament, both in general and in detail. Bound in cloth.

Price, postpaid, 50 cents

BIBLE GEOGRAPHY.

By E. S. Young.

Designed to stimulate an interest in Bible study. It is divided into two parts—Old and New Testament Geography—and contains a number of excellent maps on which leading journeys are traced and principal events located. No study is more fascinating and brings richer rewards than a faithful study of the land in which God revealed himself to his

people. Bound in cloth. 127 pages.

Price, 60 cents

THE LIFE OF CHRIST.

By E. S. Young.

A harmony of the four Gospels. Contains a systematic arrangement of the Savior's life and teaching.

Nine periods. One hundred and sixty events from birth to ascension. Nine maps on which events are located and journeys shown. Scriptures on the same subject found in the different Gospels are placed together on the same page under the proper subject. Well illustrated. 348 pages.

Bound in cloth, \$1.50

THE NEW TESTAMENT COMMENTARY.

By Lewis W. Teeter.

One volume. The Commentary contains the entire text of the New Testament in both versions with references and marginal readings, several maps and a gazetteer giving the meanings and pronunciation of the proper names. It is unevasive and impartial in its explanations. It stands in the defense of the most apparent meaning of the text.

It is a practical family reference book.

The Twentieth Century Sunday School Record System

No superintendent can afford to begin the new year's work without the assistance of our new system of records and recognitions. This plan, first used in one of our own Sunday schools, has grown in favor until it is now recommended by Sunday-school workers of all denominations. It has increased the enrollment and secures the

attendance of each scholar enrolled. Encourages systematic giving and discourages tardiness. Brings the Bible to the school and relieves the teacher of keeping class records. New scholars are enrolled and all records are kept and reported by the secretary of the school. The teacher is permitted to devote her whole time to the teaching of the lesson. Our new descriptive Record System Catalogue gives full particulars.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

Homeseecker Round Trip Rates are in effect on the first and third Tuesdays of January and February, 1909, as follows: From Chicago to Blackfoot, Idaho, \$42.50; Boise, Idaho, \$57.50; Butte, Montana, \$42.50; Caldwell, Idaho, \$57.50; Hailey, Idaho, \$53.60; Huntington, Oregon, second-class, \$57.50; Idaho Falls, Idaho, \$42.50; Ketchum, Idaho, \$54.60; Market Lake, Idaho, \$42.50; Mountain Home, Idaho, \$53.90; Nampa, Idaho, \$57.20; Ontario, Oregon, \$57.50; Pocatello, Idaho, \$42.50; Salt Lake City, Utah, \$39.00; Shoshone, Idaho, \$49.00; Twin Falls, Idaho, \$50.80; Weiser, Idaho, \$57.50.

Colonist One Way Cheap Rates will be in effect from March 1 to April 30, 1909, inclusive.

Write at once for printed matter giving full particulars about Idaho and its possibilities, climate and other attractions.

No. 7.

EDGAR ALLAN POE AT COLLEGE

JOHN WALTER WAYLAND

OF all the distinguished personages born in the year 1809, it is probable that none have been more the subject of discussion and controversy than Edgar Allan Poe. Though not born in prehistoric times like old Homer, the Greek poet, yet like Homer his place of birth is still in dispute. Boston claims him; Baltimore claims him; and I have recently read that there is a house in Norfolk, Virginia, that is pointed out as the place where he was born. It is pretty certain that he was born in either Boston or Baltimore. His ancestors seem to have lived in the latter city; and it was in the same city that death finally overtook the erratic genius at the age of forty.

But his birthplace is only one of the many points in dispute about Poe. Most of the controversy has been waged about his life, his character, and his works. Many persons have always recognized Poe as a great literary light, some regarding him as the greatest figure in American literature; others have placed him much lower down in the scale. Some have thought of him as a sot and a gambler; others have thought him no worse than many other men of his day, who were then regarded as respectable; the misfortune with Poe being that his fame and genius have caused his faults to be remembered and magnified. Without attempting to settle the question, we may observe that Poe's place in literature seems to be rising with time, rather than falling; and that his unusually nervous and sensitive temperament, which was entirely out of proportion to his will power, will doubtless account for, if not excuse, his excesses in the use of liquor and his occasional quarrels with persons who might have helped him live better and longer.

This sketch is not to deal with Poe's life as a whole, or with questions in dispute: it is to tell something of his life at college: that is, at the University of Virginia. He had been to school in England and else-

where before he came to Virginia; and he was at West Point Military Academy for awhile afterward; but his college life, properly so-called, may be limited to the ten months he spent in 1826 at the University of Virginia, the institution that had opened its doors first to students only the year before, under the patronage of Thomas Jefferson.

Poe matriculated in February and remained till the following December, the session then running straight through the summer. He first roomed on what is called the Lawn, with another young man from Richmond; but they soon quarreled—had a fist fight, it is said—and after that Poe took a room on West Range. It may help our imagination to say that there are at the University of Virginia, now as then, four principal rows of dormitories, running from northeast to southwest, parallel with one another, and about sixty yards apart. The inner pair face each other; and the grass-covered, tree-bordered space between is called the Lawn; the outside rows face, one east, the other west, and are called respectively East Range and West Range.

Poe's room on West Range was No. 13. It was only a few doors from the hall of the Jefferson Literary Society, of which he was a member, and perhaps secretary. The Rotunda, the present library building, was finished while he was at college; but before the Rotunda was finished the library and reading room were in a building on the west side of the Lawn, for a long while afterwards called the "Old Library." It was in the old library, with its quaint, white-arched entrance, that Poe did most of his general reading, or from which he got most of the general books that he read. The old building has been connected with other famous men. The board of visitors used to meet in a room on the first floor; and at one time, about the time Poe was a student, three ex-Presidents, Jefferson, Madison, and Monroe, were

on the board together. The old minute-book shows their names, written one after the other, on the same page. On one of the window-panes of the old building it is said that Elisha Kent Kane, then a student, afterward the famous arctic explorer, cut his name with a diamond. I have several times looked for the name, but have not found it; though I have not yet examined all the windows.

In choosing his books from the library, Poe appears to have been especially fond of poetry and history. He and another student read a number of the English poets together—that is, at the same time; and they formed the habit of copying favorite passages for each other. Poe likely wrote some poems while a

Poe at this time wrote a very beautiful hand. He took great pride in this accomplishment; and would sometime see how many words he could write legibly upon a given slip of paper. He was also skilful at drawing, and ornamented the walls and ceilings of his room with crayon and charcoal sketches, some of which were very artistic. We wish now that they were not covered over so thick with plaster and white-wash.

The young student was a dreamy, poetic, and perhaps eccentric sort of fellow. He appears to have taken many long strolls over the surrounding country, in the course of which he likely visited sometimes, just as students now do, the home of Jefferson, Monti-

A Birdseye View of the University at Present. Arrow (1) Shows Poe's Room; Arrow (2) the Old Library; Arrow (3) the Ragged Mountains.

student at the university; for he published a collection only a year or two later. It is certain that he wrote stories; and he would frequently read what he had written to a group of other fellows as they sat around his fireplace.

As a student, he seems to have been among the best, ranking almost, perhaps, with Gessner Harrison and Henry Tutwiler, two young fellows from Rockingham County, both of whom became distinguished: the former on the university faculty; the latter as a great educational leader in the State of Georgia. It is a matter of record that Poe won distinction in Latin and French. One of his contemporaries testified long afterwards that he was tolerably regular in attendance upon his classes. It is said that he was also commended publicly by his professor for a verse translation from the Italian. He was a "star" in athletics. He was the best young boxer in Richmond; could swim for miles; was a fast runner; was a fine swordsman; and could jump some twenty-odd feet.

cello, perched upon a little mountain two or three miles east of the university. After July, 1826, the grave of Mr. Jefferson was where it still is, half-way up the western slope of Monticello; and we may imagine Poe stopping to read the inscription, the words of which Mr. Jefferson had himself dictated before his death. The whole western side of the little mountain is still covered with timber; and this, with the road winding up through it, past Jefferson's grave to the brick mansion and terraced gardens on the summit, must have been an attractive walk for Poe. We know that he frequently took long rambles among the Ragged Mountains, a cluster of wooded hills four or five miles southwest of the university. One of the tales that he afterwards wrote is called the "Tale of the Ragged Mountains."

Poe gambled at the university, drank a good deal, no doubt, and got into debt by gambling some two thousand dollars. It was irritation at his bad debts that appears to have been the reason why his foster

father, Mr. Allan, did not allow him to return to college. He was not expelled. Neither was he suspended or disciplined by the university authorities. Hence his conduct must have been pretty good; for the boys were closely looked after, as the records show. Several times Poe was summoned as a witness in the trials of others; but he himself never suffered from faculty displeasure. I have examined the old record book, where Poe's name, with others, is enrolled. When a student was suspended or expelled the fact was entered after his name. Poe's record is clear. Moreover, the faculty minutes are very full;

owns, and by the amount of water to which he is entitled. Water in the desert is so scarce that the ownership of it is most jealously guarded. In "A Search for the Masked Tawareks" the author says that in buying a palm grove it is always necessary to stipulate for so many sa'as per day or week. A "sa'a," literally, "an hour," is the amount of water that will flow in an hour through an opening the width of a man's fist in the side of a "segia." The main "segias," or channels, as a rule, follow the roads of the oasis, forming a short ditch at the side. A regular time-table is kept, showing the hours at which

Part of West Range. "13" Marks the Location of Poe's Room; "J" Shows the Jefferson Literary Society Hall.

and no entry has been found against him.

Over the door of Poe's old room is now a bronze tablet bearing this inscription:

EDGAR ALLAN POE
MDCCCXXVI

DOMUS PARVA MAGNI POETAE

The last line is a modification of the inscription at the birthplace of Erasmus in the city of Rotterdam. During the celebration last month, from the 16th to the 23d, of the centenary of Poe, the room was open to visitors as a Poe museum. It is in charge of the Raven Society, an honor society organized among the students and teachers in 1904, and named after Poe's most famous poem. One of the curios in the room is a huge stuffed raven, a gift made to the society a year or two ago.

THE SAHARA WATER-CLOCK.

A MAN'S wealth in the Sahara is calculated almost entirely by the number of camels or palm trees he

the owners of the different plantations are entitled to draw water by a very curious little water-clock, consisting of a metal cup, made usually of brass or copper, with a small hole pierced in the bottom. At the commencement of each hour this is placed in a basin of water. The water gradually runs through the hole until, at the expiration of the hour, the cup sinks to the bottom of the basin. It is then taken out, emptied, and set again to measure off the next "sa'a," and so the process is continued throughout the twenty-four hours. This instrument is usually kept in the village mosque. In order to prevent all interference with it, a watchman is set over it, who notifies the expiration of each hour from the minaret of the mosque. At the end of the "sa'a" the opening in the side of the "segia" through which the water flows is closed with clay, and the water is cut off and allowed to flow down the main channel to the next plantation. —Selected.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLV.

"GREECE!" (Grikea) cried out the American Italian to me at the prow as he ran up out of the ship's kitchen with a sea bun just hot from the bake oven. "That is Greece," and he pointed his heavy hand across and a little to "port" of the *Letimbro*.

Rapidly the little country of Demosthenes and Socrates rose higher and higher out of the sea until the mountains, farther away from the shore line, stood out clear and keen in the clearest of rare atmospheres.

I felt in my pocket for my little five and ten lepta pieces of money, packed my nickel rubbish against the foremast on the upper deck where I had been living and sleeping, and knowing my bike would be safe in the care of the ship where it had been riding, in the freight hold, I began to look about for the first chance to get to shore. The *Letimbro* would lie here for a half day.

A half day in Greece! That's all I was to have, but I was possessed with almost uncontrollable joy. Many of my school-mates who had studied Greek with me in three great colleges—I'm always glad to have everybody know that I went to college—no one would know it if I didn't tell them myself—would never get here at all. And while I would be happier if they all could come and see this land about which we fought so long and hard in history and epic translations of the great masterpieces of men long dead, still I have that pleasurable sensation of victory which humbles as it elevates, and I rush down to the center and port or left side of the boat and climb into a rowboat to sit be-

hind a Grecian boy and he rowed into the harbor of Piræus, with Athens only six miles away, down along the shore, to my right, plainly visible from the deck of the steamer.

Before the boat touched the edge I was out and in Greece. My, I felt funny. When I trudged along over the bright, washed pebbles, I saw Demosthenes with his mouth full of them. But no longer did he seem so great. I was right there, in his own land, breathing the same air, looking upon the same noble hills, hearing the same people talk and being barked at by the same dogs. Six hours in Greece!

Up from the landing I ran, inquiring of everybody I met, and not stopping for an answer, the direction to the railway station, for a train was due right now, I had learned, for Athens! It seemed irreverent to hurry so, for Yankees rush in where Europeans fear to tread. If I missed this train I could hardly get to Athens.

The gate-keeper saw me coming and although the train was moving he sold me a ticket, pushed me aboard—and—whew! I was going to ride on a Grecian railroad train to Athens, where Plato and Homer had to walk. The coaches were queer, different, but not so much unlike those of Europe. But I couldn't tell whether I climbed out of the end, the side, or the top. I was so wild with the joy of what I was doing and of what I was going to see.

The depot at Athens was in a rude part of town, where there were few buildings and these small and common.

I asked the first man I met where the Areopagus

and Acropolis were. Accustomed to so many tourists, he knew what I wanted by the way I looked, for he spoke only Greek, and he pointed to a path right at my feet and said, motioning, "Up there is the Acropolis."

I hit the path on a hard run, wishing I had six days instead of six hours in Greece. In less than a minute I was climbing up, and then was on, the great world-famed Acropolis. There, standing before me, in every conceivable state of preservation and destruction, or lying about over the enchanted ground, were temples

sculpturing of the elaborate friezes, I ran to another part of the big, rounding hill.

There lay the *Letimbro* out at sea, seven miles away. Here I was, alone, but in a vast crowd of imaginations. Far down on the other side of the elongated hill was the big stadium where the Marathon races or the Athenian races were held. There, also, were the old theatres in circular form, and I sat in several of the marble seats, still well preserved, the names of the Greeks who occupied them still visible in the slabs of marble. In the Bacchus theatre the

"There lay at my feet modern Athens, once the greatest city of the world."

and images, platforms and cavities, a city of marble through which a western cyclone might have passed and left it no more tragic and pathetic in appearance.

Believe me, the mind, under joyful and most profitable stimuli, can act with the rapidity of the electric flash. I was tired of being cramped for space on the boat. Here I had a vast field of miracles in history to explore, free of charge, in the bright sunlight, with a pair of legs under me that after their enforced bicycle-pumping rest in Italy, were pawing for something to do.

With all my speed I sprinted from temple to temple, theatre to cistern, pausing long enough to catch my breath, look about, far and near, and then, with everything seen I cared to see, even to the most minute

arrangement of the tiers of seats was almost as good as when Greek players incited the seat holders to tears or laughter. Still farther away were to be seen the ruins, in columns, of a very large temple. These were more weathered and showed far more loosening at the joints than did the other columns seen elsewhere. "These," I said, "must be much older, for the Greeks would hardly use an inferior marble or be satisfied with less than the very best of workmanship."

But thanks to some little study of architecture before I came here, my eye found the cause. These ruins were not Grecian. In Greece, in Athens herself, they had been built by another race. The Romans had conquered the Greeks and their victory was commemorated by this great temple to Jupiter or some other

fake god. The Romans built well, but never so well as did the Greeks. Even these ruins, built long after the others standing about me, were far less preserved than the works of the Greeks. The same sun had shone upon them, the same storms had chilled and shaken and worn these great blocks. The same volcanic disturbances had shaken them. There was one thing only that made a difference! Honest workmanship. The Greek was a deliberate, thinking, honest, reliable master workman. The Greek did his best on what he had and grew the greatest intellect in the world. The Roman cared for quantity rather than quality, and both races have built better than are any races building today. But they built not on the real "Rock."

By the sun I knew it was nearly noon, but returning through the hollow, separating the Roman antiquities from the more important ones on the hill, I walked through the great theatre of Dionysius, at the foot of the Acropolis, where the seating capacity would hold three thousand spectators. Here, ages ago, three thousand Grecian playgoers sat and heard the plays of Sophocles and Euripides. The marble chairs were still perfect, many of them without a flaw. Think of my racing through these rows of marble chairs when the rich and cultured leaders of Athenian society sat breathless in the spell of a drama. Where are those people now? Why do they no longer come to hear the Greek tragedian, in measured pomp of sentence, and artful display of brawn, wrapped in the rich folds of a gentleman's soft garments? Why all this lavish quarrying of marble? Why this exquisite touch of grace at the head of every column that required the study of a lifetime to master? Why this hill covered with matchless beauty in deathless stone, preserved today so that all of it could be easily replaced, if not to be used by the children of the Greeks who fashioned it and came here to enjoy it? Why is this hill all waste, the greatest, the most magnificent ruins of all ruins, with possibly a rival in the Roman Forum at Rome?

One word answers it forever and conclusively: Paul.

When Paul dared to stand up here and open his mouth the idols all shut up theirs.

O Paul! I see you amid all of this classic beauty, standing where others, coming, became so enamored of the power of beauty about them that they lost their own personality and "followed the crowd," to worship stones. Others came here to "spout" their eloquence where the chief man spoke, just to go back and crow over their backyard fence to their neighbor about it. You forgot honor and self and home, even your own noble countrymen, and did that which the high-minded Athenians laughed at. Your own countrymen were ashamed of you, you with the intellect as good as their best, you with training in university

subjects beyond the reach of these Greek pedants, you became a fool here that the whole world might know, not of atoms and diatoms, molecules or mollicoddles, but of one Man, and his Gospel.

That's why the Acropolis today is a total mass of antique ruins. That's why there's no one around today to keep me from putting into my pockets, if they were big enough, priceless souvenirs of marble embellishment.

I wished to eat a meal in Greece and so was going back towards the city when I saw on my left, just in the act of ascending Mars' Hill, two young ladies, whose bright dresses of various shades of color made a great contrast to the white marble citizens of the hill that neither moved nor spoke but lay where the volcanic shocks had thrown them, senseless and flat upon their backs.

On reaching the girls I recognized them as the daughters of the captain and mate of the *Letimbro*.

I did not go, at once, to luncheon,—even in Athens!

[From Athens Mr. Spickler sailed for Turkey but on arriving at the city of Constantinople he was put under arrest by the Turks, and later led before the magistrate to speak for himself. His United States passport was taken from him and a fine imposed. This Mr. Spickler refused to pay and demanded his passport, appealing to the United States Consul.]

UNKNOWNNS.

MARY E. CANODE.

CHEMICAL laboratories of schools and colleges have, as parts of their equipments, packages bearing the labels, "Unknowns."

Each package contains a mixture of different elements thus prepared for the purpose of putting to the test the analyzing ability of the student who is supposed to have learned their different qualities and to be able to prove by experimentation which elements enter into the make-up of this particular package.

From the seventy-two, more or less, different known elements, then, what an endless number of these "unknowns" might be compiled! Yet the expert chemist would be able to catalogue every component part and the word "unknown" could no longer be properly applied.

But the significance of the name makes one think how much more appropriately it might be applied to each individual of the human family. The composite character of any one person is sufficient to baffle the skill of the most learned analyzer of human nature.

Physiologists may think they know well their functions and the organs that make up the human body. Fortune-tellers may claim the ability of telling past and foretelling future events of our lives. Mind

readers may deceive themselves and others into believing that mental operations are like an open book before them. Theosophists, spiritualists, Christian Scientists and all the other kinds of "ists" may claim the ability of making clear, by all their puzzling vagaries, all of those strange mental experiences that transcend present human knowledge, while the gospel minister may think himself capable of advising us as to our spiritual needs.

If each of these could do perfectly the part he thinks himself able to do, what a full register would a complete analysis of one individual show! But let all these use their utmost abilities and register what they may have succeeded in learning about any one man and he might still retain as his appropriate label, "unknown."

Through chemical skill the composition and amount of any mixture of elements may be determined. But no degree of experimentation, examination or trickery is able to discern or prove the quantities and qualities of good and evil, love and hate, interest and indifference, joy and sorrow, energy and inactivity, strength and weakness, Christianity and idolatry, civilization and barbarism and a greater host of undiscovered characteristics which constitute this queer, unknown and indeterminable mixture called a human being.

Mount Morris, Illinois.

FIGURES OF SPEECH.

JOHN H. NOWLAN.

"A FIGURE of speech is a mode of expression in which a word or thing is used in an artificial manner, in order to a more forcible presentation of thought, or the illustration and embellishment of that to which it is applied."—David N. Lord.

In studying composition, the books of all ages are ransacked to find examples of the various figures, too often ignoring the fact that one old Book, more common than any other, abounds in an almost unlimited supply of illustrations.

Comparison or *simile* is where one thing is affirmed to be like another and is expressed by *as*, *like*, *so* or some similar term. There must be a point of resemblance which is to be made more conspicuous.

The coming of Christ is to be rapid and conspicuous. (Matt. 24: 27) The change from condemnation to forgiveness is to be so great that an extreme change of color is used to describe it. (Isa. 1: 18.) Man is of short duration (Job 14: 2), the wicked may gain power (Psa. 37: 35), yet the righteous in due time shall flourish (Psa. 90: 12).

The more effective of the similes are those that not only affirm the likeness, but indicate in what manner it exists.

Isaiah 55: 10, 11 compares the effect of God's word to that of snow and rain on the earth.

A *metaphor* differs by stating that the object is that which it resembles. Joseph is a fruitful bough (Gen. 49: 22), wisdom is a tree of life (Prov. 3: 18) and the disciples were fishers (Matt. 4: 19).

To illustrate the two figures the protecting power of God is compared to a shield. A metaphor is found in Gen. 15: 1, while Psa. 5: 12 is a simile.

Metonymy means a change of names, where the land is used for the people (Isa. 10: 5), the container for the thing contained (Isa. 2: 6), the sign for the thing signified, cause for effect, etc.

Synecdoche is the use of a part for the whole or one of its kind (Isa. 5: 3), or of the whole where it signifies only a part. Compare Gen. 2: 4, Isa. 5: 3, and Isa. 10: 10-14.

Hyperbole exhibits things in greater or less dimensions, more or less in numbers, or better or worse than they really are. This figure is rarely found in the Bible, being found in the poetical portions. (Job 40: 23; Isa. 2: 7, 8; 2 Sam. 1: 23, and Psa. 119: 36.)

Irony is an expression meaning the opposite of what the words convey. Read Elijah to the priests of Baal, 1 Kings 18: 27.

Apostrophe is a direct address to the absent as if present, or to inanimate objects as if they possessed life. Thus Death is addressed in 1 Cor. 15: 55, Jerusalem, used by metonymy for her people, in Matt. 23: 37, 38, Jerusalem in Isa. 5: 1-7, while in Isa. 14: 8-20 the trees are represented as speaking.

Personification attributes life or animation to inanimate objects or abstract ideas. Moses summoned heaven and earth to listen (Deut. 32: 1-43) and Isaiah in chap. 1: 1 and chap. 44: 23. Jeremiah calls upon the heavens (chap. 2: 12, 13) and the earth (chap. 22: 29, 30).

An *allegory* is a continued metaphor or a story with a deeper meaning. Read Isa. 5: 1-7; Psa. 80, and Ezek. 31: 3-17.

These are only a very few of the illustrations that may be drawn from the Scriptures, and I hope will lead to a more extensive research than I have indicated.

Teachers, try this plan in your rhetoric class, and I feel that you will find it satisfactory.

Mulberry Grove, Ill.

A SPOT HISTORIC IN BUCKEYEDOM.

A BEAUTIFUL November day it is. One of those rare last days of the autumn time whose minutes pass too lightly, for you want to keep them by you. One of those days when you are watching the sun and calculate mentally how much of it you have yet to enjoy. You know that you cannot have many more such glorious days, and you want every bit of this one.

This is the 20th of November, in the year of our Lord 1908. The records tell us that it was just such

a day as this, a hundred years ago, that a little band of Moravians—white and red—moved slowly from yonder site where stood the mission house to this spot and reverently interred the body of their teacher in the virgin soil of the Tuscarawas valley.

I like that word "teacher." It is Anglo-Saxon. It has in it the strength of the English oak. It is cosmopolitan. It means the minister, the educator, the leader. So they laid to rest their teacher. Over the open grave of David Zeisberger his "brown brethren," as he loved to call them, chanted the Moravian litany in the hope of the Resurrection. Many of his "brown brethren" had gone on before and had received Christian burial. The remaining followers dugged his grave that he might rest beside those whom he loved, for whom he lived, for whom he labored and for whom he sacrificed.

Now a century has gone by. The broad valley of the Tuscarawas, dotted with homes, churches and schools, lay basking in the sunshine. In the small iron enclosure a little company waited until a party of children from a neighboring school could be present. In each child's hand was a sprig of evergreen. These were laid on the grave. Then with bared heads the men and women joined in reading the Easter morning litany of the Moravian church. The minister who conducted the ceremonies was a great-grandson of John Heckewelder, a fellow laborer of Zeisberger. It was a beautiful service.

But why stand by this simple slab in a country graveyard?

David Zeisberger

Born April 11, 1721, in Moravia.

Departed this life November 17, 1808.

Aged 87 years, 7 months, 6 days.

This faithful servant of the Lord labored among the American Indians as missionary during the last sixty years of his life.

It is the story of a hero. Near him is the tomb of his coworker, Edwards. All around are the graves of the forest children whom he taught. Yonder is the site of the mission house which he built and to which he retired in his later years. A farmhouse now stands there. Some of the rock foundation is still in use under the modern structure.

Two miles up the river is Schoenbrunn, where Zeisberger and Heckewelder began a settlement in 1772. Here was built a church and school. A little plot of ground now owned by the Moravian Society reminds us of this pioneer movement of civilization. It was the beginning of a series of Moravian communities on the Upper Tuscarawas—Gnadenhutten, Lichtnau, New Schoenbrunn and Salem. Here within a few years were gathered by the devoted Moravian missionaries hundreds of converted Indians. They were prepared for the future world by preparing them to live well in this one. Agriculture and stock rais-

ing and the manual trades were taught. Rum was not to be brought into the community. They were not to go to war.

To get an Indian to agree to all this in such a short time is certainly a compliment to his teacher. A hunting, roving, rum-drinking, bloodthirsty aborigine to be transformed into a law-abiding citizen of a community is enough to cause one to doubt the doctrine of total depravity.

Dr. Winship, of Boston, expresses the idea in, describing two small boys whose behavior was at opposite poles. He said there was no difference between the boys; they had different mothers only.

Schoenbrunn was the first "dry" territory in Ohio. At Schoenbrunn was written the first civil code in Ohio. At Schoenbrunn was built the first church in Ohio. At Schoenbrunn was the first school in Ohio. At Schoenbrunn was prepared a spelling book for use in teaching the Indians. Two years at Schoenbrunn, and on Easter morning, 1774, Zeisberger led the people in the praying of the beautiful Easter litany of the Moravian church, which he had translated into the Delaware Indian language.

Who said that there were no good Indians but dead ones? We are told that we graduate them at Carlisle, and the graduates hang their diplomas in a tepee, lay aside their civilized garb and go back to the blanket. Is it a difference of teachers only?

The Zeisberger education was no veneer. It did not rub off. The Zeisberger Indian did not go back to the blanket and bear's grease. Neither did he cultivate some of the civilized (?) habits of his white neighbors. He was trying to throw off savagery. Experience had told him that firewater didn't tend that way. It has taken 6,000 years to evolve a civilized man out of a savage, but it only takes six minutes, with plenty of "booze," to turn it the other way.

Yes, David Zeisberger, you were a teacher, and it is because of your work as teacher that I linger a little at your grave today and stand by the waters of Schoenbrunn.

When the last page of the world's history is writ and the scroll is about to be made up and placed in the archives of the eternities, there will be no pages more replete with heroism, sacrifice and service than those upon which are engrossed the achievements of the teacher, and none of these will be brighter than the one devoted to David Zeisberger, the first Ohio teacher.—C. L. Martzloff, in *The Ohio Teacher*.

JUST to lead the child along in a pleasant search for truth, with no sophisms and no heroics, to touch the cup to his lips that he may long for a full draught, to guide his feet to the step whence he may catch a wider view of life,—all this is the very acme of good teaching and the one who can do it in sincerity and simplicity is a power in this world.—*Exchange*.

THE WORKERS

The craftsman stood behind his bench and smiled,
Although his muscles ached and on his brow
The sweat-beads stood. He raised his eyes and spoke:

"This is my work; I have fashioned in it,
Well as I could, all my thought and my plan;
Perfect it is not, and yet not unfit;
Beauty it holds and true service to man.
Mine in the making, and mine as it stands,
Thought of my spirit and work of my hands."

The farmer looked across the billowed fields
Where waiting harvests shimmered in the breeze;
His sun-browned face was joyous as he said:

"This is my work; through the cold and the heat,
Sunshine and rain, I have labored and wrought;
Orchards and meadows and wide fields of wheat
Owe all their wealth to my care and my thought.
Mine was the toil, mine the harvest that stands,
Thought of my spirit and work of my hands."

The teacher watched with loving eyes the throng
Of jostling, happy children in the street,
And said, with tender voice and face serene:

"These are my work; all my thought and my care,
Study and labor and stern self-control,
Gladly I give that their lives may be fair,
Clearer each mind and more noble each soul.
Partly my own is each life as it stands,
Thought of my spirit and work of my hands."

The poet scanned his verses, and his face
Was all aglow with light reflected from
His dream; hushed was his voice, but full of joy:

"This is my work, which with painstaking love
I have endeavored to make true and sure;
Bright was my dream as the heavens above,
So I have striven to have it endure.
This is my gift to all men of all lands,
Thought of my spirit and work of my hands."

Then as they viewed their work there came to each
The sense of failures past and of the strength
The future claimed; and humbly each one said:

"This is my work; it was given to me,
Though it is greater than my strength can do;
Yet from the task I ask not to be free;
For, if I labor with purposes true,
Ever will infinite love help me stand,
Leading my spirit and guiding my hand."

—E. E. Miller, in *The Circle*.

Nature Studies

ANIMAL ELECTRICITY AND NERVE FORCE.

S. Z. SHARP.

IN the days of Franklin, it was a question whether electricity and the lightning from the clouds were one and the same thing. It was known that in many respects they were similar. The experiment of Franklin with his kite proved they were identical. The question now arises whether electricity and nerve force are also identical. It is certain they have their points of similarity. Both are best conducted on thin wires or fibres. The nerve force generated in the brain and sent out to all parts of the body over thin nerves, acts very much like the electricity generated in some central office in a city and distributed in all directions over the telephone wires. As the electric current is strengthened by relay batteries, so the nerve force is augmented by the ganglia through which it passes.

Another similarity between these two forces is the rapidity with which they move. No other two forces in nature move so rapidly. They outstrip both light and sound. Observe a rope-walker balancing himself with a pole. To keep his equilibrium and at the same time move forward every muscle of his limbs must be kept in tension by the nerves and every tendency to fall on either side is counterbalanced, "quick as thought," by an opposite movement as directed by nerve force from the brain, as readily as a train dispatcher from headquarters directs the train and prevents collisions.

A familiar example of the rapidity of nerve force is that of the skillful piano player. In this case, not only the rapid movement of the several fingers, but the rapidity of movement of each separate muscle in each finger must be taken into account.

The above may suffice to draw attention to the similarity between the nerve force in living animals and the electricity found in inanimate bodies. We now turn to cases in which we know a certain kind of nerve force in living animals is known to be electricity itself, pure and simple. There are four species of fish in which this force may be observed. They are (1) the electric eel, *gymnotus electricus*; (2) the torpedo, *torpedinidae*, (3) a species of catfish, *matopherurus*; (4) *telraodon*. The electric eels inhabit the

ivers and ponds of northern South America. They attain the length of five or six feet. The natives capture these eels by driving a herd of horses into ponds inhabited by them. The eels in self-defense discharge their electricity into the bodies of the horses, which are stunned, terribly frightened, and many are killed by the shock as the eels crawl under their bodies. The electric powers of the fish becoming exhausted upon the horses, the former are harpooned and thrown out on shore. The electric apparatus, which makes this fish so celebrated, occupies a large part of the lower portion of the body and consists of four parts, two on each side. This apparatus consists of 240 membranous cells filled with a glutinous matter and connected with 200 pairs of ventral spinal nerves, connected with the brain. Here the nerve force and the electricity pass over the same nerve fibers, and both controlled and directed from the brain and the question is, are they one and the same thing?

The torpedo is distributed through many waters but finds a genial habitat in the Mediterranean Sea. It attains a width of $2\frac{1}{2}$ feet and from 4 to 5 feet in length and a weight of fifty pounds. Its electrical powers seem to be used both for defense and for the capture of its prey. The electric apparatus of this fish is similar to a galvanic pile. As many as twelve hundred prisms, from one to two inches in length, have been counted. These extend from the skin on the back vertically downward and contain from 250,000 to 300,000 plates forming cells. The ganglia from which the nerves arise are larger than the brain itself, indicating the great nervous power supplied to the battery. The other two electric fishes mentioned are insignificant compared with the two described.

The identity of common electricity and that obtained from fishes was ascertained by Dr. Faraday, who showed that electric sparks can be obtained from the latter, heat evolved, and chemical compounds decomposed. He also showed the energy of a shock from an electric eel to be equal to that of fifteen Leyden jars of 3,500 square inches of surface, hence it is not surprising that a number of such shocks should stun a horse.

It is generally admitted that in this age we are

yet in our infancy so far as our knowledge of electricity is concerned. All we know about it is how it acts or some things it does. No one can tell what it is. We have discovered the similarity between its movements and that of nerve force, that they readily pass over the same media and are sometimes generated in the same body, hence, we are led to ask, "What is the relation between electricity and nerve force? Are they identical?"

A FISH WHICH IS A MIMIC.

Two species of fish belonging to Cuvier's family of perches, named the lesser weever, otterpike, or stingfish, are not uncommon on the English coast. Both have a detached portion of the dorsal fin consisting of six or seven rays which, the *Lancet* points out, when trodden upon or handled, can cause a painful wound, which takes a long time to heal. Dr. A. T. Masterman points out that the intense black color of the membrane of that portion of the fin must act as a danger signal, especially as it is in marked contrast with the rest of the skin and of the sand, in which the animal half buries and conceals itself, ready to dart out on the small crustaceans which form its prey.

Now, the right pectoral or upper fin of the sole has, especially in the young sole, a large, deep, black patch the possession of which, the doctor suggests, constitutes a well marked example of mimicry. The smaller fry of soles, like the weevers, inhabit sandy bays and shallows, and also partially bury themselves in the sand. Dr. Masterman has found that, unlike the turbot and plaice, which when disturbed make active efforts to swim or escape, the sole lies quiescent even to the point of simulating death, but at the same time erects sharply and spreads its upper pectoral fin, which thus forms a motionless black flag held upwards in a menacing attitude.—*Selected*.

UNDERSTOOD OUR LANGUAGE.

SOME time ago we had a collie by the name of Rex. My driving mare we called Nettie, and if Rex ever heard me speak the mare's name or say I should hitch up and take a drive, no matter in what language I voiced my intention, he was on the alert and at the door, whining to be allowed to go, as he was very fond of the mare. The time came when a removal of the family to this town forbade keeping the dog. I found a willing purchaser and good home for him where he is today; and the day I announced the fact at the breakfast table I told my wife not to allow Rex to go out, as I would come up and get him in time to ship him on the noon train.

The dog could never be coaxed or driven into the cellar, for some unknown reason, but when I came for him and searched the house from top to bottom, calling him constantly for some time, he was at last dis-

covered in the farthest corner of the cellar behind some barrels.

His story has a happy sequel, for he is now the contented guardian of an old lady who has no children, and values the dog beyond price.—*Our Dumb Animals*.

THE SEA BEAVER.

THE sea beaver's bright black eyes are full of intelligence. It is by nature affectionate, and both parents are devoted to their little ones. Its love of home is strong and abiding, and year after year it returns to the same region; even though the spot may often have been the scene of massacre for its companions. Like its marine cousin, the land otter is full of play and will often lie on its back in the water and toss a piece of seaweed from paw to paw as a boy tosses a ball.

When the weather is fair the mother otter's favorite pastime is to float about on her back in the calm, blue water, holding her baby with her forepaws, while she paddles leisurely with her flippers, sometimes crooning a plaintive strain. If any danger threatens she clasps it to her breast and presents her back to the foe. When the reflection of the sun's rays on the water dazzles her she looks almost human as she lifts her paw and holds it above her eyes to shield them from the glare.

The sea otter's curiosity is large, and its "scenting" powers are the keenest. It varies its fish diet with mussels, clams, crabs, sea urchins, and occasionally a tender bit of kelp. Of urchins it is particularly fond. It takes one in each forepaw, strikes them together, and sucks their contents when the shells break. Its favorite dwelling place is among the kelp beds about the rocky islets that fringe our northwestern coast.—*Selected*.

CURIOUS FLORIDA HERB.

ALMOST everybody knows there are such things as insectivorous or carnivorous plants, but it is doubtful if many know we have such a plant growing right in south Florida.

This is an annual herb, says the *Punta Gorda Herald*, and the entire plant, including the flower, is of a deep rich red color. It rarely reaches a height of more than three inches, and is never so broad. The leaves are spatulate when undisturbed, and present many small fibrillæ and secrete at their tips a tenacious fluid which is capable of holding the small insect, such as ants and the like, upon which it feeds. When any of these get lodged in the fluid and disturb these fibrillæ the leaves slowly acquire a deep cup shape and sometimes curl completely up over the victim. When they have absorbed the insect they slowly recover their original shape, leaving only the skeleton of the insect remaining.

CONGRESS AND THE PRESIDENT.

THE tilt that has been going on between the President and Congress is furnishing the people of the United States a great deal of amusement and not a little instruction. They are learning how some things are done, or rather how they are *not* done. If nothing more comes of these charges and countercharges than the instruction the citizen is getting the big stick will have been wielded not in vain. American citizens have a way of thinking that might be said, in some respects, to resemble the power of the hypnotist, and the more they know about public affairs, the more powerful thinking they do.

No sane person thinks that the President is always right—that he never makes mistakes,—but the contention between him and Congress has not advanced the latter in the estimation of the people, in fact has made it evident that for earnest, disinterested effort in behalf of the people it will have to travel long and hard to catch up with the President.

In some of the President's acts many people have seen a disposition to usurp authority, but when these are placed alongside the many in which he has stood out as the people's friend and protector it is clearly seen that he has never had a thought of making his rule autocratic. As one writer says, "It needs not the eye of the wise man to see that every bit of the strength which Roosevelt possesses as executive comes to him simply and solely because he has been the true and direct representative of the will of our democracy. And the same eye can see beyond a doubt that the weakness and the rage of Congress at this time are due to the fact that it is not fulfilling the duties which inhere in it and that it objects to having its degeneracy pointed out and brought home to it."

Abraham Lincoln's well-known statement about fooling the people is applicable here. It may take the people some time to find out that they are being fooled.

but afterward there will be little time lost. Information on governmental affairs will help the people to see whether their representatives are guarding their interests or whether they are guarding the interests of certain individuals and businesses, and such information is easy to obtain these days.

A MODERN JAILER.

THE subject of our criminals has come in lately for a good deal of consideration by our reformers. It is pretty generally conceded that the State ought to do more than simply punish its criminals, or the punishment should be of such a nature, or so administered, that the man is made better. In the present order of things we know that, as a rule, this is not the case. Imprisonment generally confirms a man in his downward tendencies.

Most of the ideas of reform in this line are yet in the theoretical stage and few have the courage to test them. Of course some of the ideas are so absurd that they should never be taken seriously. But now and then there is a man directly connected with prison work who is possessed with the idea of making men of his prisoners and he avails himself of this opportunity to put his theory in practice. It is no doubt through the efforts of such men—prison keepers who themselves are deeply interested in the future welfare of their men—that a change in the treatment of prisoners is to come.

Such a man is John L. Whitman, jailer of the Bridewell in Chicago. About two years ago we called the attention of our readers to his work. We now give them additional knowledge of his theories and of how they are working out. We are indebted to the *Home Herald* for our information. The writer of the article reports an interview which he had with Mr. Whitman. We give only a part of it. The jailer began by answering the interviewer's question as to what he thought about running a jail.

"'Fundamentally,' he began, and his eyes glistened with the joy of a man who is telling his favorite story, 'fundamentally, a jail ought to be a whole lot like a hospital. *Ours* is.' We have each individual case diagnosed, and our subsequent treatment is given in accordance with that diagnosis. It is my task, of course, and that of my assistants, to judge of the moral character and needs of the men, but before you can do much for a man morally you have got to get him physically well, and that takes doctors.

"'You know,' he smiled, 'the general scheme in an institution of this kind is to have one doctor who works, when he works at all, telling men that there is nothing the matter with them when they are reported sick. That used to be the situation here, but it is no longer. We have a house physician, as we always have had, but he spends *all* his time at the *work* now; he is fired with an ambition which makes

him a power. Then there are three internes and a medical nurse and a surgical nurse, an eye, ear and nose specialist who is here two days a week, and three surgeons who come one day a week to operate. Every one of them is a professor in one of the big medical colleges; there they are,' and he pushed over a paper on which were the names of three different men whose reputations are more than State-wide. 'Every man that comes here is given a bath and a medical examination and a clean suit of clothes in that order. And, do you know, the examinations show fifty per cent of the men in need of physical treatment and nine out of ten of the boys? That explains something about the reason for crime.

"What they get here is a whole lot different from what their ideas of a jail have led them to expect. It's curious to see their attitude towards it, curious—and pathetic, too. After their natural distrust wears off and they catch the idea that we are here not merely to guard them, but to help them, too, the improvement begins right away.

"Here's an illustration: Thanksgiving Day we had an exercise in the chapel—something to make the day a little different from the rest. And when I got up to open the program, the men cheered so that for five minutes I actually couldn't begin. That shows a little something about their attitude towards us; don't you think so?"

"I *did* think so, and I said so. And I asked him to give me a list of all the other jails in which the prisoners have ever been known to cheer their jailers for five minutes.

"Well, it wouldn't be a long list,' he said, 'and that's the pity of it. The accepted prison philosophy is so different from ours. I have been familiar with it ever since I stumbled into this work sixteen years ago, and there has been mighty little change in the general idea in that time. Prisons are for the punishment of the criminal; that is the accepted notion. When society has apprehended him and shut him up, it has done its duty, and has no further concern with him. The idea of reformation is jeered at. We are experiencing the depressing effect of the habitual philosophy every day; every reform which we have ever attempted has been with all the opposition which the old-liners could bring against it. "Whitman, you're foolish," they say; "go back and keep your jail doors locked tight and increase the revenues of the institution, and you'll be doing all that's expected of you. And forget these wild ideas." That's the sort of talk I've heard so long that I am calloused to it. But my ideas are not wild. In the first place they make money, for they put spirit into the inmates at their work, and in the second place they make men.'

reformation of men to prove the soundness of his theories.

"But," said the interviewer, 'there is one thing I don't understand. You speak of these men as coming to you and talking with you. How can they? How can a prisoner come and talk to his jailer?'

"That's another of my wild theories,' said Mr. Whitman, and at this he smiled a very pleasant smile. 'Every Sunday morning at the services I announce that any of the men who wish to see me personally may remain after the services. Then I talk with each one alone. Sometimes one has a grievance that I can adjust, but in nine cases out of ten they stay to tell me that they want to brace up and to get my advice and help. Do you know, last Sunday ninety-eight staid to talk with me? It took all day long to get through the list, but I did it; it pays.'

"We went out through the iron doors and into the shops. There was an air of contented industry in the building. Men in blue coats, not striped, and with all their hair, nodded pleasantly to the jailer as we passed among them; the guards were noticeably few, and, though watchful, had nothing of that air of cunning which is common to their ilk. In one building the men were making shoes; in another women were making the clothes the inmates wear. Others were printing, some quarrying in the great hole behind the prison, and in one little building, set off by itself, a dozen husky fellows were busily engaged in baking great loaves of sweet-smelling bread.

"I suppose you noticed there was no guard in there?' Mr. Whitman remarked as we left the bakery. I had noticed it and wondered at it. 'The guard came to me this morning to tell me that his little son was sick at the hospital. He broke down as he talked, and I said: "Go and stay with your son today." So he went, and these are his men.'

"The noon whistle blew as we walked about, and up from the quarries and the factories they came, trooping along, with the air of men who have done a satisfactory work and can eat their meal in hope. There was no lock-step. As they passed through the gates two of their number counted them in strident tones and the guards on the wall below noted the figures. But except for that they went as any other group of laborers from their toil.

"There is opposition to John L. Whitman, of course, and there will continue to be until people learn the lesson he is teaching—that society is best protected by an institution which turns out men, not punished merely, but reformed."

NOTICE.

BE sure to read "A Business Deal," by Hattie Preston Rider, on the next page. Call the attention of the boys and girls to it; it may help them to make the right start in the business world.

Mr. Whitman then gave two illustrations of the

The Home World

A BUSINESS DEAL

HATTIE PRESTON RIDER

UNCLE FRANK pushed open the door and came into the sitting-room, breezy and glowing. "It's gloriously cold!" he announced; "Halloo!"—suddenly catching sight of his nephew lounging in the big easy-chair. "Home on a working-day, Harry? Not sick, I hope."

The young man looked embarrassed. "I've left the shop," he answered, half-sullenly.

Uncle Frank drew a chair toward him and sat down. "Not for good, I hope," he said, regretfully. "Crane & Barrett's is an excellent place. They're the best business men I know. What was the matter, Harry?"

"I had to work over time," his nephew answered, defiantly, but the deepening color in his face told that he was ashamed of the excuse. "I was dead tired; besides, there was a good show in town, and I wanted to see it. I asked the foreman for my evening off, and he wouldn't give it, so I took it, anyway. When I went back next morning, he told me I could have all my evenings and days too. He was so crabbed I was glad to leave. I wouldn't take a job there now, even if they offered it to me. You'd have been tired of it yourself, Uncle Frank. Twelve hours a day, for three straight weeks!"

"During the holiday rush," Uncle Frank supplemented. He raised his eyebrows with a quizzical smile. "Thirty years ago, when George Crane started in his little one-story shop on Ashe street, he used to put in sixteen hours of solid work a day for six months at a time, and keep his own books besides. How much do you suppose that furniture plant is worth today, Harry?"

Harry did not answer. Crane & Barrett were the heaviest taxpayers in the city.

"Being rich is no excuse for overworking their help," he said at last, doggedly.

"It is a waste of time to criticise the other fellow, I find," Uncle Frank remarked, kindly. "Don't think, either, that I'm criticising you. If you had

just returned from an automobile trip to San Francisco, and I were starting on the same jaunt, I should take it very thankfully indeed if you advised me as to the best route. Besides, a boy that strongly resembles you gave me pointers on lobbing in that tennis tournament last summer, that won me my match. Don't you think I'd be doing the ungrateful thing, if I kept silent while I saw you making the mistake of your life?"

The hard lines on Harry's face softened.

"I know you mean well, Uncle Frank," he acknowledged, in a subdued voice, "but you weren't in my place."

"Ah! But I have been, lad, exactly; and what's more, I made the identical mistake you're making. I was years righting myself, after it. I tell you, Harry, a fellow starting out at eighteen is really a merchant setting up in business; just that. Only, he's selling his labor instead of coats or potatoes or ribbons. Now, first of all, you have a tiptop common-school education, penmanship very fair, fingers *not* all thumbs, thanks to that course in manual training. Also, we must admit, since we are taking actual inventory, you are honest, intelligent, and well-mannered. There, lad, that's the stock-in-trade with which your Heavenly Father has set you up. A pretty fair outfit, I should say.

"Now, what are the methods of a successful dealer in staples? Faithfulness and industry, of course; but next after those, and just as essential, is another: *he must bend every energy to create a live market for his wares, and at any cost make good.* That's the point, Harry. Do you see it? A fellow must get up so desirable a reputation for the labor he has to sell, that it will command the very highest price in the market. The man that wishes to buy another's labor, whether it be of the head or hand, is willing to pay a first-class price for a first-class article, exactly as if it were a piano or a peck of apples. You mustn't

do anything to spoil your labor market, to get your wares branded as slow sellers, for the man or boy that puts up a poor article quickly comes to be known among the employers who constitute that market. And faithfulness and willingness are the very first qualities a purchaser looks for."

"Well, I guess I've done just the thing I oughtn't, then," Harry said, ruefully, as his uncle paused. "I didn't realize it, though. I thought a fellow had to show his independence, in order to make other people respect him. I was simply *homesick* for work before I'd been out twenty-four hours; but I don't suppose Crane & Barrett would take me back now, if I worked for nothing. That's the way it always goes, seeing your mistake when it is too late."

"It is never too late to do one's best to straighten out matters," Uncle Frank responded, quickly. He was silent a moment, and then added, earnestly:

"Just now it's your stint, lad, before you try to sell any more of your goods, to put yourself right with a customer you used rather unfairly. If I were you, I'd go back to that foreman and make an honest manly apology. It is of far greater consequence than your finding employment again."

The slow red crept into Harry's face once more. His uncle could hardly have set him a more uncongenial task. But he answered at last:

"I'll think of it, Uncle Frank."

A week later, swinging sturdily up the avenue, Uncle Frank nearly ran against a slender, bright-faced boy walking briskly in the opposite direction.

"Oho!" a familiar voice called, laughingly. "What do you mean, Uncle Frank, by trying a head-on collision with one of the busiest business men of your own city?"

Uncle Frank stared; then a broad smile broke over his face.

"Lad! You don't mean it!" he exclaimed, gripping the boy's hand heartily.

"Yes, I do," Harry nodded. "Selling my goods to Crane & Barrett again, and at a better margin than before. It was the straightening up of that old deal did it, too, uncle." He laughed once more, but there was a suspiciously uneven note in his voice.

"Praise the Lord!" Uncle Frank said. He looked after the boy proudly, as the latter hurried away. "I wish we had about a million more such business men growing up around us," he added to himself. It did not occur to him to mention the desirability of an equal number of such confidential advisers for them.

THE TRAGEDY OF THE CHILDLESS HOME.

THE coming of the Christ sanctified child life and placed a crown of beauty and glory on the head of every little boy and girl. Only that home is a happy one where there is the patter of little feet and the

ring of childish laughter. God gives to a man and a woman his best gifts when he gives them children. Every child that comes into our lives is a proof of his love. I have nothing but pity for the childless woman. Many of them can blame themselves alone. They do not want children; they are the women who want a good time. The story of their lives is one of sadness. It's a long, tireless round of whist parties and dances, while home and husband are neglected. It's the theater night after night and the late return which finds them weary and without interest in life. Such women do not know the meaning of a woman's best nature. They know not why it is that God has given them a pair of hands. It is in order that they may have an opportunity of helping God to guide the little feet into the paths of righteousness. They have never known the cooing of a little child, the voice of an angel's song.

What will become of these childless women in future days? The day will come when the husband is dead and they are left in lonely widowhood. I saw a beautiful picture in a well-known hotel the other day. An old lady sat by the window contentedly knitting, when suddenly a young man of perhaps thirty years rushed up and threw his arms around her neck and said, "Mother." It was her son, grown up now and married, but always her "boy." Her husband has been dead for many years, but she finds in their son a new life and a new inspiration. Because he lives, the closing days of life have been made bright and happy for her.

Much of the disgrace culminating in the great number of divorces is due to the decay of home ties, because in so many homes there are no children. There is no perfect union unless it be blessed by a birth. The security of the home lies in the coming into it of little ones who will bind husband and wife closer together and raise up new and powerful interests beside which their differences sink into insignificance.—*William Spurgeon, D. D., in Home Herald.*

READING FOR THE HOME.

ONE of the most vital matters in the home life of every family is the question as to what reading shall be provided for the entertainment and instruction of the different members of the family circle.

The importance of having good reading matter in every home cannot be emphasized too strongly. It is as essential to provide material for the culture of the mind and soul as to furnish food for the body, and to select the right kind of mental and spiritual nourishment demands perhaps greater care and attention than to supply suitable provision for the needs of the body.

What we read influences us for time and for eternity. Our ideals in life are framed largely according to that which we read. Through books which bring to us the very "life blood of master minds" we re-

ceive incentive for living, which lifts us to the highest planes of thought and action.

The moral character of the literature which enters our homes is a matter of transcendent importance. While good reading ennobles, bad reading degrades and destroys the spiritual life of young and old alike. The human soul cannot feed upon that which is evil in literature and expect that the result will be anything but bad.

The periodical press constitutes a very large portion of the reading matter that enters the great majority of homes at the present time. In selecting a paper for the family circle it is therefore desirable to secure the best that can be obtained, for the repeated visits of a periodical contribute one of the most potent moulding influences at work in the home.

Whatever other publications may be taken, every family should have a strong Christian periodical whose regular visits may minister to the highest spiritual needs of all the members of the household.—*Exchange*.

THE BEST HOUR.

"Get down on the floor here, daddy,
Get down on the floor and play,"
And that is the song my baby
Sings to me at close of day.
"Get down on the floor and tumble,
Get down with me, daddy, do;
Get down on the floor now, daddy,
Me 'ants to sit down on you."

Then overboard goes the paper,
And down on the floor goes dad;
And onto him clammers baby,
And baby is more than glad;
And daddy's a horse and wagon,
Or daddy's a ship at sea,
And rolls with a little baby
As happy as she can be.

And, oh, but that ship is careful;
The waves may foam and curl,
But never the ship goes plunging
Too much for the baby girl,
And never the horse gets fractious,
Or plunges or jumps aside
So much as to mar the pleasure
Of the wee little girl astride.

Oh, good is the hour of gloaming,
When labor is put aside
And daddy becomes a horsey
A wee little girl may ride;
Or daddy becomes a plunging
Big ship on the stormy seas,
And is guided and captained onward
By a baby with dimpled knees.

—Houston Post.

"STRIVE and do all you can to make the winter evenings ever memorable on account of the solid comfort enjoyed by your family. It will be time well spent. Turn the home into a love factory."

DISCIPLINE.

IN nine cases out of ten a man's life will not be a success if he does not bear burdens in his childhood. If the fondness or the vanity of the father or mother has kept him from hard work; if another always helped him out at the end of his row; if, instead of taking his turn at pitching off he stowed away all the time—in short, if what was light fell to him, and what was heavy about the work to someone else; if he has been permitted to shirk until shirking has become a habit, unless a miracle has been wrought, his life will be a failure, and the blame will not be half so much his as that of his weak and foolish parents.

On the other hand, if a boy has been brought up to do his part, never allowed to shirk responsibility, or to dodge work, whether or not it made his head ache, or soiled his hands, until bearing burdens has become a matter of pride, the heavy end of the wood his choice, parents, as they bid him good-bye, may dismiss their fear. The elements of success are his, and at some time and in some way the world will recognize his capacity.—*Christian Advocate*.

DIOXYGEN FOR THE MOUTH.

THE merits of dioxygen as a mouth wash are not as well realized as they should be. It is easy to get and not expensive. A stoppered glass bottle of it should be on every washstand.

After eating, if one hasn't time to brush the teeth, the mouth should be rinsed out with diluted dioxygen. It is a strong antiseptic, keeps the teeth from decaying and protects the top of the mouth and gums from soreness or from creating and emanating a disagreeable odor.

The toothbrush should always be dipped in a little of it and brushed over the teeth and gums at morning and night, even after tooth-paste is used. The latter merely cleans the teeth. It does not disinfect the mouth. People do not pay enough attention to the inside of their mouths, even though they may be scrupulous about their teeth.—*Selected*.

WHEN COLD, BREATHE DEEPLY.

A SIMPLE way to get warm after exposure to cold is to take a long breath with the mouth firmly shut. Repeat this several times until you begin to feel the heat returning. It requires a very short time to do this. The long breath, according to the *Family Doctor*, quickens the pulse and thus causes the blood to circulate faster. The blood flows into all parts of the veins and arteries and gives out a great deal of heat. It is stated that this method of deep breathing prevents colds and a great many other ailments if begun in time.—*Culled*.

"THE lazy man has little trouble with the letter of the Sabbath law."

TOMATOES FROM THE GARDEN IN JUNE.

By growing tomatoes on stakes and watering in a rather novel way I obtained a crop of unusually large tomatoes on June 21st, many of the fruits weighing over a pound.

I did not possess a hotbed, but prepared a seedbed in the sunniest spot in the garden. Three feet of the old soil was removed and replaced by two feet of manure, on top of which one foot of good potting soil was firmly packed. Early in February I planted seed of Chalk's Early Jewel, fitted over the top of the seedbed an old glass window sash, banked manure around the sides, and covered the glass with straw mats.

As soon as the tiny plants appeared I gave them light, using the mats at night only. During warm, sunny days I raised the glass to admit air, so that the plants would harden.

On May 6th I set in permanent places in the garden 110 thrifty plants, most of which were budded. They were planted two and one-half feet apart each way and trained to stakes, and I thereby secured from the same ground about three times as many tomatoes, which were larger, better, and much earlier than those produced by the usual methods.

Between each row of plants a piece of pipe was set on end (a leaky tin can would do as well) and filled with water twice a day during dry weather. The plants more than paid for this little trouble by rapid and sturdy growth.—*The Garden Magazine*.

The Children's Corner

LISTEN, BOYS!

1. TREAT your mother as politely as if she were a strange lady.
2. Be as kind and helpful to your sister as to other boys' sisters.
3. Don't grumble or refuse to do some errand which must be done, and which otherwise takes the time of some one who has more to do.
4. Have your mother and your sister for your best friends.
5. Find some amusement for the evening that all the family can join in, large and small.
6. Be a gentleman at home.
7. Cultivate a cheerful temper.
8. If you do anything wrong, take your mother into your confidence.
9. Never lie about anything you have done.
10. Never boast of your own achievements. If you have done a noble deed it will speak for itself.—*Select-ed*.

A FORGIVENESS ACCOUNT.

JOHN and his sister Gladys were out at the front of the house. Gladys was making a bead necklace for her doll. The bears were on a little work-table beside her. John was playing at trains. His train was an old box-cart, his new wagon was a coach for the passengers, and Gladys' doll-carriage for the "first-class" passengers. He was the engine and was steaming and whistling loudly.

"Don't come here, John," said Gladys, as he came near the table.

"Puff, puff," went this snorting human engine.

"Take care!" cried Gladys again, as he came nearer to the table, "you'll spill my beads." Away John went, and soon forgot his sister's warning. The train came round the corner, and before he knew, the table was upset, and the beads scattered in all directions.

"O John!" cried Gladys, with angry face, "what did I tell you?"

"I'm awfully sorry," said John, as he helped to pick up the beads. John was always sorry, but it did not make him careful. Gladys did not answer for a moment, but then she said, "Never mind, John, I'll forgive you." She had remembered the lesson she heard the previous Sunday about Jesus' telling Peter how he had to forgive his brother seventy times seven. Gladys was a passionate child, but had resolved to obey Jesus. She had been saying to herself—although John did not know—"I will forgive him four hundred and ninety times, but after that—" She shut her lips tight. "I'll keep a forgiveness account," she thought, "so as to know when it's seventy times seven." Before she went to bed she wrote at the top of a clean page in her last year's copy-book:

"List of the Times I Forgive John."

And under this:

"Monday—For spilling my beads."

Then she remembered that that very day she had upset a block tower John built to show father when he came home, and John had not been the least cross with her. "I suppose I ought to count that on the other side," she said. She then wrote on the opposite page:

"The Times John Forgives Me."

"Monday—For knocking down his tower."

That made them even.

And so day after day went on.

One day she had a longer list, and another day John had it—often they were even; and Gladys was beginning to feel very humble, and said to herself: "I guess if I forgive all I can without keeping any list, it will take me all my life to make four hundred and ninety times. Perhaps, after all, that was what Jesus meant. I will try. Dear Lord, help me to forgive always, as I wish to be forgiven."—*Friend for Boys and Girls*.

The Quiet Hour

THE TRAGICAL ELEMENT IN A HOLY IDEAL.

RICHARD BRAUNSTEIN.

Ye men of Galilee, why stand ye gazing up into heaven?
(See Acts 1: 11.)

OUR text forces itself without any preliminaries, right to the heart of the despondent disciples. The two heavenly visitors only translated what they saw written on the faces of the gazers into the clouds, by the pointed question, "Why are you looking up?" And the same question would have been asked in the first person, if they had given voice to the countless thoughts trooping their minds, and each, in return, pleading for expression.

It was a moment of intense retrospection. They had in mind the cherished hope of sitting on his right and on his left, and the intensity of their ambitions and designs had precipitated a dissimulation. Now all was settled. He was gone. How tame and prosy fishing after hearing such startling truths as were daily brought to light by the Master! Could they continue the work, feeding the multitude and bending low under the weight of an ever-increasing burden as they must experience?

It was a moment of introspection because they were unqualified for carrying out the work of Christ. They were incapacitated for any other engagement. A vision disables a man for following any other line of work. All the other faculties must be emptied into the faculty that lifts a man nearest his ideal. The step from the Master's side to the fishing net no soul will take without a pang of anguish. The pride of man balks, decending the hill of success.

Christ had led them from the crowd to the Mount of Olives. The winding footpath was lined with staggering vines and half dead olive trees. Here and there a slender palm stood in sombre loneliness as a crestfallen sentinel guarding a forsaken cause and not far behind them the brook Kedron, bathed the feet of the Mount of Corruption where Solomon had built his temple for his strange women. After the great commission had rolled with rhythmical cadence, from his lips, the Book significantly adds: "As he blessed them, a cloud received him out of their sight," causing the question of the angels.

When the thought of a man's responsibility comes upon him, he undergoes a process of self-abasement; the weight of the burden bends the soul. They had leaned on him through all difficulties—now they must test their own strength. They must conquer or die. When the sea becomes enraged no gentle Master walks the waves in peace, quelling the storm. The training they had received from him had broken all their idols, and standing guard over the shattered fragments of their erstwhile hopes and fancies, they inly groaned for something substantial. Their inability to execute the plan burned their hearts—to them it was impossible. The feeling of one's responsibility is an earnest of his ultimate success. Long nights of vigil, toil, visions that disturb contentment, are necessary for the qualifications of life. Some of us already have felt the depth of that call crushing our souls, and bathing our pillows with tears. The teacher, responsible for the success of a number of souls, feels the same burden. In the same proportion as one realizes the responsibility of a Christian character, to that degree is the tragical aspect of his ideal realized.

God's cause is a delicate one. Beware how the ark is touched! That David on whose hands is the blood of his fellow-man, though his music may rival that of Orpheus, his countenance that of Apollo, yet he will never build for Jehovah, God, a temple. The very inherent value of the cause crushed those men, and like Menelaus, when at his feet he saw his sword broken to pieces, and his ashen spear mispent in vacant air, they threw to the wild skies their trembling hands and prayed. The Saul who refuses to wait for the command of God, but sacrifices with his bloody hands, after having died a thousand worse than deaths, will find death at last while the swift-winged arrows of the enemy riddle his burning breast. Could we grind that into our teachers and preachers—that inherent purity is essential to imparting truth to others! The sins of the pulpits and the giddiness of the teachers are appalling. The lack of reverence in the house of God is a disgrace. The impurities of its messengers are the greatest barriers in the way of

Christianity. The teacher, or preacher, who refuses to offer a remedy for a sick soul is a criminal.

The question of money must not be discounted, as it is an important factor in the propagation of Christianity. There are some problems which nothing but money can solve. The eleven disciples saw the oncoming disaster of their efforts because means were lacking. The messenger of God is held at a discount when clothed in jeans. A man is not at himself in debt. He longs for the freedom of the one who owes no one. Those friendless and penniless men had to propagate a truth that only piled on their defenseless heads increasing poverty. The young man of straitened circumstances who catches the vision of life's work begins to complain at once of his lack of money. Often he turns his longing eyes to the dying sun, sinking behind the rolling plains, in the sea of fire, and pictures each radiant shaft of light shot across the western boundaries of the crimson skies, bars of gold all his own to defray schooling expenses. Poor men! What they must have felt. Clothed in rags, footsore, and heartless, a world to conquer and the extent of their qualifications determined by the vacant stare into the hastening clouds.

The man who fishes for the soul must keep the brain busy while he casts about with the gospel net. Wouldst thou fish men, then bait thy hook with brains. Illiteracy is the bane of progress. Those disciples knew that through their own strength they could not command the attention of the strongest minds. John could love, but must wait for another to unfold the doctrine of love. Eleven men will witness, one Paul will unravel the philosophical intricacies. Peter, full of impulsiveness, mistakes and tears, has already cursed like a demon and wept like a woman, still he dares to turn his tearful eyes to the leaden skies, seeking the way of truth. Do you long for an education, so that you can command the respect of men? It is bought with blood. Would you walk through snow with pieces of carpet tied about your feet, like Thurlow Weed, to borrow a book? Would you tie tighter and tighter a girdle about your body to appease hunger, like Samuel Deen? Can you eat sawdust without butter to become the lawyer Chilty? The road to knowledge is one that tears the brow with thorns and exhausts the heart with disappointment.

There was nothing about them that appealed to society, neither the color of their blood nor the attractiveness of their vocation. They would not be heard by that class of society which would be influential when won. Their energy must be expended on the outskirts of society, catching now and then a decedent, worth nothing after having been caught. There is nothing more discouraging than realizing the worthlessness of the material one has to work on. The wonder is that the disciples attempted it at all.

He who discovers a new truth must be a martyr

to that truth. Society demands an experiment on the inventor. 'Twas then as it is now, and the disciples knew it. Mankind would refuse them as it had their Master. To be fought by the object of one's love is the greatest source of pain! The redeemer of society will be an outcast by society. The drizzling rain percolating through the bosoms of the lashed and chastening clouds caused the treader of eastern thoroughfares to draw more tightly about him his Roman tunic, and entering a dingy alley a middle-aged man is seen resting on his left knee and with his right elbow on his right knee he sews on a pile of damp, mildewed and fetid canvas.

"Why is it, O fated man, selected from the walks of man, to feel the chastening rod of an apparently listless God, that thou dost seek companionship in the brains of Pliny or comfort in the scholarship of Tacitus? Is it explained by a mystic dream or an idle fancy, the secret of thy enfolding thyself in such a glory garment of loneliness?" From his task the philosopher and apostle lifts his massive brow and with tremulous lips replies: "Love seeketh not her own." Every truth man introduces, society says to the inventor, "We will experiment your truth on yourself." Dig on young man! You will win the respect of men only as you bleed for them. The vision came to the disciples only as the result of a course of training. Aspiring youth, remain passive—thoughts are swarming about you that will make you great.

The secret of their success lay in the universal consolation, "I am with you always, even unto the consummation of the eternities." There can be no success without the abiding presence of Jesus.

The method of Jesus is the method of preëminence. There can be no full fruition of one's life unless that life suffers death. Oh, that we may die for the love of God; then each respective soul will rise a star!

THE WORLD'S GREAT ONES.

THE man who drives on, regardless of others, gets things done; the man who weighs and considers, who consults others and avoids antagonisms, gets himself loved. Which course shall we choose? In a measure the choice is made for us by temperament. We are such as we were born—men of action or men of deliberation. Yet it is possible judiciously to combine the two opposing tempers. A man may be like a flint in his devotion to principle and a perfect tornado of energy in bringing things to pass and yet be gentle, sympathetic and considerate in his dealing with people. It is the men who by nature or by grace succeed in welding into one these contrary elements who are the world's great ones.—*Nashville Christian Advocate*.

God has two dwellings—one in heaven, and the other in a meek and thankful heart.—*Isaac Walton*.

Echoes from Everywhere

In West Virginia, there is, in the "dry" counties, but one convict for every 4,022 of population. In striking contrast MacDowell County, which is "wet," shows an average of one convict for every 190 of population.

The Sultan of Turkey has decided to build, at his own expense, a new parliament house which will amply accommodate the two branches of the legislature. This is taken as a sure sign that the constitution will not be revoked.

Secretary Wilson is about to take steps to investigate the uses to which cocaine, caffeine and certain chloral hydrates are put, with a view to putting a stop to their use in any way that will tend to fasten the drug habit upon their consumers.

Kansas has gone into partnership with the harvester trust. The International Harvester Company is to pay a fine of \$60,000 and to submit to State control of the business in Kansas. The company is prohibited from making exclusive contracts of any kind.

Many of the admirers of ex-President Eliot, of Harvard, feel that the country will be the gainer through his retirement from the university which he has so long headed. As head of the National Civil Service Reform League, the value and range of his services cannot be estimated.

United States District Attorney Sims has filed suit against the Atchison, Topeka and Santa Fe railroad for violation of the law prohibiting the working of train dispatchers over nine hours a day. Seven violations are charged. Fines aggregating \$3,500 may be imposed. This is the first case to be brought by the government under the new law.

The taking of testimony in the trial of the action brought against the American Sugar Refining Company by the government, alleging fraud in the weighing of shipments during the past six years, was begun Feb. 5 before Judge Holtin the United States District Court in New York City. The amount of customs duties in arrears sought to be recovered is \$2,124,121.

Five thousand Chinese corpses, bound for their final resting places in the Flowery Kingdom, left Brooklyn Feb. 10 on the steamer Shimosa. The bodies of the dead celestials were disinterred from burying grounds all over the United States and placed in sealed caskets which in turn were enclosed in pine boxes, each labeled with the name and history of its silent occupant and stored between decks on the ship. When the Shimosa reaches China the bodies will be sent to the localities from which the dead Chinamen came.

Plans have been perfected for the merger of all the big cement plants in the country. The aggregate capital will be \$200,000,000. Lawyers say the plan is proof against the Sherman anti-trust law.

The flood situation in many parts of Germany continues to grow worse, the melting snow causing the already swollen streams to leave their banks. Large loss of life is reported. The Eltz, the Rhine and the Oder are still rising and the lower sections of Frankfort-on-the-Main are flooded. The dykes are threatened and police boats have been stationed along the streams to rescue the people.

The question of cross-ties is becoming a serious one with railroads in the United States, and just recently one of the big companies sent its timber manager over into the Orient to study and report upon conditions there. Among other things that the manager learned was that the Japanese began to take care of their forests about 300 years ago, and as a result Japan is now selling cross-ties in the United States and Mexico, despite the fact that there is a duty of 20 per cent on each tie.

A few changes have been made in the cabinet of the present administration during the past few months, and the following are the President's advisers at present: Secretary of state, Robt. Bacon; secretary of treasury, Geo. B. Cortelyou; secretary of war, Luke E. Wright; attorney general, Chas. J. Bonaparte; postmaster general, Geo. von L. Meyer; secretary of navy, Truman H. Newberry; secretary of interior, Jas. R. Garfield; secretary of agriculture, Jas. Wilson; secretary of commerce and labor, Oscar S. Straus.

Savings banks derive no small profit from the unclaimed deposits left with them. About \$1,000,000 of such unclaimed savings has accumulated in the last thirty years in the Massachusetts banks, and according to a decision of the courts the State is to get this money—though, of course, it has no right whatever to it. The banks argued that they had the first right to the graft, but the judge thought it belonged to the State, on the same principle presumably that gives all "treasure trove" to the king in monarchical countries.

A publishing house is planning to bring out the long-awaited complete edition of the works of Count Leo Tolstoi, an undertaking that up to the present time has been impossible in Russia because of the censorship and the difficulties in the matter of paying royalties. Under the present arrangement royalties to the amount of \$250,000 will be paid in annual installments of \$25,000. It is declared that with the approval of Premier Stolypin the censored works of the Count will be included in this edition, which will number about twenty-five volumes.

Thirty manufacturers of wallpaper, representing the largest wallpaper mills in the country, in session recently in New York City organized the Wallpaper Manufacturers' Association of the United States, to take the place of the Continental Wallpaper Company, which was voluntarily liquidated several years ago. The purpose of the new organization is announced as to bring the manufacturers into closer business and social relations with especial interest in legislative and tariff matters.

The government of the Mikado believes in giving a criminal a chance after he has served his time in prison, so the Japanese penal code has been amended so as to provide that punishment shall be full expiation, and the term of confinement wipes out the convict's offense. On account of his crime no one may ostracise him, and he must not be refused employment because he has been a convict, nor is he to be discharged except for other causes. Furthermore, no one is permitted to make reference to the convict's crime or to insult him or his family.

The beginning of the movement by Chicago and eastern men to wrest supremacy in the steel business from Pittsburg became known recently when it was announced that the Inter-Ocean Steel Company, a \$2,500,000 concern, within six weeks will begin the construction of a mammoth new steel plant at Chicago Heights, a suburb. The new plant, it is announced, will begin business with a full equipment, aiming to rival the largest steel plants in the country. The company proposes to make a specialty of tires for locomotive and railway coach wheels.

The borrowing power of Persia has been completely nullified by the action of the rebel headquarters at Tabriz and Ispahan in notifying the diplomatic corps at Teheran that the constitutionalists will not recognize any loan made to the Shah until the Persian parliament approves the rebellion. The ultimate success of the revolutionists is deemed so certain that it is improbable that any power would lend Persia money in accordance with the terms of the revolutionists. Any other loan would undoubtedly be repudiated by the revolutionists in the event of their success.

Liberia, the little republic on the west coast of Africa, doesn't seem to get along, and in order to facilitate governmental matters in that State the President has asked Congress to appropriate \$20,000 and give him power to appoint a commission of three "to examine into the situation, confer with the officers of the Liberian government, and with the representatives of other governments actually present in Monrovia, and report recommendations as to the specific action on the part of the United States most apt to render effective relief to the republic of Liberia under the present critical circumstances." The proposed commission would have for its object the study at first hand of affairs in the republic, so as to be able to recommend to the United States what action it should take. It will be recalled that last summer three Liberian commissioners visited the United States and asked assistance. France and Great Britain control territory contiguous to Liberia, but they favor the United States as a succoring agent, inasmuch as the negro republic was founded by the United States in 1822 and has ever since been more or less under our protection. There are now perhaps 50,000 civilized blacks in Liberia, but they are unable to cope with the million or two of uncivilized people in the 43,000 square miles of Liberian territory.

It is well understood among prominent officials in Washington that Secretary of the Treasury Cortelyou has accepted the presidency of the Consolidated Gas Company in New York. Mr. Cortelyou has declined either to affirm or deny the statement, but there does not seem to be any doubt as to its truth. It is understood that the Secretary will leave Washington about March 4 for a rest of a month and possibly longer, and that upon the termination of his vacation he will go to New York and assume charge of the gas company.

The United States Government has refused to accept whiskey warehouse receipts as payment on internal revenue assessments from distilleries. The Chicago Tribune in a Washington special dispatch February 2, declares that the whiskey men are in distress over the rapid progress of prohibition which is handicapped by the startling fact that "some 225,000,000 gallons of distilled whiskey are stored away in bonded warehouses which they had expected to pour down thirsty throats during the last year."

The Methodist and Baptist ministers of southern California, at a meeting in Los Angeles adopted resolutions protesting against the anti-Japanese legislation now pending at Sacramento. The position of President Roosevelt, Governor Gillett and Speaker Stanton is endorsed, and it is "hoped that the entire matter will be voted down." The resolutions adopted by the Baptists say the exclusion of the Japanese from the public schools of California is an unjust discrimination "against this worthy class of people sojourning among us," and urgently request the legislature to "set us right before Japan and the world on this great question."

A series of conferences have been held by House leaders to determine on some method of getting the House to agree to legislate to regulate the shipment of liquor from State to State. Representative Watson, of Indiana, is leading the fight for the proposed legislation. The program finally agreed upon probably will be to tack the liquor legislation onto the bill for the codification of the penal laws of the United States, which has a privileged character on the House calendar. As the bill for this purpose has already passed the Senate, it is believed that both houses can be brought to an agreement to enact legislation more quickly than by voting on a separate bill. This course also would avoid the disagreeable action of ignoring the failure of the committee on the judiciary to report the bill.

Augustus A. Busch, who recently purchased the old home of Ulysses S. Grant on the Gravois road, St. Louis County, and known throughout the country as the "Grant Farm," has converted it into a model game preserve. He has purchased the old home of the General, the famous log cabin, which, after being knocked down and carried around the country for exhibition, has been returned to its former site and occupies a position on the farm overlooking the road. The place will be thrown open to the public as a museum. It is the intention of Mr. Busch to collect as many Grant relics as possible and restore them to the cabin. The cabin itself is intact and just as General Grant left it, except that a few logs have been cut out of an inside partition. The old "spring house" has been preserved in its entirety. A fence of musket barrels which saw service during the Civil War surrounds the cabin. A veteran who served under Grant is caretaker.

Among the Magazines

WAGES FOR PRISONERS' FAMILIES.

Why the wives and husbands of loafers and drunkards sentenced to terms in correctional institutions should suffer for the sins of their "lords and masters" is a question that has often been discussed at penological and reform conferences. Occasionally it is suggested that when the State sentences a man to hard labor or to labor of any profitable kind part of his supposed earnings should be paid to those dependent on him for support.

In the District of Columbia, under a new statute against family desertion and non-support, the payment of "wages" to families of prisoners has been very successfully tried. The amount is fixed by the statute at 50 cents a day, and the prisoners are supposed to earn it and more by taking care of Rock Creek Park and rendering other service to the district.

It is the testimony of the judge who has been administering the law that the provision in question has worked admirably as a preventive of unmerited misery, a form of discipline and a deterrent of vice and shiftlessness. Offenders are punished promptly, whereas under the ordinary plan courts are greatly tempted to take chances and give prisoners opportunities which they neglect or abuse. Moreover, any man with a little horse sense, when he realizes that he could earn three times as much for his family and home in free industry as is paid to his dependents by the community which keeps him a prisoner, makes an effort to mend his ways, and under the law the court has the power to release him when satisfied that he would "stay reformed" and go to work in peace and decency.

These facts were brought to the attention of a house committee which was about to strike out an item appropriating a small sum for the wages fund of prisoners' families. The committee had taken the view that the law was enabling dead beats to shirk their duties and saddle the cost of family maintenance on the community. As a matter of fact, where wages are not paid the public and private relief agencies bear the burden of pauperism and dependence created by imprisonment for nonsupport, habitual drunkenness and other offenses, and there is no economy in the plan. And under proper administration prisoners can easily be made to earn the wages paid to their families, plus the cost of their own board, shelter and other necessities or conveniences.—The Record-Herald.

WOMEN WORK FOR CLEAN CITIES.

Has progress deprived women of all their old-time employments and are they forced to engage in public affairs, too long neglected by men? These questions are suggested by an article in the February Delineator, in which Ida Husted Harper tells why "Woman's Broom in Municipal Housekeeping" has become necessary.

One after another the old-time employments of the household have been taken from home to factory until

now women are separated into two great divisions of an army—one that follows the work and marches forth each day to find in some public hive of industry the occupations once carried on in the seclusion of private life, and the other that remains at home stripped of all those domestic tasks that used to keep their foremothers busy from daybreak till long after nightfall, says Mrs. Harper. Churn, loom, spinningwheel, even the sewing-machine was snatched away, until at last they were left with only the broom of all their former implements of labor. And finally, one day, with a great clatter of victory, up to the door came the automatic compressed-air sweeper and sent the woman and her broom riding through space like Mother Goose in the story-books.

When the woman came down to earth again she was still clutching the broom, and, finding her house all swept and garnished from cellar to attic with the products of the factories, she began to wonder if the men, in taking for themselves all this labor belonging by right to women, might not have neglected their own legitimate work, so she looked about her and on every hand saw the evidences of such neglect. The condition of the streets was a menace to health; impure milk was killing off the babies by the thousands, while impure water and food threatened destruction to the rest of the race; the idle children swarmed the highways and byways because there was no room for them in the schools; from afar off came the cry of the little ones sacrificed in the labor market; on every side the agencies of evil had set their doors wide open to lure the innocent.

What are the women doing in the way of municipal housekeeping? In Massachusetts they had nine bills before the last Legislature; in Pennsylvania about the same number, and at least half a dozen in most of the other States—for child labor, juvenile courts, better conditions for women wage-earners, temperance legislation, vacation schools, pure food, school savings-banks, civil service reform, better pay for teachers, girls' industrial schools, women factory inspectors, children's playgrounds, women police matrons, anti-expectoration in public places—all for the betterment of the community, not one for "graft,"—not a "job" of any kind,—all clean, wholesome, much-needed laws.

PATRONAGE AND BARGAINING.

The doctrine which in his inaugural address Governor Hughes defines as to the double constitutional duty of the Governor of New York we have had occasion more than once to defend as applied to the President of the United States. Governor Hughes says:

"The executive power is vested in the Governor, but he is also an important part of the lawmaking power of the State. This is through his power of veto. . . . The Governor is also to recommend to the Legislature such 'matters as he shall judge expedient.' It is not his constitutional function to attempt by use of patronage or

by bargaining with respect to bills to secure the passage of measures he approves. It is his prerogative to recommend and to state the reasons for his recommendation; and, in common with all representative officers, it is his privilege to justify his position to the people to whom he is accountable. The more closely he confines himself to his province and discharges his responsibility within the limits assigned to him the less confusion will there be in the working of our system and the more potent will be the sway of intelligent public opinion over those charged in their various offices with the duties of representation."

The purpose of the Governor is to insist that it is no part of his duty to try to secure legislation by patronage and bargaining; and to explain why, instead of employing these political methods, which have been in almost uniform use, he has appealed directly to the people. This appeal to the people at large, he says, it is his privilege to make, "in common with all representative officers." Equally, as we have had occasion to say, the President of the United States combines legislative and executive functions. He has the right of veto, and he has the right to make recommendations to Congress. Beyond that, he has all the right which any citizen has, and even more, from his high office, to urge by speech or letter any policy which he regards it as important that Congress should accept. He is not to be blamed for anything except as relates to the validity and courtesy of his arguments.

Governor Hughes was severely criticised by the professional politicians because he went direct to the people, and in speech after speech attacked the gamblers and their defenders in the Legislature. They thought that was dictation—was outside the rules of the political game. It would have been all right, they thought, if he had made bargains and used patronage for his purpose. They might have made something out of that sort of compromise. He did the unheard of thing of offering rewards to no friends and punishing no foes. He told the Legislature what he thought it ought to do, and when it refused he denounced them to the people. He kept to the front nothing but the bare ethical question, the question the politicians wished to keep hidden; and the people heard him gladly and followed him. He has set an example of a high theory of gubernatorial responsibility and right which we trust will not be forgotten. The theory is, No bargaining, but appeal to the people if the Legislature fails of its duty.—*The Independent*.

THE COMING OF LOCAL SELF-GOVERNMENT IN CHINA.

But more spectacular than education, railroads, or opium edicts is the talk of a constitution. The impatient West is already asking what it comes to. As if all Oriental smoke must come from fire! In 1905 a commission was sent abroad and reported in favor of a constitution for China. In 1907 came a shower of edicts abolishing the distinction between Manchu and Chinaman, inveighing against bound feet, urging the toleration of missionaries and native Christians, appointing a constitutional commission to draft a plan, ordering self-government councils in Peking and elsewhere, and directing officials to have constitutional principles explained to the people by competent instructors. In August, 1908, came the announcement of a full constitutional government and a parliament after nine years. Now no one can tell just what this means, but contemporary events may throw some light upon it. At the end of 1907 representatives of the gentry of Kiangsu and Chekiang were ordered to Peking

to discuss their differences with the government over the matter of a railroad concession in their provinces, and they took good care to point out that their presence in Peking on an imperial summons was the beginning of provincial representation and possibly the first step toward a parliament. It was evident that Peking did not feel able to ignore the wishes of the provinces in the matter. The self-government societies ordered in 1907 have been established in a number of the larger cities, particularly in connection with chambers of commerce, and they enjoy a considerable degree of freedom of discussion when exercising a reasonable amount of restraint. Consisting of the gentry, well-to-do merchants, and minor officials, they have been active in securing the representation of the local rate-payer in municipal affairs. In the native city of Shanghai nearly half the original area has been taken from the jurisdiction of the magistrate and put into the hands of the self-government organization. When, as in this case, it is done with the full support of the official whose power it so vitally diminishes, it is a striking evidence of public spirit. Surely this is a new China.—From "The China That Is," by David Lambuth, in the *American Review of Reviews* for February.

THE WAY WE SAY IT.

Opinions are a good deal like old shoes: a coat of polish makes considerable difference in them. It matters little what we say, but it matters much how we say it. If the mode of expression is crude and rough, we are apt to reject the sentiment on account of its clothes, even though oftentimes the sentiment is a true one. If, on the other hand, the mode of expression is highly polished, we are in danger of accepting the sentiment on account of its rhetoric, even though it be false. That is to say, in each case we are prone to overlook the substance in the contemplation of the form. It was for this probably that some ancient once said that language was invented to conceal thought.

A remarkable case in point is furnished by two passages in an essay of Emerson's, who was a master of the English language, and whom a large proportion of our people hold dear. They are:

"In this national crisis [he was speaking at the time of the Civil War] it isn't argument that we want, but that rare courage which dares commit itself to a principle, believing that nature is its ally, and will create the instruments it requires, and more than make good any petty and injurious profit it may disturb.

"I wish I saw in the people that inspiration which, if Government would not obey the same, would leave the Government behind and create on the moment the means and executors it needed."

These two paragraphs contain a world of meaning. For less radical and incendiary utterances, men have been denounced, shot, and deported as anarchists and enemies to society. They breathe the very spirit of anarchy. What advice could be plainer from the lips of the most rabid and dyspeptic of anarchists? In the first paragraph he advises the sacrifice of certain special interests (vested property in slaves) for the sake of the general welfare. In the second paragraph he advises the people "to create on the moment the means and executors" necessary for such sacrifice. Such advice recognizes neither constitution, convention, nor statute. And he meant it in just that way. He was urging President Lincoln to set the slaves free, although there was no constitution, convention, or statute to support him in such action. Soon after, however, President Lincoln acted on that advice, and a

half-century still finds the act generally approved.

Many an agitator would, no doubt, have called Emerson a trimmer for the choiceness of his language. But he was not a trimmer. He had opinions which have stood the test of time, and they are all the better for having been elegantly expressed. Truth is truth, wherever uttered and however distorted, whether it is raved through the bars of a maniac's cell, punctuated by curses in a barroom, or expressed in faultless diction by a man of letters. Men who prefer the first two to the third do not need argument; they need a club.—Ellis O. Jones, in February Lipincott's.

HAPPY GERMANY.

Whatever makes the poorest people healthy is good in German eyes because it insures a strong nation that hereafter is to carry the power and influence of Germany around the world. Whatever impairs the physical constitutions of the masses of people is intolerable in German eyes because it threatens the national vigor and interferes with Germany's destiny.

Hereafter men may think it strange that of all the nations on earth the German nation was the only nation of these times to recognize adequately and officially the obvious facts of the great changes wrought for the sons of men by the introduction of steam and machinery. For one thing (and most important), the Germans saw that it drew huge populations into the manufacturing cities, where they speedily became overcrowded and undervitalized, and it bent them for long hours over such unwholesome employments as would in time destroy the race if there were not some compensation in hours of rest and relaxation amid wholesome surroundings.

Hence, goaded on, no doubt, by the growth of German Socialism, the German Government began to take most excellent care of the working populations, to provide exact and minute regulations concerning the conditions of labor, careful factory inspection, compulsory insurance, old-age and invalidity pensions, ironclad laws about compensation for injuries; for to the directing German minds that one man shall make a billion dollars seems less important than that sixty million people shall be healthy and happy.

Berlin's wonderful homes for workingmen are in a way a product of this general idea and directly the product of the nation's insurance system, which is operated by the government and not by stock gamblers, and for the sake of the common good, not for the sake of private fortunes. The houses are built by the workingmen themselves, but the government encourages them to build such houses, then enables them to build such houses, and then sees that such houses are built rightly.—Charles Edward Russell, in February Everybody's.

NATIONAL LIFE AND DRINK.

APOLOGISTS for the liquor traffic are fond of saying that the drinking nations of the world have been the strong and progressive nations. In a recent magazine article the writer said:

"Now, as ever, it is the drinking people that lead the progress of humanity. The Jews drank and gave us monotheism. The Greeks drank and gave us art and literature. The Romans drank and gave us law. The Teutons drank and gave us liberty. Britain has drunk, not always wisely, and established commerce.

What have the teetotal races done for the betterment of the world?"

Statements like that often go unchallenged just because nobody happens to take the trouble to look the matter up or to give the subject a few moments' serious thought.

But in this case somebody has taken the trouble, and here is the answer given:

"The Jews drank, of course, but where are the Jews now? They are scattered over the earth without any national home.

"Greeks drank, of course, but where are the Greeks now? The Greek civilization is a matter of history and their descendants are now peddling peanuts to abstainers on the street corners of American cities.

"The Romans drank, of course, but where is the Roman empire today? It is a matter of ancient history, and the descendants of these drinking Romans are now prowling around American cities with monkeys and hand organs, living off the pennies tossed them by abstaining Americans.

"The Teutons drank, of course, but what 'liberty' did we get from the Teutons? The Teutons for years have been running away from the tyranny and oppression of the Teutonic government to find liberty under the prohibition laws of America.

"The Britons drank, of course. But it requires 300,000 of these drinking British-trained troops to subdue 25,000 abstaining Dutch farmers.

"Greece and Rome both died drunk."

"Wise men are now writing articles on the decay of France, another drinking nation.

"Russia has the delirium tremens, and will soon die or reform. Japan, a temperance nation, with the oldest dynasty on earth, chased the vodka-soaked Russians all over Eastern Asia."—*The Illinois Issue*.

A colored woman was brought before a West Virginia magistrate charged with inhuman treatment of her child. Evidence was clear that she had severely beaten the youngster, who was in court to exhibit his marks and bruises. Before imposing sentence the magistrate asked the woman if she had anything to say.

"Kin Ah ask yo' honah a question?"

His honor nodded.

"Well, then, yo' honah, I'd like to ask yo' whether yo' was ever the parent of a puffedly wuthless culled chile?"—*Everybody's Magazine*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Eighty acres land in Butte Valley, Cal. Forty acres in cultivation, two dwellings, good barn, and young orchard. Will sell all or part at a bargain. Lock box No. 2, Frankfort, Ind.

While They Last

Did you read our Great Premium Offer in the INGLENOOK dated January 19 and January 26, 1909? If so, you will remember that we offered a valuable premium to a limited number of our subscribers. This offer was limited not because we desired to show favoritism, but because our supply of premiums was limited to a few hundred copies of the book, "Modern Fables and Parables." The INGLENOOK and the book have proved a splendid combination and we shall soon be compelled to withdraw the offer. This is not to be wondered at though, when you remember that we offered a \$1.25 book and a Dollar Magazine for a trifle more than the price of the Magazine. The INGLENOOK is rapidly taking its place among the best and cleanest home and family magazines of the land. We have a splendid body of readers and the number is increasing daily. We want to

C=U=B=A

member of the INGLENOOK family and urge that you send in your subscription in time to secure one of the books as a premium. If you desire 52 copies of an illustrated magazine and a free copy of "Modern Fables and Parables" for almost one-half the regular price write us today.

Remember the price, \$1.31.

The Lost Brothers of the Alleghanies

By Eld. Jas. A. Sell

On the morning of April 24, 1856, Joseph and George Cox, aged respectively 5 and 7 years, wandered from their home in the mountains of Western Pennsylvania.

Thousands of men, women and children searched for the boys, until, on the fourteenth day their whereabouts was made known through the dream of Jacob Dibert.

Eld. Sell, who conducted Memorial services on the Fiftieth Anniversary of the occasion, tells the story in all its details. The illustrations consist of five portraits: Mr. and Mrs. Cox, Jacob Dibert, Harrison Wysong and the Author.

A sad but true story of life in the mountains. Intensely interesting and instructive.

NEFF'S CORNER

One of the largest owners of real estate in Clovis has just come to me for money. He owns a number of good business houses and has a large rental income, but he still has some well located vacant lots on Main Street that he would like to improve. He would borrow \$2,000 to \$10,000 for from one to five years at 8 per cent interest and I suppose he thinks I can get it for him. In fact it ought not to be hard to get on the terms he offers. He would use the money in the erection of a substantial brick building on Main Street in Clovis, give first mortgage and carry insurance in favor of mortgagee so that your security would be as two or three to one. Persons having money to place should write me at once. Address

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words. This is the Only New and Complete Webster Dictionary issued since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the Best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

Full Sheep Binding with Patent Index.

A Sample of the Oat Fields in the Nanton District.

Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

CHURCH EXTENSION BY COLONIZATION

The Co-operative Colonization Company, incorporated under the laws of Indiana, proposes to establish colonies, on their Co-operative plan, in the United States and other countries, in suitable localities, under the most favorable conditions.

The aim is to establish self-supporting congregations of our people, with good church and school privileges from the beginning of a colony.

A committee appointed by the Directors of this company, made an extended tour of investigation through the West. After careful consideration of their report by the Directors, it was decided to locate their first colony in the San Joaquin Valley, California. This is one of the world's famous valleys, noted for its mild, congenial climate, rich soil and variety of products.

In this valley are grown successfully wheat, rye, oats, barley, alfalfa and other grasses; peaches, pears, prunes, apricots, nectarines, figs, olives, oranges, lemons, melons, canteloupes, strawberries, blackberries, raspberries, loganberries and grapes. Vegetables are grown almost every month in the year. English walnuts, almonds, pecans, peanuts and other nuts do well and are profitable. Dairying, beekeeping and poultry raising are carried on successfully. The new colony town, is on the main line of the Santa Fe Railroad, immediately on the tract selected for our first colony. It is in central California, within a few hours run of San Francisco, Sacramento and Stockton, among the best markets in the State.

The colony tract is well located, almost level, with a deep, fertile soil, mostly a sandy loam, well adapted to above-named crops. It is in the Modesto irrigation district, one of the best systems in the State, with plenty of water, and the land owns the irrigation plant. Two large ditches cross the colony tract, and the present owner will construct lateral ditches to each forty acres—an important item. The drainage is excellent, no alkali or hardpan to interfere with crops, no brush, stumps or stones to be removed, a good place for

IDEAL HOMES AND PROFITABLE INVESTMENTS

This tract is not large. It will soon be taken up. Each one can select his tract. Home-seekers and investors should investigate this proposition. A selection either in the town, or colony will make an ideal home. Water for domestic use is obtained from wells about 50 feet deep, and is of fine quality. A good public school house is in easy reach of the colony.

The next party of colonists will leave Chicago about February 9. The town and colony lands are both platted and are ready for occupation and cultivation. Prospective colonists and California tourists are invited to join us. Write for rates and particulars.

One Dollar Per Year

Washington

Of all the names that stand on history's pages,
And fill man's soul with patriotic fire,
The one that shines the brightest through the ages
Is Washington, our nation's honored Sire.

In youth, true manliness he cultivated,
Gallant in action, pure in word and thought;
Falsehood and baseness were the foes he hated,
With noble purpose golden deeds he wrought.

In early manhood into fiercest conflict
He plunges with enthusiastic zest,
Marshals the host that boldly strikes for freedom
With courage that withstood the strongest test.

And when the sombre clouds of war had parted
And those oppressed by tyranny were free,
'Twas he our glorious ship of state first started
Which ever on has sailed majestically.

He was the first in war, brave, patriotic,
And first in peace, true counselor and guide;
First in the nation's hope and aspiration,
And in the patriot's heart will first abide.

We cannot estimate the price of freedom
Nor tell how men of strongest faith are tried;
We only know they loved the cause they honored
Parted from dear ones, fought and bled and died.

To us a priceless heritage is given,
Wrought out by sacrifice and sealed with tears;
Ours to enjoy, to guard, to keep untarnished,
That it may grander grow with passing years.

—L. U. Hulin, in Ohio Educational Monthly.

"Mention Inglenook When You Write"

The Other Half Of The Globe

TO EVERY GOSPEL MESSENGER SUBSCRIBER WHO HAS NOT ALREADY RECEIVED A COPY OF THE BOOK FOR ONLY 45 CENTS. This book is a regular \$1.50 publication and can be had only when ordered with the Gospel Messenger for one year.

"THE OTHER HALF OF THE GLOBE" is undoubtedly one among the best of D. L. Miller's many works and discusses countries and people that we know very little about. Much time has been given to the preparation of this work, and it is well written throughout. More than 100 illustrations are woven in, which makes the book exceedingly interesting.

An excellent quality of book paper has been used in order to bring out the illustrations to the best possible advantage. The type is large and clear,—the same size as that used in the reading columns of the Messenger.

It contains 398 pages and is bound in good substantial cloth. In every way it is a much better book than the ordinary premium book.

It is easily worth \$1.50 and would retail at that or more were it placed on the market.

CAN'T BE BOUGHT.—This book can't be bought in any other way than with a year's subscription to the Messenger. Don't ask for it.

OUR COMBINATION OFFER.

Kind of Grain	Bushels per A.	A.					
I. Hildreth,	58	15					

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

Homeseeker Round Trip Rates are in effect on the first and third Tuesdays of January and February, 1909, as follows: From Chicago to Blackfoot, Idaho, \$42.50; Boise, Idaho, \$57.50; Butte, Montana, \$42.50; Caldwell, Idaho, \$57.50; Hailey, Idaho, \$53.60; Huntington, Oregon, second-class, \$57.50; Idaho Falls, Idaho, \$42.50; Ketchum, Idaho, \$54.60; Market Lake, Idaho, \$42.50; Mountain Home, Idaho, \$53.90; Nampa, Idaho, \$57.20; Ontario, Oregon, \$57.50; Pocatello, Idaho, \$42.50; Salt Lake City, Utah, \$39.00; Shoshone, Idaho, \$49.00; Twin Falls, Idaho, \$50.80; Weiser, Idaho, \$57.50.

Colonist One Way Cheap Rates will be in effect from March 1 to April 30, 1909, inclusive.

Write at once for printed matter giving full particulars about Idaho and its possibilities, climate and other attractions.

No. 8.

GEORGE WASHINGTON

D. Z. ANGLE

Life Sketches from Irving.

OUR first President was descended from ancient English stock, whose ancestry has been traced back to the century immediately succeeding the Norman conquest. In 1657 two brothers, John and Andrew, migrated to Virginia, settling near the Potomac River on Bridges Creek where John's grandson, Augustine, was born in 1694. He was twice married. By his first wife he had two sons, Lawrence and Augustine, who grew to maturity. By his second-wife, the beautiful Mary Ball, he had four sons, George, Samuel, John Augustine and Charles; and two daughters, Elizabeth and Mildred. George, the eldest, was born on the 22d of February, 1732 at the homestead on Bridges Creek, but while he was still an infant his father moved to an estate in Stafford County opposite Fredericksburg.

Educational facilities in Virginia at that time were limited. At fifteen Lawrence the eldest son was sent to England to be educated. George, who was fourteen years younger than Lawrence, received the best instruction, as he grew old enough, that the neighborhood afforded. This school was kept by one of his father's tenants named Hobby. The instruction was of the simplest kind, being reading, writing, and ciphering. But George had the benefit of mental and moral culture at home, from an excellent father. When seven or eight years of age his brother Lawrence returned from England a well educated and accomplished youth, who looked down upon George with a protecting eye, as the boy's dawning intelligence and perfect rectitude won his regard; while George looked up to his manly and cultured brother as a model in mind and manners.

Lawrence shortly afterward joined the English army, and served against the Spaniards in the West Indies with great distinction. Upon his return he was about to be married, when the nuptials were delayed by the death of his father which occurred April 12, 1743, when but forty-nine years of age. George

had been absent from home on a visit during his father's illness, and just returned in time to receive a parting look of affection. Augustine Washington left large possessions, distributed by will among his children. To Lawrence fell the estate on the banks of the Potomac, to which place he took his bride, a Miss Fairfax, after their marriage in July following. To this estate he gave the name of Mount Vernon in honor of Admiral Vernon, an English naval officer in the late war with Spain (1740).

George, when he became of age, was to have the house and lands on the Rappahannock. George, now eleven years of age, was under the guardianship of his mother, who proved entirely worthy of the trust. From her he inherited a high temper and a spirit of command, but her early precepts and example taught him to restrain and govern that temper, and to square his conduct on the exact principles of equity and justice. Tradition gives an interesting picture of the widow, with her little flock about her as was her daily wont, reading to them lessons of religion and morality out of some standard work. Her favorite volume was Sir Matthew Hale's "Contemplations, Moral and Divine." The admirable maxims therein contained, for outward action as well as self-government, sank deep into the mind of George, and, doubtless, had a great influence in forming his character. They were certainly exemplified in his conduct through life.

About this time George was sent to a superior school. His education, however, was plain and practical. His object, or that of his friends, seems to have been to fit him for ordinary business. His manuscript school-books still exist, and are models of neatness and accuracy. He was a self-disciplinarian in physical as well as mental matters, and practiced himself in all kinds of athletic exercises, such as running, leaping, wrestling, pitching quoits, and tossing bars. His frame even in infancy had been large and powerful, and he now excelled most of his playmates in contests of agility and strength. In horsemanship he was able

to manage the most fiery steed. Above all, his inherent probity and the principles of justice on which he regulated all his conduct, even at this early period of his life, were soon appreciated by his schoolmates; he was referred to as an umpire in their disputes, and his decisions were never reversed.

The attachment of Lawrence Washington to his brother George seems to have increased, and the latter was frequently a visitor at Mt. Vernon, where he often met and enjoyed the company of the family of William Fairfax, father-in-law of Lawrence. The society of these worthy and cultured people probably gave him ambition to acquit himself well while in company, and caused him to compile a code of morals and manners which still exists in a manuscript in his own handwriting, entitled "Rules for Behavior in Company and Conversation." It is extremely minute and circumstantial. Some of the rules for personal deportment extend to such trivial matters and are so quaint and formal as almost to provoke a smile; but in the main,

a better manual of conduct could not be put into the hands of a youth. The whole code evinces that rigid propriety and self-control to which he subjected himself, and by which he brought all the impulses of a somewhat ardent temper under conscientious government.

In his closing years in school George devoted himself to mathematics, especially to land surveying at which he became very proficient. He was thorough, painstaking, and methodical in all his work. Nothing was left half done, or done in a hurried or slovenly manner. The habit of mind thus cultivated continued throughout life; so that however complicated his tasks and overwhelming his cares, in the arduous and hazardous situations in which he was often placed, he found time to do everything, and do it well. He had acquired the magic of method, which of itself works wonders.

Mt. Vernon, Ill.

BLESSINGS IN RESERVE

NETTIE CULLER

WE are yet in the morning of a new era of which the twentieth century will be the beginning and for which the nineteenth has been a preparation. In our finite vision we often think that all possible things have already come to pass, but the great movements of the nineteenth century suggest not completeness but beginnings. Although we may not attempt to prophesy future events, we can draw from the study of past experience and present conditions reasonable inferences concerning the future.

Among the more significant changes that have taken place during the past century, and are still in progress are the achievements reached through steam and electricity. They have materially changed time and space, two great factors that enter into all lives. They have reduced the earth to a smaller scale; and have set it spinning at a much more rapid rate. So men have been brought into closer relations and the world's rate of progress has been wonderfully quickened. Thought and action are stimulated because of the increased ease of communication. New ideas are more speedily diffused, and public opinion is more quickly formed. Yet we must believe that all these quickening processes are as yet in their infancy. Many of them have been conceived in the minds of men within the last century.

Scientists are daily making new discoveries in every phase of their scientific research. If all that science has done for the world in this century were suddenly eradicated, it would leave our civilization in ruins.

The progress of science is so recent, that as yet we have scarcely a beginning of its innumerable applications to life. The field of knowledge is boundless. Each newly-found truth makes others more easily discovered. The truths of science are God's truths, and its laws are God's laws. We know not what more God has in store for us, for man discovers simply what God reveals. We must but realize that man's discoveries and inventions are but a part of God's great purpose.

The growth of democracy has been the salvation of much of Europe, and as yet it spreads its borders from nation to nation, and popular suffrage dictates the policy of the nations, the barriers that obstruct progress will be gradually removed. The death knell of successful despotism has been sounded. The discontent on the part of the workingmen in our land is prophetic of some great change in sociological conditions. No longer do the rich alone call for luxuries, but through the education of the many, the tastes of the poor are becoming very much like the desires of the rich, and the demand for universal equality must be recognized and met.

Students and statesmen are awakened to the fact that some movement,—momentous, though indefinite,—is passing like a great wave over the civilized world. Surely there are evidences that the present state of things is drawing to a close, and that new developments are at hand. As God's laws are more fully revealed, and more perfectly obeyed, new blessings

will be given us. Our very surroundings that are now void of beauty will be transformed into sweetest benedictions.

A hundred years ago the gates of Japan were closed to the world, but today she is enjoying a new civilization. She is eager to hold a place in the front ranks of progress. For years, blessings of enlightenment and culture lay dormant about her until Commodore Perry with his fleet of steamboats entered her harbor and made known to her the advantages of American civilization.

For centuries a barrier more immovable, and stronger than the great Chinese wall itself,—a wall of pride and prejudice, separated China from the world. But subdued by Western powers, her pride was humbled to employing foreigners to teach her sons shipbuilding, commerce and science.

So other nations have yielded to the irresistible, and are gradually and rapidly entering the light of Christian civilization. The door which is thus opened to Christianity has been only partially entered. Who may be able to conceive of the blessings that are now in reserve for the nations when they as one united whole have accepted the life-giving light of Christianity? Who can picture the consummate victory made possible by these now hidden treasures?

Modern missions have indeed done a great work, but they have but formed the nucleus of what remains yet to be accomplished. "The foothold has been secured, the fulcrum found, the gospel lever put in place," and may the near future see the mighty uplift. New blessings are gladly received, but greater than these shall ultimately follow.

Does the progress of the past indicate anything as to the progress of the future? Does not one great purpose run through all the law of history? As there is a unity in nature, there is a like one in history. The law of gravitation governs the physical creation; the workings of the intellect are governed by great laws of thought; the law of love governs the whole moral realm; but back of this there is one greater law that unites these different spheres in one infinite whole—even the great God himself.

In the material world this unity has been perfect, for things have no will-power and cannot disobey, but this harmony where there is no liberty is devoid of moral beauty. Could humanity be as obedient to the Divine Law as nature to natural law, then would the universe be crowned with blessings too vast for the finite mind even to comprehend. The wonderful discoveries of steam and electricity with their manifold blessings were concealed in the earth's great bosom until the intellect was sufficiently cultivated to delve into mystery, and wrest from the depths these wonderful achievements.

As the nations have developed and progressed, growing more and more into a harmonious whole, the

intellectual, too, has been carefully and continually cared for. Colleges, seminaries and universities have filled our beloved nation. The rich and poor alike may be satisfied by refreshing nectar from the unfailing fount of knowledge.

Are we not on the threshold of a great intellectual dawn? May there not be in God's bounteous storehouse innumerable blessings in reserve? May not the youths of the coming century grasp what is now to us the longed-for unknown and soar from our limited vision into the realms of supreme knowledge? May not our exalted heights be to them mere stepping-stones? Ah! we have beheld only the faintest possibilities! The future, with learning's longed-for prize, reaches eagerly toward our noble sons and daughters. To them it will reveal the mystery of the unknown depths.

New Paris, Ind.

THE OBELISKS.

T. H. FERNALD.

THE obelisk was the Egyptian symbol of the Supreme God. By the Arabians they were called "Pharaoh's Needles," and by the Egyptian priests the "Fingers of the Sun."

The first obelisk is said to have been erected by King Rameses of Egypt in the time of the Trojan war, and was forty cubics high and twenty thousand men were employed in its erection. Rome has about one dozen Egyptian obelisks erected within its borders. One was erected by Emperor Augustus in the Campus Martius, about 14 B. C., at the base of which was a dial marking the hours. Of these obelisks brought to Rome by the emperor the largest is that from Heliopolis. It was of granite and is situated in front of the church of St. John Lateran, where it was placed in 1588. It is about one hundred and forty-nine feet high; without the base about one hundred and five feet. Constantine removed it to Alexandria, and his son Constantius removed it to Rome and placed it in the Circus Maximus. The obelisk at Luxor was presented to France in 1820, by Mehemet Ali, and set up in Paris in 1833, and is seventy-three feet in height.

One obelisk, sixty-eight feet, five and one-half inches high, with a base seven feet, ten and one-half inches by seven feet, five inches, was presented to England, and set up on the Thames embankment, in London.

There are forty-two Egyptian obelisks known, many of which are now broken. Twelve are in Rome; one from Luxor at Paris; five in England; and one in the United States.

Washington and Bunker Hill monuments may also be termed obelisks. The Washington obelisk is five hundred and fifty-five feet high and was dedicated

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLVI.

IN going up Mars' Hill there is a path that leads up over rough stones and steep inclines. The very first step to this path from the ridge of the Acropolis is over a rock three or four feet high.

The two girls from the Ladies' Seminary in Genoa were just about to climb over this rock when I reached them, so I put out my hand and begged to assist them up so difficult a climb, taking the little Italian hand of each and gracefully—they did the "graceful" part—lifting them to the rock and following them up the irregular path to the highest point of the hill, daring to ask them a few questions in poor Italian. They had been driven in a carriage, but they had only a little time in which to see the Acropolis.

Before hastening away to lunch I did as most all Christians do on the same spot,—read the latter half of the seventeenth chapter of Acts: "For as I passed along, and observed the objects of your worship, I found also an altar with this inscription, TO AN UNKNOWN GOD.

What therefore you worship in ignorance, this set I forth unto you." The remainder of this energetic chapter shows up Paul at his best. Like any other traveler visiting the city for the first time he passed around among the ruins on the Acropolis, as he plainly says, pausing here and there just as any other tourist pauses, and meditating upon the dead past. But Paul was the only one of all the travelers who saw ruins here. For he beheld the magnificence in its future condition. The buildings and monuments he saw here were probably then in their most complete and beau-

tiful arrangement. Their number was complete. Every god had his temple or his statue. When all the known gods and goddesses had been enthroned in costly marble, one was brought here and set up with no name at all. The officials didn't know what to call it. The masons traveling about its base, left it stand much as the blank gravestone is erected on the new burying lot ready to be inscribed with the name of the first one who dies in the family. Here the analogy ends, for when Paul chiseled the name of God upon this blank stone on Mars' Hill, God's life was beginning to live among them, and all the other gods died.

The Genoese girls continued their sight-seeing amid the ruins as I ran down the hill into the city with its narrow, strange streets, noticing the small, open shops, the meat and fish stalls where no putrid flesh could be offered for sale as is sold daily in our country. As in Paris, so here the drinkers and loafers sat idly in chairs about little tables right on the sidewalk or in the street itself. There seemed to be no beggars.

Everybody had something to do or money to idle. I should like to return to study the municipal government of Athens. It ought to be the most wisely-ordered city on the globe, with possible exceptions in Rome and Jerusalem.

At Grand Hotel Pateros were many tourists from England and the United States, taking their luncheon. The tables were all full. With a note written in Greek by the proprietor, to the postmaster in Athens, I went to the general office and bought a stamp each of all the stamps used in Greece and mailed them back

to Rome to an Englishman keeping a drugstore—pharmacie—opposite the Grand Hotel. He had entrusted to me a sum of money for this purpose, so that I might gather for him in every country unused postage stamps of all denominations.

On the way back from the postoffice I tried to talk Greek to a fat citizen who asked me to please pronounce my words with the right accent. "Kai?" he kept saying to every sentence I formed. "Kai!" and looked at me for more Greek, long after it had all

if the word was made to appear to be coming from his mouth on the left side of his face, it would look as if he were pronouncing it *backward*. Had he been wise, knowing I was to honor him by taking the time and expense of putting his picture here in the INGLENOOK, he would have turned the *other way*. The work of reproducing this bust—*bust!* will be engraved upon *zinc*. But I suppose that when my book comes out, like every secret finally does, and it gets into Athens, this fellow will be mad because the publisher did not

"And that is the Parthenon!" I exclaimed, my heart beating like a drum as I hurriedly stumbled over the marble wreckage of ages.

run out. I said, "Yes, sire,—K-a-i! I am an American from Chicago." "Kai!" he replied, getting out of the way of a porter with a trunk on his back, "kai!" To say this as *he* wished to say it, he opened wide his mouth, threw back the upper part of his head that was movable, and pulled down the lower part, so that the fat, instead of thinning out by elongation of adipose, only hung in chunks upon his big, square face. I could have counted three-fourths of his fine teeth, every one sound and white save one in the lower front jaw. I have sketched him in one of his flying trapeze acts of saying K-a-i!

The rascal had his face turned the wrong way, so in order to represent him as *talking*, I had to cause the word K-A-I to take a "fly" around his black head, for

sculpture it—the bust—upon stone,—that is *marble*, he being an Athenian.

Though we did not converse well, it was striking how nearly modern Greek is like the Greek of Homer. The signs over the shops are painted in Greek characters. The advertising in the windows is printed in big Greek letters. The modern Greek is rather thick and short, as if the original copy of the various peoples of the earth, by oft-repeated use among other races, had, like the boy's copy at school, finally lost the teacher's personal flourish of form and been degraded into a scrawl, which while it had lost in beauty and symmetry, had gained the more practical expression for the boy who was to use it. So with the modern Greek. He will build in human charac-

ter what he has lost in deathless stone. His noble mind, long since turned from philosophy and art, will turn the intensity of its original strength upon the natural development of the spirit-haunted land. The little land of Minerva will smile in a landscape of cultivated fields, the bare mountains of Zeus will be enlivened by bright little homes of the common people. The Bible, and not Homer, will be her epic. The Bible, and not Plato, will be her argument. Christ, and not Jupiter, will kindle her imagination until the sea-cut land of the Mediterranean and Ægean will win again the trophy cup of victory, that like the statue of the Goddess of Victory represented in the ruin of the still beautiful shrine, the "Temple of Wingless Victory," will be without wings, and will never leave the home of the most magnificent in art of marble or speech or thought the world has yet to show the thankful pilgrim.

I ate my Grecian dinner with some haste. There was too much to eat outside. Again I went into the Square de la Concord, passing across and out of one of the several boulevards leading from it. Again I sought the Acropolis and took my last look at the imposing mountains. Again I looked into the plain of Marathon where Darius was defeated by Miltiades, and again my eyes fell upon the plain of Attica, a little east of Marathon, with the grand form of Mount Pentelicus and the warm sea to temper its gentle flowing breeze. Again my toes stumbled at innumerable fragments of a glorious past, as my tongue had tripped, some years before, over the fragments of the Grecian language I was mastering. Again my eye was bewildered at the strewn wreckage of altar, pillar, frieze and platform. Again—but the *Letimbro* was firing up her furnaces, sending great clouds of smoke to the west. My half day in Greece was nearly gone. With the queer Grecian ticket still in my hand as a souvenir of Athens, I ran through the turnstile of the exit and past the clamoring collector, who first objected and then allowed me to keep the ticket after he had punched it full of holes.

Out over the blue sea the kind boatmen rowed me back to the *Letimbro*. On her clean deck I stretched my tired legs and lay, propped on my right elbow, with my gaze always upon the panorama of the Acropolis, her background of mountain, and her wonderful atmosphere above. Bending her arch of blue, the sky, as if never close enough, guarded her treasure fields, pouring down upon them the golden splendor of summer's sunshine. At this distance, with exactly the same sea lying between us and practically the same shore line, the same sun and the same rare air, as in the days of Athen's power, I saw her only as she lay there, twenty-three centuries before the *Letimbro* throbbed with steam-filled cylinders below me. Sails decked the sea. Demosthenes warned with matchless eloquence the coming of the Macedonian,

whose fleet even now could be seen in the far distance against the dark face of Mount Pentelicus. The Parthenon gleamed strangely near. Yonder Corinthian pillar and Doric shaft, columns of ineffaceable beauty, looked down upon Homer, walking about alone and in ecstatic meditation. Along the frieze of the Olympian Temple to Jove, Phidias crawled with chisel and hammer, to finish the last touches of his imperishable masterpiece. It it wasn't Phidias, it was some other Greek whose name is immortal and whose honor is secure. In that amphitheatre Sophocles heard his plays, the models of all tragedy today. There, on the marble-strewn hills, the world's greatest poetry, speech and architecture first spread their wings of flight to take to every modern nation the inspiration for poet, orator and builder. There Paul, the apostle, the servant of God, stood for a brief series of sermons, on his way to die for the cross.

Little islands rise grandly around us. The *Letimbro* changes her course to avoid, now one, now another of these beauty spots of the Ægean. She is sailing through the Grecian Archipelago, coasting the same rock-roughed shore coasted by the Trojans.—coasting the blue Ægean.

The last, long rays of the setting sun, tipping the columns of temple ruins we are passing along the shore, have gone. Night steals softly over the land and sea. The faint moonlight hides the passing grandeur in gauzy dreams.

But in my mind, as clear as brilliant noontime, the silent majesty of the Acropolis unrolls, in added splendor, her long curtain of heroic achievement and I find myself so grateful to dear old *Letimbro* who has brought me here, I am trying to put my arms around her, to pay her in hugs what the land of Apollo has given me through her kindness, in artistic and honest inspiration.

All Rights Reserved.

THE BACKSLIDER.

WHEN a tornado eradicated the "Loyal Saints'" frame church at Silver Dell the ruling elders met in solemn session to discuss the situation. There had been no insurance on the building because the *powers* that *be* did not think Providence would destroy anything raised in its name. It *was* somewhat perplexing until Brother Samuel Walker, a pioneer torch-bearer, reasoned it out:

"That building wasn't good enough," he said, "and Providence decided we needed a bigger and a better church. That's why it let the jimmy-cane uproot it. Now, what we want to do is to pray good and hard for another church—pray with faith, long and earnestly—and it'll shore come."

So they held regular prayer meetings in one of the members' homes once or twice a week to supplicate for a new church building, a much larger and finer

one than the old, with a parsonage, a library and a preacher's study room. There is no limit to the Lord's bounty, and it were a reflection on his power not to ask enough while about it.

For a while it was the most faithful little colony of believers that ever worked in Silver Dell, but as the months drifted by without anything happening there was some anxiety, and they began casting about to learn where the trouble was. During a meeting at Sister Jarboe's one night, Bro. Walker disclosed the weak link in the chain of faith.

"There is a brother who has not lent the influence of his presence to these meetings," said Mr. Walker, gravely. "You all know who I mean. When the church was organized, Brother Hiram Turner was one of the foremost in the work; he helped in the building, plastered the walls himself, made the seats and donated two stoves. He was always in his place to lead in the singing and praying, and we looked upon him as one of our strongest pillars. Now, where is he? Why isn't he here, assisting us with his prayers and supplications? No one has seen him. He's a lost sheep; a backslider; a wanderer from the fold. He may be in the depths of sin. But the Lord hasn't forgotten him, nor our duty to him. We must bring the erring brother back by entreating him kindly with forgiving words."

During the day, it became known around town that Brother Turner had been seen by the committee, but he would not make any explanation of his strange conduct. He merely said he would attend the meeting at Brother Walker's. The committee reported that "there was a fierce gleam in his eye as he said it, and his jaws seemed to go together with a snap."

This news, rapidly circulated about the village, brought out a big crowd, so large, in fact, that many had to stand outside by the raised windows to see in.

The backslider had not taken any particular pains to dress for the occasion. He wore his pants stuffed in long boots, and there was no coat over his flannel shirt. There was a peculiar alertness about his eyes, as they roved from one accuser to another. The features were somewhat rough, but not harsh. He didn't look like a bad man, but rather a determined one.

"Brother Turner," said Mr. Walker, arising and addressing the accused, "I understand you have an apology to make for not attending our prayer meetings—the most important meetings that have been held since this church was organized."

The backslider got up and, standing by his chair, with one hand resting on the back, thus addressed the eagerly curious throng about him:

"I am not here to apologize. The brother has made a mistake. I am here to tell why I have not been taking part in these meetings. I was not too busy to attend. It wasn't far to go. My farm is only a few

miles down the creek. And it's not because I've lost my religion. I think I'm as great a believer as I ever was, and that my faith gets stronger as I grow older; but I don't ask God to build me a house until I till the fields and raise a crop to pay for it. If he did, what need would there be for me to work? If he had your meetinghouse blown down, it was because he had enough confidence in you to think you'd get busy and build a bigger and better one. He thought you'd be glad of the chance to do something for him. It must have been some sort of a surprise when he heard you were laying the ruination of your house on him and acting like he owed another one in place of it. If you people were poverty-stricken and going about on crutches, there might be some sense in praying for things you couldn't get yourselves; but it makes me weary to see strong, healthy folks flopping down on their knees and asking the Almighty to relieve them of the very burdens he has imposed to make 'em Christian soldiers.

"Now, if you people want to build a new church, I've got this to say: Out on my farm is a herd of fifty cattle. I'll sell a tenth of them and give you the proceeds. Same way with the hogs and the corn and other stuff I raise. But you must do likewise, else I'll give it to some other church. We got a-plenty to build the best church in this town without hurting ourselves, and when we get it built, then I'll come and pray with you that the Lord will give us other burdens for his sake. That's the only way we can reach the seats of the mighty in the Kingdom of God."—*Home Herald*.

THE NATURE AND CAUSE OF SEASICKNESS.

It is now generally admitted that there are two kinds of seasickness—a purely psychical form, due to "suggestion," and a true physical seasickness, due probably to disorder of the sympathetic nervous system.

Dr. F. Regnault was the first to differentiate "seasickness of the imagination" from true seasickness. The former type is particularly that to which persons are subject who are seasick on land. Some, through the mere recollection of the suffering gone through on a previous sea journey, are seasick when they watch a vessel entering port; others are similarly affected on boarding a vessel at anchor in port; others again cannot escape seasickness whenever they travel by ship, even if the sea is as smooth as glass. In the same class are usually persons who are subject to "carsickness" in traveling by rail or in a carriage.

This seasickness by suggestion is highly contagious. Dr. Bérillon quotes his own case: "During a trip across the English Channel I was bearing up pretty well, when some friends near me started telling stories about seasickness. I felt that I was going to suc-

cumb to it unless I asked them to change the subject of their conversation."

This form of seasickness works in strange freaks. One man may invariably be sick in the Mediterranean, never on the Atlantic; with another it may be just the other way about. Still another rides unscathed through a stormy sea, but is sick in calm weather. One is immune on the open sea, but falls a prey to the sickness on lakes or rivers, while a second, who thought he had finally conquered the trouble, suffers as on his first trip, if he travels on a different type of boat. Examples might be multiplied. While the essential cause of seasickness lies in the motion of the vessel, many persons, including those subject to the "imaginary" variety of seasickness, ascribe it to other causes, such as the evil odors emanating from the hold, from the engine, from tar, etc., or to the noise of the screw, of the engine, and so on.

This seasickness by suggestion is curable, according to Dr. Maillet, who quotes a large number of cases of persons who have been cured by preventive suggestion. As a matter of fact it is purely by suggestion that some of the quaint remedies occasionally recommended have sometimes proved efficacious—though never in really rough weather. Of such remedies one may be quoted here: "Take a fish that has been found in the stomach of another fish, cook it, season with pepper, and eat it as you go on board."

While seasickness due to suggestion is curable, the same is not the case with true seasickness, for which no efficacious remedy is known. This form will, in a raging tempest, attack even sailors who have been on the water since childhood, and who are greatly surprised when they succumb to it. In this case then the attack occurs even in the face of suggestion to the contrary.

Numerous theories have been proffered to explain this true seasickness. The two that appear most rational are the theory of cerebral disturbance, which attributes the trouble to the concussion of the cephalo-rachidian fluid by the motion of the vessel; and the abdominal theory, according to which the irritation produced by the friction of the abdominal organs against one another affects the nerve ganglions, thus producing by reflex action all the symptoms of seasickness. In this connection Dr. Maillet draws attention to the observation which must be familiar to all, that the distressing sensation experienced in a sudden descent, as an elevator or a switch-back railway, is unmistakably located in the abdomen.

The hardened sailor rarely falls a prey to seasickness, because he has, as it were, become part and parcel with the vessel, as a horseman with his horse. His body yields and instinctively follows the most irregular motions of the ship.

While there is at present no cure for seasickness, some relief can be given by applying an abdominal

bandage, which diminishes the swaying of the internal organs.—*Translated for the Scientific American Supplement from Cosmos.*

INTERESTING FACTS ABOUT JAPAN.

JAPAN has nearly 50,000,000 people, more than half as many as the United States.

The word "Mikado" signifies something like "the Sacred Gate" or "the Sublime Porte."

Rice is the common food of the common people.

Sixteen cents a day is now good pay for unskilled labor in Japan. Ten years ago it was six cents.

Japan has few millionaires and practically no multimillionaires.

Tokio is a hundred years older than St. Petersburg.

Japanese dead are buried in a squatting posture, chin upon knees.

Fujityama, the volcano that appears in all Japanese pictures, is 12 365 feet high, and 10,000 pilgrims ascend it every year.

The Japanese people, even the poor, travel much in their own country.

Modern Japanese coins and bank notes bear legends in English as well as in Japanese.

It is quite proper, even complimentary, to ask a lady's age in Japan.

The Japanese "Hello!" at the telephone is "Moshi Moshi!" or "Ano ne!" with the accent on the "nay."

Kissing and shaking hands are rarely practiced in Japan.

Japanese mothers do not kiss their children, though they press their lips to the forehead or cheek of a very young baby.

Japanese inns furnish fresh toothbrushes every morning free to every guest. The brush is of wood, shaped like a pencil and frayed to a tufty brush of fibre at the large end.

Japan has one of the largest steamship companies in the world, with service to the United States and to England by way of Suez.—*Selected.*

PREVENTION OF WASTE.

THE cheapness of writing material has developed a great waste in its use. This is especially true in our schools. When our State inspector called on us this year, he spoke of the lack of economy in the use of scratch tablets in the schools he visits, and remarked that during his inspection of the schools in Germany, the students there were not permitted to remove leaves from their notebooks, and when all the space had been utilized the pupil took the tablet to his teacher to get permission to procure a new one.

We have followed the German plan in our grades except that leaves may be removed for work to be handed in, but only with the consent of the teacher. The results have been gratifying to us, for our waste baskets are not more than full; the pernicious habit

of crumpling paper is not being formed, and we are teaching our young people a practical lesson in economy.—*Exchange*.

A BRIGHT DOG.

MR. F. F. CAVE was called up over the telephone this morning by Dr. J. W. Hull, the veterinary surgeon, and informed that his valuable pointer was running up a doctor bill at Dr. Hull's hospital.

Dr. Hull declared that when he arrived at his office this morning the dog was sitting in front of the door. When the doctor entered the dog followed him, walking with a decided limp. The animal permitted the doctor to make an examination, and he discovered it had been shot in the left hind leg, apparently with a 22-caliber bullet.

Dr. Hull dressed the wound and the dog left, wagging its tail gratefully. In about two hours the animal returned and Dr. Hull dressed the wound again. It departed as before, but returned after an interval and would not leave until the doctor had again examined its foot.

Dr. Hull knew the dog, and it was at this stage that he telephoned Mr. Cave, stating that he did not wish to take him unawares when he sent in his bill. The dog had visited Dr. Hull's office quite often when the firm had occasion to take horses there to be treated, and seemed to know where to go when it needed a surgeon.

The dog's wound is not serious, and there is no clue to the identity of the cruel wretch who did the shooting.—*Burlington Gazette*.

LARGEST CHIMES IN THE WORLD.

THE four chimes for the great clock in the tower of the Metropolitan Life Insurance Company Building, in Madison Square, New York City, weigh respectively 1,500, 2,000, 5,000 and 7,000 pounds. The largest is seventy inches in diameter. They are tuned in G, F natural, E flat and B flat and will strike either on the half hour or quarter hour—just which has not as yet been decided. They are to be mounted on pedestals between the marble pillars outside the forty-sixth story.

The bells were cast by the Meneely Bell Company of Troy, N. Y., and are the largest and costliest chimes in the world. They will ring out their melodies at a height of 650 feet above the street level. They are made of Lake Superior copper and imported block tin, which is supposed to give the sweetest tones. Probably not before April 1 will the chimes be in place striking the hours indicated by the twenty-five-foot hands on the great clock face.—*New York World*.

THE OBELISKS.

(Continued from Page 171.)

Feb. 22, 1885, while the Bunker Hill obelisk was erected in commemoration of the battle whose name it bears, which took place June 17, 1775. Marquis de La Fayette, just fifty years later, laid the corner-stone. The base is thirty feet square, and the monument is two hundred and thirty-one feet high. It was dedicated in 1843. These last two are the most famous of American obelisks.

Belfast, Me.

BEFORE THE GOSPELS WERE

Ye are witnesses of these things.—Luke 24:48.

Long noons and evenings after he was gone,
Mary the mother, Matthew, Luke and John,
And all of those who loved him to the last,
Went over all the marvel of the past—
Went over all the old familiar ways
With tender talk of dear remembered days.
They walked the roads that never gave him rest—
Past Jordan's ford, past Kedron's bridge,
Up Olivet, up Hermon's ridge,
To that last road, the one they loved the best.

This way he passed with Jarius, this the place
He called the light back to the maiden's face—
A slow strange light as when the dawn fills up
In her first hour a lily's pallid cup.
There was the shadow of the cedar tree
Where he would sit and look on Galilee,
And think on all that had been and must be,
And yonder was the secret trail he trod

Where birds were feeding as the guests of God;
And where the lilies, lighted by the sun,
Made dim the glory of King Solomon.
And then Jerusalem, where once he came,
His words all sword and flame
For those who buy and sell the Holy Name—
'Twas there he lifted up the little child,
Its heart all wonder wild;
Yes, lifted up a child for all to see
The secret of the Kingdom that shall be.

So huddling often by the chimney blaze,
Or going down the old remembered ways
On many a lingering walk,
They held their wonder-talk,
Minding each other of some sacred spot,
Minding each other of a word forgot;
So gathered up till all the whispered words
Went to the four winds like a flight of birds!

—Edwin Markham.

Nature Studies

PETS.

JOHN H. NOWLAN.

As a rule all civilized people have pets, for our domestic animals are only wild animals tamed.

The dog is only a species of wolf; the common barnyard fowl is a direct descendant of the jungle fowl of Asia; while the turkey still roams the woods and hills in its untamed state.

While the majority of people confine their efforts to the usual animals, some apparently desire to prove the apostolic statement that all animals can and have been tamed by man, and make pets of some quite unusual kinds.

Yet there is no valid reason why they should not be tamed, for many believe that to be the normal state of all creation. You may often see birds flying around cattle and even alighting on them. You may never have injured a bird in your life, yet did you ever have one to put such trust in you? Why not? Certainly not because of any *natural* cause, but they have learned that man is an animal to be dreaded and avoid his presence. If by any means you are able to overcome this *acquired* fear, then you have succeeded in petting the animal.

How is this to be done? Read O'Reilly's poem on "Habit" and you have the key to the situation.

"How can I a habit break?
As you did the habit make."

The fear of man is a habit acquired because they have been taught by experience that they may be harmed, and by not harming them they may be tamed.

Fish.

Many persons would be surprised to be told that fish could be petted, yet such is a fact. One of my youthful attempts was to collect a number of fish from an almost dry pool and place them in a tank supplied by means of a windpump. They took kindly to their new home and soon were thriving on the corn, etc., dropped by the horses and the larvæ of mosquitoes which they absolutely exterminated, not one of them being allowed to reach maturity. They would catch flies from the side of the tank, often leaping far from the water and never missing their aim.

Soon they became so accustomed to me that I

could put my hand in the water and they would swim around it searching for crumbs which I sometimes fed them. If the treat was not forthcoming they would nibble at my fingers as if to remind me that they had not yet been fed.

Sometimes I would dip them out in a dish and take them away to show to wondering persons.

Their fate is unknown to me. They, with the exception of a few that died, were there when I left the farm, years after.

Dove.

At another time I was plowing and disturbed a dove's nest. One egg had failed to hatch and the bird from the other was not old enough to be left to shift for itself. I took it home with me, intending to rear it by hand and give it its liberty as soon as it was able to care for itself.

How was I to feed it? I had often seen the young robins and others open their mouths to the utmost extent and solicit aid from the human visitors to their nest, but coax as I would I was unable to induce this bird to do so. On the contrary it frantically resisted all efforts to force open its bill. While holding it in my hands it thrust its bill between my fingers and lo! the mystery was solved. Instantly it opened its bill and eagerly swallowed the morsels placed therein.

I arranged it a roost on a closed porch where it would be safe from cats and that was its home till it was able to fly. When that time came I took it out into the orchard, placed it on a bough, and bade it farewell. When night came, what was my surprise to see it back begging to be let into the house again. Did I do so? Certainly. All summer long it remained with us, flying to us around the yard as fearlessly as any bird could.

Late in November it disappeared, with another dove which seemed to desire to remain with it.

For three succeeding summers a dove had a nest in an apple tree near the house and it was so little afraid of me that I could go close enough to it to almost touch it. I always felt sure that it was my pet, for when I would call it by its name to which it used to answer, it would act as if it almost wanted to come to me.

Tadpole.

Once reading an article on the effect of sunlight I was struck by the statement that sunlight was essential to the development of tadpoles. One day in the latter part of August I was passing a wayside puddle, almost dry, in which were a few almost dead tadpoles. Taking them home with me, I placed them in a small spring. But one survived; however, he was a fine specimen of his race. He grew to be more than four inches in length and large in proportion. The spring was covered closely and on May following the spring was left open.

He had made no progress toward froghood, but when left to the effect of sunlight he began to develop a pair of legs.

With the approach of July the spring began to fail so much that I dug a new home for him. While waiting for the water to settle he was placed in a dish and left in the smoke house. On going after him an hour or two later he was not to be found. What became of him I never knew but always blamed the rats, for there was no means of anything else reaching him.

Mulberry Grove, Ill.

**GATHERING ORCHIDS.**

ORCHIDS are the cheapest of flowers, cheap when one takes into account the cost of obtaining them both in money and in human life. The adventures of the collectors who search for this strange plant through almost unknown regions would fill many books. They are almost always Germans, for they must have unbounded patience as well as courage, power to endure hardship, and combine with these virtues great fluency in languages and the knowledge of a professor of science.

Some years ago a collector for an English firm was sent to New Guinea to look for a new *Dendrobium*, then very rare. He went to the country, dwelt among the natives for six months, faring as they fared and living among very trying conditions. At last he collected about four hundred of the plants. He loaded a schooner with them, but when he put into a port in New Dutch Guinea the ship was burnt to the water's edge. He was ordered to go back for more, and he did. He found a magnificent collection of the orchids growing in a native burial ground among exposed skulls and bones.

After much hesitation the natives allowed him to remove the plants, some of them in the skulls, and sent with the assignment a little idol to watch over them. It is small wonder that these plants sold at prices varying from five to one hundred and fifty dollars apiece.

A collector's life is in jeopardy from the time he begins his search till it is ended. Oftentimes the danger is not over then, for he may become impreg-

nated with the germs of an incurable fever or become a hopeless invalid. Eight naturalists, seeking various specimens, once dined together in Tamatave, and one year later there was but a single survivor. Even he was terribly afflicted, for, after a sojourn in a most malarious swamp, he spent twelve months in a hospital and left without a hope of restored health. Two collectors of a single plant died one after the other. A collector, detained at Panama, went to look for an orchid of which he had heard; the Indians brought him back from the swamps to die.

An authority on the subject shows that these dangers must be encountered invariably if rare or new orchids are to be found, for he speaks of one which "clings to the very tip of a slender palm in swamps which even the Indians regard with dread as the chosen home of the mosquito and fevers." And the difficulties of the work are as great as the dangers. One collector was known to wade in mud up to his waist for a fortnight seeking for a specimen of which he had heard; another lived among Indians for eight months looking in untracked forests for a lost variety. To obtain the orchid which grows on trees the collector must hire the tract of woodland, with the right to fell the trees.

The natives cannot be trusted to climb to the summits and gather the plants, and the collector cannot spare the time. So the wasteful plan of felling the trees is adopted, and the collector gathers his specimens from the fallen trunks. This, however, takes place far inland, and the plants must then be brought home. This is easier said than done. In one case they had to be carried six weeks on men's backs from the mountains to the Essequibo River; then six weeks in canoes, with twenty portages, to Georgetown, and then over the ocean.

The same authority, before mentioned, talks of a trip to the Roraima Mountains as quite easy traveling, yet it involved thirty-two loadings and unloadings of the cargo, and in another direction "one must go in the bed of a torrent and on the face of a precipice, alternately for an uncertain time, with a river to cross almost every day." After all this trouble the specimens often die on the voyage.—*Selected.*

"If a little word of mine
May make a life the brighter,
If any little song of mine
May make a heart the lighter,
God help me speak the little word
And take my bit of singing
And drop it in some lonely vale,
To set the echoes ringing."

"A NARROW rut that leads somewhere is better than a wide road with no particular destination."

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

THE RESPONSIBILITY OF PARENTS.

"TRAIN up a child in the way he should go: and when he is old, he will not depart from it." This is the verdict of the man who had his wisdom from God. The natural conclusion is that if, in the process of growing up, the child is not found going in the way he should, the parents are to blame and should be punished, when punishment is due, and not the child. People who have to deal with the delinquencies of children are coming to take this view of the matter and it may be we can look for decided improvement in the next generation of children. Parents who do not conscientiously follow Solomon's advice for the children's own sake and for the sake of the welfare of the country, may be induced to do so "to save their own hides," as it were.

One writer, speaking of this position taken by a certain officer, says: "There is more merit in the opinion of the Colorado secretary of the Bureau of Child and Animal Protection that parents of bad children should be punished for the misconduct of their offspring than one would suppose at first thought. If the State had the power to bring parents to the bar of justice when their children went wrong, there would perhaps be a more determined effort to see that boys and girls lived in accordance with the ideals of civilization."

A certain truant officer in Illinois is putting this theory into practice in handling the cases of "chronic" truants. His advice to fellow-truant officers is this: "Swear out a warrant for the father whose boy is out of school, and hale him before a justice. You will be surprised to see how quickly that boy becomes a regular attendant. By the time he has settled costs, often amounting to a neat little sum, that father will find out that it's really cheaper to let his boy attend to his studies than to stay out on the excuse of earning money. I believe there are some parents that

would keep their children running errands for a week if they could earn a quarter."

Of course the parents of unruly children get a good deal of punishment in having to live with their impudent, disobedient offspring, but the fact that it is "nobody else's business," helps to make this bearable and at the same time dulls any desire to mend matters. On the other hand, if the actions of the child bring him into conflict with the law and the latter turns to the parents for satisfaction, they are bound to acknowledge their failure and in the majority of cases will take the proper method to set themselves right in the eyes of the public which in other words means that they will have better-behaved children.

One is made to wonder sometimes in observing the trials of parents of disobedient, disrespectful children, what motives such parents had for bringing children into the world, aside from that of disproving the race-suicide charge. To be sure, there is a lot of talk in these days about child-training, but the modern version of Solomon's advice is, "Train up a child in the way he *wants* to go." and, naturally, when he is grown, "all the king's horses and all the king's men" cannot move him a hairbreadth from that way, to say nothing of what that way is. Parents are possessed with the idea that the child must not be in any way repressed. To have the ideal man, they say, we should develop the natural tendencies of the child. As if they did not know—though they might if they would take the second thought—that two or three generations of such "developing" would take us back to savagery. The savages give us an excellent example of the development of "natural" tendencies.

We trust that some plan, whether the one we have referred to or some other, may be found whereby parents may have a greater sense of their responsibility and children may come to have a greater regard for the rights of others and greater respect for authority of whatever nature.

OUR FIRST PRESIDENT.

THE anniversary of the birth of our first President, with all its recollections of a noble man's life, has a permanent place in the program of the twentieth century. As each year is counted off, the characteristic virtues of George Washington are held up before the hero-worshiping eyes of the boys and girls of our land, and into their characters are woven some of the threads that go to make up the pattern of such a life.

We should, in the first place, be thankful that our land has been blessed by the life of one whose kingly deeds helped to make our country the favored land it is. In the second place we should be thankful because our land continues to be *inhabited by those* who place a high estimate on the *services* of such men as Washington and Lincoln. It needs no prophet to see

that so long as the good in men's lives is thus extolled, we shall make marked progress along the road that leads to the highest and best in national life.

This year when we have just celebrated the centenary of Lincoln birth and have endeavored to give due honor and praise to the name of that great man, his place in the hearts of the people may seem to overshadow that of the great Washington. But Washington's name and fame will not suffer through our praise of any other loyal American citizen. Whatever of honor is accorded to the one who gave himself for the preservation of the nation will only add luster to the name of him who dedicated himself to the terrible trial of bringing it forth. As long as the nation has a place among the nations of the world, so long will the name of Washington, the father of his country, be honored by the people of this nation.

THE BRAVEST SONG AND THE SWEETEST SONG.

The bravest song is the song he sings who is hoping the best he may,
While he faithfully helps to do the things that have to be done each day;
The warrior may sing a glorious song as he marches to meet his foe,
And the hunter may sing as he hurries along where the quarry is crouching low,
But the bravest song is the song of the man who goes when the light is dim
To faithfully labor as best he can for the ones who depend on him.
The sweetest song is her song whose eyes are filled with a righteous pride
As she watches the cot where her baby lies while her needle is deftly plied;
The prima donna may grandly trill, and her bird-like notes may be
So pure that they never may fail to fill her hearers with ecstasy.
And her song is sweet who in rapture brings her lover the faith she should;
But the sweetest song is her song who sings in the joy of young motherhood.

—S. E. Kiser, in Chicago Record-Herald.

IN the hours of the reading of some great book—a work that presents the coinage of the author's heart and life—there come those inspirations which are the culmination of early dreams,—the inspirations which bring to the uplifted soul the sound of far-off harmonies. Perhaps you think this is the “stuff that dreams are made of.” It is imagination—and it is more; it is truth. When one reaches the height to which he has aspired he assumes only the form that he has created a thousand times in imagination. Thus the ideal becomes the real. If literature lifts the imagination to the creation of ideals, surely it helps to fashion the character of the man.—*Charles Milton Ware.*

MARTIAL MORTALS.

RICHARD BRAUNSTEIN.

THE human race is a brave race.

It is proved by the fact that it continues to live. While it requires bravery to die, it requires more bravery to live. And humanity is so stout-hearted it fights the battle of life so long as it can fight. Occasionally a tired, sick-hearted one surrenders, but he is the exception.

Humanity is brave.

Men and women daily face conflicts that might well daunt the intrepid gods. Think you because they go about with smiling faces there are no tasks that test all their fortitude, no sorrows that must be courageously borne?

Humanity indeed is brave!

Here is one fighting to keep in subjection his lower nature. Think of the duels he fights! Who knows the strivings of his defeats, the gallantry of his victories? He is a brave man, as brave as ever couched a lance in rest against a foe. And here is one who battles with wild beasts and unseen forces in the arena of business, and social life. And here is another who struggles with a great sorrow and bereavement, who has lost a friend or dear one, and is left alone.

This woman faces poverty and limitations, or anxiety, or pain, strain on nerve or sympathy. An archangel might well shudder to undertake the whole gamut of suffering that comes with wifehood and motherhood. And there is no shirking, no shrinking, no complaining. Duty, ever commands to be obeyed, and the obeying of duty means bravery. To live means doing one's duty. Humanity lives. Humanity is brave!

Woman dies and gives no sign. Woman lives and smiles in the face of Fate!

In this age of competition, in this strenuous life of ours the real men and real women sleep each night as the soldier sleeps—on the battlefield. And reveille wakes each martial mortal to daily strife, to daily battle for bread. Some to fight the good fight with hands and some with brains and some with hearts. Is it not true? You may even see some who are fighting with broken swords.

But one needs to repeat daily the prayer of Robert Louis Stevenson:

“The day returns and brings us the round of irritating concerns and duties. Help us to play the man; help us to perform them with laughter and kind faces; let cheerfulness abound with industry. Give us to go blithely on our business all this day, bring us to our resting place weary and content and undishonored and grant us in the end the spirit of sleep. Amen.”

Cairo, New York.

The Home World

THE GREAT WHITE PLAGUE

O. G. BRUBAKER, M. D.

No greater or more important discovery was ever made than that made by Robert Koch some twenty-five years ago when he discovered that tuberculosis, commonly called consumption, was caused by a germ or microbe, called the tubercle *bacillus*. Before the time of this discovery to have the doctor tell us that we had consumption meant that we should "set our house in order," or we would seek some other physician who knew less about it and would give us a less serious diagnosis. However, at that time tuberculosis meant to the patient that sooner or later he would succumb, "waste away, and die." But during the last ten or twenty years a great change has taken place. Then practically every one who contracted the disease died as a result of it, but today ten, twenty, forty, fifty and even seventy-five per cent of the cases are being saved.

At first Koch's discovery seemed to be everything but hopeful and encouraging, for no sooner were these gruesome, microscopic organisms identified than we learned that they were everywhere—in the saliva, in the breath, on the clothing, in the dust of our floors and carpets, in the streets—and in fact it seemed that the heavens above and the earth beneath were literally filled with these germs and to declare war against them would only stir them up into greater activity.

And then when it was found out that so many common maladies, as curvature of the spine, scrofula, lupus, many fatal bowel diseases of children and adults, meningitis, chronic joint affections and peritonitis were often to be laid at the feet of these same ubiquitous microbes, our despair became almost intolerable and to fight against them would seem almost as useless as to try to fight back the Atlantic waves with a broom.

But here, as always, the gloom had preceded the dawn,—the rain, the sunshine. The enemy had spread out in battle array before us but while we were watching the marshaling of the enemy's forces we found

that we had not been left alone without allies and weapons but that nature had supplied us with three mighty implements of warfare—sunshine, fresh air and abundant food. And then in our gloom of despair we had forgotten our own inherent powers of self-resistance and adaptation to changing conditions.

We had forgotten that we are a mass of individuals instead of one. We did not stop to reckon that while there were millions and billions of these bacilli for each person that there were more than an equal number of cells in our bodies and that each cell is a mighty warrior against disease germs. And then the power we have of adapting ourselves to such conditions and circumstances of living so that the germs can not continue to develop is well worth considering. So that after a number of cures were made by the open-air method we began to take heart and now, as said before, seventy-five and eighty per cent of the incipient cases are being cured. Even with this record to our credit, it is an appalling fact that one hundred fifty thousand people die every year in the United States as a result of this great plague. It is easy to see what inroads the remaining twenty per cent of cases will make in our population in a few years. And then so many patients after spending months and years in a sanatorium, the very place for a consumptive, find themselves scarcely fit to take up the stern actualities of this all too strenuous life. So every one who is thinking of this subject has come to the conclusion long ago that after all *cure* is a poor weapon against disease as compared to *prevention*. Hence without lessening our efforts in the least to cure the sick ones let us do all we can to *prevent the consumptive*.

It will be interesting as well as helpful for us to know something more of the life history and characteristics of these dreaded loathsome organisms. The tubercle bacillus is a bacterium, and hence belongs to the great plant or vegetable kingdom. It is a one-

celled, non-motile, slender rod of about 1-60,000 of an inch in diameter and about 1-8,000 of an inch long. Under the microscope they are very often found in pairs, slightly bent and generally scattered throughout the field but not infrequently we find them in smaller or larger bunches.

The tubercle bacillus is a strict parasite—that is it could scarcely find conditions suitable for its growth and development outside of the bodies of living animals. But we must not forget that bacteria, as well as all life, have a wonderful power of adapting themselves to changing conditions and that they may be able some time to thrive outside of a living body.

When tubercle bacilli are exposed to direct sunshine

Tubercle bacilli in sputum

X 1000

they are killed in a few minutes to several hours, depending upon the thickness of the layers and the season of the year. An exposure to diffuse daylight will destroy them in a few days. This as will be seen has an important hygienic bearing. Thus sputum that is expectorated by a tuberculous individual will be disinfected in a comparatively short time if exposed to the sunlight. And it also gives us a hint of the importance of sunshine and fresh air to the welfare of the consumptive.

From autopsy reports and from what we find in the deadhouse it is beyond question that a very large per cent of the human family is some time in their life somewhat tubercular. The German scientists tell us that "everyone is some time a little tuberculous." No doubt you and I have at this time tubercular foci somewhere or other in our bodies and the only reason why more of us do not become a rich camping ground for the hordes of the enemy is because of our power of resistance. If this be true, and it can not be proven false, we have a sure proof that if we can keep our bodies in good vital condition we can keep these bacilli from growing and spreading in our bodies—and not having the disease ourselves of course we can give it to no one else.

We have learned to know that the places outside the body where these germs thrive the best would be dissolution for us. In dirty, dark, gloomy, damp

cellars and basements, in old castles and mansions, in shutter-closed houses and dwellings, with no possible chance for any great amount of ventilation are the abodes of all disease-producing organisms. Fresh air and sunshine are as fatal to them as they are life-giving to us. Aside from the fact that many dear and precious lives are being saved every year by the sanatoria and open-air treatments, the greatest help comes from the fact that these sanatoria become schools of education and every patient coming from them becomes an enthusiast on fresh air and the rest of us soon see the beneficial results and profit accordingly. This plan of campaign is becoming more ambitious and hopeful every day. Physicians, ministers, lawyers, teachers and everybody are heart and soul in the movement wherever it has been started. And it begins to look like there may come a time when tuberculosis will be as rare a disease as smallpox or diphtheria.

Mount Morris, Ill.

TOO LATE.

If I had known your eyes would turn away
From smiling into mine; that I—alone—
Should stand beside your silent form some day;
I should have been more tender, had I known.

I could not hear the silent waters creep
Close to your feet, or I (you knew it, dear?)
Would not have said the words that made you weep,
Nor left unsaid the words you longed to hear.

So many years I saw you in your place,
I never dreamed that you could steal away—
That I should lose the rare and gentle grace
Of your dear presence in my life, some day.

The words unspoken, kindness left undone,
These rise in tears of vain regret, today;
I knew your worth and loved you, patient one—
Would I had told you ere you went away!
—Beulah C. Clement, in *Ladies' Home Journal*.

LOYAL.

LILLIAN M. WIRE.

HEARING a sound at the pump near my study-window, I glanced out. There was Loyal, trying to get, by himself, the water that was needed at home. He had a small pail, but he could scarcely reach the handle of the pump. Sister was gone, and Loyal thought he would "sprise mama," as he said. So he climbed out at the open window and started. His little ankles were so weak that he walked slowly.

Looking at the earnest face, I hoped that mama would not scold, and she didn't. Catching up the small figure, she said laughingly: "He wanted to help me, didn't he? And love for me was the spur."

The child smiled contentedly, as he went homeward cradled in his mother's arms. His motive was understood.

Later, he got in the habit of going a longer dis-

tance away without permission. This made a great deal of trouble, especially when he went to the railroad-crossing a few rods from his home or from "my house" as he called it.

Finally mama thought of a remedy that proved good. She told sister to take two pins and lay them on the track. Then after the train had passed, to bring the pins to the house.

Sister did so, and when Loyal looked at the little pair of scissors, as he called the pins, he learned the lesson that mama wished to teach. Now he is willing to stay at home and look at the pictures in his new book, when sister can not go with him.

PREPARE FOR THE STORMY DAY.

THE excitement of the wedding is over, the new home has been selected and furnished, and the newly-made husband and wife draw a long breath of satisfaction and relief that at last they are "settled."

They look around the cozy home, and their hearts swell with pride that it is all theirs—their very own. Surely they can want nothing more to make them perfectly happy. They have each other, they have their home and a comfortable salary to maintain it; they have their friends—what more could mortal wish for?

There is, however, one other thing that they do need, or the time will surely come when this happy family in their comfortable home will not be able to weather the storms of life.

When we are happy we do not like to look ahead for trouble, nor do we need to do so. That would mar our happiness. All that is necessary is to take the history of every man or woman that ever lived, and it will show that life is made up of both storm and sunshine.

The storm does not bother us much, however, if we are safely housed and warm, and there is nothing that can secure us from the storms of life like a bank account.

True love will stand the test of many troubles, but if the time comes when illness or financial disaster cuts off the income, then, a bank account, however small, is the rudder that guides love through the storm.

Young husband, young wife, get out pencil and paper, and figure up the exact amount of your weekly or monthly income, then first of all set aside a certain sum to be saved every month, and live on the balance.

Get in the habit of feeling that this amount must be saved, regard it as taxes, for you know that taxes must be paid, or the property will be lost. Just so it is with your saving. If you do not save, the time will come when your home will go to pay doctor's bills, to tide over the financial strait, or for one of the many difficulties that come to all people at the same time during their natural life. Do not think you will be exempt from trouble.

It is not in accordance with the great plan of the uni-

verse that anyone should have all sunshine. If, however, you have a bank account you can meet the trouble bravely and try again with renewed vigor.

Why not start the new life in "double harness" on a practical businesslike basis? Young man, be frank with your wife; tell her exactly how much your salary is and ask her to help you save a certain sum each month, so that when old age comes, you may sit together and rest in comfort, after your many years of labor. You will find her eager to help you and soon you will both have the saving habit.

Give her her own savings account and each day she will find new ways to save and will take pride in showing you at the end of the month how her account has grown.

I do not mean to advise doing without pleasures simply to accumulate money. My motto is: "Do all things in moderation." Enjoy yourselves as you go through life, but keep a constant eye on the inevitable old age, which none of us can escape, and see that you save enough to insure comfort and ease for that time.

Don't put off starting your savings account. Do it at once, and by next year this time you will have an account to be proud of.—*Philadelphia North American*.

FOR FATHER'S SAKE.

SOME time ago I went shopping with a girl friend, who showed such a beautiful reverence for her father's opinion that I have since wished every girl in America could be brought to follow her example.

She was in quest of an article of clothing about which she knew her father's taste and preference. Repeatedly in making her choice she said to her mother, who was with us, "I like this, but I don't believe papa would." And when she finally made the selection, it was one in which her own good taste predominated, but which she was certain would be thoroughly approved by her father. There was a little air of triumph about her when she finally made the decision. Her conscience fully acquitted her, and she was sure of her father's smile and hearty approval.

"For father's sake"—girls, is this your motto? Just because father does not always betray his feelings do you imagine he is not sensitive? How father loves to have his daughter meet him with a smile at the door! How he enjoys finding a warm room, a clean-swept hearth and a cozy chair that he knows has been drawn before the fire with loving thoughts for his comfort and happiness! How he enjoys finding some special dainty at his plate that was prepared especially for him! The careworn look on his face gives way to a smile, the discouragement that he has met with and that you do not—cannot—know anything about in your youth and inexperience, fade away, and his heart is comforted.

After supper he will ask you to go to the piano, and

sing his favorite song. Do not refuse him, dear, however indisposed you may be. Think in your heart, "For father's sake," and joyously and cheerily perform the little favor he has asked of you. It is such a small return for the burden that he has been carrying for your sake all day. Father will sacrifice much for you and for the others of his household, and all he asks in return is a grateful appreciation of his kindness.

So, whenever your music lesson seems hard, Kathrine, Anna, remember to say, "For father's sake," and it will become easier. Whenever you feel cross and discouraged at tea time, try to cheer up for father's sake. Do all you can to lighten the cares of him who does so much for you, and sacrifices so much of his own comfort and convenience that you may have a joyous girlhood. Some day you will realize what your kindness has really meant to him, although you cannot fully realize it now.—*S. S. Visitor*.

BECAUSE MOTHER KNOWS.

THE mother of the household sank into her rocking-chair and folded her tired, patient hands in her lap.

"I hope I shan't have to move for an hour," she said to the father of the family, in whose hands she had just placed a magazine he had hunted for in vain.

"I've done nothing but trot, trot, all day long, it seems to me. I wonder if every mother in this land is expected to know where everything is, and find it if she doesn't know?"

"I believe it is the usual custom," said her husband, dreamily, already more than half lost in the article on X-rays.

"Well, it's a poor custom," said the mother, wearily. "All day long I hear: 'Mother, where's my hat?' 'Mother, where did I leave my drawing pencils?' 'Mother, what have you done with my music roll?' 'Mother, where is my fishing rod?' 'Mother, where did you put my fancy work?' 'Mother, what magazine was that story in, and who had it last?'"

The leaves of the magazine rustled, and the father's face was hidden behind them.

"I believe they think I have some way of knowing where things are that I've never seen," the mother went on, smiling in spite of her wrongs, "for they ask me—"

"Mother," came a boyish shout from the head of the stairs, "Ed and I are in an awful hurry to go in town and we can't find our heavy gloves. Do you know where they are?"

"Ed's are in the second drawer on the left, where they belong; he left them in the dining room," called the mother, without a second's hesitation. "I haven't seen yours; but why don't you look in the pockets of your old coat?"

There was a sound of hurrying feet overhead, and then a joyful whoop. "Got 'em all right, mother!"

The father's face appeared above his magazine.

"Does it ever occur to you that you give the family some slight reason to think you have an inexhaustible fund of wisdom as well as a bureau of information in regard to articles lost, strayed, or stolen?" he asked, in a carefully impartial tone.—*Youth's Companion*.

The Children's Corner

LITTLE, "BUT THEN."

HAVE you ever read the story of Little "But Then"? Her real name was Annie, but they called her Little "But Then," and I will tell you why. Her face was like a sunbeam and she was always looking for every bit of good she could find in everybody and everything. When Freddie came home and told in a ridiculous way the story of the new boy's first day at school, and how odd he looked in his brother's outgrown coat and trousers, little Annie began with her most earnest air: "Yes, but then I didn't hear him say one naughty word all day, and he helped poor little Kelly out of the mud when he fell down."

"That's just the way with you, Little 'But Then,'" laughed Freddie. But he always loved Annie more than ever after such a speech as that, he couldn't help it.

When the day for the picnic which Annie and Fred had planned, dawned gray and cold, Freddie puckered his mouth ready to complain, but Annie soon snatched away all the frowns. "I know it's going to rain, Freddie, but then you know we can cut those paper chains and hang them all over the attic and eat our picnic dinner up there. And it'll be nearly as nice as in the woods" (with an extra emphasis on the nearly).

"All right, Little 'But Then,'" said Freddie, cheering up. A play with Little "But Then," in the attic was almost as good as a picnic, any day.

When she fell and broke her arm and had to have it bandaged for many days, she said over and over to her friends as they sympathized with her, "Yes, it hurts, but then it could be worse, you know."

All the other children made fun of poor old Mosey Crosby, but not so Little "But Then." "Of course I know he's queer," she said, "but then he has no one to love or care for him, and it makes him cross to have the boys tease him so. I took him some flowers and you ought to have seen him smile and thank me over and over for them."

And so it was by always trying to see the good and cheerful side of life that Annie came to be called Little "But Then." Would it not be worth while owning such a name if it stood for a sunny disposition like hers that always smiled at discouragements and tried to find the good and lovely in everybody?—*Sunday School Advocate*.

The Quiet Hour

COME YE APART.

"Come ye apart into a desert place,"
Said Christ, my Lord, to me.
"And rest a while," just as of old he spoke
To men in Galilee.

"The desert places blossom like the rose,
If I am there with thee,
On bread from heaven, abundant, new,
Thy soul shall feast with me.

"Come ye apart. The city's noisy din
Shuts out the still, small voice,
And I have messages thy heart should hear,
Come hear them and rejoice."

I went with him, my Master and my Friend,
Apart from men awhile,
I missed no faces of the ones I loved,
While basking in his smile.

Where only desert sands had been before,
The Rose of Sharon grew,
And the hot paths my tired feet had shunned
Were pastures green and new.

My weary soul found rest, my hungry heart
Found manna fresh and sweet.
I'll go again when'er I hear him call
My blessed Lord to meet.

—Frederick A. Gould, D. D.

A SILVERY SUNDAY SCHOOL.

D. D. THOMAS.

THE cold of the winter is upon us. All week long we were housed up at the stern command of Mr. Jack Frost, and we slunk away at every gust of wind for he was in every wind. The cattle shivered in their stalls and the fowls drew their feet into their feathers to keep him from nipping their toes.

But in the cold of winter or the warm of the sunny summer, all are glad when the first day of the week comes when we can hie away to the Sunday school and the other sanctuary privileges. This morning nature seems to be especially solicitous. Mr. Frost has partially let go and the air is filled with moisture. I think he must have forgotten himself. Then he takes hold with a strong grip and the trees are covered with a silvery tinsel. Myriads of them are in the air. Should the sun peep forth, what a glory there would be! The tall pine that grew in a front yard is covered with silvery bunches, like downy feathers. Even the

feathery clusters do not suggest gayety as one would suppose, for there is no fluttering or rustling but a calm, submissive serenity. And with them everything is taking on a solemn spirit, in keeping with the day.

It is the kind of food upon which we grow. We look forth with joy and our Bibles are in our hands that our rejoicing may be in the Lord. For several reasons the school is not as large as usual but we feel that the same spirit is present that we had caught from nature in the earlier morning. As we talk of the great sermon of Peter on the day of Pentecost there is a silvery resplendency cheering us and making us believe that the same pentecostal spirit is moving. It is a silvery Sunday school. We see no cloven tongues, we hear no sound of rushing winds, but the still small voice echoes in our hearts and his spirit's swelling there.

Lafayette, Ohio.

JOSEPH, THE CARPENTER THAT BUILT A TEMPLE OF FAITH.

CARPENTERS are generally slow and serious people, but very substantial. Their characters partake of the sweet solidity of the material with which their lives are spent. As it is their business to fashion accurate angles, to create joints that are true, surfaces that are smooth, uprights that are perpendicular, and horizontals that are exactly level, their thoughts tend to justness and their actions to sobriety. As their work cannot be rushed, but the wood's resistance must be patiently worn away with plane and sandpaper, saw and drawknife, their tempers gain a placid persistence that overcomes obstacles quietly but surely. The fragrance of oak and maple and pine passes into their spirits, and imparts to them an aroma and a tang. They are not talkative people, but have taken on the taciturnity of timber and the silent peace of deep forests. The world is generally ignorant of their fine qualities. They wear their rough bark on the outside, and the finer grain, the shimmer and the polish, are within. They are folks that wear well, with an instinctive aversion to veneer, and an instinctive satisfaction with honesty and permanent strength.

I think I cannot be wrong in believing that Joseph,

the carpenter of Nazareth, was such a man as I have pictured. We have only a tantalizing glimpse of him, but every word points to such a character. He was "a righteous man." He was a merciful man, "not willing to make her a public example" when he thought his betrothed guilty of the most unpardonable of sins against himself and society and God. "He thought on these things," anxiously, earnestly, and patiently, not flaming forth in a just indignation, but waiting to discover what might be precisely the best way. Could a man have been selected better fitted to the unique occasion?

It seemed like the ruin of the home that the carpenter had been building in his loving and hopeful thoughts. Perhaps he had erected an actual home, a new home to which to bring his bride, and was very proud of the woodwork and the well-made furnishings. At any rate, his dreams, as he toiled in the shop, had fashioned with the skill of a lover a very palace of delight, with long and radiant vistas of mutual affection, the honorable regard of men, the helpfulness of children. And now a black storm had tumbled it to the ground, and he must sit mournfully among the fragments and think what he would do with the pitiful remains.

What he did was to build a temple of them! It was a temple of faith, one of the rarest and loveliest the world has ever seen. It was not easy of construction, though he had an angel to help him. It was built out of a confusion and wreck. We read almost nothing of Joseph hereafter, and it seems clear that he died before our Savior entered upon his public ministry; but I like to think that Jesus was not reared in a carpenter's humble home or trained in a carpenter's low-ceiled shop, but that his boyhood and youth were spent in a very temple, one of the noblest the earth has ever seen.—*Amos R. Wells.*

LIFE'S REAL MEANING.

JESUS found childhood in a peasant home a large enough place for the living out of his divine life. If only some young people understood life's real meaning they would find room enough in the lowliest conditions to work out divinest ideals. Robert Browning represents Gabriel taking the place of a poor boy and working for him at his trade, as contentedly as if engaged in the highest service. But here is something sublimer than even the poet's fancy. Should any true-hearted child, however great his gifts, consider his place in the lowliest home too small, since the Son of God found room in a peasant home for the development of his glorious humanity? Canon Farrar says, "A life spent in brushing clothes, washing crockery, and sweeping rooms—a life which the proud of the earth would have treated as the dust under their feet—a life spent at the clerk's desk, a life spent in the

narrow shop, a life spent in the laborer's hut, may yet be a life so ennobled by God's loving mercy that for the sake of it a king might gladly yield his crown."—*J. R. Miller, D. D.*

THE SELF-CENTERED MAN.

WORLDLY-wise philosophies teach selfishness—Christianity teaches self-sacrifice. The world has made a dogma of self-preservation. A physician in a widely circulated magazine makes the statement that selfishness is a healthy sign in babies—that "to a child under three his devoted parents; his nurse, his playmates are little more than so many features of the landscape." He speaks of the "rightness and morality of primary selfishness." In fact we are told by our wise men that selfishness is the base upon which our institutions and even our virtues are built.

Perhaps the wise men are right; at any rate, contradiction would prove nothing. But even if we admit that this praise of selfishness is the truth we cannot admit that it is the whole truth. Self-preservation may be the first law of nature, but it is not the only law, nor the principal law. We may have a right to be selfish at the age of three, but we have no right to remain so. Our institutions and virtues may be founded upon selfishness, but their purpose is the restraint of selfishness.

After all, philosophy and religion do not contradict one another. Philosophy says that life must begin in selfishness; religion says that it must grow from selfishness. At first the little life knows only of its own existence, but soon, very soon, it finds that it has a mother to love, a father and brothers and sisters. Then, in an ever-widening circle, it begins to love relatives, playmates and friends. Unless the growth is diverted or stunted the youth finds that he must love his country and his countrymen, and he becomes a patriot; and then he learns that he must love all men as brothers in Christ, and he becomes a Christian. No character is truly great until it has cast aside selfishness for this universal love.—*Selected.*

NO MAN LIVETH TO HIMSELF.

THERE is no sort of wrong deed of which a man can bear the punishment alone; you can't isolate yourself, and say that the evil which is in you shall not spread. Men's lives are as thoroughly blended with each other as the air they breathe; evil spreads as necessarily as disease. Every sin causes suffering to others besides those who commit it.—*George Eliot.*

"SOMETIMES our minds are so crammed with other people's thoughts that there's no room for any of our own."

"By nothing do men show their character more clearly than by what they think laughable."

Echoes from Everywhere

The struggle of Arizona and New Mexico for separate Statehood was rewarded Feb. 15, in so far as the House is concerned, when that body under suspension of the rules unanimously passed the bill granting separate Statehood to the two Territories.

The Red Cross stamp committee which had charge of the sale of the little red sealing stamps during the Christmas holidays reports that the total receipts from the 1,500,000 stamps sold were something over \$15,000. All that was made over expenses will be devoted to fighting tuberculosis.

President Roosevelt has given his consent to the placing of the head of Lincoln on one of the popular coins. He has conferred with Director Leach, of the Mint, and the details are now under advisement. It is probable that the half-dollar pieces will be selected as the principal coin to bear the Lincoln head.

Indianapolis, Ind., Feb. 12.—By a vote of 52 to 44 the House passed the Proctor-Thompson county local option repeal bill. The bill provides for city ward local option, prohibition in the rural districts, one saloon to 500 of population and does away with saloons owned by breweries. It is expected the Senate will pass the bill.

The upper house of the Nebraska Legislature has passed a bill increasing the residence period for divorce applicants from six months to one year. The applicant must also announce an intention to reside in the State. A large number of divorce-seekers have flocked to Nebraska, and the bill is designed to break up these "colonies."

It is said an executive order will be issued disbanding the United Association of Postoffice Clerks and the National Association of Letter Carriers because of their affiliation with labor unions. Charges have been preferred by Postmaster General Meyer that members of these organizations have tried to influence legislation in their favor.

There is a report to the effect that there are 2,000 drugstores for sale in Kansas owing to the fact that the Legislature is about to pass a law cutting them out of their chief source of revenue—the liquor trade. The Senate bill already passed stops the sale of liquor by the drugstores for any purpose whatever. It is the most drastic law enacted in any State on the prohibition question. It not only provides for absolute prohibition but also restores the inquisition and gives immunity to people who testify in "joint" cases. Legislators say the bill is bound to become a law.

At the spring meeting of the Mount Vernon Association, J. Pierpont Morgan will present to the society the sword worn by George Washington when he resigned as commander-in-chief of the Continental Army in 1783. The sword was recently purchased from Miss Virginia T. Lewis of Baltimore. Two years ago the United States Senate voted to appropriate \$25,000 for its purchase, but the House failed to pass the bill.

The local option bill passed by the Idaho Senate a few weeks ago was later accepted by the House by a vote of 33 to 13. The bill now goes to Governor Brady, who has announced his intention of signing it. Under the terms of the bill county commissioners of any county are required, on presentation of a petition signed by 40 per cent of the voters, to order a special election to determine the question of the sale of intoxicating liquors.

After a discussion lasting more than a year the Spanish Chamber of Deputies has passed the local administrations bill, which is the principal feature of the Government's programme. The new measure increases the existing powers of the municipal and provincial councils, giving these councils new prerogatives and providing a certain degree of local economy, especially with regard to education, public works and charitable institutions. There is every reason to expect that this far-reaching reform measure will pass the Senate and will be put into operation before the end of the year.

People living in the vicinity of Mt. Colima have been driven from their homes in terror before an invasion of wild animals driven from the forests surrounding the mountain by the constantly recurring earthquake shocks. Mt. Colima is in eruption and lava and ashes are falling over a narrow territory. The eruption has caused a number of forest fires that have driven wild animals to the cleared settlements. It is reported from Coalcoman, Patzoura, Arrio and Tacambaro that the earth there trembles almost constantly and that the people are frantic.

A petition from 1,100 ministers of the Episcopal church of America, asking for repeal of the canon providing that any bishop may authorize any "Christian person" to speak from the pulpit of any Episcopal church in his diocese, caused a heated discussion in the house of bishops of the church, in session in New York City. Several bishops favoring the repeal said that the license allowed by bishops had been carried so far in this respect that some persons not even Christians had been thus authorized and had often been opposed to the teachings of the very church they preached in. The bishops were unable to agree on any solution of the problem, and it is probable that the matter will go over until the general convention meets in 1910.

The House of Representatives has passed a bill for the acquisition by the Government of the two groves of Calaveras big trees in California and their reservation as the Calaveras Big Tree National Forest. The bill was reported by Representative Smith (Rep., Cal.). It provides that the Secretary of Agriculture may trade other public lands to owners of tracts on which the trees are located, in exchange.

An announcement that will interest Jewish scholars is one to the effect that the Jewish Quarterly Review of London, the foremost scholarly and religious publication of its kind in the world, will be transferred to this country. The Review, it is now said on good authority, will be edited in New York by Dr. Cyrus Adler, formerly of the Smithsonian Institution and now president of the new Dropsie College of Hebrew and Cognate Learning which is being established in Philadelphia.

The first award of the gold medal recently established by the Smithsonian Institution in memory of the late Secretary Samuel Pierpont Langley and his contributions to the science or aerodromics has been made to Wilbur and Orville Wright by the board of regents of the institution "for advancing the science of aerodromics in its application to aviation by their successful investigations and demonstrations of the practicability of mechanical flight by man."

That the American people retrenched on the so-called "luxuries of life" during the recent hard times, is evident from statistics issued recently by the department of commerce and labor. Four million dollars' worth of automobiles were imported during 1907, but in 1908 there were only two and a quarter million dollars' worth. In 1907 there were imported 985,000,000 pounds of coffee, but in 1908 only 890,000,000 pounds. In 1905 more than a billion pounds were brought in. In 1907 more than \$35,000,000 worth of diamonds were imported, while in 1908 there were but \$14,000,000 worth.

The Pope gave a private audience Feb. 8 to fourteen underofficers and a number of sailors from the American supply ship Celtic. They were presented by Mgr. Kennedy, rector of the American College in Rome. The Pope said he was greatly pleased to receive the American sailors, and to be able to express his gratitude for all that America has done in aiding Italy after the earthquake disaster. The Pope said he desired his thanks to be conveyed to President Roosevelt and the commander of the Celtic for the splendid work done by this vessel in Calabria and Sicily. The Pontiff then extended his hand to be kissed and gave to each man a silver medal.

A Belgian investigator has been looking into the correctness or incorrectness of the somewhat popular belief among farmers that dandelions increase the yield of milk and that, in consequence, they are rather desirable forage than otherwise. He claims that this belief is incorrect and is founded wholly on the false analogy suggested by the milky juice of the dandelion. Furthermore, he asserts that dandelions in large numbers have a deleterious effect on the quality of butter and is one among the causes which make it difficult to get butter of a fine flavor and good keeping qualities in spring and early summer. Hay which has large quantities of dandelions in it has a similar effect, he says, and he advises farmers to weed their pastures whenever it is practicable to do so.

Several bills have been introduced in the Missouri Legislature to prohibit the sale and use of cigarettes or the "makings" if the same. C. P. Hawkins of Dunklin County and Pross T. Cross of Clinton have introduced bills which would prevent the carrying of cigarettes by individuals.

The United States Steel Corporation will build a new city, like Gary, Ind., around a \$14,500,000 plant to be erected this spring at a point on the St. Louis River within three miles of Superior. The steel corporation has purchased and cleared 1,600 acres of land on the Wisconsin side of the river. The sum of \$14,500,000 has been set aside, plans have been drawn and the same construction crew which put in the steel plant at Gary has been ordered to Superior to begin work when spring opens.

President Vetoes the Census Bill.

With his blood up for the prerogative of the veto, the President has sent in another message canceling a bill of the House of Representatives, the wisdom of which action will be appreciated throughout the whole country by all save the politicians and those who live in the hope of living off the pluckings. A few weeks ago the President vetoed a bill conferring unlimited grants as to water power to a private company, and just a few days ago by the same means he killed the census bill. This bill as passed by the House of Representatives provided that the employees to be added to the census office force in the taking of the 13th census should be selected from those who should take a noncompetitive examination. The President disapproves of this provision in no uncertain terms. He recognizes the importance of supplying the census director at as early a date as possible with the force necessary to the carrying on of his work. "But," he adds, "it is of much consequence to the country that the statistical work of the census shall be conducted with entire accuracy. It is therefore essential that the result should not be open to the suspicion of bias on political and personal grounds, and it should not be open to the reasonable suspicion of being a waste of the people's money and a fraud. The act provides in effect that appointments to the census shall be under the spoils system, for this is the real meaning of the provision that they shall be subject only to noncompetitive examination. The proviso is added that they shall be selected without regard to political party affiliations. But there is only one way to guarantee that they shall be selected without regard to politics, and on merit, and that is by choosing them after competitive examination from the list of eligibles provided by the civil service commission. To provide that the clerks and other employees shall be appointed after noncompetitive examination, and yet to provide that they shall be selected without regard to political party affiliations, means merely that the appointments shall be treated as the perquisites of the politicians of both parties, instead of as the perquisites of the politicians of one party. I do not believe in the doctrine that to the victor belong the spoils; but I think even less of the doctrine that the spoils shall be divided without a fight by the professional politicians on both sides, and this would be the result of permitting the bill in its present shape to be come a law." He further recommends that, if Congress finds it expedient to have the census printed outside the Government printing office, "it shall be explicitly provided that the government authorities shall see that the eight-hour law is applied in effective fashion to these outside offices."—The Pathfinder.

Among the Magazines

ALCOHOL AND ART.

Under this head some of the utterances of psychologists like Professors James and Münsterberg, who have been lately coquetting a little with alcohol, are resented by an editorial writer in *The Dietetic and Hygienic Gazette* (New York, January). He says:

"We are not a little startled to have one of our leading exponents of psychology suddenly kick out the underpinning theory which had formed one of the supporting pillars of our notions of psycho-physical perfection, by suggesting that we need to be convivial drinkers in order to become more artistic. Can we believe our senses, or must we think of art as something dependent on a benumbing of the finer nervous structure, and, therefore, on less than our highest consciousness?"

"Professor James wrote, not long since, that alcoholic intoxication stands to the poor and unlettered in the place of symphony concerts, and of literature, but, he says, 'it is a part of the deeper mystery and tragedy of life that whiffs and gleams of something that we immediately recognize as excellent, should be vouchsafed to so many of us only in the fleeting earlier phases of what in the totality is such a degrading poison.' All this we could easily believe coincided with the facts. Now comes Professor Münsterberg and tells us that the masterpieces of music and poetry which are beyond the comprehension of the poor and unlettered have been the result of the use of alcohol, and that we as a people must needs become convivial in order to appreciate these creations. It is acknowledged by Professor Münsterberg that the drug works by its inhibiting influence on certain departments of brain activity, and he also says that even small amounts interfere with normal mental activity. In other words, by moderate degrees of intoxication our highest selves are for the time benumbed, and our sentiments and feelings are let loose from the control of our saner judgment."

Such teaching, the writer thinks, either degrades art or is anything but scientific truth. It is a fact, he admits, that most of the artistic nations have hitherto happened to be peoples of a convivial habit, but he can see no evidence connecting the alcoholic item in their conviviality with their productivity in art. He goes on:

"True works of art are the soul records of lives uplifted through life's experiences into the realm of the ideal. We respond to this art expression in proportion as we see in it a record of our own inner experience. Such works are neither conceived nor worked out under the influence of a narcotic, and they appeal most highly to the sane and sober, for art is ever a serious and a healthy thing. We are perfectly aware that some distinguished writers and artists have used narcotics, but the vast majority of users of intoxicants have shown no special proficiency in these fields.

"We are not inclined to be fanatical on the temperance question, but we object to teaching which would tend to

hinder, in any way, our physical, mental, and moral progress. It would seem that the will to abstain or to be temperate is far better than the being pushed to such a course through prohibitive laws, yet the amount of crime and misery prevented by the removal of places of temptation has proven far better than any sentimental waiting for time and experience to develop an individual power of self-control. Total abstinence from alcohol has lifted men from the gutter, and has never pulled them down. No saloon, nor any place of convivial drinking, ever lifted man to a higher appreciation of life, nor of what stands for the ideal in life—true art."—*Literary Digest*.

THE POPULAR ELECTION OF SENATORS.

In a country like ours the people have their way when they want it. The recent election of a Democrat as a United States Senator from Oregon by a Legislature which was strongly Republican proves this. Oregon is a confirmed Republican State, but the party in power sometimes needs a lesson—needs to be reminded that the power it wields is not inherent, by divine right, but is delegated by the people. It is not necessary here to refer to Oregon politics in detail; suffice it to say that, under the primary election system of that State the people issued a rebuke to the majority party and instructed the Legislature to name a Democrat as Senator. It may be a Legislature is under no constitutional obligation to carry out any such instructions, but, as we said, when the people speak their mind in a way to show they mean it, no legislative body in this country is going to defy them.

There has never been any steady, insistent and general demand for the election of United States Senators by popular vote, else this reform would long ago have been granted by Congress. The House has repeatedly declared itself in favor of the proposal, but it is well understood that this action was for buncombe purposes only, and the Senate has always refused its consent to a plan which would virtually be the death-knell of State representation in the sense intended by our Constitution. But the people, though ignored by Congress, have set to work in their own way to exercise a power in the spirit which has been denied them in the letter. Just as at an earlier period they found a way round the cumbersome scheme of letting the electoral college choose the President, and learned how they could name the President themselves, so now they have found that no constitutional amendment is needed to let them say whom their Senators shall be.

Oregon has set a new pattern in pure democracy and non-partisan rule. Personally, we have always felt that it would be risky to break down the safeguards against mob rule which the Constitution provided, but when you behold the intelligent people of a great State deliberately setting to work to exercise more effective self-government, by devising a little fiction which takes the power away from the political manipulators, you have to concede that

there is virtue in the movement. The bare fact of a strong Republican State electing a Democratic Senator is a milestone in the progress of true popular government, which is constantly veering away from party control. "The voice of the people is the voice of God"—but there is always danger that the people will not be faithfully represented. "Eternal vigilance is the price of liberty" still, and even with the people exercising their powers directly there is as much necessity as ever for guarding against unjust influences in politics.—The Pathfinder.

CONTRIBUTIONS TO SCIENTIFIC MEDICINE BY THE ROCKEFELLER INSTITUTE.

The outcome of the work on cerebro-spinal meningitis was the evolution of an antiserum which has been tried with encouraging success, not only in New York City, but in places as distant as Edinburgh and Belfast in Europe, and San Francisco in the United States. As a result of the experimental work and its successful test in local hospitals, large quantities of the antiserum have been prepared since its discovery in 1906, and it has been tested by use in various epidemics as well as in hospital practice. In most instances where the antiserum was used there was a marked decrease in the mortality, and in the absence of any other treatment it has proved of the greatest benefit.

Likewise, it is possible to appreciate the importance of a physiological investigation involving the production of spinal anesthesia by the injection of a solution of magnesium sulphate, or Epsom salts, which has been found applicable with advantage in certain kinds of surgical operations. Furthermore, spinal anesthesia so induced has been proved beneficial in cases of tetanus or lockjaw, where it works to mitigate in a marked degree the severity of the spasms, thus aiding in the recovery of the patient. Then there is important experimental surgical work where the transplanting of organs, the engrafting of bones, the substitution of blood vessels and tissue from one animal to another with the complete restoration of the original functions, and other such experiments constantly are showing new possibilities in surgery, some of which may be found susceptible of application with advantage to the human patient.

Then, in studies and investigations on cancer and tuberculosis progress constantly is being made in advancing the general scientific knowledge of these maladies by observing animals to whom these diseases have been given experimentally, and the data thus obtained by constant experiment at the Rockefeller Institute and other laboratories are slowly bringing the problem of the control of these diseases nearer a solution.—From "The Rockefeller Institute for Medical Research," by Herbert T. Wade, in the American Review of Reviews for February.

MORE GRASPING THAN THE BUCKET SHOP.

Let us examine a few of the points of difference between the bucket shop and the legitimate brokerage firm. In the first place, the bucket-shop man does do a legitimate investment business, just as the stock-exchange house does. He buys, sells, and delivers the certificates, and does it through a stock-exchange member, who fills these orders as promptly and as efficiently as he would do for any other customer.

On a margin order the bucket-shop man does not buy the stock at all, nor does he pretend to, while the stock-exchange man actually does buy the stock, yet may at once sell the same stock for his own account, or for a

fictitious account. If this is done, then in both cases the broker is in the market against his customer, and all that the customer loses the broker wins.

The bucket-shop man charges no interest, for he makes no pretense of the existence of a debit balance, while the stock-exchange man often charges more interest than he has paid, or charges interest on a balance which has but a fictitious existence.

The bucket-shop man uniformly gives his customer the market price, while on odd lots the stock-exchange man almost invariably charges his customer an eighth or a quarter more on a purchase, and gets a fraction less on a sale.

The bucket-shop man will take orders on a margin of one or two points. The stock-exchange man demands five or ten.

The bucket-shop man takes margin orders on five shares or even less, while the stock-exchange man refuses to carry less than fifty or one hundred shares on margin.

The customer of a bucket shop is sold out automatically when his margin is exhausted, while the stock-exchange man strives to induce the customer to increase his margin, and thereby his probable loss and the broker's possible gain.

The bucket-shop man simply makes a wager with his customer that his client's expectation of the market is wrong, and he pretends to nothing else, while the stock-exchange man invariably pretends to a virtue to which he often has no valid claim.

The bucket-shop man makes money, much money, out of the vanity and folly of his fellows, and herein is the vital point of difference between the two; for the stock-exchange man deems it quite irregular for any one to do this save a member of an accredited exchange. For every dollar lost through a bucket shop a thousand dollars are lost through legitimate stock-exchange houses. Even this does not satisfy, for the legitimate one wants that other dollar.—Frederick S. Dickson, in "The Poison of the Street," in the February Everybody's.

SPEECH IN CONGRESS IN OPPOSITION TO INCREASE OF THE NAVY.

By Hon. Richard Bartholdt, of Missouri.

Mr. Chairman: If there ever was a time in our history when preparations for war and further increases of armaments are both unwise and unnecessary, it is the present; unwise because the normal annual expenditures in the national household now exceed the revenues by considerably more than \$100,000,000, and unnecessary because we are not only at peace with all the world, but, what is more, we have wisely managed to safeguard our peace as it has never been safeguarded before. Hence every consideration of prudence and patriotism points to the present as the most propitious time to pause, temporarily at least, in our vast expenditures for so remote an eventuality as war.

We are all agreed that if our country were in any immediate danger of a foreign invasion or of war with a foreign foe, no sacrifice would be too great for us to make for our defense. But at a time when there is no more probability of war than there is of lightning striking our houses at this season of the year,—and I shall give my reasons for this assertion,—at such a time, I claim, we have no moral right to run the government into debt in order to pay for totally unnecessary increases of the implements of war. Before flattering national vanity by increasing the navy beyond the requirements of effective

national defense, I hold it to be our bounden duty to provide for the necessities of the peaceful development of the country and to subordinate the unreasonable demands of the jingo to the obligations which the government owes to the peaceable citizen and taxpayer.

And as not one of us, Republican or Democrat, can furnish to his constituents a valid excuse for government expenditures in excess of government revenues, except in time of war, this duty becomes the more patent to all.

When I came to Congress sixteen years ago the navy cost us about \$22,000,000 annually. This year's budget calls for over one hundred and thirty-five millions. While in that same period of time the population has increased only about thirty-five per cent, naval expenditures have increased over six hundred per cent. These figures show that we have already gone back on the traditions handed down to us by the founders of the Republic, which teach us to rely for national safety upon our inherent strength, our righteousness and our sense of justice, and that instead we have accepted the false theory through which monarchs from time immemorial have filched money from the pockets of their people, namely, the theory that armaments and man-killing machines alone can vouchsafe security and peace. Do not the figures I have just cited bear out this assertion? And have we not actually been told time and again that a big navy is the best guaranty of peace? It is false, I say again, and our own history proves it to be false. Why was it that we enjoyed both peace and immunity from attack when we had no navy at all? Does it not dawn upon those who are misled by that fallacy, and who constantly shout for more arsenals and more battleships, that, after all, there might have been something besides the big stick that deterred either Europe or Asia from invading this Republic of free men? Was not safety rather to be found in our isolated position, our numbers, our limitless resources, our love of peace and justice, our stout hearts, and in the patriotism born of liberty? [Applause.]

But let us for an instant meet on common ground. Let us admit, for argument's sake, a powerful navy to be the only real guaranty of our security. How many battleships would we have to build to be absolutely secure? Certainly more than any other one nation, and in fact more than all other nations combined; for if naval armaments are to be the only safeguard of a nation's peace, we would be in constant danger of being overawed, because our big stick is not as big as all the other big sticks combined. Is not this the true logic of the plea for a bigger navy? And if it is, then all those who believe in the peace-promoting mission of the fleet would be forced to the conclusion that true patriotism requires the immediate construction, not of two, but of at least a hundred "Dreadnoughts." The fact, however, that they are willing to content themselves with two amounts to an abandonment of their own theory, and is a practical admission that our safety rests on a better, securer foundation than mere ironclads, and one which our navy boomers quite evidently rely on themselves. From their viewpoint two additional ships cannot possibly afford adequate protection; and if, nevertheless, they are satisfied with this increase, we have a right to conclude that it makes no difference whether we build two more ships or none at all. Either course would be inconsistent with and contrary to the theory that the peace and tranquillity of the United States depends upon battleships alone. If we are not to be entirely burglar proof until our navy equals that of Great Britain, or, in fact,

the navies of all nations combined,—and that is and must be the contention of our friends, the navy boomers,—then it is immaterial whether we have two ironclads more or less at this time, because we are insecure in any event.

There is but one consistent course to be taken in this emergency. It is to refuse all unreasonable demands for additional armaments. Such a course will be consistent, in the first place, with American traditions; it will also be consistent with the enlightened sentiment of the world, and it will be consistent with our own professions, as well as with the actual situation.—Advocate of Peace.

Between Whiles

Little Henry: "Tell me a story, uncle."

Uncle: "But I don't know what to tell a story about."

Little Henry: "Oh, tell me a story about a little boy who had a good uncle who gave him ten cents."

✽

Teacher: "If I never see you again," said a teacher to a model little girl, on parting, "I hope you will never forget to do your best wherever you may be and whatever tasks you are called to perform. I hope you will always be an upright, honest woman, truthful and brave."

Little girl (earnestly): "Thank you, and I hope you'll be the same."

✽

Her Catch.

He told about the fish he caught
On his vacation trip,
And how he used with rod and line
The mountain streams to whip;
And how he stalked from pool to pool
An old and wary trout,
And where all other anglers failed,
Had pulled the rascal out.

But while he talked the maid demure
Was clinging to his arm.
Her shyly drooping lashes dark
Enhanced her modest charm.
She did not boast about her catch;
'Tis not a woman's plan.
But while he angled for the fish
She hooked the fisherman.

—New York Press.

✽

At Last.

Diogenes, lantern in hand, entered the village drug-store. "Say, have you anything that will cure a cold?" he asked.

"No, sir, I have not," answered the pill-compiler.

"Give me your hand," exclaimed Diogenes, dropping his lantern. "I have at last found an honest man."—Christian Advocate.

Inglenook

Handy Atlas of the World **FREE**

This Atlas Contains:

A Map of each State and Territory in the United States and in every Country in the world.

An Alphabetical List of the above mentioned States and Countries, indicating the page of Atlas on which the Map may be found.

The Flags of all the principal nations are reproduced in many colors.

An important feature of this Atlas is a "List of the Principal Cities of the World." This list contains the larger towns of the world in all countries except the United States. The population given, is taken from the latest census enumerations and official estimates.

Several pages are devoted to an exhaustive write-up of the principal Reclamation Projects of the United States.

The Portrait of each President from Washington to President-elect Taft, is given along with a half page of historical matter concerning each.

An extensive profile of the Panama Canal is accompanied by an historical Sketch and Explanation of the final plans as adopted by Congress, June 29, 1906.

The Alphabetical List of the Cities of the United States having a population of 10,000 or more, gives the population according to the latest enumerations and corrected by the "arithmetical method."

The atlas is printed on good paper and bound in Cloth. The maps are printed in colors and contain the latest corrections and geographical changes.

A Handy volume for the Center table or book shelf. Size 6x8 inches. Regular retail value, \$1.50.

The Inglenook

is a high-class Magazine that is constantly increasing its number of subscribers through the increased merit of its reading matter. Many of its readers say the magazine is a Two-Dollar value. But we want to enlarge the influence of the Magazine by securing a few thousand new subscribers. Here is our plan. To every person sending us ONE DOLLAR for a year's subscription to the INGLENOK before April 20, 1909, we send a free copy of the "INGLENOOK HANDY ATLAS OF THE WORLD."

If you are already on our subscription list and desire to secure the Atlas, send us the Dollar and we will extend your subscription for another year or you can have the Magazine sent to a friend and keep the Atlas yourself. You will regret it if you do not secure the Atlas for your own use.

OWN A HOME

In the Land of Health and Wealth

Here's an opportunity to make a fortune. It's not a chance—not a risk—but a **positive opportunity**. And combined with this opportunity of wealth, is an offer of culture, education, pleasure and health—for your family as well as yourself.

Clear blue skies, pure air, mild winters, comfortable summers, beautiful scenery, together with excellent church privileges, good schools, pleasant neighbors and **big crops**—they're all to be found at

—Miami Ranch—

18,000 acres of land in New Mexico's choicest farming section. Not a lonesome, dreary tract of land in a boundless desert, but a rich, cheerful valley surrounded by picturesque mountains.

Plenty of elk, deer, bear and other game can be found in the mountains, while the surrounding lakes are black with wild ducks and geese. The Rayado River, which flows through the ranch, is filled with mountain trout and is famous throughout the Central West for the exhilarating sport which it furnishes.

The MIAMI RANCH is specially adapted to

the raising of wheat, oats, barley, sugar beets and fruit. New Mexico wheat took first prize at the World's Fair in Chicago; and apples raised in an orchard directly adjacent to MIAMI RANCH won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 per acre.

Everything favors stock and poultry raising in Northern New Mexico. With a perfect climate and a variety and abundance of food rich in butter-fat, the condition for dairying could not be excelled.

WONDERFUL IRRIGATION SYSTEM

Although the average annual rainfall at MIAMI RANCH is 13.92 inches and the heaviest fall is during June, July and August, when it is most needed, the owners of the MIAMI RANCH have constructed ditches and storage reservoirs which give such an abundant supply of water to all lands which they offer for cultivation as to insure the biggest crops possible for any soil to raise. The irrigation system is in charge of an expert who furnishes instruction in irrigation to the farmers. Every opportunity possible is offered you to make your life a success on MIAMI RANCH.

Less than half fare rates can be secured to MIAMI RANCH via the Atchison, Topeka and Santa Fe Railroad, the first and third Tuesdays of every month. Write for more information regarding these excursions and also ask for **our free booklet**, "Westward Ho." It tells in detail all about MIAMI RANCH and shows illustrations of actual scenes on the ranch.

Prompt action is necessary if you want to take advantage of the present bargain offers being made. Write today—right away.

The Bells, by Edgar Allan Poe.

Bingen on the Rhine, by Caroline E. Norton.

The Cotter's Saturday Night, by Robert Burns.

The Deserted Village, by Oliver Goldsmith.

Gems from Tennyson, as selected from the Author.

Greenland's Icy Mountains, by Reginald Heber.

Lady Claire, by Alfred Tennyson.

The Night Before Christmas, by Clement C. Moore.

Our Price,35 cents
(Postage extra, 8 cents.)

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

A Sample of the Oat Fields in the Nanton District.

BOUNTIFUL HARVESTS

The prosperous settlers of Sunny Southern Alberta have harvested and threshed enormous crops the past year. The wheat yield on some fields was as high as fifty bushels per acre. The oats yield was as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

\$25 TO CALIFORNIA, From Kansas City.

\$33 TO CALIFORNIA, . . . From Chicago.

A NEW COLONY

After an extended tour of investigation and careful consideration the CO-OPERATIVE COLONIZATION COMPANY decided to locate its first colony in the famous San Joaquin Valley, California, near the center of the State. This is a fine section of country, with mild, short winters. Grains, grasses, fruits, berries and vegetables of about all kinds are grown here successfully, from oranges, and other citrus fruits, to the most hardy plants of the more northern climate.

EMPIRE

is the name of the new Town and Colony. It is located on the main line of the Santa Fe railroad, in Stanislaus County, five miles east of Modesto, the county-seat, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

This is not a new, undeveloped country. All the colony lands are under cultivation, wheat, oats, barley, etc., being the principal crops, until the installation of the Modesto-Turlock Irrigation system, one of the finest in the State, since which the more intensive methods of farming have been followed, because of the greater profits.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal.

Our next party of Colonists will leave Chicago Tuesday, March 9. Prospective Colonists and Tourists are invited to join this party. For further information write to

An extensive profile of the Panama Canal is accompanied by an historical Sketch and Explanation of the final plans as adopted by Congress, June 29, 1906.

The Alphabetical List of the Cities of the United States having a population of 10,000 or more, gives the population according to the latest enumerations and corrected by the "arithmetical method."

The atlas is printed on good paper and bound in Cloth. The maps are printed in colors and contain the latest corrections and geographical changes.

A Handy volume for the Center table or book shelf. 106 pages. Size 6x8 inches. Regular retail value, \$1.50.

The Inglenook

is a high-class Magazine that is constantly increasing its number of subscribers through the increased merit of its reading matter. Many of its readers say the magazine is a Two-Dollar value. But we want to enlarge the influence of the Magazine by securing a few thousand new subscribers. Here is our plan. To every person sending us ONE DOLLAR for a year's subscription to the INGLENOOK before April 20, 1909, we send a free copy of the "INGLENOOK HANDY ATLAS OF THE WORLD."

If you are already on our subscription list and desire to secure the Atlas, send us the Dollar and we will extend your subscription for another year or you can have the Magazine sent to a friend and keep the Atlas yourself. You will regret it if you do not secure the Atlas for your own use.

Bargains in Books

LIGHT ON LIFE'S HIGHWAY.

For the despondent; the tired and toiling; the doubting and the believing; containing the most valuable truths and maxims; gems of knowledge and instruction, brightest thoughts from the brightest minds. Light on all questions relating to daily life and conduct. Remedy for trouble; what to do in difficult duty; service in hard places; special providence and many other living themes are fully treated in the rich storehouse of practical helps for everyday life. Over 600 pages and over 250 engravings.

Bound in fine cloth, silk finish, marble edges.

Publishers' Price,\$2.75
Our Price, postpaid, 1.25

THE WORLD'S PROGRESS IN KNOWLEDGE, SCIENCE AND INDUSTRY.

The Instructor for home, school, office and workshop. For all occupations and walks of life. A vast treasury and compendium of the achievements of man and the works of nature. Nearly 400 photographic illustrations. Edited by Trumbull White. Bound in cloth. Cover design stamped in gold. 768 pages.

Publishers' Price,\$2.50
Our Price, postpaid, 1.48

A JOURNEY AROUND THE WORLD.

A grand panorama of the world in story and picture.

Reading this book is next to making a tour of the world. It is a tour of the

world with the charming description of cities, countries, historic scenes and strange and interesting peoples, as visited by Professor Glee and his party of young people.

Bound in cloth, stamped in colors and gold, over 400 pages and a picture on nearly every page.

Publishers' Price,\$1.50
Our Price, postpaid,90

THE IDEAL LIFE,

Or Royal Road to Success and Happiness.

This book contains a vast treasury of the noblest truths and wisest maxims for the instruction and self-improvement of old and young; showing the true aims and objects of life. Including talks to young people on friendship, love, courtship, marriage, domestic life, and the mistakes and follies of the times; the

whole forming a most valuable library of important rules, which should govern our conduct through life. To which is added the New Testament story in verse. This book should be in every library. Over 600 pages, with more than 150 illustrations, bound in cloth.

Publishers' Price,\$2.50
Our Price, postpaid, 1.30

FAMOUS WOMEN OF THE BIBLE.

Charming characters and noble examples. Comprising religious and social helps for mothers and daughters. Containing the most striking scenes and events depicted in the lives of all the prominent women of the Bible.

The graphic story of each has its own delightful charm, and this volume brings them all together and portrays with a master hand their beautiful traits and their immortal deeds.

Contains over 550 pages and is embellished with over 100 beautiful phototype engravings. Bound in fine cloth, marbled edges.

Publishers' Price,\$2.50

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

Homeseeker Round Trip Rates are in effect on the first and third Tuesdays of January and February, 1909, as follows: From Chicago to Blackfoot, Idaho, \$42.50; Boise, Idaho, \$57.50; Butte, Montana, \$42.50; Caldwell, Idaho, \$57.50; Hailey, Idaho, \$53.60; Huntington, Oregon, second-class, \$57.50; Idaho Falls, Idaho, \$42.50; Ketchum, Idaho, \$54.60; Market Lake, Idaho, \$42.50; Mountain Home, Idaho, \$53.90; Nampa, Idaho, \$57.20; Ontario, Oregon, \$57.50; Pocatello, Idaho, \$42.50; Salt Lake City, Utah, \$39.00; Shoshone, Idaho, \$49.00; Twin Falls, Idaho, \$50.80; Weiser, Idaho, \$57.50.

Colonist One Way Cheap Rates will be in effect from March 1 to April 30, 1909, inclusive.

Write at once for printed matter giving full particulars about Idaho and its possibilities, climate and other attractions.

THE INGLENOOK

Vol. XI.

March 2, 1909.

No. 9.

"THE PRINCESS OF POETS"

DALLAS B. KIRK

ELIZABETH BARRETT BROWNING was born in Durham, England, March 6, 1809.

Early in life she showed her skill in mastering books with wonderful rapidity. When only eight years old she could read from the original of Homer. Her grandmother did not favor this, because she thought that young Elizabeth ought to learn more about common work and less Greek.

At about twelve years of age she wrote "The Battle of Marathon," and her father being pleased with this epic poem, had it printed.

Falling from her pony when she was fifteen so injured her spine as to make her an invalid. In order that she might still continue her studies, which the attending physician opposed, youthful Elizabeth had her Greek books bound as novels.

In 1826 was published "Essay on the Mind, with Other Poems."

"Prometheus Bound" appeared in 1833. And five years later (1838) the people read some more fine poems in a volume of verse entitled "The Seraphim and Other Poems."

When her mother died her father moved the family to London. The elder brother (her favorite) was drowned by the capsizing of a sailboat before her eyes at Torquay. He had come here to visit his sister.

Up to this time she had been improving in health, but this added grief gave her a severe relapse. She had to live in a darkened room for some time.

Some of the friends of her invalid days were; Miss Mitfort, Mrs. Jameson and John Kenyon (her cousin). Although her body was weak, her mind was sound and vigorous, and she enjoyed the companionship of these friends very much. At this time she also translated poems and wrote some original ones.

Elizabeth Barrett Browning.

It was Mr. Kenyon who brought Robert Browning, the poet, to see her in 1845 and the acquaintance thus started ripened into love. Her father opposed the match and they were married secretly in 1846. He never gave in and at the end of five years returned all her letters, which he had never opened and read.

On account of Mrs. Browning's health they went to Florence, Italy, and made this their home.

Aside from her father's anger her married life was a very happy one and approaches the ideal. She wrote to Mrs. Jameson, "Women generally lose by marriage but I have gained the world by mine."

As a result of the change brought about by her marriage, her later works have more strength and sweetness added to them, as a careful reading will show. She had the good fortune to marry a man who had a similar life work before him, thus affording each other valuable aid and consolation.

An only son was born in 1849.

"God is so good, he wears a fold

Of heaven and earth across his face—
Like secrets kept for love, untold."

—From "A Child's Thought of God."

In 1851 "Casa Guidi Windows" was published. This is a plea for Italian union and liberty and is indeed a fine poem. Her residence in Italy naturally led her to take more than a passing look at the Italian events whether social or political.

One of the finest series of love sonnets in the English language appeared in 1851 under the name of "Sonnets from the Portuguese." She had written them before her marriage and did not show them to her husband until some years afterward. Numbers 1, 6, 35, and 43 are probably the most read. The following two lines are from these sonnets:

"Guess now who holds thee?" "Death," I said, but there,

The silver answer rang—"Not Death, but Love."

In 1856 a novel in verse first saw the light of the reading world, entitled "Aurora Leigh," her longest work. This didactic poem, consisting of nine books, describes the life of an educated English lady of that time. Deep thinkers alone can appreciate it in its truest artistic sense.

"Poems Before Congress" was published in 1860. This work praised the Italian fight for liberty and unity.

Mrs. Browning died at Florence, Italy, June 30, 1861. She had during her well-spent lifetime sung of Cowper,

"Earth surely now may give her calm
To whom she gave her anguish,"

and it could be very fittingly applied to herself.

After her death her husband edited two posthumous volumes, one in 1862 known as "Last Poems" and the other in 1863 entitled "The Greek Christian Poets and the English Poets."

She belongs to the Victorian age of literature and ranks with such men of her day and age as Macaulay, Carlyle, Arnold, Ruskin and Tennyson, in giving to the world of literature something lasting from her brain treasure-house.

She excelled even her husband in the singing quality of her verses.

— "I would not work where none can win,
As thou, half way 'twixt grief and sin,
But look above and judge within.

Then sing, O singer! but allow
Beast, fly and bird called foolish now,
Are wise (for all my scorn) as thou."

—From "Wisdom Unapplied."

Among her shorter poems which with many are favorites and widely read are, "A Musical Instrument," "The Rhyme of the Duchess May," "The Sleep," "Lady Geraldine's Courtship," "The Cry of the Human," "The Mother and Poet," "Cowper's

Grave," and the following-named sonnets, "Cheerfulness and Reason," "Work," and "Prospect."

Other appellations besides the one given as the subject of this sketch are, "Shakespeare's Daughter," "A Soul of Fire Enclosed in a Shell of Pearl," and "Most Beloved of Minstrels and Women."

Her husband died twenty-eight years after her death, in December, 1889.

The year 1909 marks the one hundredth anniversary of her birth, and we will close this life sketch with one of her "Sonnets from the Portuguese":

"My own beloved who has lifted me
From this drear flat of earth where I was thrown,
And in betwixt the languid ringlets, blown
A life-breath, till the forehead hopefully
Shines out again, as all the angels see,
Before thy saving kiss! My own, my own,
Who camest to me when the world was gone,
And I who looked for only God, found thee!
I find thee; I am safe, and strong, and glad.
As one who stands in dewless asphodel,
Looks backward on the tedious time he had
In upper life—so I, with bosom-swell,
Make witness here, between the good and bad,
That Love, as strong as Death, retrieves as well."

Pentz, Pa.

WHAT THE DRIVER SAYS.

IRA P. DEAN.

"Do you know who is to blame for the saloon being open at twelve o'clock at night?" said Mr. Wire.

"Well, I could not place the blame positively," said I.

"Well, then I will tell you why the saloon keeps late hours. I don't suppose you ever worked for a 'beer firm,' or you would know all about it.

"You know a confirmed drinker will go to the saloon any hour of the day, and he don't care who sees him; why, I know them who take it home in glass pitchers at noon time and use the main street."

"Yes, I saw that often myself, and I've heard of people getting beer in an oil can."

"Well, there you are, what kind of a person was that? There are hundreds of that kind around Harrisburg. They are the ones who keep the saloon open late at night. *Church members!* Do you believe that?"

"*Church members!*" said I.

"Yes, and mighty good church members, too (on Sunday). I know some of them only too well; I know why I was not allowed to unhitch and go home to my family like other men when seven o'clock came. Old Koenig said, 'Will take the team in for supper, then come back. I have an order for eleven P. M.' I might have been home many a time at eight o'clock if it hadn't been for one of them church member orders. Koenig would say, 'Will, take the team up to Sixth and Cumberland and wait till eleven, then carry this

case of beer down to Mrs. — on Cowden Street, but leave the team on the corner where I told you. Her pastor don't know it, and she's a *Christian*! And don't rattle them bottles any more than you must. Whistle at the back gate, and don't stop if any of the neighbors hear you.' That old woman made me so mad I could hardly hold myself.

"Well, this kept up till one night I bumped against the fence and the bottles rattled. She swung the door open and tore me up fierce. She said, 'What's the matter with you, are you crazy? If you can't bring that in without all that noise, I'll get some one who can. Hereafter I want each bottle wrapped in paper.' The next time I went around it was eleven-thirty and I was mad. I rattled the gate like fury. She came out and began to read off the law and I said, 'Look here, old lady, if you're not afraid of the man in heaven you don't need to be afraid of your neighbors.'

"Well, you should have seen her, she never said beans after that and I never took any more beer there either.

"Over on Green Street a man belonging to a certain church took sick and the doctor told him to drink half a bottle of beer a day. At first he ordered a half dozen bottles. I had to wrap them up, put them in a basket and carry them over about nine-thirty in the evening, and when he came to the door I had to say, 'Here's your groceries.'

"Well, at first it wasn't so bad, but later he ordered a dozen bottles, then a case. When he got a case I had to make two trips and that was no fun; but I had to do it because he was ashamed to have the wagon stop in front of his door, for he was a church member.

"If those people would not be such hypocrites and let me take the beer around during the day as others do, I could be home at six o'clock every evening, but at night I am kept busy with such 'church member' orders."

"Well," said I, "there are plenty of those people, I suppose, who are in the church, but the church don't stand for that class of people."

"Why, man, I know *preachers* who do the same thing," said Mr. Wire.

Is this true? Mr. Wire says so, and he knows, for he drove the delivery team for a wholesale and retail liquor firm.

At Carlisle a bartender often said, "I must put an extra dollar in the collection tomorrow at my church, the pastor must have his beer too." This same bartender admitted that he carried beer in covered market baskets with groceries to the pastor's home.

What does this mean? Where shall we begin to wipe out the liquor traffic? Who is to blame for its not having been wiped out long ago? When will it be wiped out?

It means we must begin with the church, the pastor,

the deacon, the layman,—it means the church members are to blame for liquor not having been wiped out long ago. It means, liquor will never be wiped out until the church wipes it out, and the church *can* do it, if she will. The power is not a secret. The church has the power, and the liquor men know it; that is why they are making every effort to fight it. Do you suppose for a moment the liquor people would invest millions of dollars and exhaust every effort to oppose prohibition if they thought the church was not the power against them? If it is worth all the money and combined efforts of the liquor men of the country to fight for their damning privileges (not rights), how much is it worth to the church to oppose them? Is it not worth equally as much? The church is a "sleeping lion," "beautiful in peace," "terrible in such a war," "glorious always."

One of the most painful scenes to me, a scene which proves the church is asleep, I witnessed (I am exceptionally sorry to say) in our own beloved Brotherhood. At one meeting in another city the preacher asked of a congregation of about eighty, for all those who could conscientiously say they did not keep intoxicating liquor in their cellars, to raise their hand. Five hands went up. It isn't that way now, I trust. Then in Harrisburg, my home church, in a vote by the church against granting a license for a new saloon, only half voted against the saloon, the other half remained neutral. In a fight like this there is *no neutral ground*. If you are not against the saloon, you are for it, and if you are for the saloon you had better surrender now, for when the church awakes, the saloon will be driven to the last ditch and buried. "Woe unto that man that giveth his neighbor drink." Yea, woe unto that man that voteth or favoreth some other man to give his neighbor drink. This is not you, is it?

MAN'S BEST AGE.

WHEN is the average man at his best? That depends a good deal upon what is required of him. A prize fighter is old at 30; most counselors-at-law are youthful at 50, and for the ordinary pursuits every man is entitled to his "guess," and there shall be no decision. But it is certain that the dead line is being pushed further and further back upon age. Men are learning how to live; the comforts of life are more easily attainable; science intervenes in man's behalf, and the man who has passed 50 need not be ashamed of his years, because he may see for himself that there is a place for him by simply regarding the men long past that age who are actually carrying on the world's work. —*Philadelphia Public Ledger*.

"THE cause of lack of punctuality is lack of interest. The effect is, losing more interest."

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLVII.

THE next day we sailed into Smyrna, Turkey, which is in Asia Minor.

The panorama from the boat of the city is flat and uninteresting. The mountains back of and to the left and right of the broad, sweeping bay are rough, bare and hungry-looking. I can almost see the brigands who caught Miss Helen Stone and who may get me, if my wheel breaks down.

Every port has revealed a slightly-different type of boat to take passengers ashore. For seldom in these old-world ports do I find wharves against which the big vessels can lie, as in New York, Montreal, or Liverpool. But these boats that gathered about the *Letimbro* by the hundred are really curiosities. The men in them are "frights," and such a jabber!

Out of twenty long, dipping boats I pick on one and make my way from all the others to that one, the tall Turk, holding out his hands to help me in, and another behind me with my wheel. He agrees to take me to shore for about ten cents. The boat glides faster than other similar boats. Their prow is longer and more pointed, and it rises far out of the sea.

A score of boats lay in our way along the landing so that—I had to step from one to another, some of them at two yards distance. In making these jumps I all but fell and I was afraid my man would drop my wheel into the bay.

Once on the beach I was also right in the main street that ran along the very shore for a mile, with the stores and hotels facing the sea, the rough paved street lying between. But I was not free from the

boatman. He refused to accept the pay as agreed and roughly demanded more, following me up the street and making much fuss, as only a Turk knows how to make so as to shame me into paying him a big fee by his attracting attention from all passers. But he had to gain an experience with a "penniless" world tourist who was totally deaf to everything save fairness and economy.

It was wise, too, doubtless, for me to stick doggedly to my agreed price, for I was just landing in a new country, and to enter it by showing my ability to pay my boatman an extra fee would only court the greed

and graft of every man with whom I was to do business while in any part of the Turkish Empire. Such news flies fast.

None of the hotels cared to receive me on the terms I was willing to offer them. But I found a lay-over here both necessary and beneficial. Through some kind voice on the street I learned of the location in Smyrna of an International American College, to which I made my

"A score of boats lay in our way along the landing so that I had to step from one to another."

way up and through the narrow, crooked streets, opening my eyes in wonder at the queer circus of wonders all about me. If going to a big circus is worth a dollar, this was worth fifty. Here was real Turkish life in a Turkish city in the country of Turkey. The nearest resemblance to it was on Midway at the Columbian Exposition, Chicago. But I slipped on. The paving stones were smooth, but rounding, and fitted too loosely in the street to make going over them easy. The shops were nearly all one story, opening out on the street, without apparent doors. Queer-dressed, queer-looking, queer-voiced men, cut off a

steak or tied up a package for still queerer buyers, all of whom took more notice of me and my outfit than I felt was good for my safety. But I walked as though it was just a little stroll I was taking after a short absence from my own city. I looked at things that in my own land or in Europe would have caused me to exclaim with open eyes and speaking mouth in thrilling wonder with the negligent air of an old timer. But when the people around me permitted it, I allowed my enthusiasm to express itself freely.

It was Sunday, but the business done here made it seem like a week day. The Turkish theatre is open. But that is no sign of a week day, for Chicago theatres are also open on Sundays.

From an open quadrangle I see the *Letimbro* lying out in the quiet bay. With regret I had said farewell to the officers and crew, who will go on to Constantinople, while I will follow on another boat. But with an indeterminate expectation I push on over the big blocks of pavement and at the corner see a donkey, picking his way over the stones as if making a path for something to follow. He is pulling something, for there is a rope hitched to his saddle. No, he is leading a camel, two camels, three, four, five, six, and then seven, stately swinging camels, loaded with their caravansary of big sacks and bundles tied on both sides of a sort of big saddle. Behind this set of seven camels came a donkey with five camels, all connected by ropes between them, as they walked fifteen or sixteen feet behind each other. A hideous Turk, just like the pictures drawn of them in papers, ambled along on a pair of spindle bowlegs.

Now he runs or tries to, to the fourth camel, which is having some trouble to get through the narrow street with his big baskets. He was knocking off the tinware hanging on the right side, and like a sensible fellow he saw his mistake and swung away from it, but he swung too far, for on the other side he ran into a Turkish lemonade stand, knocking down the glass that the man in attendance picked up, rubbed off with his dirty hand and set down ready to be filled and drank from by the next American tourist.

I spoke to this big camel and tried to pat its long, crooked neck, but when I patted at it, it was gone, and I struck the air. Their movement as they walk is so uncertain, always a swing, swing, swing, that tries to avoid the stranger's touch. For like the workhorse, the camel was not ready for fun and he had seen too many people staring at him to give any time or strength to me. So when I thought by my position that I could touch him as he passed me, he swung a little more "off" of his customary path. But I gave him a good slap on his blanketed hip as he cleared me with his tremendous baskets.

This camel caravan runs all night. Several times during the night I was awakened by the peculiar ring of the bell that is always placed on the last camel. It is a set of three bells, one within the other, and gives

a distinctly interesting sound or tune through all the hours of the day or night, for there is hardly a minute when they are not passing a given spot in the street selected for this great trade of fruits and products of the deserts. Why the bell is tied to the trappings of the last camel I do not know. The camel walks perfectly noiselessly on his soft, bun-ion feet, and often I was nearly run over by one at the head before I saw

"The street was so narrow even this experienced camel knocked down the wares on one side and upset the lemonade on the other."

him to get out of his way. Possibly I heard the bell of the seventh camel in the rear, but that was one hundred and fifty feet away, and possibly not yet turning the corner of the third street away.

I reached the high walls behind which safely stood, from the danger of the rioting Turk, the college buildings. I was received with great kindness from the forbidding Turkish atmosphere of the street to the safe and genial company of American teachers and English-speaking students. At once they said I could have a room in the dormitory. Possibly they knew how much joy that would bring me. I could pay for it, certainly, and my board, too, but if they had heehawed around like a lot of folks I have met, and pretended their inability to keep me for one reason or another, yet secretly meaning to do so, I would quite probably have accepted their hospitality. But the val-

ue in such a case would have been only about half, whereas the cost and trouble to them would remain the same. In other words, they did the right good thing by saying, "Come in!" in such a way I knew they meant it.

All Rights Reserved.

BAD MANAGEMENT.

J. G. ROYER.

NOTHING hurts one more than a continual effort to get his rights. "That man always manages to get a seat, no matter how crowded the car," one man was heard to say of another who had just demonstrated his ability. The man thus described no doubt considered it good management; but those who knew his practice would call it bad. If there is no stronger reason for insisting on our rights than the mere fact that they are our rights, we better let them go.

Every one should carefully heed the impulses of his own soul, and act on them promptly. To do so will greatly bless our own lives as well as the lives of others, provided we choose the right impulses. Every one has many a good impulse every day and almost every one lets many of them die a barren death. Yet by doing so we hurt our best natures and stunt our real growth.

Good impulses are promptings from God. They are God's own gift to us. They are sent that we may cause them to live in our actions. When we ignore one of these God-given promptings we are worse off than if it had not even come to us; and we also diminish the likelihood of its ever coming back to us again. The impulse to offer one's seat to a deserving one in a crowded car, is God's call to our best self. Not to act on it is to weaken our higher, nobler self, and add strength to the lower selfish nature. This is bad management. The same is true of him who is prompted to surrender the first seat in the church pew, to that late-comer. If he fails to act promptly on the good impulse, thus necessitating the other to crowd by him to secure a seat, he weakens the finer, well-bred side of his being, and adds strength to the lower, coarser nature. He may say, "I was here early and I claim my right to a seat." Well, he can do that, but he will be the loser and not the gainer so far as the culture of his best self is concerned. It is bad management. So also of the impulse to make a needed visit, or to attend to a neglected duty.

These impulses for good are all God's calls to our nobler selves, and should be acted upon promptly, and made to live and to bless our lives, and the lives of our fellows. "To let today's call to do good pass unheeded, is to dull our hearing to a similar call tomorrow." The best impulses come to those who are quick to act upon the best that they have.

Mt. Morris, Ill.

USE OF DIFFICULTIES.

DANIEL L. MILLER.

WEBSTER says "difficulties are impediments," but a great statesman of England says they are "severe instructors set over us by the Supreme Guardian and Legislator who knows us better than we know ourselves."

The oak that stands apart and alone against the force of the angry elements develops into a far stronger tree than the one that is hidden away in and protected by the forest.

The resistance of the water against the prow is the only difficulty that the steamship has to overcome, yet if it were not for this same power against the blades of the propellor the ship would not move at all. This same view that our difficulties are conditions of our success, or if considered as impediments the cause of our failure, holds true in human life.

For instance, the works of Shakespeare appear less meritorious when we consider that his predecessor, Marlowe, at the early age of twenty had not only introduced the drama but had written masterpieces. If it had not been for his difficulty, self-control, which was to him an impediment, Marlowe instead of Shakespeare might have been the greatest name in all literature. But instead of this, Marlowe, while quarreling in an inn, was fatally stabbed and while dying he expressed his own views in his epitaph,

"Cut is the branch that might have grown full straight,
And burned is Apollo's laurel bough."

On the other hand Shakespeare on account of lack of money moved from Stratford to London and associated himself with the theatre and became not only an actor but a writer of plays. While success attended him, yet he smarted under the disgrace attached to his profession as is shown in one of his sonnets.

"O for my sake do you with fortune chide,
The guilty goddess of my harmful deeds,
That did not better for my life provide
Than public means, which public manner breeds.
And almost thus my nature is subdued
To what it works in, like the dyer's hand."

Thus it was difficulty which made him, or rather caused him to make himself not only the greatest writer of his age but of all ages.

Milton after seeing the principles that he had so long and faithfully defended fall to nothing, blind and loaded with shame, dictated his glorious immortal epic, "Paradise Lost."

Lincoln is a type of noble manhood, and his name will always be affectionally remembered by his nation, because he was always actuated by the motive to overcome difficulties, rather than to be overcome by them.

It is impossible to have possibilities without difficulties, for with our possibilities come difficulties, which

if successfully overcome not only build for us a stronger and nobler character but bring an eternal reward.

North Manchester, Ind.

SWEEPING OCEAN OF DERELICTS.

DERELICTS are one of the worst dangers of the deep, and the United States government has for some time been making earnest efforts to carry on the destruction of these wrecked vessels with such celerity as will be of real value to the maritime world. The work is carried on by a number of revenue cutters under the direction of the treasury department in Washington, and a systematic campaign has been arranged among mariners on all vessels with a view to reporting all derelicts discovered. Commanders of vessels now consider it a part of their duty to note down the latitude and longitude of these forsaken vessels and report to the officials at Washington. A cutter is at once sent out to destroy the wreck, though frequently it takes a long time to find it, as between the time when it was first seen and the time the cutter reaches the point the tides may have carried the vessel miles away. Recently wireless telegraphy has been of great assistance, and the delay in reaching the derelict has been cut in half. The hardest and most exciting part of the commanding officer's duty is to calculate from the weather conditions and the winds where the hulk is most likely to be found, and in many cases it is not located at all.

It is anything but fun, this matter of destroying derelicts, for the ships that go on the mission carry great quantities of gun cotton, enough, in fact, to blow half the navy to atoms if it were all set off at once. It makes the new man on board feel creepy indeed when he lies down in his bunk at night, knowing that an unusual jar in the magazines would set the whole pile off. Revenue cutters detailed to this service are especially equipped to carry their death-dealing cargo of explosives, and the government's most experienced gunners and explosive experts are sent along to avoid the possibility of danger as well as to insure the entire destruction of the floating masses of wood and steel. Every precaution is likewise taken to blow the abandoned hulks into splinters with the least expenditure of ammunition, for gun cotton, besides being one of the most powerful is likewise one of the most expensive explosives. The charges are carried in harmless-looking little wooden boxes, stowed away in every corner of the ship. Inside these boxes are the 30, 40, or 50 pound loads of dry gun cotton.

When a derelict is sighted the chief gunner becomes the man of the hour. The surfboat is lowered, and with the gunner and his first assistant in charge, a dozen or so marines are dispatched to the derelict. Soundings are taken on all sides with mathematical precision, and from these figures the bronzed old

gunner determines exactly where the mines must be located. Generally one mine will do the work. Sometimes it takes three or four. But seldom or never does it take more than one trial to disjoin the hulk. On board, meanwhile, the mines are being prepared. The wet gun cotton is brought up from the hold, and the little boxes are carried out from the cabins. Then are produced the copper cases in which the charges are to be sunk. In these the wet and dry gun cotton are placed in the ratio of five pounds of wet to one of dry. The charge is made watertight by means of rubber; a detonator is placed in the receptacle before the metal top is screwed on, and a coil of copper cable establishes a connection between the mine and the battery. This cable is slowly unrolled as the deadly brass ball is taken over to the derelict. The mine is carefully lowered to a solid foundation, the boat pulls away from the range of falling wreckage, and all the electrical connections are made.

"Here she goes!" cries out the head gunner, as he puts his thumb on the button, and at that instant a long, maddening roar comes up from the deep, the government boat is lifted on a swell, a great geyser of water rises several hundreds of feet in the air, and the derelict is torn into splinters small enough for birds to use in building nests.

Heretofore the revenue cutters have been used for this work, but special vessels are now being built. The new destroyer, *Seneca*, now in course of construction at Baltimore, which will be in commission within a few months, is built along the lines of a revenue cutter, but has special facilities for carrying the necessary cargo of explosives and is capable of slightly higher speed than the regulation cutter. The list of those at present in active service as derelict destroyers includes enough to patrol the coast from Maine to Florida. Day and night these watchdogs of the sea ply up and down the coast on the trail of wreckage which is a menace to the mariner. Occasionally a complication arises when the derelict is less than three miles from the shore. For in that territory the war department exercises unlimited jurisdiction and permission must be granted by the secretary of war before operations can proceed. But beyond this line a derelict is common property and may be looted or blown up by any crew that has the nerve and enough gun cotton. The crew of the new destroyer is now being picked, and only men with an iron nerve will be selected. The sailors will then be given a course in the handling of explosives and the officers' staff will be composed of the trustiest veterans in the revenue cutter service.

The *Androscoggin*, stationed at Portland, has been converted into a destroyer, and will hereafter be used exclusively for that purpose. With the completion of the *Seneca*, and a third cutter now being built at Key West to patrol the Gulf of Mexico, a trio of the fastest

and best equipped patrols in commission will be on the lookout for wreckage and furnish succor to vessels in distress.—*The Pathfinder*.

SCHOOL DECORATION.

THE interior decoration of our school buildings opens up a wide range for the unconscious education of the child. An ordinary schoolroom is an unattractive place. Bare walls, stretches of blackboard and rows of windows opening upon undesirable views do not inspire the occupants with a love for these rooms where they spend so many hours.

The outside appearance of school buildings is improving. Some years ago the little square building, plain and unpretentious, proclaimed the utilitarian purpose of its builders. Today even the district schools are groping for some pretentious expression beyond the economical idea, and our cities and towns are building with the purpose of encouraging and perpetuating the best in architecture.

While there has been this stride in the exterior appearance of our buildings and an improvement in the lighting, heating and ventilation of the interior, the idea of decoration as a means of education has scarcely been thought of.

Decoration in the way of calendars, pretty pictures, etc., can scarcely be depended upon in an educational way, although it is a healthy sign of an effort to make the schoolroom a more habitable place. One fallacy in the general idea of an appreciation of art comes from this quest of so-called prettiness. Yet, in an educational scheme, this tendency may be utilized by selecting real art that happens to be pretty and working up to the great perfection of the noble and lofty.

One good picture in a room will give tone to the whole atmosphere. A soft, brown "Angelus" hung conspicuously where the eye may often unconsciously rest upon it will, in many ways, prove its own excuse for being. Seeing day by day such a picture will develop a love for the true and beautiful that may never be gained otherwise.

A picture for a schoolroom should be large enough to be seen clearly from the farthest corner, and thus its size will conform to the extent of wall space. Cheapness should be avoided. Economy should be shown only in the number of pictures. Three or four well chosen prints with possibly a plaster cast or two furnish ample material for an ordinary schoolroom. If this plan should be carried out, having passed through the first eight grades, the pupil will have become familiar with twenty-five or thirty real works of art.

The selection of pictures should be made relative to grades, that a systematic advance in appreciation may be secured and that repetition may be avoided. Publishing houses are furnishing carefully planned

lists of subjects, which are of great use in starting a decorative scheme.

As for high schools, they should stand as the art centers of our smaller cities and towns. It is only the largest cities that boast of art galleries, and these are, alas, too few for this great country of ours. As a nation we fail to recognize even the commercial value of art as do the European countries. But we are beginning to see through the glass, though darkly, and one great means of bringing about a better appreciation of art lies in our schools, and especially in our high schools.

High schools stand as the criterion of a city's measure of itself. They are centers of civic pride and should rightly be so. They stand as the hope of the future growth and influence of the community. If the schools do not realize and consummate this idea, they are failures. Every influence must be brought to bear, and no one or two so-called practical ideas can be trusted to bring about the result. It is quite as necessary to appreciate the true and beautiful in art, gaining thereby a never-ending joy in life, as to be constantly memorizing facts which are as driftwood unless assimilated by an imaginative mind.

Human nature has an inherent love for the beautiful—a birthright, as it were. This needs simply to be fostered by seeing. We cannot appreciate things we have never seen. The Parthenon frieze may be described and lauded, but unless we actually see it in reproduction we gain no idea of the grace and force of that majestic, spirited procession. We read about it; we study about it. Why can't we see it? The long stretches of halls and large rooms of our modern high schools offer most excellent space for such reproductions. All that is needed is the effort and enthusiasm to see to it that the space is used.

Better Than an Art Gallery.—A high school abounding in good art is a much more potent influence for the love of the beautiful than a regular art gallery. An art gallery is a building that is visited; a high school is a building that is worked in and lived in. Living and working surrounded not by mere walls, but by the works of the great minds, brings us to an appreciation of the life and work of those minds. We are thus introduced into a sphere beyond the practical—into a sphere of imagination, where we find the practical made worthy of effort.

There are three entrances to this sphere of the imagination into which, unless we have taken our students, no true education exists. Music, with its divine melodies, and the inspired writings of great geniuses lead the mind into this realm. Our schools have provided for this by compulsory work in music and literature. We have concerts and libraries which are doing their appointed work in these lines.

The third road by means of which we enter this

realm of imagination which rules the world has been so far neglected in the educational scheme, and yet it is the road that may be taken with the least effort. We simply need to have the reproductions of master minds in art plainly in view that they may be daily factors in forming aspirations and character. We need simply to be surrounded by the best in art to become appreciative.

Our schoolrooms and halls should more than express the idea of cleanliness, which heretofore has been their chief attraction. Cleanliness we must have, and it has truly been called the principle next to godliness. But to make a room habitable we need the prosimum of cleanliness, godliness; we need something in the room to stimulate, to call us from the room.

When looking at bare and unattractive schoolrooms there comes to my mind that little couplet of Brown-ing's:

"The little more, and how much it is!
The little less, and what worlds away."

I hope the time is coming when our educational directors will realize the value of "the little more" and the deprivation caused by "the little less," so that art may take its true place as one of the great factors of our modern educational system.—*The Ohio Teacher*.

IT ALL DEPENDS ON YOU.

KNOWLEDGE is the greatest power in the universe. Secure a weight of knowledge of the right and couple it with a strong lever of the study habit, and you will have a perfect apparatus for keeping the watch always wound.

Remember that while your father and your mother gave you a start in life, they cannot keep you going. It is an old but homely saying that "You may lead a horse to water but you cannot make him drink."

Once you are a working member of society, the rest is in your own hands. Do you want a better position? Then you must fit yourself to hold on. Are you dissatisfied with your present calling? Then you must study to acquire knowledge that will fit you for some other.

The man that gets to the top of the ladder of success nowadays is the man that climbs. You cannot stand still and be carried up to the place you have so long desired to fill.

Hard work and hard study will qualify you to undertake almost any kind of business, but without that you must expect to be outdistanced by others. The man deliberately refusing to study and fit himself for a certain position has no right to complain when he sees that position go to some other man that has had the pluck and determination to earn promotion.

Get right down to study and fill your brain with

the right kind of knowledge, and the watch will be self-winding. Then when your competitor has to spend time winding his watch you can keep straight ahead and outdistance him.

With the knowledge and the study habit you have the whole secret. No need to dream over it, or ponder some quick road to wealth. It lies in books and their use. It's for you to decide whether you will be a poor timepiece always in need of repairs, or up to date, useful, and progressive; in study lies your only hope.—*Ambition*.

JUDGE FOR YOURSELVES, BOYS.

MUST a boy be damaged, in order to be happy? Can a boy walk better on one foot than on two? Does a bird with a broken wing fly better than a bird with two wings? Is a stuffy room better to live in than a room filled with fresh air? If not, does a boy need to be crippled by the cigarette habit or any other bad habit, in order to be happy?

Did God forget to provide for a boy's happiness, when he created him? Do good food, warm clothing, loving friends, splendid schools, playgrounds count for anything? Do not these things serve to make a boy happy without tobacco or strong drink? Does not a boy, every time he gives up a moral, simple life for the strange fascinations of evil, lose more than he gains?

Can a boy know what is really good for him? Can he trace out cause and effect in his own body as affecting his own feelings and health? When he feels bad cannot he find the cause, and cannot he so care for his body as to make sure that he will be well?

Is an hour's pleasure worth more than a year of sound health and comfort? Can a boy know a temptation when he sees it? Is it manly to give way to every impulse and never think of the future?

Which is best, for a young man to have every form of evil removed far from him, or make him so strong that he can resist the evil in his path and overcome it? Evil is here, we must either fight it or be overcome by it. Do you want the joy of victory? Do you like to show courage and pluck? We must fight if we would win.—*Glenwood Boy*.

I NEVER could have done what I have done without the habits of punctuality, order and diligence—without the determination to concentrate myself on one object at a time, no matter how quickly its successor should come upon its heels.—*Charles Dickens*.

"How easy it is to pick flaws in existing things and to think up remedies for those evils over which we have no direct power. When it comes to reforming ourselves and our own ways, that's a different matter."

Nature Studies

A MOTH'S HISTORY.

THE life of a moth is a most complicated existence. At first he is a tiny round egg resting on the leaf, or branch, where the mother moth deposited him; next he is a caterpillar, very, very tiny, then he grows big; then changes into a thing as motionless as the egg was and finally comes forth as a moth, like his parents. It is very easy to watch all this happen.

Go search on the leaves or twigs in the garden. Find some small round things either singly or in groups, then watch carefully what comes of them. Within those little balls, not the size of a pin's head, lies, carefully rolled up and protected, the life of a handsome moth.

In a short space of time you will find small caterpillars which have hatched from these eggs. They eat the leaves of the plant upon which the eggs were placed, for insects always provide the food for their young by placing the eggs on the thing necessary for their food. "These tiny caterpillars are called *larvæ*."

Like a boy they eat and grow. They grow so fast that their skins won't hold them, and split up the back to let them out. In some cases they change their skins many times before becoming full-grown caterpillars.

After the caterpillar has woven itself into its winter home the last thing it does before going to sleep

(lying dormant it is called), is to push its caterpillar skin down into a little heap in the bottom of the cocoon, and change into an odd-looking dark thing called a "pupa," which means a "doll." It really does look very much like an Indian papoose wrapped up in its blankets. The cocoon which the moth makes is the winter home made by the Cecropia moth. This moth, which is very large and is bluish green in color, is a silk moth, and fastens its large cocoon lengthwise on a twig or branch.

When the warm June sun shines down, it wakens up the pupa, which begins to move round and round in

the smooth case inside of the silk cocoon, and creeps forth to hang on the outside of its now useless home.

There it clings, a soft bunch of nothing-in-particular. Presently a tremor passes over it; then a constant vibration begins, and under our eager watch the wings begin to expand. Line after line, tint after tint appears. Larger and larger it grows, until in about an hour the fully-expanded gorgeous Cecropia moth, with its waving head-plumes and wings nearly four inches long, rests before us.

It will stay on the branch until the shadows of evening fall, and then it will flutter away to start up another moth circle, in the great "world of the dark."

So this insect that we saw first as a tiny caterpillar

from a still tinier egg, goes through four changes before becoming perfect. "The life history of a butterfly is an interesting study, and in no other way can the relation between *larva*, *chrysalis* and butterfly be so well learned as by actually observing the growth from one stage to the other. Begin by collecting the *larva* which may be observed through all its changes. Note the plant on which the *larva* is feeding in order to supply its wants. Boxes with glass tops will serve for rearing *larvæ*." If we have been fortunate enough to see the whole process we will have known moments of intensest interest. Nature's book has neither clasp nor lock, but lies open ever to those who "go out for to see."—*East and West*.

ANIMAL INSTINCTS.

No doubt all have learned in school that one of the instincts of self-preservation among wild creatures lies in a fine distinction of colors.

Even here in the woods about beautiful "Lunenburg-by-the-Sea," some of the forest habitants mark their coats to suit the season. Weasels and raccoons show a notable change in this respect, while hares (or rabbits, as they are erroneously called), during a winter having very little snow, bear a fur very little lighter than the prevailing brownish-gray hue of summer; yet in a winter of much snow, they appear white, although it is only the tips of the hair that become white. Other creatures will adapt colors in other ways as a means of safety. Even birds, crouching in their nests, depend upon the marking of their plumage to deceive the eyes. Grouse look not unlike the dried leaves of which they form a nest. Bitterns look a part of the swamp as they stand watching for food.

One day two little girls, embryo thrifty housekeepers, belonging to a school in a secluded locality—the sea a stone's throw in front, the woods all about—washed out all the slate-cloths and my blackboard cloth and hung them on the rustic fence of our tiny school-garden to dry. The board-cloth was a large piece of reddish-brown material, while the slate-rags were, one and all, bits of white or light-colored calico. It was late in October and there was that frostiness in the air which foretells the near approach of winter. I came back early for the afternoon session, and found a red or pine squirrel tugging away at the brown cloth, which was caught on the rough bark of the rustic fence. It was a great chance for my pupils to watch the experiment. For four or five days I kept doling out small pieces of the brown rag, all the time leaving pieces of the white rags around; but it was soon evidenced that Mr. Squirrel would have nothing to do whatever with the latter, and he was unsatisfied until he had carried off all the kind that he preferred. Truth to tell, his actions of running hither and thither over the yard, and sitting up on the fence and asking for more, was, to say the least, impolite. All the pieces were taken into a hollow tree, and these with his bushy tail, which serves as a blanket, probably made its winter home quite comfortable.

We all could understand that there must be a reason for its choice of color—possibly an instinct that is an inheritance from far-distant forbears when the woods were full of fourfooted hunters, and every precaution was cultivated to prevent discovery. Weasels and raccoons are enemies to the squirrel, and perhaps the light rags, in contrast with the brilliant fur, would attract the attention of these sharp-sighted animals if prowling near the nest. The poor squirrel has often a hard time of it; for if the winter season is protracted, its store of pine and spruce cones may give out, when it is compelled to gnaw the tender tips of

trees. It does not do the harm to orchards and vegetable fields that the ground-squirrel does, for it never eats that kind of food.—*Young People*.

**A BIRD WHOSE WINGS ARE HANDS.**

OF the South American hoazin, a bird that in early age has claws on its wings, so that it can climb before it has learned to fly, W. P. Pycraft gives the following interesting information in *Knowledge*:

In all other instances the young of birds reared in trees are hatched in a perfectly blind, naked, and helpless condition. Not so with the hoazin, however. The young emerge from the shell endowed with a very lively disposition, wandering about at their own sweet will on the branches of the tree on which the nest is placed. These wanderings are necessarily attended with considerable peril, but the risk of accidents is diminished by the presence of the large claws already referred to. Grasping the boughs with enormous feet, and aided by the claws and beak, they are among the most expert of climbers at a very tender age. But the wing at this time differs in several other remarkable particulars from that of other birds, and even from that of the full-grown bird. Closely examined, it will be found that the hand is much longer than the forearm, and that the thumb is also unusually long. Furthermore, the under surface of the thumb and first finger will be found to resemble those of the human finger, in that they terminate in a fleshy ball, obviously useful for grasping purposes. At this time, then, the wings serve the very unbirdlike function of fore legs, and they really move on four legs instead of two. This remains the case till they can fly.—*Sunday School Visitor*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

ONE AHEAD.

Not long ago our latest battleship, the *Delaware*, was launched into the James River from the yard of the Newport News Ship Building and Drydock Company. It is in many ways superior to the boasted *Dreadnought* of the British navy and for a short time our government may pride itself on being ahead in the race of the leading nations to possess the most formidable and destructive machines of war.

The monster leviathan is a masterpiece of our modern mechanics. It is over five hundred eighteen feet long, eighty-five feet beam, with a trial displacement of twenty thousand tons and a draught of twenty-seven feet. Compared with the British *Dreadnought* the *Delaware* is nearly ten feet longer, five hundred tons heavier in displacement and one and one-half knots faster—that is, if it comes up to the requirement on this point. By the arrangement of the guns the firing range is also greater than that of the *Dreadnought*. The contract price of the *Delaware* is a little less than \$4,000,000.

Just now there is a fierce fight being waged in the British cabinet over the question whether England shall have six new *Dreadnoughts*, costing \$33,000,000, or only two, costing \$11,000,000. Those who are holding out for the latter number say that “sufficient causes already obtain for a big treasury deficit without running wild in naval expenditures.” Of course it goes without saying that these new battleships must surpass the one our government has recently launched in size and destructive power.

One sometimes is driven to question the wisdom of these learned statesmen who vote to spend the people's money for such purposes when there are so many other ways in which it might be spent for their direct and permanent betterment. Look at the picture of the British government spending thirty-three million dollars simply to hold its place as the foremost naval

power of the world while thousands of its subjects are, through poverty, sunk to the lowest depths of degradation and walk the streets of the capital without homes and without employment! But we need not look across the waters to see as great folly passing under the guise of wise statesmanship. Last year our President held out against Congress as long as possible for four instead of two battleships. In many other ways he has given expression to his belief that the best way to maintain peace is by large preparations for war—a doctrine that harmonized very well with the spirit of the times when might made right, but which has no place among people who for two thousand years have enjoyed the blessings brought to them by the Prince of Peace.

But with all these preparations for war, the peace spirit is gaining ground. Thousands of earnest, thinking people are firm in the conviction that war and preparations for war are incompatible with the teachings of Christ and that therefore a Christian nation should have nothing to do with them. And this belief is spreading rapidly. Then there is another class, and in this money-making, economic age it is not a small one, who oppose a war policy because of the waste of money which it entails. They object to good money, the people's money, being invested in a way which brings no reasonable returns. With these two influences working against the war spirit, we look with eagerness toward the early coming of that time when the nations shall no more learn war.

REPORT OF FARM COMMISSION.

SOME months ago mention was made in these pages of President Roosevelt's interest in the farmer, and of the appointment by him of a country life commission. This commission was to look into the conditions of the farmer with a view of making improvements, so that country life might afford attractions to counterbalance those of the city which have drawn many people away from the farm. The commission has now made a report and this has been forwarded to Congress along with a special message from the President.

The President lays special stress on the importance of the farmer's wife as a factor in his success, and declares that “if she does her duty she is more entitled to our regard even than the man who does his duty.” He closes his message with this paragraph:

“I warn my countrymen that the great recent progress made in city life is not a full measure of our civilization; for our civilization rests at bottom on the wholesomeness, the attractiveness and the completeness, as well as the prosperity, of life in the country. The men and women on the farms stand for what is fundamentally best and most needed in our American life. Upon the development of country life rests ulti-

mately our ability, by methods of farming requiring the highest intelligence, to continue to feed and clothe the hungry nations; to supply the city with fresh blood, clean bodies and clear brains that can endure the terrific strain of modern life; we need the development of men in the open country, who will be in the future, as in the past, the stay and strength of the nation in time of war, and its guiding and controlling spirit in time of peace."

From its investigations the commission has come to the conclusion that there are "three great general and immediate needs of country life."

They are as follows:

1. "Effective coöperation among farmers, to put them on a level with the organized interests with which they do business.

2. "A new kind of school in the country which shall teach the children as much outdoors as indoors and, perhaps, more, so that they will prepare for country life, and not as at present, mainly for life in town.

3. "Better means of communication, including good roads and a parcels post, which the country people are everywhere, and rightly, unanimous in demanding."

To these may well be added better sanitation, for easily preventable diseases hold several million country people in the slavery of continuous ill health.

Most people who are acquainted with conditions in the country will agree that improvement along the lines suggested would be highly beneficial to the farming community.

Considering the gigantic task which the farmer is now accomplishing in providing food for us all, to say nothing of the "fresh blood and clear brains" with which he supplies the cities to carry on their work, we do not think he is greatly in need of outside help to improve conditions. All he needs is a little stirring up on the subject of his possibilities and almost unlimited powers. He can then roll up his sleeves and work out his own salvation.

Care should be taken that these good, well-meaning, would-be reformers do not overdo the "improving" idea, especially as it relates to the social conditions. We do not want the country homes—the real homes of the land—to become merely places to eat and sleep, as in the city, while the recreation hours are spent in a giddy round of dissipating pleasures. We do not want the garb of genuineness—the result of much communion with nature and a degree of solitude—changed for the cloak of artificiality which characterizes the city dweller. In short we want the farmers to have all the helps that may add to their real happiness and well-being, and only these, so that we may continue to look to them for those sterling qualities that have made them the salt of the nation.

STAGE ONLY TO DEGRADE.

THAT the stage in this city (New York) today is a festering spot of filth in urgent need of a censor was the opinion expressed recently by Charles Burnham, president of the Theatrical Managers' Association.

Five theaters would close their doors today if Mr. Burnham had his way, and he declared that if the trend toward "the inexpressibly filthy shows" that have drawn crowds for a year or more continues a stage censorship will be a reality.

"If this is not the case," said Mr. Burnham, "it will be because we are honest with ourselves and open our theaters as concert halls—'dewdrop inns,' as it were. And above the door we should inscribe, 'For Men Only.'"

Mr. Burnham referred to some of the plays now being produced as "orgies of obscenity."

"Archbishop Farley was right," he said, speaking of the sermon preached at St. Patrick's Cathedral the previous Sunday, "when he said that the stage today is worse than in the days of paganism.

"There are shows running on Broadway to which no right-minded man would take a decent woman. And the manager is to blame. Any manager will tell you that if he puts on a 'good' show he will starve to death.

"The public must want these shows or they would not battle about the doors every night to get seats. The press? The press declares that a certain show is filthy and lewd and immoral and the manager pats himself on the back. He knows that is the best advertisement he could have.

"I tell you that the theater is not educational. It does not teach a lesson. It does not deliver a sermon. Its mission is purely one of entertainment. When it presents the story of a harlot that story is told to entertain those in the audience, not to elevate their souls and point out to them the pit dug for unwary feet. It might be of less importance if men only attended the theaters—as some theaters should admit men only. But you can't bar your doors to women and young girls and boys.

"Up on Forty-second Street there is a show running to tremendous business. It tells the story of a woman and her trafficking with her lovers. Who goes to see that play? Men and women of mature age, who seek to gain a lesson from it? Bosh! Younger men and women who read a sermon in its gutterish lines? Folly! You will see young girls with dresses to their shoetops pressing about the doors to get in, giggling ecstatically as they come out. Were they elevated morally by that recital of bestiality? Fudge!"
—*Chicago Record-Herald*.

CONVICTION of ignorance is the doorstep to the temple of wisdom.—*Spurgeon*.

The Home World

OUR GIRLS, WHERE ARE THEY?

CLARA NORTH RULEY

MANY a broken-hearted mother has asked herself this question when it was too late. Our power for good with our daughters is practically limitless if we begin in time to influence their young minds.

We should know our girls. It is our own fault if we do not. There should not be a look, a gesture, even a thought but what we, their mothers, should not be able to comprehend. Why? Because they are a part of us. Whatever faults, whatever of bad there is in them, was ours in a lesser degree or established there by our thoughtlessness in the prenatal stage, or, if not in that way, implanted in their natures by the father we gave them. Our daughters are born with certain tendencies for good and evil and they cannot conquer them alone by reason of their very innocence, and ignorance of what life means with its complex laws, and usages. They must have aid, the aid they do not even know they need, therefore do not seek it of their own accord. It is we who must offer and do it, too, in so clever a way that the recipient, however sensitive, must feel no criticism embodied in the offer. For our girls are sensitive. More than that they are egotistical. They reason with the power of a fresh and oftentimes brilliant mind, but they reason from a wrong premise.

It is just there the mother helps, that is, if she is the right sort of mother. With her knowledge of the world she starts the girl aright and the rest is easy, for if one has a set of right principles one cannot go far wrong. Be your daughter's confidante. She can have none better. Enter into her little pleasures of school life, into her innocent fun, and try to remember that old and young see with different eyes, that what may seem a trifle silly to you is the quintessence of wit to her. Moreover, if she detects the least suspicion of mockery in your reception of it, she will shrink back into herself and her confidence will be denied you, perhaps forever. This makes the backward, shy, sensitive woman. But what is perhaps worse is

the girl who, finding her mother uncongenial, turns to some schoolmate, one with a strong personality and with a decided tendency for evil things. Ah, then you have need to regret, you have need for all the cunning your roused motherhood can inspire. You must not be caught napping now or your girl will have gotten beyond your reach.

Some day your daughter will come home from school with a companion. All at once some boy will have discovered her inability to bear the burden of a few schoolbooks for a few blocks. So he sets himself to the task. To you he appears a scrubby lad, looking as though he had need of soap and a scrubbing brush, but to her he has the attributes of a Don Quixote, or a Richard Cœur de Lion.

Or perhaps he may have passed the scrubby, unwashed stage, and entered into incipient dandyhood. Whatever he is don't laugh, if he is a good, honest boy, and even if he isn't at all what you wish for her, don't laugh anyway. The Bible is so many times quoted by those who wish to excuse themselves for some fault, as saying, "There is a time for everything." This is not the time to laugh. If, as I say, the boy is not a desirable companion, do not even tell her so. Get her in the company of good boys, gentlemanly boys, those who are courteous and manly, and her own nice instincts will do the rest. But if you criticise the boy who is not nice, you rouse in her all the instincts that have up to now been buried to protect and defend him, and before you know it the mischief is done. But if his faults are those of age and only superficial, be honest with yourself and look back, not so very many years, with honest eyes at the husband and the lover of your youth. What you see there will fill your heart full of loving sympathy for your daughter and for her romantic friendships, and will make the loving bond of comradeship strong enough to withstand the tempests of misunderstanding that may fall to your lot.

HOME DECORATION.

FLORA E. TEAGUE.

SLOVENLY surroundings of homes are usually pretty fair representations of the inmates and owners. "Straws show which way the wind blows." Farming implements scattered about promiscuously and left to the pitiless wear and tear of the weather indicate a very careless and easy-going farmer. Such a man will never make much more than his living. He permits too many leaks.

Chickens, ducks, and geese having the dooryard for their run are usually a pretty good indication of unkempt insides as well as outsides. Pasted-up windows, gaping screen doors, doors loose on the hinges, indicate either a very indifferent, careless husbandman or one who is too awkward to use ordinary tools for simple work. Everything in topsy-turvy fashion inside the house may mean a tired, worn-out, nervous mother, a lot of frolicsome, playful little folks, or slovenly indifference. The practiced eye will soon discriminate and lay the charge justly.

A constantly careless and slovenly wife eventually discourages the neatest of husbands and leads him finally to become negligent also. Equally true is it that the wife sometimes grows weary and negligent because of the frequent accumulation of unsightly articles peculiar to men appearing in places where they should not.

It is much easier in the end to straighten up things and keep them so than to hunt for misplaced articles or to use negligently injured ones. Every one ought to have sufficient ambition to take delight in a neatly-kept home and surroundings. A beautiful lawn with a few shrubs and blooming plants, takes but little extra time of either the men or the women. The men can do the heavier work of preparation; the women, the lighter work of cultivating, planting, trimming, watering. Every woman could have a better complexion, rosier cheeks, a healthier body were she to spend a part of each day in active out-of-door work. To me such work is far more valuable, health-giving, and beauty-cheering than all the tennis games, basket ball, or what-not.

I have known some young ladies who were very painstaking with parlor, front porch and hall. The kitchen and backyard were completely relegated to mother as were many other unpleasant tasks. A glimpse at their own private bedrooms would proclaim very forcibly the untidy make-up of the owner.

Cultivate a love for beauty by beautifying all your surroundings. The love of it will grow by careful training as also will pleasure in your work. Even such menial things as sweeping, dusting, and dishwashing may be made attractive and pleasant if pleasant ways are found for doing them.

Parents can do much towards training both boys and

girls in taking delight and pleasure in their work and surroundings by using spare moments in adorning and fixing up things in general. Try it once and see.

Lordsburg, Cal.

**NO PLACE FOR BOYS.**

There's a place for the boys. They will find it somewhere;

And if our homes are too daintily fair

For the touch of their fingers, the tread of their feet,

They'll find it, and find it, alas! in the street,

'Mid the gilding of sin and the glitter of vice;

And with heartaches and longings we pay a dear price

For the getting of gain that our lifetime enjoys,

If we fail in providing a place for the boys.

A place for the boys—dear mother, I pray,

As cares settle down round our short earthly way,

Don't let us forget, by our kind, loving deeds,

To show we remember their pleasures and needs;

Though our souls may be vexed with the problems of life,

And worn with besetments and toiling and strife,

Our hearts will keep younger—your tired hearts and mine,

If we give them a place in their innermost shrine;

And to life's latest hour 'twill be one of our joys,

That we keep a small corner—a place for the boys.

—Author Unknown.

**THE SECRET OF A CONTENTED SPIRIT.**

CONTENTMENT is a virtue which has its root in the home. Not long since I heard a mother bemoaning the fact that her daughter never seemed satisfied with anything she had. "The habit grows upon her, too," the mother affirmed.

Now I happened to know a little about the home life of that discontented daughter, and I was satisfied that this "habit," as the mother chose to call it, was fostered to an extent she little dreamed of by the daughter's home environment. This complaining mother was herself continually striving for things entirely beyond her reach in her present social condition,—not, however, in the way of attainment through honest effort, but rather in a discontented, pessimistic, fault-finding attitude which had developed her into a chronic grumbler.

So fixed had this outlook upon life become, that nearly all her conversation was prefaced by such remarks as: "Now, if I only had the money to spend that Mrs. So-and-So has,—" or, "If my health would only permit,—" or, "Oh, I shall be so glad when this hot spell is over!" "I wonder if it is ever going to stop raining!" and the like.

Scoff at the fact as we may, such moods are as contagious as scarlet fever, and their after-effects are infinitely more deplorable, for unless one recognizes the danger of such a pessimistic outlook, a habit is thus formed which is very difficult to undo; and it is in turn transmitted to those with whom one is daily brought in contact, by that psychological law which recognizes thought forces to be as potent in their effects as that unseen electric current which transmits the message across the continent.

A contented mother usually has a contented daughter. Both by heredity and environment the child of such a mother comes into her birthright. Unseen forces play as important a part in a child's mental education and development as do the more tangible ones that even the dullard recognizes.

Place a child in daily contact with a chronic grumbler and you develop a prototype of this most undesirable factor of humanity by that same immutable law of cause and effect that produces a flower or a weed. On the other hand, surround this same little one with sunny home influences, and without the spoken word of counsel the child will absorb them into its life as the flower absorbs the sunshine; and you have the sweet and sunny temperament that in its turn radiates light and happiness.—*Farm Journal*.

SAW AND SUPPOSED.

CERTAIN Jews from Asia who came to Jerusalem, "saw" Paul in the city with Trophimus, an Ephesian, and "supposed" that Paul had brought him into the temple, and so were bent on the apostle's destruction (Acts 22: 27-29).

The Pharisees "saw" Jesus eating with Publicans and sinners. They "supposed" he was a gluttonous man and a wine-bibber (Matt. 11: 19).

They "saw" him let a sinful woman kiss his feet. They "supposed" he was at least ignorant of her true character. They never dreamed that he had God's vision of the woman's heart (Luke 7: 39).

Some miners saw two of their company quarreling, afterwards they "saw" that one of them was missing, and "saw" up on the hillside a newly made grave; they "supposed" the miner had murdered his companion and immediately lynched him without a word of explanation. Only when the missing miner returned, and they found the body of a dead fox in the new made grave did they realize their injustice, but it was too late.

She "saw" that her husband was quiet and something was the matter; and "supposed" he was offended with her, but he was only ill and abstracted.

He "saw" that no letter came in answer to his enquiry and "supposed" that his friend had not written, but later he discovered that the letter had been delayed in the foreign post nine days by quarantine.

We "saw" that he did not come to the train to meet us when we arrived, nor according to the appointment when we left, and "supposed" he was careless about keeping his engagements, but most important business hindered him the first time and illness hindered him the second time.

She "saw" that her umbrella was not in its place and "supposed" that her friend had taken it, but it turned out that she had not put it away the last time she used it.

Oh, how prolific is the family "I saw" and "I supposed"! But love never sees and love never supposes. "Love thinketh no evil." "Love never faileth."

The true followers of Jesus drop out of their lives all supposing. They, like him, are not here to judge but to save (John 3: 17). They never "imagine evil" in their "heart" against a "brother." They "judge not according to appearance but judge righteous judgment" (John 7: 24).—*Exchange*.

A HEALTH TALK IN THE NURSERY.

HEALTH and temperance, which in its broadest sense is the law of health needs to be taught from the cradle. When my little four-year-old boy discovered the veins in my hands, I was obliged to lay down my pen and give a plausible answer before his childish curiosity would be satisfied.

On being told that they were little rivers carrying blood, an exploration of his own chubby hands followed, with the delightful discovery that he, too, had those "little rivers."

Of course a volley of questions was fired at me in quick succession. The first was "what do the little rivers carry blood to my hands for?"

"To make them grow."

"Does everything I eat make my hands grow?"

In that way he soon learned that some kind of food furnished better building material for his bodily house than other kinds.

When inclined to eat anything that was not suited to his childish stomach, I had no difficulty in inducing him to deny himself when reminded of the work of the "little rivers."

He does not want tea and coffee, because in our table talks he has learned that they hurry the nerve builders, but is a staunch friend of milk and brown bread and takes great interest in his food and by this means is learning to have power over his appetite and to exercise self-control. On discovering a picture of a man drinking beer, his first question was, "Will beer make my hands grow?" On being told that the alcohol in the beer dried up the water in the little rivers and injured them, he voluntarily pledged himself against intoxicants, because he is inspired with an ambition to possess a firm bodily tenement.

His delight is unbounded, if, while taking a bath, he discovers, on some parts of his body, a vein heretofore unknown to him. I consider that here is a foundation for a desire to make his body a splendid creature, with every nerve steady and every muscle trained to do his bidding. His imagination makes the wonderful little builders very real and he will not intentionally retard their progress. He is willing to retire early because his house is being built more rapidly while sleeping and the very best work is being done in the first half of the night.

We have even gone a step higher in our little talk and learned to reverence the Creator of such a wonderful building and that it is a sin to abuse the house so costly and beautiful, because it is God's workmanship.

All this came about without "cramming" his mind. The questions naturally came, at intervals, even after I had forgotten our previous talk. It was better to give the little philosopher a reasonable, satisfied answer. He is a child of only ordinary intelligence, so I believe that every fact pertaining to physical life can be taught the children very early and physiology become a fairy tale to the imaginative child, and they are all such.
—*Mother Enterprise in Georgia Bulletin.*

NAILS AND SCREWS.

JOHN S. FERNALD.

MUCH time may often be saved when most needed, that is, when a job is to be done, by keeping a supply of nails and screws sorted by sizes. For this purpose the tin boxes in which mustard, cocoa, baking powder, etc., come are admirable. Tin fruit cans may be made good for this and many other purposes by standing them, open end downward, on a hot fire until the solder melts, when the cover will drop away, leaving a smooth top to the can. At present prices it will pay to save second-hand nails, using spare time for straightening and sorting. Never use a screw after the slot in the head has become so worn that a screwdriver will not take hold in it. Keep the screwdriver well ground to the proper shape.

SELECTED FOR THE HOUSEKEEPER.

A LITTLE orris root added to the water in which handkerchiefs are boiled will impart a faint scent of violets.

Many housekeepers dry all coffee grounds and fill pincushions with them. Pins and needles do not seem to rust when thrust into the coffee.

The Children's Corner

A USELESS CHILD.

She was not naughty, rude nor wild,
She did not always wish to play,
And yet she was a useless child,
And tried tried dear mother ev'ry day.

Her face was more than passing fair,
Her voice was ever low and sweet,
She had no listless, dreamy air,
But moved about with nimble feet.

Yet whatso'er the part assigned
To gentle Bessie, sad to say,

She never seemed to have the mind
To do it, as she ought, straightway.

Her silk lay tangled on the spool,
Or in a mazing wisp was drawn.
Though "Ma," she'd say, "ere time for school
I'll fix it, sure as I am born."

There is a bead-purse just begun,
But; see! the needles all are out.
No work-box yet beneath the sun
Had all it held so tossed about.

Yet she lacks not the means or skill
To carry ev'ry project through;
For years remaining useless still
Because she always meant to do.

And so I have this tale to tell,
That other girls and boys may heed.
Whate'er your task, perform it well,
And you will earn the toiler's meed.

—Days of Youth.

THE PLAN THAT WAS BEST.

"MOTHER," said Cliff, "what am I going to do with Joe Blair?"

"What's the matter?" asked his mother, looking up from the work in her lap. The salt air blew freshly in her face, and her eyes roved past the angry little questioner to the shimmer of sunlit waves and the gleam of white sails, the *Sunbeam* tells us.

"Why, we are building a fort, mother; and Joe will build it so near the water that in a few minutes it will all be washed out to sea."

"Why don't you get him to build it higher up, then?"

"I can't make him do it," cried Cliff, stamping the pebbly shore in vexation. "I've tried and tried, and I can't."

"How did you try?" asked mother.

"Why," said Cliff, hesitating a little, "I first said that he mustn't."

"And then?"

"Why, then I told him that he was a big goose."

"And then?"

There was a little pause before this answer came, "I jerked his paddle away."

"And then?"

This time his mother thought she would not get any answer at all; but at last Cliff said, hanging his head, "Then I knocked him over and made him cry."

"Oh, my, my!" said the mother, shaking her head sadly; and Cliff felt very mean indeed. "You have tried your own naughty way and failed, now suppose you try God's plan. He says that you must suffer long and be kind; go back and try that, little son."

Cliff went back slowly. He didn't at all like God's plan of treating Joe; but he must have tried it after all, for the two little boys built their fort without any more quarreling, and it lasted a whole fifteen minutes.—*Selected.*

The Quiet Hour

BARTIMEUS.

I would receive my sight; my clouded eyes
Miss the glad radiance of the morning sun,
The changing tints that glorify the skies
With roseate splendors when the day is done;
The shadows soft and gray, the pearly light
Of summer twilight deep'ning into night.

I cannot see to keep the narrow way,
And so I blindly wander here and there,
Groping amidst the tombs, or helpless stray
Through pathless, tangled deserts, bleak and bare;
Weeping I seek the way I cannot find—
Open my eyes, dear Lord, for I am blind.

And oft I laugh with some light, thoughtless jest,
Nor see how anguish lines some face more dear,
And write my mirth, a mocking palimpsest,
On blotted scrolls of human pain and fear;
And never see the heartache interlined—
Pity, O Son of David! I am blind.

I do not see the pain my light words give;
The quivering, shrinking heart I cannot see;
So, light of thought, 'midst hidden griefs I live,
And mock the cypressed tombs with slightest glee;
Open my eyes, light, blessed ways to find—
Jesus, have mercy on me, I am blind.

My useless eyes are reservoirs of tears,
Doomed for their blind mistakes to overflow;
To weep for the thoughtless ways of wandering years,
Because I could not see—I did not know.
These sightless eyes—than-angriest glance less kind—
Light of the World, have pity! I am blind.

—Robert J. Burdette.

IS THE YOUNG MAN ABSALOM SAFE?

D. L. FORNEY.

At the gate of an Eastern city toward the close of day sits a venerable man with a careworn, anxious look upon his face. It is David, the sweet singer of Israel. A great battle has been going on. But of its outcome, aside from one individual, he has but little concern. One young man, a cherished son, a son in whom was no blemish, perfection from the crown of his head to the sole of his foot. A son of whom any father might be proud. And though in rebellion against his father, an army mustering to his support—it is of this son, at the close of battle, the father anxiously inquires, Is the young man Absalom safe? But from how many anxious hearts does the inquiry go up

today all over this land, Is the young man safe, is the young woman safe? Parents today are sacrificing in many ways that their children may have a good education and be well prepared for any honorable position in life.

And yet on every hand are so many enticements and snares to catch the unwary. The attractions of city have proven a snare to many young people who have sought relief from what appeared monotony in the country home. But in the quiet of the country home there is the safety that every young man needs till his character is fixed. In the cigarette and tobacco so attractively displayed is danger the youth knows not of. The pool room and card tables have attractions in which his skill can be displayed and in this he does not want to appear lacking. The wine cup and the gilded halls of vice may be the Scylla and Charybdis toward which the siren song is luring the unwary youth to ruin of both body and soul. How often from the heart of the anxious parent comes the inquiry concerning the absent son or daughter, Is he safe, is she secure?

For others the theatre is the road that leads to ruin. It is not the place of real safety. Even the literature of many homes has been the road on which the young have started on the downward course. Fathers and mothers, has your home the safeguard of pure and wholesome literature that no taint of impurity be formed within its sacred walls? Is the young man in your home safe, really safe?

He only is safe who has found safety in Christ. Then he who abides in him is safe now, safe forever.
Reedley, Cal.

THE HIDDEN LIFE.

"OUR life is hid with Christ in God." The sublimity and the loftiness of such an utterance suggests at once that it comes from one who knew what it was to live on a high plane of Christian life and experience. It is an expression that savors of a soul that "lived, and moved, and had its being" in a life that transcends all other kinds of life for fulness and richness, and that knows something of the pure, refreshing at-

mosphere of the heights of communion and fellowship with God. The secret, therefore, of the deep-toned spirituality which glows in the language and utterances of Paul, is to be found in the fact that his inner, nobler life was steeped in that larger, richer life that is centred and discovered only in God himself.

And so the apostles impart the truth that our Christian life is nourished and strengthened because it is "hid with Christ in God"; that it depends upon and draws from it just in the same way as the branch depends upon and draws from the life of the stem with which it is connected.

It is very obvious that if "our life is hid with Christ in God" then all our activities will be performed in him, and for him, and unto his glory. It is recorded of Philip Melancthon that "he used to rise every morning between two and three o'clock, and whilst the household slept, would answer his letters, draft his addresses, outline chapters of new books, and revise lectures. He never wasted a moment. From first to last," adds Alex. Smellie, from whom I am quoting, "all his activities were steeped in religion and his life was hid with Christ in God."

It is the life thus centred that thinks and acts, and enjoys and purposes as unto God and in God. If we are living the true Christian life we shall see that all our service is actuated by a proper and worthy motive, we shall not harbor any desires that are base from the coöperation and blessing of God, whilst we shall see that all our aims and ambitions are under the approval and benediction of the Most High.

Another truth in this utterance that needs asserting is, that the deeper our "life is thus hidden" the more revealed will it be to the world.

This seems like speaking in contradictory terms, but a little scrutiny will reveal the fact that is embodied within them. It is only as we are united to Jesus Christ that his life will flow into ours, deriving thus the nourishment and power we so much need. It is only as we are in constant contact with him, joined by a living faith, that our nobler selves are sustained, and we manifest the fruits of righteousness. It is only as our life is hidden and steeped in God that our life will flow out in those evidences that tell of our connection with him. And the more closely we are united, the more intimate our fellowship, the stronger our faith, and the more thoroughly we are saturated with the life of God, so shall we the more richly abound unto good works; but "apart from him we shall do nothing" and our spiritual life will, like the branch severed from the trunk, shrivel up and perish.—*A. R. Tomlin, in London S. S. Times.*

"GREAT thoughts lift the mind skyward like the mountains lift him who climbs them."

JESUS.

JESUS! How does the very word overflow with sweetness and light and love and life; filling the air with odors like precious ointment poured forth; irradiating the mind with a glory of truth in which no fear can live, soothing the wounds of the heart with the balm that turns the sharpest anguish into delicate peace, shedding through the soul a cordial of immortal strength. Jesus! the answer to all our doubts, the spring of all our hopes, the charm omnipotent against all our fears, the remedy for all our wants, the fullness of all our desires. Jesus! at the mention of whose name every knee shall bow and every tongue confess. Jesus! our power—Jesus! our righteousness, our sanctification, our redemption—Jesus! our elder brother, our blessed Lord and Redeemer. Thy name is the most transporting theme of the church as they sing going up from the valley of tears to their home on the mount of God. Jesus! Thou only canst interpret thine own harmony of heaven where the angels and redeemed unite their exulting, adoring songs around the throne of God. Jesus! Thou only canst interpret thine own name and thou hast done it by thy works on earth and thy glory at the right hand of the Father.—*Dr. Bethune.*

OUR FATHER'S BUSINESS.

"I MUST be about my Father's business," are the words of our Savior which should re-echo in our lives. When we are striving by the grace and help of God to learn and obey his will concerning us, then are we about our Father's business.

But when we are so concerned about the perishable things of this world that we have hardly time to read his Word or to pray, then whose business are we about?

Or, if we think so much of dollars that we drive sharp bargains, then whose business are we about? Or, if we want to appear like the world, act like the world and associate with the world in a way that makes them know that they are as good as we are, then whose business are we about? When we waste the Lord's time and money on things that are useless, or worse; such as tobacco, strong drink, costly array, grand houses, costly furnishings, expensive meeting-houses and going to shows, etc., then whose business are we about? "To whom ye yield yourselves servants to obey, his servants ye art" (Rom. 6: 16).—*Gospel Herald.*

NATURE is man's religious book, with lessons for every day.—*Theodore Parker.*

THERE cannot be a more glorious object in creation, than a human being, replete with benevolence, meditating in what manner he might render himself most acceptable to his Creator, by doing most good to his creatures.—*Fielding.*

Echoes from Everywhere

"The Swedish temperance organizations, eight in number, with a membership of nearly half a million, have united for political action, which means national prohibition within a few years," declares the latest news of the Scientific Temperance Federation, Boston.

Roads in the Western Passenger Association have again taken up the matter of excursion rates. Their purpose is to do away with all rates less than 2 cents a mile. The subject will again come up on March 3, when a meeting of the executive committee will be held.

The United States is the world's largest consumer of coffee and cacao, and holds third rank among the importing nations in the importations of tea; her imports amount to more than one-third of the coffee, nearly one-fourth of the cacao, and about one-seventh of the tea entering the international markets of the world.

Dovey's Official Brewers' and Maltsters' Directory for 1909 gives the executive officers of fifty-three brewing associations in the United States and Canada; five of them national leagues; five of them interstate organizations; nineteen individual State organizations and twenty-two other local and district bodies in leading cities and brewing centers of the country.

Senator Bradley has introduced a bill in the Missouri Legislature for a constitutional amendment to regulate suffrage. At present foreigners may vote in Missouri when they declare their intention to become citizens. The Bradley measure requires that before voting they become fullfledged citizens, which means a residence of five years.

After a test extending over a period of more than two years, in Milwaukee, John I. Beggs has decided to abandon the alternating current for the propulsion of interurban cars. The Milwaukee system was one of the first to adopt the alternating and direct current motors, technically known as "A. C-D C." The change will cost \$1,000,000 and miles of heavy copper cables must be erected. The action of Mr. Beggs will have a sweeping effect upon the electric railway world.

It is reported from Los Angeles that Beggs Rocks, located in the outside channel between Santa Barbara and San Nicholas Islands, have recently sunk into the ocean, probably as the result of an earthquake, and now constitute a serious menace to navigation. Captain Keegan of the schooner Cecilia Sudden, arriving at San Pedro, reports that he came near the rocks, which are charted as showing forty feet above high tide, and found them but four feet above the water at almost low tide. The hydrographic office in San Francisco has been notified.

Investigations in connection with the United States opium problem disclose the fact that in Honolulu—where the curse has strongest hold—there are nine public places for opium-smoking. There are fourteen importers of the drug located there, and there are 2,500 Chinese, thirty Hawaiians and thirty-eight Americans who have contracted the opium habit.

Both the Cuban senate and house are expected to pass by an overwhelming majority a bill to prevent foreigners owning property in Cuba. The foreign investments in Cuba are estimated to be: Americans, over \$500,000,000; English, over \$400,000,000; Spanish, over \$400,000,000; Germans and French, over \$100,000,000. The railroads are owned by foreigners.

Cipriano Castro, at one time President of Venezuela, has left Berlin for Dresden, where he purposes to make a prolonged stay. He came from the private sanitarium where he went for an operation a fortnight ago, and he is now fully restored to health. Senor Castro left Berlin on account of the receipt of quantities of begging letters due to the fanciful newspaper stories of his lavish expenditures while in that city. One writer demanded \$125,000, of which the first installment of \$25,000 was to be sent immediately.

The Mayor of Rome, Signor Nathan, has decided not to carry out the proposal to confer upon Theodore Roosevelt the citizenship of Rome during his brief stay in Italy, on his way to East Africa. It was planned to confer this honor upon Mr. Roosevelt as a recognition of the generosity of the United States toward the earthquake sufferers, but Signor Nathan believes that when all nations did everything in their power to help the needy no distinctions should be made. Should Mr. Roosevelt consent to deliver a lecture in Rome Signor Nathan would gladly place at his disposal a befitting hall.

The well-known Welsbach mantles for gaslight have been made, as is generally understood, by saturating woolen or ramie fiber with a solution of rare earth, which produces the increased light. Experiments to substitute silk, hemp, or jute proved unsuccessful, but it seems that an artificial fiber has now been found which in all respects is equal to wool or ramie. The Moniteur Scientifique says that this is an artificial silk, made by dissolving cellulose in an ammoniacal copper solution. It is then saturated with nitrate of thorium, and through the action of ammonia, hydro-oxide is formed upon the fiber, which after incineration leaves a perfect, solid skeleton of hard little crystals. This mantle is very durable. Experiments have shown that 2,000 or 3,000 shocks do not injure it, while the best mantles prepared by the old methods did not survive more than 100 shocks.

When Mrs. Mary Baker G. Eddy, discoverer and founder of Christian Science, dies she will have no successor. Friends of Mrs. Mary K. Morgan of St. Louis were urging her for the position. To them Alfred Farlow, press agent for Mrs. Eddy, has written telling them that although Mrs. Eddy is 88 years old she is well preserved and expects to live for several more years. He also says that when Mrs. Eddy dies there will be no "leader," as Christian Science is already discovered and established and Mrs. Eddy is succeeded by the religio-science which she teaches and she will never have another successor.

What is believed to be a buried prehistoric forest has been discovered by army engineers on the New Jersey coast, near the Sandy Hook military reservation. While boring for water the test pipes, at a depth of nearly 400 feet, struck a broad stratum of wood. At one point the engineers reported that the drills had sunk through 20 feet of wood, which they think was a tree trunk still remaining upright. It is thought that at some prehistoric period a forest flourished at that point and was covered by the sand washed up by the sea. Archaeologists are now making an investigation.

Thirty steel machines have been installed in the new department for mechanico-therapy at the Vanderbilt clinic of the College of Physicians and Surgeons in New York City. By the use of the machines tissue, bone and muscle will be strengthened and the period of convalescence appreciably lessened. Dr. Charles H. Jaeger, instructor of orthopedic surgery at Columbia University, has charge of the machines, which were operated for the first time recently. Columbia is the first university to adopt the new system of treatment and to instruct its students of medicine in this branch of therapeutics.

Astronomer Emil Merchand of the Pic du Midie observatory was partially vindicated by a slight earthquake Feb. 20 at St. Georges, a village near Grenoble. No damage was done, but the quake was felt throughout the entire village and neighboring territory. Merchand predicted several days ago that February 20 would be a day of great earthquake activity. He based his prediction on the position of the sun and moon with reference to the meridian, which is such as to cause the maximum influence of the sun's and moon's rays on the earth, affecting particularly the weak spots on the earth's surface. Merchand says the dates of the San Francisco and Sicilian quakes support this theory. He says the same conditions will prevail again on March 20.

Portions of southern Africa suffer periodically from swarms of locusts, although much has been done with a view to getting rid of the pests. The Mattei system has been tested, for instance, and many thousands of the insects have been killed while yet wingless. This system is based on the knowledge that the locusts cannot surmount a smooth surface. Canvas screens are set up across the road taken by the swarm, and at intervals pits are dug below these. The locusts, checked by the smooth canvas, turn, march along the line of the canvas, fall into the pits, and are crushed by the weight of those of their kind who follow them. When a pit is almost full, earth is piled upon it. Further, eggs are destroyed whenever found and endeavor has been made to inoculate insects with disease, the idea being that the cannibal practices of the locust will cause such disease to spread with devastating rapidity.

Stockmen in Oregon, who claim they are losing more than \$4,000,000 a year from the devastation of the animals, are planning to kill 10,000 coyotes this year. Fully 10,000 were killed last year, and the warfare is to be repeated in the hope of exterminating the pests. The Oregon Wool Growers' Association, including the sheepmen, and others interested in the live stock industry, have banded together in this campaign and will use traps, poison and other methods. Coyotes have caused heavy losses in various parts of the State, especially in the Umatilla district southwest of Spokane, where the animals live by killing sheep, poultry and wild game, such as prairie chickens, grouse and other birds that nest on the ground. Oregon is the only wool-growing State in the Northwest that has no bounty law, hence stockmen are compelled to pay the expense of destroying the coyote or of submitting to its ravages from year to year. A combined effort is to be made at the coming session of the Legislature to secure the passage of a law allowing a bounty of \$1.50 for coyote scalps, and there is a fair chance for its passage.

Prohibition leaders in Chicago fail to find any cause for cheer in "Uncle Joe" Cannon's reported efforts to befriend a temperance measure in Congress. Instead of proving false the charges frequently made against the Speaker that he is the chief obstacle in the way of prohibition legislation, Charles R. Jones, chairman of the Prohibition national committee, declared his action strengthened them. "The amendment of the penal code bill, aimed at the shipment of liquor into dry territory, adopted by the House of Representatives, is but a feeble response to the demands for protection from the interstate liquor traffic made by the forty million people now living in prohibition territory in the United States," said Mr. Jones. "This bill does not pretend to stop the interstate jug trade at all. It permits anyone in dry territory to order any quantity of liquor and under it the brewers and distillers can ship into dry territory any quantity of liquor, and be specifically protected from dead beats by the provision which requires payments in advance."

The adjustment of the claims of Americans in Venezuela has been like a case in the English chancery court, so long have they been on the docket. But after Cipriano Castro sailed for Europe and Gomez became president, it began to appear possible to get matters settled. The United States sent Wm. I. Buchanan as special commissioner to carry on negotiations with the new president of Venezuela concerning the settlement of claims, and a protocol has been completed and signed. For a long time the New York and Bermudez Asphalt Co. has been pressing its claim because of alleged unjust treatment under the Castro regime, and at a time or two, because of Castro's stubbornness, it seemed as if Venezuela and the United States would have serious trouble; but now through Mr. Buchanan the matter has been brought to a settlement, so that the company obtains possession of its property in Venezuela and agrees to pay the Venezuelan government a minimum revenue of \$20,000 a year. Furthermore, the company will pay the government a cash indemnity of \$60,000 to compromise the suit brought against it on account of its alleged participation in the Matos revolution. Several other claims which were pending go to The Hague tribunal for arbitration. This protocol, Mr. Buchanan reports, is equally satisfactory to Venezuela and the United States, as it saves the honor of the former and disposes of the claims of the latter.

Among the Magazines

ARE JEWS IMMUNE TO ALCOHOL?

It seems to be a fact that Jews are less affected by alcoholism than other races, and it has been thought that this is the result of some sort of racial immunity. Dr. L. Cheinisse, who discusses the matter in *La Semaine Médicale* (Paris, December 23), concludes that it is rather due to social and religious conditions. This is not the only kind of immunity attributed to those of Hebrew race. The author notes that Bordier in his "Medical Geography" (Paris, 1884) ascribes to them, although without exact demonstration, immunity to plague, dysentery, typhus, and malaria, and explains that the Jews, especially in the Middle Ages, when these beliefs first arose, were a sedentary, calm people, going abroad little and living a retired, hygienic life. This, Dr. Cheinisse remarks, is not really "immunity" at all, any more than the relatively small number of women killed by lightning entitles us to conclude that the female organism is "immune" to the electric discharge. The immunity of the Jews to alcoholism is likewise apparent, he thinks, rather than real. He says:

"It is incontestable that the surprising vitality of the Jewish race, which has enabled it to resist victoriously, during so many centuries, such bitter persecutions, must be attributed, before all else, to their characteristic habits of temperance. . . . According to some authors, the influence of race has much more to do with this than that of religion; the Jews must possess, they think, a sort of hereditary immunity to the narcotic poisons, and in particular to alcoholic beverages, so that these provoke in them only a slight excitation and not a profound poisoning of the organism. To this must be added the influence exerted by hygienic conditions of life.

"Without contesting the role of this second cause, we believe that the rarity of alcoholism among the Jews depends much more on social factors than on racial influence. In 1878, Samuelson, in his monograph on alcoholism, thought that the phenomenon in question might be attributed to two causes: (1) The Jews form generally a small, very compact community; and because of this intimate cohesion and of their isolation from the rest of the population, they are distinguished by very rigorous customs; (2) they never adopt occupations necessitating great physical effort. The same author remarks that among Jews of the higher classes, who do not keep so rigorously aloof from the Christians, and who are inclined to free themselves from their traditions, he does not observe the same abstinence that prevails among the lower classes. This fact is particularly worthy of note because it squares perfectly with recent observations. Thus, Fishberg has shown that, in New York, Jews of the younger generation, who assimilate their habits to their environment more easily, are allowing themselves more and more to fall under the influence of alcohol. And on the other hand . . . Zadoc-Kahn notes a considerable difference between Jews who have recently come to Paris and those who have lived there long; here also

alcoholism spares the Jews only when they remain loyal to their traditional precepts.

"All these facts prove that the slight development of alcoholism among Jews, far from being due to some mysterious immunity of the race, depends on social conditions, and above all on the close cohesion of the Jews, engendered and cemented by long centuries of persecution. The church exerts a preventive force on suicide, but this, says Durkheim, is not because it preaches to man respect for his own person, but 'because it is a society.' Now, Judaism generally has preserved, up to the present time, that character of a collective and social bond, which the other religious bodies have lost somewhat; and it is this very force of cohesion and concentration of the religious community that preserves the great mass of the Jews from alcoholism. But wherever the traditional bonds are loosened, we see at once a fissure opened by the alcoholic contagion, which slips into the environment, formerly absolutely refractory to it."—Translation made for the Literary Digest

REASONS WHY OUR NAVY SHOULD NOT BE ENLARGED.

The following statement of reasons why our navy should not be enlarged was issued on January 15, with the endorsement of a large body of the leading men of the country: [Thirty reasons are given, but we have room for only a few of them. Editor Inglenook.]

Because we have fought foreign foes, English, Spanish and Mexican, only six years in the one hundred and twenty-five years since the Revolution. In every foreign war we made the first attack. With less danger from attack than any other nation, we are now spending more for past war and preparation for future war than any other nation in the world.

Because our coast line has little relation to danger from attack. The second Hague Conference has provided for immunity from bombardment of all unfortified towns and from levying contributions by threat of bombardment. We would be safer still if we reduced fortifications, as one of our delegates to The Hague has said.

Because there is no danger from China, a peace-loving nation friendly to us. Our return of the indemnity has done more to promote peace with her than anything else could do. According to the testimony of Ambassador Luke Wright, of Hon. John W. Foster, of Secretary Taft, and of over one hundred missionaries to Japan, familiar with her language, customs, and politics, there is not the slightest foundation for the violent and frothy talk which is emanating from a few Americans against Japan and is poisoning the minds of millions of our uninformed citizens. Said Ambassador Wright, "The talk of war between this country and Japan isn't even respectable nonsense." The one hundred missionaries say: "We desire to place on record our profound appreciation of the kind treatment which we experience at the hands of both government

and people; our belief is that the alleged belligerent attitude of the Japanese does not represent the real sentiments of the people. We wish to bear testimony to the sobriety, sense of international justice and freedom from aggressive designs exhibited by the great majority of the Japanese people." Nothing could do more to develop the opposite feeling than the baseless assumption and insulting statements published by certain irresponsible newspapers and military men.

Because we are already spending over sixty-five per cent of the nation's revenue in payment for past war and in preparation for future war, and have but one-third of our national revenue left for judicial and executive departments, coast guard, lighthouses, quarantine, custom houses, postoffices, census, waterways, forestry, consular and diplomatic service, and all other constructive work.

Because we have increased our expenditure for defense two hundred times during a period when our population has increased only twenty-two times, our coast line perhaps three times, and our danger from attack not at all.

Because increase of our navy does not increase respect of foreigners for us. Respect can be given only to moral qualities. Our indifference to lawlessness and our civic corruption are well known abroad. We have no more moral influence than we had thirty years ago, when every monarchy in Europe was being sapped by our democracy. Plutocracy and militarism made us talked of, and dreaded, but not respected. Many, perhaps, are glad that we are being hampered in our race for commercial supremacy by saddling ourselves with the Old World's military burdens.

Because an increase of the navy argues infidelity to the great achievements of the Hague conventions. It is childishly inconsistent to create more force when better methods are being substituted for it.—Advocate of Peace.

A PLEA FOR DAILY KINDNESS.

The daily evils that make life hard are not the great sorrows but the infinity of irritating trifles, the unnecessary injustice, the man-made wrongs of life. Such are the cruel temper that upsets a household for a day and leaves a trail of enervating sadness and protest; the unreasonable selfishness that overrides the rights of others like a car of Juggernaut. There is a bitterness of unfor-giving condemnation that listens to no reasons, explanations, or motives, that believes because it has seen, that credits the senses and accepts circumstantial evidence as final. Then two that love may walk alone down the valley of darkness and separation, heart hungry for the treasure that has been thrown away.

Man is said to have been made in the image of his Creator. Some men seem to be trying to remove the labels and other identifying brands. If we are men, with the dignity of our powers and privileges and possibilities, let us live like men. Life is not something to be lived through, it is to be lived up to—in all its highest meanings and messages. There was in the army of Alexander the Great a soldier, who, although he bore the very name of the great conqueror, was in his heart a coward. Cowardice in any soldier in that mighty army was the worst of all crimes; yet for this man to be a coward was shame unspeakable. And Alexander in great anger commanded the craven: "Either give up my name or follow my example." Living up to our possibilities means living up to our name—anything less means failure.

If for a single week in any city each individual were to say each morning: "Today no one in the world shall

have even one second darkened by any act of mine," and live it, that city would be transformed and glorified. It would, after all, mean only negative goodness, the avoidance of evil, not real, aggressive, positive, high-keyed living at our best, but the burden of life would be lifted, and in an atmosphere warm with the radiant glow of love and brotherhood we could almost hear the faint rustle of the angels' wings, the angels of peace ushering in the millennium.—From the February Circle Magazine.

MORAL HEALTH.

Dr. Arthur MacDonald, of Washington, has submitted to the foreign governments of the world a plan for the scientific study of crime. Russia has adopted the plan and other governments are considering it. It is Dr. MacDonald's belief that the nations should look after the moral health of the people as carefully as they look after the people's physical health. He shows that crime in nearly all of its forms, as well as insanity, suicide and other forms of abnormality, has been steadily increasing for the past thirty years, and he believes the time has come when the conditions that develop this increase must be scientifically studied if the increase is not to continue relatively faster than the increase in population. Crime, pauperism, alcoholism, degeneracy—all of these are matters with which the State has to deal almost daily. They are influences making for degeneracy and for race suicide. We spend millions of dollars in prosecuting criminals and in caring for them after they have been convicted, but we spend not one cent to remove the environments that cause crime. We treat all men alike, once they are accused of lawbreaking. The victim of environment is sent the same route as the vicious. The morally degenerate and those who may have been driven to theft by hunger are herded together in our prisons. We give a man who is not wholly bad small opportunity to redeem himself. In fact, we put in his way every social obstacle that we are able to raise and we offer to him unlimited opportunity for becoming a worse man than he was before his conviction. From top to bottom our entire criminal system is crude and superficial. We proceed from the time a man is arrested upon wrong principles and we follow these wrong principles throughout our entire dealing with him. We know less about crime and its causes than about almost anything else that we meet in daily life. It would seem to be economical, even if it might not also be humanitarian, to spend a few dollars in the study of crime, with a view to its prevention and to the possible saving thereby of many millions. We certainly could not waste more money on criminals than we are wasting now.

REMAKING A PEOPLE.

WE have completed the separation of church and state, buying out from the religious orders their large agricultural properties, which are now administered by the government for the benefit of the tenants.

We have put the finances on a sound and sensible basis.

We have established a complete new system of auditing and accounting.

We have placed our civil administration on a strictly self-supporting basis, receiving no aid whatever from the United States government, except in so far as they have elected to help us in charting the coasts for naval

purposes. This charting, which is being done at a rapid rate, is at the joint expense of the insular and national governments.

We have established a uniform and stable currency on a gold basis.

We have established schools throughout the archipelago, teaching upward of half a million children, and we find that the Filipinos are eager to learn and are rapidly learning the English language.

We have started a general and thorough system of road construction and maintenance, in which the insular, provincial and municipal officials coöperate.

We have established the policy of constructing all public buildings, as well as bridges and wharves, of durable material, preferably reënforced concrete, in order that our work may endure.

We have given the Filipinos almost complete autonomy in their municipalities.

We may not as yet have given independence to the Philippines, but we are certainly giving independence to the Filipinos.—*February Atlantic*.

BIGGEST BUG IN THE WORLD.

To the Hercules beetle, a giant among insects, which is found in certain portions of Central and South America, as well as in the islands of Dominica, one of the British West Indies, belongs the distinction of being the biggest bug in the world. In appearance this creature is anything but prepossessing.

It is a common trait of tourists and travelers to make little of anything seen on foreign lands, especially in the little West Indian islands, and to declare that similar things of greater size or better quality occur in "God's country." When they run across the Hercules beetle, however, they are obliged to acknowledge themselves beaten.

Although so formidable in appearance, this insect is perfectly harmless. It lives in the heavy forests and feeds on the sweetish sap or gum of native trees. The larva, or grub, is about four inches long and as thick as a man's thumb, and looks like a huge white maggot. It is considered a delicacy by the native negroes and Caribs, who roast it in hot ashes and say that it tastes like roasted nuts.

Clumsy in appearance, the Hercules beetle possesses great power of flight, and in the outlying villages it is not uncommon for one of these huge creatures to enter the native houses, being attracted thereto by the lights. The invariable result is a prompt extinguishing of the candles by the wind created by the beetle's buzzing wings, accompanied by screams of the inmates of the house, who imagine a jumble, or evil spirit, has invaded their dwelling.

A popular belief among the natives is that the Hercules saws off limbs of trees by grasping them between the two horn-like appendages and flying round and round. This is a manifest impossibility, as the

insect has but little power in the horns, and moreover, the upper one is lined with a soft, velvety hair which would rub off by friction.—*Search Light*.

WATTLESON, JR.

"Boys," said Wattleston when he reached the office nearly thirty minutes late the other morning, "I think you all know me well enough to understand that I'm not one of the foolish kind who believe everything they have is always the best on earth. The fact of the matter is that the stork swooped down on our premises last night, and you see before you the father of a boy who weighed eight and one-quarter pounds stripped. Now let's just let it go at that. You know that I know that you don't care a whoop about my boy. I don't care anything about the babies that may have come to the homes of any of you fellows, and I'm not foolish enough to believe that what my boy is or gives promise of being can interest any of you in the least. So I am going to promise you right here and now that you shall never be bored by me, as far as my boasting about that child is concerned. I make the announcement that a son has come to gladden my home, and that shall be sufficient. Some of you are fathers, and there are others among you who may in the future become fathers. But, whether you are fathers or not, I know you will agree with me that the worst bore on earth is the man who thinks his baby is the most wonderful one that ever was born and who insists on telling everybody so. Mind, I do not blame a man for having a good opinion of his child. The father who does not think well of his offspring does not deserve to have one; but that's no reason why he should make other people weary by giving an account of every bright thing the child does. So, as I have said, I do not intend to do any boasting about my little one. I shall let him speak for himself, and he'll do it, too, all right. I'm not in the least afraid on that score. Why, by Jove, it seems when I look at him that he wants to talk to me even now. I never saw a more intelligent look on any face than there was on the features of that baby when they put him into my arms three hours after he was born, and he looked up into my eyes just as if he had known me all his life. And handsome! Say, you know how most babies look when they are very young—just sort of putty-faced, without any features worth mentioning. Well, this boy has more character in his face right now than you'll see in the faces of most men. The fact is that he bears a striking resemblance to Napoleon—has that lock of hair hanging down over his forehead as natural as life—and—Well, confound you, what are you all snickering at? You fellows make me sick."—*Chicago Record-Herald*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—494 acres in Mexico \$950. On Southern Pacific Railway in Sinaloa. The New California and Coming Country. Rich soil. Level. Bank and Government References. W. S. Hunt, Culiacan, Sinaloa, Mexico.

OWN A HOME

In the Land of Health and Wealth

Here's an opportunity to make a fortune. It's not a chance—not a risk—but a **positive opportunity**. And combined with this opportunity of wealth, is an offer of culture, education, pleasure and health—for your family as well as yourself.

Clear blue skies, pure air, mild winters, comfortable summers, beautiful scenery, together with excellent church privileges, good schools, pleasant neighbors and **big crops**—they're all to be found at

—Miami Ranch—

18,000 acres of land in New Mexico's choicest farming section. Not a lonesome, dreary tract of land in a boundless desert, but a rich, cheerful valley surrounded by picturesque mountains.

Plenty of elk, deer, bear and other game can be found in the mountains, while the surrounding lakes are black with wild ducks and geese. The Rayado River, which flows through the ranch, is filled with mountain trout and is famous throughout the Central West for the exhilarating sport which it furnishes.

The MIAMI RANCH is specially adapted to

the raising of wheat, oats, barley, sugar beets and fruit. New Mexico wheat took first prize at the World's Fair in Chicago; and apples raised in an orchard directly adjacent to MIAMI RANCH won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 per acre.

Everything favors stock and poultry raising in Northern New Mexico. With a perfect climate and a variety and abundance of food rich in butter-fat, the condition for dairying could not be excelled.

WONDERFUL IRRIGATION SYSTEM

Although the average annual rainfall at MIAMI RANCH is 13.92 inches and the heaviest fall is during June, July and August, when it is most needed, the owners of the MIAMI RANCH have constructed ditches and storage reservoirs which give such an abundant supply of water to all lands which they offer for cultivation as to insure the biggest crops possible for any soil to raise. The irrigation system is in charge of an expert who furnishes instruction in irrigation to the farmers. Every opportunity possible is offered you to make your life a success on MIAMI RANCH.

Less than half fare rates can be secured to MIAMI RANCH via the Atchison, Topeka and Santa Fe Railroad, the first and third Tuesdays of every month. Write for more information regarding these excursions and also ask for our **free** booklet, "Westward Ho." It tells in detail all about MIAMI RANCH and shows illustrations of actual scenes on the ranch.

Prompt action is necessary if you want to take advantage of the present bargain offers being made. Write today—right away.

NEFF'S CORNER

My little folder, "New Mexico Investments," printed a few months ago, says Clovis has seven brick buildings. Now we have twenty-seven. Then we had about 1,000 population, now about 2,500. Our printers here are getting out an illustrated pamphlet giving information about our town and country right up to date. To read it will give you such an idea of the rapidity of our growth that it will almost make your head "swim." Send me a red stamp and get a copy.

I have five rooms furnished for light housekeeping that bring me a rent of \$50.00 per month. You perhaps would like to own property here. If so write.

JAMES M. NEFF,

Clovis,

New Mexico

Remember our Investment Association paid 17 per cent last year.

OUR 1909 GENERAL CATALOG

contains description and price of nearly 1,000 Books; 178 Bibles and Testaments; 193 Silver Text Cards; a fine line of Blotters; 25 Silk and Celluloid Bookmarks; an entirely new line of Art Pictures and Floral Wall Mottoes; 12 Magazine Club Offers; 10 Post Card Albums; Post Cards in 700 designs; 50 Sunday-School Reward Cards; Christmas and New Year Cards and Booklets; Maps, Blackboards, Cradle-Roll Supplies, Home-Department Helps, Teacher-Training Textbooks; and other Sunday-School Supplies.

Holmes' Green Prolific Pole Lima Bean

Grows Green—Dries Green—Stays Green—Most Prolific

Equals the Early Jersey or any other variety for earliness. More productive than any other Pole Lima we have ever seen grow. Every Bean has that true, distinct, deep grass green color, and this color it retains when the Beans are shelled for market. The large pods hang in clusters of from five to eight, each pod containing from five to six beans.

Stock extremely limited. Positively only three papers will be sold to any one person. Pkts. containing six beans, 25 cents; 3 pkts., 50 cents.

Holmes' Delicious Early Sweet Corn

Entirely new and distinct. Very early. Ready for market in 55 days. The most delicious Early Corn grown. Has twelve rows to the cob, and each stalk bears two or three well-developed ears.

Stock extremely limited. Pkt. containing enough seed for three hills, 25 cents; 3 pkts., 50 cents. Positively not more than three pkts. sold to any one customer.

Fuller description of both above Novelties will be found in our Hand Book on Seeds which is sent free for the asking.

No other seed house can offer these two sterling novelties this year

HOLMES SEED CO., HARRISBURG, PA.

TAKE NOTICE

Are you seeking for health, wealth, happiness, beautiful scenery, fine weather, good schools, and splendid church privileges? If so, come to Reedley, Fresno County, Cal. Located in the famous San Joaquin Valley, where you can enjoy yourself all the year around. Land is not so high yet but what you can get a home. Land is worth from \$10.00 to \$1,000 an acre and steadily advancing in price. It so happens that Reedley lies at the intersecting of two great railroads, the Santa Fe and the Southern Pacific. This gives us an excellent train service and good shipping facilities. Reedley soil under extensive irrigation has proved remarkably productive and the location, near the foothills of the Sierra Nevada Mountains, is a location that cannot be surpassed for the raising of almost any kind of fruit and nuts and all kinds of vegetables. You can raise some kinds of vegetables every day in the year. The "Square Deal for All" is our rule. For further information address

Reedley, California, Box 602

A Sample of the Oat Fields in the Nanton District.

BOUNTIFUL HARVESTS

The prosperous settlers of Sunny Southern Alberta have harvested and threshed enormous crops the past year. The wheat yield on some fields was as high as fifty bushels per acre. The oats yield was as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

REDCLIFFE REALTY CO. (R. R. Stoner, Pres.),

\$33 TO CALIFORNIA, . . . From Chicago.

A NEW COLONY

After an extended tour of investigation and careful consideration the CO-OPERATIVE COLONIZATION COMPANY decided to locate its first colony in the famous San Joaquin Valley, California, near the center of the State. This is a fine section of country, with mild, short winters. Grains, grasses, fruits, berries and vegetables of about all kinds are grown here successfully, from oranges, and other citrus fruits, to the most hardy plants of the more northern climate.

EMPIRE

is the name of the new Town and Colony. It is located on the main line of the Santa Fe railroad, in Stanislaus County, five miles east of Modesto, the county-seat, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

This is not a new, undeveloped country. All the colony lands are under cultivation, wheat, oats, barley, etc., being the principal crops, until the installation of the Modesto-Turlock Irrigation system, one of the finest in the State, since which the more intensive methods of farming have been followed, because of the greater profits.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal.

Our next party of Colonists will leave Chicago Tuesday, March 9. Prospective Colonists and Tourists are invited to join this party. For further information write to

The Lost Brothers of the Alleghanies

By Eld. Jas. A. Sell

On the morning of April 24, 1856, Joseph and George Cox, aged respectively 5 and 7 years, wandered from their home in the mountains of Western Pennsylvania.

Thousands of men, women and children searched for the boys, until, on the fourteenth day their whereabouts was made known through the dream of Jacob Dibert.

Eld. Sell, who conducted Memorial services on the Fiftieth Anniversary of the occasion, tells the story in all its details. The illustrations consist of five portraits: Mr. and Mrs. Cox, Jacob Dibert, Harrison Wysong and the Author.

A sad but true story of life in the mountains. Intensely interesting and instructive.

NEFF'S CORNER

And now another good thing has happened. By the provisions of a bill that has just passed the Legislative Assembly of New Mexico a slice has been taken off two adjoining counties, a new county formed which will be called Curry (for our Governor, George Curry), and Clovis is made the county seat. And now as a county seat and with prospect of two more railroads, our already rapidly growing town will continue to go forward with leaps and bounds. This will be welcome news to those who own property here and will be of interest to others who ought to. I have had some photographs taken of one of the \$450.00 properties I advertise and will mail one for eight 2-cent stamps to pay cost of making and mailing. Address:

JAMES M. NEFF,

Clovis,

New Mexico.

CHINESE SUPERSTITION

C. F. APPLETON

IGNORANCE and seclusion for many centuries have kept the people of China bound by superstitions that even the present educational system has as yet been able to affect but little. Personal observation for a few months or years is quite sufficient to reveal this lamentable fact.

During the three hundred and sixty days of each Chinese year there are three great festivals, *viz.*, New Year's, the middle of the fifth moon and the middle of the eighth moon.

These are special occasions for attending to religious rites. The New Year season is the greatest holiday of the year. The stores are closed for two weeks; old debts as far as possible are all settled up and the new year is ushered in with the beating of drums and tom-toms and the boom of fire-crackers. Each day of the first week has a regular programme which is faithfully observed. A day of special interest to foreigners is the one when the natives go out to sacrifice and burn incense at the graves of their ancestors and make offerings of meats, sweets, bread and other delicacies before the ancestral tablet in the home. The people are taught that every man has three souls and seven spirits. One soul remains in the family tablet, one in the grave and the other in the aerial regions. These must be propitiated or calamity will befall the family before the year closes.

The second great festival comes late in the spring and lasts but one day. At this time some women were once seen in a neighboring courtyard burning incense to the rising sun. On inquiry it was found that that was the universal custom for that day. The object was to ensure good crops and pleasant weather for the coming year.

The middle of the eighth month is kept as a public holiday. At this time the moon receives worship as a

god. The rite consists of the burning of incense and the firing of crackers in the evening.

Another superstitious idea was noticed one day while on a journey to a neighboring city. As we passed through village after village we noticed an unusual amount of noise and stir. The people were beating old drums and tin pans and making a great clamor. We were informed by our wheelbarrow

The God of the Well.

man that the dragon was trying to swallow the sun and the people were endeavoring to scare him away. The eclipse soon passed away and the ignorant people rejoiced in their success.

In most, if not all, Chinese cities, one temple is dedicated to the god who presides over that place. It is customary to have this god, which, in our city, is a large wooden idol, taken outside the city gates twice a year, left there during the day and carried in again

in the evening with great pomp and show. The magistrate of the city takes a prominent part in the procedure. The people say the god is taken out in the spring to gather together all the evil spirits that they may not injure the crops during the summer. In the fall the same idol is again carried out and the evil spirits are supposed to be let loose for the winter when they cannot injure the fields or crops.

Another curious custom has been noticed in this part of China and I believe the same is true elsewhere, also, *viz.*, in times of drought the magistrate is expected to go to the temples and beseech the gods for rain. If this fails the mandarin orders the south gate of the city closed day and night, as this gate is supposed to preside over certain elements of nature. If this does not bring rain an edict is put forth ordering all the meat shops of the city to be closed and the butchers are forbidden to kill. In extreme cases of drought, as happened here about a year ago, some religious fanatics are carried about the city in chairs, the seats of which are covered with sharp iron spikes, and great suffering is borne in hopes of propitiating the wrath of the gods.

A very common experience in China is for houses to become haunted, and when this is the case it is almost impossible to persuade anyone to live in them. Christian missionaries frequently rent such houses at a very nominal price. A native servant was once asked by a missionary why he was not now afraid to dwell there. He replied that the God of the Christians was stronger than the demons and that he would protect him while he was in the employ of his servant.

In almost every community in this great Empire the temples are the finest buildings to be seen. In large cities the Buddhist, Taoist and Confucianist temples are very numerous. In some instances there are no idols, but tablets bearing inscriptions only, while in other cases every nook and corner in the building are filled with images of people, animals, reptiles, birds or fishes. The idols usually have hideous appearances and are intended to terrify the people. In the temple of hell some of the most horrible punishments that can be imagined are portrayed by these

idols. In addition to the idols in the temples the Chinese have kitchen gods, door gods, the god of wealth, the god of the well, and the god of the field, each presiding over his respective sphere and must be constantly worshiped by the ignorant masses.

In case of sickness the witch is frequently called in to cast out the demon that is troubling the afflicted person. The native doctors are also numerous, but their medicines are practically useless and they know almost nothing about the structure of the human body.

The burying of the dead is an interesting ceremony in this country. It frequently happens that the corpse is embalmed in lime and kept for several months waiting for a lucky day for burial. A few years ago the writer saw a coffin containing the corpse of a wealthy person who had been dead for several years, but the relatives were still waiting for the heathen

priest, who received fees for each consultation, to find a lucky day for the funeral.

In China a coffin is considered a most acceptable gift even many years before there is any use for it. A common sight in Kai Feng Fu is to see long funeral processions preceded by a group of ragged men or boys, carrying paper carriages, horses, money, houses, sedan-chairs and furniture, all of which are burned at

Funeral Procession. Paper Horse and Cart to Be Burnt at the Grave for Use in the Next World. Woman with White Cloth on Her Head—a Sign of Mourning.

the grave or at some prominent point on the road to the place of burial, for the use of the deceased in the other world.

The ancient sage, Confucius, taught the people an excellent system of morals, inferior only to those of Christianity, but his teaching is entirely lacking on the question of a hereafter. The natural instinct of man, however, teaches him to fear and worship some power higher than himself even where he has no knowledge of the true God. This country is a sad example of the effects of ignorance, darkness and superstition which can be vanished only by the Sun of righteousness.

Kai Feng Fu, China.

SIR FRANCIS DOYLE said: "It is the intention of the Almighty that there should exist for a certain time between childhood and manhood, the natural production known as a boy."

CORN BREEDING.

WM. MOHLER.

AN ear of corn worth one hundred and fifty dollars? Yes, that was said to be its value by the man that had it on exhibition.

It was an ear of white corn of fair size. In appearance it was, to the general observer, but little if any better than the goodly ears that he had often seen. In fact, quite a number of farmers, that saw it, said they thought they could have but little trouble to find just as nice ears in their own cribs.

But in the eyes of the corn expert it was almost an ideal ear of corn—so good that if a farmer could find twenty just as good ears he could win the first prize in any corn show. Even if he could find but one ear like it, it would be put in a high rank among corn men. Do not waste time looking for it because such ears of corn are not to be found in the farmers' cribs. The above ear was not found. It was the result of years of labor by an experienced corn breeder.

The average farmer is not as much interested in growing fancy corn as he is in growing seed that will produce big yields. The method of breeding corn for different purposes is quite similar. The method followed to produce high-yielding seed corn will be given here:

Every farmer knows that the corn tassel produces a great quantity of flower dust when in bloom. This flower dust is called pollen.

It is essential in corn breeding to know that the tassel is the male part of the corn plant and the ear the female part; that every place on the young cob for a grain of corn has a silk that extends from the embryo corn grain out through the end of the husk in order to be exposed to falling pollen. And that the embryo will not develop into a grain of corn unless it is fertilized by a grain of pollen finding lodgment on its exposed silk.

An ear of a thousand grains may have its individual grains fertilized by the pollen from more than one hundred different tassels; each grain partaking of the nature of the mother stalk and the nature of the stalk that produced the grain of pollen by which it was fertilized.

The plant breeder arranges to have embryo seeds fertilized by the pollen of plants having the desired qualities. In corn breeding about the following plan is pursued: A number, for convenience we will say one hundred, ears of corn are selected, of even size having, as near as can be procured, the desired qualities. Each ear is labelled with a number for future reference, and the corn from each ear is planted in one row of a corresponding number. That is, the corn on ear No. 1, is planted in row No. 1. Ear No. 2, in row No. 2, and so on up until ear No. 100 is planted in row No. 100. In this way of planting a record of the behavior of each ear of corn may be kept.

In planting, but two-thirds of the corn are shelled off the ear; the remaining third is reserved for planting the next spring.

The planted corn is carefully cultivated. When it is fully matured each row is gathered separately and weighed to ascertain its rate of yield per acre, a record being kept of each row.

The ears selected for planting may have been quite uniform in appearance but the difference of the yield of the different rows is often surprising. In a plot that came under my notice, the row with the lowest yield was at the rate of thirty-five bushels per acre and the row having the greatest yield was at the rate of eighty-five bushels per acre. In this plot ten rows yielded at the rate of eighty or more bushels per acre. Two of the ten rows showed bad features, and all of the corn in the rows that did not produce at the rate of eighty bushels were rejected as unfit for seed. The low-yielding rows were great pollen producers, and being close to the eight prolific rows the chance of the corn in the good rows being fertilized by the pollen of the poor rows was so great that seed from these rows was not considered good for breeding purposes.

The ears that were reserved from which the high-yielding corn was planted were taken and all of the corn that was left on them was shelled together and planted the following spring. From this crop a hundred ears were selected and were treated the same as the first hundred ears.

In this planting there was a marked increase in yield as was to be expected since the eight ears of corn from which the seed was selected had produced as much as eighty bushels per acre. This process is repeated until satisfactory results are obtained.

The ear of corn mentioned in the beginning of this article was the result of about twelve years of corn breeding.

In breeding corn several ears should be planted. Where but one or two ears are used the inbreeding is so close that the results are generally quite disappointing.

The busy farmer may feel that he has not the time to follow up corn breeding as here outlined, but the retired farmer can find in it a pleasant and a profitable pastime.

Walton, Kans.

**A POOR WEALTHY MAN.**

"ONCE there lived a rich sultan who, in spite of his wealth and power, was always melancholy. His physician said, if he wished to be cured, he should exchange his shirt for that of the happiest man in his kingdom. After a long and tedious search, the man was found, and when brought before the sultan, it was discovered that he was not even the possessor of a shirt."

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLVIII.

THIS International College had enrolled two hundred and fifty pupils, of both sexes. It is non-sectarian, but Christian, and exerts the strongest possible influence over the natives, and particularly over such young men and women who are ambitious to become leaders. There are few such institutions anywhere to which a generous contribution or bequeathed legacy could possibly do as much good. The college should not lack in power for want of money to carry on the great burden of opposition met by the Turkish officials, by the head government, and by the peculiar unfitness bound to exist in the pupils presenting themselves for matriculation.

Rev. Alexander McLachan, B. A., was president, and Prof. S. L. Caldwell, who came from Minnesota, was at the head of physics and mathematics when I was there.

To start the dull mind of the superstitious Easterner into the right way of thinking, the college emphasizes the department of science. Here I found an X-ray machine in Turkey. More than that was the Marconi system that had been installed.

—On the afternoon of the day I was to give a literary and elocutionary entertainment in the college chapel, Prof. Caldwell was getting the first electric light plant installed. That evening, in the fine, large chapel, I had the honor of meeting the first "Turkish" audience to use the electric light bulbs in Smyrna, one of the "Seven Churches" of Paul. In fact this electric-light plant, run by a gas engine, was the only complete one in the Empire. It worked beautifully. While the great fly wheel went whirling and the lamps all began to glow and then grow more brilliant, several natives watched the dangerous proceedings from the outside.

The Sultan has forbidden such things in the Empire, but like everything else good that has been denied by a tyrant, the day always comes when such things find a way, or make one.

Within these walls are the very principles at work that if allowed to aid the Sultan in his work of improving his country, would bring a golden prosperity to his throne on the Bosphorus, and enrich the revenues pouring into the Golden Horn.

The president told me that the college expenses are very low and that any bright boy or plodding fellow here who cares to, may find a way to secure at least a part of his desired training. Outside forces brought

to bear upon the Sublime Porte leave little of good in their wake. Turkey is like any other country in this respect. She resents being *advised* as to how to do things. But she cannot refuse to her sons and daughters under her flag the ordinary development, in mind and body, ordained by the Creator for every one. Without bloody revolution, but with peaceful order, the work of building up the life

International College, Smyrna, Turkey.

of the common citizen in Turkey must have its foundation in the schools, and the most modern schools in normal method, with ability financially, will be the powers behind the throne, when Turkey will rise from her dismembered skeleton of political and social starvation, to face the world powers with independent triumph of national greatness.

There are various schools along the Levant. As to this one, I should like to be back again in the academy and take work here for a year or so before finishing in college. Vacations are planned during the season and the professors take out groups of the students to visit, at their leisure, the Seven Churches

of Asia, Athens, Corinth, the Sea of Marmora, and even to the Holy Land.

Once a palace and the abode for a night of the Sultan himself, these buildings are exceedingly well-fitted by reason of their substantial construction and by the fine interior work of decoration for the purpose to which they are now given. The walls are three and four feet thick, the ceilings are frescoed. Strength unites with beauty to give here these fine-looking boys the complete training they desire.

Athletics has a great part in the curriculum. In the cut you may see the set of horizontal bars. I was too stupid to ask the name of the queer tree near by. The sleeping rooms are just above the big glass windows, the open shutter showing the window looking out on the "Turkish" campus from my room.

While spending the week here in rest and study, the boys desired me to form them into a physical culture class which I did. These young fellows represent the best of the class found in the trades. They were poor, but were paying for in cash, and by labor, their college expenses.

My association with these boys showed me something of the delightfulness of their personality as well as the unsatisfactoriness of many things they set out to do.

It would be disastrous to their veracity should I venture to disclose their native tendency to escape a too severe burden or to avoid a plain but reasonable duty.

As I wished to take a railroad trip to Ephesus, the professor detailed one of these boys to pilot me to the station so that I might learn just when the train left on the following morning. We set out accordingly for the station, going aside, on the way, a few blocks to do some trading at the stores and to "set up a treat" on behalf of the pupil whose kindness was apparently about to get me to my required place of visit.

Then we started—he said so—for the railway. As I did not know where to look for it, he had me at his mercy, and I know now, though I only surmised it then, at just what corner he decided to switch off and

take me, not to the station, but most everywhere else in town, keeping in that part wherein the shops sold drinks and eatables, Turkish paste candies and rich ripe figs. For two hours he kept me on the go, halting in puzzled dismay right in front of a lemonade stand, walking me so fast on the hot streets as to demand, for my own necessity, several more glasses of Turkish beverage than I should have otherwise cared for. So we kept drinking first a red glass of something, then a clear glass, meanwhile eating our appetites away with the Ottoman sweets that were too good to resist. Besides I felt sure my guide would never lead me right and that I would fail to see the station agent, until I had "set up" everything within sight which this young scamp could eat, drink or carry.

I was angry. The sweat from the frequent imbib-

ing of temperance drinks and the hot sun, poured over my clean collar, while the terrible dust of the dirty streets settled upon my clothes with a grimy vengeance.

Three times I asked if he was taking me to the station. Three times he replied, "Yes." "Why don't we get there, then?" I asked, scowling at his thievish face. "It's too far away," he replied. "Where is it?" I asked, impatient and

alarmed. "Over there—down this way—up here it is," he said as he looked and pointed in several different parts of the city. "Where is the college?" I demanded, in tones that he would have to honor. "In this direction," and he had been going in *that* direction for two weary hours!

We had passed out of the neighborhood of the candy bazaars and the only thing he could do now, pleasing to his fiendish prank, was to take me to the college.

When we reached the gate and rang the bell, I asked why he had treated me so cruelly. "Oh," said he, "the station was too far away!"

All Rights Reserved.

"It is a rare school that rises above the level of its head and when this happens there is usually a headache."

"These boys would do everything I showed them, except to walk on their hands."

JUVENILE DELINQUENTS

J. H. HARNLY

It is the purpose of this article to create greater public interest in the right discipline of juvenile delinquents, and to give a general resume of the government of incorrigible youths in our public institutions: a task which necessarily becomes incumbent upon some person who has had wide experience in institution work, and who does not observe the limitations of conventional secrecy in narrating his observations.

Newspaper reports of public institutions are almost invariably toadying commendations, and misleading. Press representatives generally rely upon institution superintendents for their data, who only disclose such distorted facts as are favorable to themselves, and who take every precaution—even to the extent of withholding requisite matter from Boards of Control—to keep the public ignorant of details in management and methods of discipline that would incite adverse criticism. Thus evils are perpetuated that the commonwealth would be quick to correct if made cognizant of them. Furthermore, absolute efficiency will never be secured so long as the public is not aroused to its full province in the government of delinquents and neglects its prerogative of making the most scrutinizing investigation of results attained.

Americans have been assuaged into the belief that their public institutions are above reproach, and that person is looked upon as a monstrosity who dares to question the integrity of a public official. Civil emolument seems to beget in its recipient an undue appreciation of himself, and an exaggerated estimate of his achievements and contributions to popular comfort. These parasites vividly remind me of the German, whom the English poet Coleridge met at Frankfort, who always took off his hat with profound respect when he ventured to speak of himself. Their posture is the more grotesque, when it becomes evident that the actual state of affairs abounds in defective systems, and grossly incompetent management prevails.

It is sufficient cause for alarm when, in spite of our splendid educational facilities, conditions of ignorance and vice abound that beggar description. Here in America, in this age of free thinking, we are fostering a species of Smart Aleck peculiarly our own. Every community is terrorized by a clan of these free-to-das-they-please fellows. So far no system of local government has been evolved which deals satisfactorily with this element of our heterogeneous population. State institutions of every kind are full to overflowing, and judges are at a loss to know where to get relief from this ever-increasing army that demands State guardianship. Lax immigration laws have permitted many very undesirable citizens to come

to our shores and rear a manifold progeny devoid of restraint, and respect for the rights of others. The public schools, which we had hoped would prove equal to this perplexing problem, are powerless to accomplish the work of transformation. This is attested by the fact that annually hundreds of boys and girls are suspended because they are not amenable to discipline and endanger the moral welfare of the better class of children. But suspension enhances the incorrigible boys' opportunity for evil. They are thrust upon the street to contaminate all with whom they come in contact, and children of refined homes are in less danger from these precocious lads in the school-room under the protecting care of a teacher than they are on the streets unattended.

A number of instances of little girls being insulted on the streets by these little gamins, and at least three cases where force was attempted, have come under my own observation as an educator, one case nearly resulting in murder. Is it surprising that every community is repeatedly scandalized when the little children are not exempt from this polluting atmosphere in going to and from school? All of them becoming familiar, and many becoming adepts in vice and vulgarity before they enter their teens. Where is the man or woman that cannot recall incident after incident in their child life that makes them shudder? How I ever escaped when many of my playmates went down in disaster and ruin is more than I can fathom unless it was as a brand from the fire. But I did not escape unharmed. No, my mind was so saturated with the vulgarity of my early associations—wherever boys would congregate to while away the time, be it on the creek or in some barn to play cards, to read dime novels, to repeat obscene rhymes and sing lewd songs—that it still remains a dark spot in my memory. And if anyone thinks conditions have improved during the last two decades let him stop at some side street or vacant lot, where boys gather to engage in youthful sports, and listen to their conversation for a few moments to convince himself that the condition today is even more deplorable than it was twenty years ago. Furthermore, vulgarity and obscenity are seldom successfully banished from school playgrounds.

If your boy is losing interest in his school work, and is commencing to grow indifferent toward religious services, you may take it as an evidence that he is acquiring bad habits, that his mind has suffered pollution with immorality and is now preoccupied with stupefying thoughts and desires. Lack of discipline in the home and freedom of indiscriminate association on the street are proving the ruination of

your boy, and add one more to that class of youths who thwart the best endeavors of the school and church to save them to noble and righteous habits of life. Where is the educator, secular or religious, that has not frequently had his patience exhausted by these ungovernable urchins? They appear devoid of conscience and disregard all law of propriety. They are in evidence at every public assembly, noisome and exasperating, frequently necessitating a magistrate to keep order. A small per cent of this class, many of whom have no responsible person to shield them from the clutches of the law, eventually are taken into custody and it is our further purpose to make known the methods of dealing with these unfortunates in one of our western reformatories, where boys between the ages of seven and sixteen guilty of crime or gross incorrigibility are incarcerated to be disciplined.

Although the law sets the age of commitment between the ages of seven and sixteen, little boys are frequently confined in the institution before they reach this age. The incarceration of little children with adult criminals is most emphatically reprehensible and invariably accompanied by direful results. Again, in the case of most first offenders a short term of right discipline affords ample chastisement where the State provides due surveillance to her wards when released, and neither should this class be subjected to the humiliation of being incarcerated for long periods with those who resist every effort at reformation. Hence the system in most States of bringing together all the juvenile delinquents and criminals into one institution indiscriminately is pernicious and indefensible.

Parents frequently take the initiatory in filing complaints against their own children that they may commit them to the care of a reformatory, but such soon repent of shifting their parental responsibilities upon the State when they become cognizant of the debauchery that exists in these institutions. Suffice it to say that crimes are insolently and repeatedly committed by the older inmates that if perpetrated in the outside world would send them to the penitentiary. Frequently a preceptor's influence over a boy that has made manifest improvements is entirely destroyed by one of these reprobate fellows who have grown to manhood in the institution and committed enough depredations to warrant life sentences in State's prison.

Now, what is to be done? Strange that this condition of affairs should obtain when we annually spend millions of dollars for the maintenance of penal institutions, and, too, in spite of the fact that we have men who have had every opportunity to study this question, and from whom we have a right to expect better results. Any one acquainted with the severity of the corporal punishment in vogue in institutions for incorrigibles knows that there is no further relief from this source. Corporal punishment has a brutalizing and not a humanizing effect, although in some in-

stances accompanied by good results. Crush a boy's vivaciousness and you start him on the road to anarchy, but direct his activities and you start him on the way to good citizenship. Of course something must be provided to meet the condition of those not amenable to good discipline. They should be removed from all opportunity for creating discord, until they prove themselves worthy of greater freedom.

But the discreet student of penology and practical sociologist would seek the conditions which produce these unfortunates and finding the influences which make for vice and crime prescribe an effective antidote. In the first place, we need to get rid of pedantic educators and ignore pedantic parents; then inaugurate compulsory education, supplemented by a rigid curfew law, with a truant officer to see that all children of school age are in regular attendance, behave with proper decorum on the streets and remain in their homes at night.

The State should provide five classes of institutions: the public school, the house of refuge, the industrial school, the reformatory and the State's prison, the last two alone being penal. If a rigid discipline is enforced in the first, and children of school age compelled to attend, there will be but few inmates for the other four. But in case the outside influences for evil overcome the child, remove him from his vicious environments and place him into the house of refuge, there to determine if his viciousness is innate. If so, and he resist all efforts at betterment, transfer him to the industrial school, and if he still persists in his mad, downward course, eventually place him into the reformatory. When there for a reasonable time and he manifests signs of total depravity, send him to State's prison and keep him there for life, unless he gives unmistakable evidence of becoming a respectable member of society. Society has this right to protect itself against persistent evil doers. And, furthermore, let the sale of intoxicants and narcotics, the great breeders of crime, be outlawed. Provide State employment for all tramps and beggars, taking them into custody, and there will be a marvelous change in present conditions.—*The Raleigh (N. C.) Post*.

TOLD AT FORTY,—A LECTURE FOR BOYS.

THINGS look different—at forty. I know, for I am writing this on my fortieth birthday.

Life isn't any more serious than it ever was; perhaps it is less so. Surely, too, it is more comfortable.

You see, I am an employee—one of the millions who get pay envelopes from somebody or somebody else every so often. I have always been an employee, and suppose I always shall be.

Somehow, there doesn't seem to be enough employing to do for all of us to have a chance at it. And besides, most of us don't know enough to do employ-

ing, yet nine-tenths of us feel that we are superior to the men who pay us, and we criticize their methods and their action, not openly—more's the pity. I believe the average employer would be glad to hear decent criticisms, decently made.

We sneak. We tell the other fellows in the place, and our friends outside, how "slow" and "mean" and so on, the superintendent is. And we are forever going to quit when we "get a good chance."

But we don't often quit,—unless we get discharged,—for a good chance rarely comes to the sneak and the backbiter.

But we don't get promoted or "raised," either, because our think-boxes are so filled with meanness that there isn't room in them for the honest thought that leads to better things; or our initiative has become paralyzed through fear that we are doing too much for the money we get, or atrophied through plain lack of use.

Often, too, we become obsessed (suppose you look that word up) with a notion of our indispensableness. Then we're moored to a mud bank, and some stormy day we drift away to nowhere.

When I began to work, I didn't see any of these things quite this way; didn't see some of them this way at all. Of course I wasn't forty then. But I was on the way to it. So are you, my brother, unless you have reached it or passed it.

I have had three jobs since my twenty-first birthday—four years, seven years and eight years. I left the first to go the second, and the second to go to the third. I am still at the third.

To do better each time? No; to do worse, from a money standpoint. But to apply some of the things I learned in the previous job:

I did get my wages increased occasionally while at the first two jobs. But I wouldn't have gotten a worthwhile promotion in a thousand years. Why? Don't ask me; just read over again the first part of this talk.

Eleven years to learn something—not much even then—of my duty as an employee; and I also learned not to lay any great particular stress on my employer's duty to me, because he really doesn't owe me any duty, unless my work and conduct are such as to impress an obligation upon him, in which event he'll be glad to "square up."

Is that a new thought? It was to me—once. But I'm fixed in it now.

I have said that I am an employee. And yet I have spent the last eight years working for myself, just as surely as if I owned a business.

How? By doing the best I know for my employer, every minute of my working day. It's easy when you get into it.

I tumbled to the fact that there is only one fellow

in the world who can help me or hinder me. That fellow is myself. He hindered me for a good many years. He is helping me now.

Some folks say I made a wonderful jump to where I am. They're wrong. I've gone up slowly, very slowly, it has seemed sometimes; in obedience, however, to the law of business gravitation—the law that inexorably says "up" if you're worth it, and "down" if you're not. I haven't worried about my job since I got the real hang of things.

Once, when I had a good offer from another city, my employer simply said, "I would like you to stay here."

Not a word was said about advancing my wages to meet that offer—not a word for six months, for I stayed; then—that much and more.

Some of the other fellows say harsh things about that man, just as I said them about former employers. And they are listless, and uninteresting, and jump when the bell rings.

Sometimes they tell me I'm lucky—when there is no such thing as luck. They have not learned: some of them are 'way past forty, and will never learn.

I'm not a sentimentalist; I believe that "business is business" all around. I'm happy in my work; my digestion and nerves are good. Life is beautiful, and richly worth living.

I've saved a little money, by the way; maybe I can quit and rest after a while, if I want to. Won't that be fine?

Yes, things do look different—at forty.—*An Employee, Selected.*

COLOR OF EGGS.

It is a matter of common observation that hens' eggs vary rather widely in color, ranging from a clear white to a decided light brown. Domestic poultry have descended from several wild strains, the various breeds being formed by numerous crossings. The color of the eggshell, it is generally believed, is a characteristic which has been transmitted from the early ancestors of our modern breeds.

There is no constant relation between the color of the shell and the composition of the egg, although there is a popular belief in some localities that the dark-shelled eggs are richer.

That there are no differences in the physical properties and chemical composition between brown-shelled and white-shelled eggs was shown by investigations carried on at the California and the Michigan experiment stations.

The color of the shell has, however, an effect upon market value, the brown-shelled eggs bringing the higher price, for instance, in the Boston market and white-shelled eggs in the New York market. In England the preference is decidedly in favor of the tinted eggs.

Of common breeds Plymouth Rocks, Wyandottes, Cochins, Brahmas and Langshans, among others, lay brown-shelled eggs and Leghorns and Minorcas white-shelled eggs.

At the Maine experiment station breeding experiments with Wyandottes and Plymouth Rocks have been carried on for a number of years for the purpose of establishing strains with highly developed laying qualities. The recorded data show that though both breeds lay tinted eggs the depth of color varies decidedly with individual birds in the case of each breed. By careful selection of breeding stock, therefore, it should be possible to control the color of the eggshell to a great extent, so that it may be made to meet any market demand.

In this connection it is interesting to consider the ancestry of the Plymouth Rocks and Wyandottes. The Plymouth Rocks are said to have originated from American Dominiques and Black Javas, with light and dark Brahma and Pitt Game blood also. All these varieties lay tinted or brown eggs, so it is natural to expect that this would be a characteristic of the different strains of Plymouth Rocks.

The effect of feed on the color of the yolk and white is a matter which is doubtless less commonly considered by poultry raisers than the effect of feed on flavor, yet it is known that there is a relation between them. Though frequently the yolk is pale, the color which we associate with the egg yolk is a decided yellow. The yellow coloring matter has been studied in the laboratory and is related to the coloring matter, also of animal origin, called lutein. The pale-yolked eggs are commonly considered inferior by housekeepers, as a given number impart to cake or custard less of the yellow color, which is looked upon as an indication of richness, than would eggs with a darker yolk.

The cause of pale yolks is not known with certainty, but, as has been pointed out by W. P. Wheeler, of the New York State experiment station, the eggs laid by hens fed only certain grains and animal feeds generally have this characteristic, and adding to the ration a liberal amount of fresh or dried young clover, alfalfa or grass will, as a rule, insure the deeper yellow color which is desired. The effect of green feed on the color of the yolks is illustrated by a test at the New York State experiment station, in which four lots of hens were fed alike except that no hay or green feed was given to one lot, while the other three lots had different amounts of clover hay alternating with green alfalfa. The depth of color of the yolk varied in the different lots and was directly proportional to the amount of clover and alfalfa fed.

It is perhaps possible that the coloring bodies or other materials containing iron, present in the green feed, have an effect upon the yellow coloring matter of egg yolk, but whatever the reason it seems from the

New York work cited that the poultry raiser who desires eggs with deeply-colored yolks can obtain them by feeding an abundance of such green materials as those indicated.

The egg white also varies somewhat in shade, having a more or less pronounced greenish cast before cooking and corresponding variations when cooked. That the color of the egg white varies more or less with different rations was noted in the New York experiments cited, but there was little uniformity in this respect. There is a belief that the cooked whites of eggs with shells of like tint will match in color and that albumen of white-shelled eggs is decidedly whiter when cooked than that of eggs with tinted shells. Perhaps few of us carry our preferences so far that we will refuse an egg on account of the color of the white, yet it is stated on good authority that in first-class hotels and restaurants, where great attention is paid to details, it has been found that the boiled eggs served must match in color.—*Department of Agriculture Bulletin*.

LOCUST TREES ON STEEP GROUND.

ON a farm in Westmoreland County, Pennsylvania, eight years ago this fall, the seed from a row of locust trees (planted along a fence some thirty years previously), was scattered by the wind over about two acres of one of the fields, containing five acres. This field is almost a perfect rectangle and extends from a valley to the top of a high hill. The lower part of it is very good soil and easily worked, but the upper part is very steep and rocks outcrop in several places. The seed, for the most part, was scattered over the latter portion of it. The field was sown in rye that fall, so that the seed easily became imbedded in the earth.

As if by magic a luxuriant growth of young locusts sprang up. After the rye was cut the field was used as a pasture and for two years very little attention was paid to the young trees. The third year, however, the owner determined to plow the field again, but he discovered that this course would be impossible without first grubbing out the trees, so firmly had they become established.

His first impulse was to proceed with the grubbing, but after giving the matter some thought (with the appreciation that locust timber is very scarce in that section) he decided to allow the trees to remain, and cease cultivation of that portion of the field. He had confidence that in fifteen or twenty years timber could be cut that would equal many times the profits that would be derived from the land in any other way.

There are now between 750 and 800 trees in the grove, the largest of which are five inches in diameter and twenty-five feet in height.—*Farm Journal*.

Nature Studies

A MUD-DAUBER.

N. J. MILLER.

It is too windy today for an invalid to take a walk for health. But once have I seen its equal, at Boulder Canyon, when the wind blew the paint off the box-cars standing on the side-track, *i. e.*, the moving sand chipped off the paint. This storm is strong enough to interfere with walking, for an invalid. However, I'll risk the walk to an outbuilding not far away. It is a cozy place a day like this, guarding the wind and yet giving enough room for exercise to make one's blood rush warm. On its rafters are one, two, three, yes, a score of bunches of mud made of clay, the work of a particular wasp.

Now, I recall that the wasp family is counted as the earliest paper-maker and amongst some of the earliest potters the world has seen—skilled in that corner of the professional world before the advent of man.

A little inspection shows the bunches of clay are fashioned after some definite plan or symmetry, adobe houses, if you please, consisting of several vertical tubes or jars arranged side by side. On the surface are bits of dirt drawn out in ropy layers giving the adobe home a corrugated coat. These give a hint as to how each tube is built. The mother-wasp begins with a small load or bit of dirt—sandy clay—cementing it to the wall or rafter. Other loads are brought and cemented together with her saliva so as to form a single tube an inch or two in length and about a half inch across. A tube being closed and completed, another is added, another and another until quite a number are built side by side forming a modern adobe flat.

What of the inmates of the adobe? Crushing it opens the secret. Here are a few cells apparently containing nothing but spiders and—spiders six, eight, ten, twelve, fifteen of them in a single cavity—all paralyzed. Some of the tubes are half filled with dead spiders infested by some sort of pest, showing something has gone wrong. Yes, I remember now the story the books tell about this part of the Mud-dauber's world and recall some former observations merely corroborative.

When the mother-wasp completes a tube, all but the closing of it, she sets about to capture spiders to

provision that home. Having found a spider, the wasp stings it in a ganglion of the nervous system on the ventral side of the body. Its slender body is remarkably adapted to reach around to the under side of its captive to sting it at the desirable point. The spider is not killed outright by the sting but paralyzed, the paralysis being due, perhaps, to the formic acid injected by its captor. The preservative effect of the acid is sufficient to keep the insect from decay even if it should die before the provision is needed. When the wasp considers the cell sufficiently provisioned with fresh paralyzed food she deposits her egg, seals the tube or cell and leaves the developing young to work out its own fate.

The small egg soon develops into a worm-like form, a larva, which, as it grows, feeds upon the paralyzed spiders. J. M. Faber, a French naturalist, gives classical work in observation and experiment concerning this phase of the wasp's development, more particularly of the Mud-dauber's close relative, the Fraternal Potter Wasp, which builds its cemented homes not under cover but in the open. I quote from "Weed's Nature Biographies": "Like the egg it (larva) hangs suspended, attached to the thread by the hind part of the body. But the thread is longer: in addition to the slender filament that held the egg there is a sort of ribbon. The larva is feeding: with lowered head it is devouring one of the caterpillars (the Fraternal Potter eats caterpillars instead of spiders). I touch another of the waiting victims with a spear of grass. It moves . . . and the eumenes larva instantly withdraws from the melee. But how? To my surprise I find that what I took for a bit of flat ribbon attached to the thread, is a sheath, a scabbard, into which the larva retreats. And this is simply the empty egg-shell, transformed into a refuge for the larva when the writhing caterpillars below become dangerous."

The larva develops into the pupa stage of which the protecting coat or cocoon consists of a capsule made of chitinous and fibrous layers and the enclosed individual is a fat and Indian-club-shaped form. The majority of cells constituting the adobe flat I break open contain one of these brown cylindrical cocoons which, after a few warm days have come, are broken open by the individual within. It now appears as a

mature wasp, the imago stage, almost black with light yellow bars across its abdomen. Its life cycle then is—the egg, larva, pupa and imago. And the easiest method for me to capture the imago is to put these adobes into a screened cage and await what will happen next spring. I am tempted to do it.

Rocky Ford, Colo.

THE WHISTLER.

THE "whistler," or "hoary marmot," is one of the most numerous of the inhabitants of the Rocky Mountains. In the Selkirk Range it is more common than in the Rockies proper.

Its common name of "whistler" is conferred upon it because of its custom, when alarmed, of giving utterance to a shrill, piercing whistle, which echoes and reëchoes through the lonely valleys in which it lives. Early explorers, unfamiliar with the sound, have mistaken its whistle for the call of a fellow traveler.

It makes its home in cracks in the rocks, generally near the edge of the timber line, about six or seven thousand feet above sea level. Here it lies on the rocks, basking contentedly in the sun, or gathering grass to prepare its bed for its long winter sleep.

The whistler belongs to the same family as the ground hog, or woodchuck, with which so many of us are familiar, and resembles it closely in appearance. It is about the same size and build, and in most cases the color is nearly the same, a light grizzly brown. Some members of the species appear almost white around the head and shoulders, but whether this is merely the result of old age, or the sign of a different variety, the writer is unable to say.

In August, 1905, we spent two weeks in the O'Hara Valley, a spot where whistlers abound, and it was here that we caught our baby whistler. It was a wet morning, and in the afternoon one of the boys went out for a walk. Toward evening he returned carrying something in a sack, and, of course, we all went out to see what he had found.

"Bobs" was taken out, and deposited on a pole some distance from the ground, causing great excitement in the minds of two dogs, who thought that whistlers were created solely for their amusement. I think the dogs and the novelty of the proceedings excited the whistler also; but being shy he said nothing about it, and seemed inclined to make the best of things.

A little later he was taken down and tied to a tree with a chain around his neck. His first performance

was to start for some underground habitation, where there was less company, and, had it not been for the restraining influence of the chain, he would have succeeded in reaching there. When unceremoniously brought back to the surface by means of the chain he expressed his disgust by two or three shrill whistles. The first difficulty was to persuade the dogs that Bobs was a visitor and was to be treated as such. In a day or two one of them became quite affectionate, and would spend two or three hours at a time watching him. He also took care that the second dog did not do any harm. In a short time, the second dog also became quite friendly, and then Bobs' troubles in that direction were over.

At first he was too frightened to eat, but hunger soon remedied that, and he displayed considerable ability in the disposing of a dish of bread and condensed milk. After that, he quickly became quite tame, and would readily take things from our hands, or, if not noticed would sit up and whistle to attract attention. On one occasion, feeling particularly sociable, he climbed up and sat on the shoulder of one of the boys.

When we moved from O'Hara Lake to Hector, a distance of about eight miles, Bobs accompanied us, and selected an old stump, under which he made his home. Here for one week he seemed perfectly happy and contented, then we moved again and Bobs was left behind to join his own tribe once more after his brief but, I trust, happy sojourn with human beings.—*Selected.*

INSECT MIMICRY.

THE mimicry and protective coloring of insects is well known, and many of the caterpillars of that section of the moths known as the "Geometers" form excellent examples.

Resting on a leaf or stem, they support themselves by taking a firm hold with their claspers, their bodies sticking out rigidly at an angle. The lower part of the body being, as it were, wrapped round and closely fitting to the branch, they look like nothing so much as a short piece of stick, a leaf stem, or a rolled-up leaf, according to their color.

The buff-tip moth is another good instance of mimicry. The moth when at rest wraps its wings closely around its body. Its head and the tips of the wings, which form the opposite ends of a small cylinder, are of a buff color, which gives it the exact appearance of a short piece of stick broken at each end.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WHAT ARE WE COMING TO?

WHAT is to be the end of the inordinate love of wealth, the bargain-hunting craze, the desire to get something for nothing, which in so large a measure characterizes the people of America today? We may be sure that the sowing of such seed is bound to bring a harvest after its kind. And what will that be—a generation of beggars? The following statement from one of the wealthiest men of our country forces one to this conclusion: "Four-fifths of the great mass of letters I receive appealing for money are requests for money for personal use, with no other title to consideration than that the writer would be gratified to have it."

There! Who can say how far removed these money-begging writers are from the whining beggars of some countries in Europe and Asia who stretch out dirty palms to every person suspected of having more than enough money to buy his next meal? How long will the boasted independence of our nation continue to find a response in the independence of the individual? Could there be anything more incongruous than a nation of beggars in America—the land of opportunity?

Of course we know we shall always have people in our land who will never descend to the level of the beggar. They have them also in the countries referred to, but that does not prevent the countries from suffering under the curse of beggarhood as long as the number of beggars is noticeable or in any way representative. An evil that is bound to add large numbers to the beggars of the next generation is the custom of tipping which is gaining such a tenacious hold in this country. The individual who has been hired to do certain work at a certain price and who in discharging his duties is polite or impolite, helpful or indifferent, to the third party in the case, according to whether this party has or has not crossed his palm with an accept-

able sum, is scarcely a step removed from the fawning beggar in the street.

We need to guard ourselves that we do not fall victims to the mania for trying to get something for nothing. We need to square our shoulders and stiffen our backbones so that the taunt of being a beggar may never be flung at us. And we need to teach our children the same principles of independence and self-reliance.

LOOKING AFTER THE CHILDREN.

IN the issue of January 19 we gave a brief account of the calling of a meeting by the President for the purpose of discussing ways and means of caring for the dependent children of the country by a better and more systematic plan than those now followed. The meeting took place at the time set for it, January 25. It was a good meeting, as it was bound to be, made up, as it was, of men and women who are deeply interested in the welfare of our children and who have given proof of their interest by actual work in that field.

The President took an active part in the meeting, but he did not exhaust all his zeal for the cause. It is one of his characteristics not to let go of a movement until he has good evidence that something is to be accomplished by it. Three weeks after the meeting the President sent a message to Congress, recommending legislation along the particular line of helping dependent children. In his recommendation he especially urges, "the establishment of a federal children's bureau; the enactment of such legislation as will bring the laws and practices in regard to the care of dependent children in all federal territory into harmony, and certain legislation in behalf of dependent children in the District of Columbia."

In urging a children's bureau, one of the duties of which will be to look into and report upon all matters relating to the welfare of children and child life, the President declares that "the national government is the only agency which can effectively conduct such general inquiries as are needed for the benefit of all citizens. It is not only discreditable to us as a people that there is now no recognized and authoritative source of information upon these subjects relating to child life," he continues, "but in the absence of such information as should be supplied by the federal government many abuses have gone unchecked, for public sentiment, with its great corrective power, can only be aroused by full knowledge of the facts."

In his message the President enlarges on the point which he emphasized in his invitations to the conference of January 25, namely, that the best way to care for dependent children is in the family home. This is what he says:

"Parents of good character suffering from temporary misfortune, and above all deserving mothers

fairly well able to do the work, but deprived of the support of the normal breadwinner, should be given such aid as may be necessary to enable them to maintain suitable homes for the rearing of their children. The widow or deserted mother, if a good woman, willing to work and do her best, should ordinarily be helped in such fashion as will enable her to bring up her children herself in their natural home.

"As to the children who for sufficient reasons must be removed from their own homes, or have no homes, it is desirable that, if normal in mind and body, and not requiring special training, they should be cared for in families whenever practicable. The carefully selected foster home is for the normal child the best substitute for the natural home. Such homes should be selected by a most careful process of investigation, carried on by skilled agents, through personal investigation, and with due regard to the religious faith of the child. After children are placed in homes, adequate visitation, with careful consideration of the physical, mental, moral and spiritual training and development of each child, on the part of the responsible home-finding agency is essential."

The President has done a noble part in the matter. It now remains to be seen whether congress will second his action. The fate of the movement for the present, at least, will have been decided by the time our readers have this paper, since this congress comes to an end March 3. But even if congress should not take any action on the subject at this time, that can hardly interfere with our doing all we can for homeless children. Let us watch the opportunities and if enough are not presented to us to satisfy our desires to help in this work we can easily make them come our way.

WITH OUR READERS.

Most of our readers, as teachers, patrons, or scholars, are interested in the common schools. We endeavor to keep this fact in mind and will do what we can to increase this interest and add to the uplifting power of the schools. We now have on hand four articles dealing with this subject which we shall give our readers soon. They are written by one who has spent many years in the schoolroom. We shall be glad to have other articles along this line.

UNDER THE LEAVES.

Thick green leaves from the soft brown earth,
Happy springtime hath called them forth;
First faint promise of summer bloom
Breathes from the fragrant, sweet perfume,
Under the leaves.

Lift them! what marvelous beauty lies
Hidden beneath, from our thoughtless eyes!
Mayflowers, rosy or purest white,
Lift their cups to sudden light,
Under the leaves.

Are there no lives whose holy deeds—
Seen by no eye save his who reads

Motive and action—in silence grow
Into rare beauty, and bud and blow
Under the leaves?

Fair white flowers of faith and trust,
Springing from spirits bruised and crushed;
Blossoms of love, rose-tinted and bright,
Touched and painted with heaven's own light,
Under the leaves.

Full fresh clusters of duty borne,
Fairest of all in that shadow grown;
Wondrous the fragrance that sweet and rare
Comes from the flower cups hidden there,
Under the leaves.

Though unseen by our vision dim,
Bud and blossom are known to him;
Wait we content for his heavenly ray—
Wait till our Master himself one day
Lifteth the leaves.

—Selected.

THE SCHOOL GROUNDS.

WHILE planning for the home grounds this spring do not forget the school grounds. The school-buildings may be as much in need of soap, paint, white-wash, hammer, nails, hatchet and saw as are the home buildings. It is useless to try to cultivate a love of the beautiful in children if they are obliged to spend all their school hours in a dirty, unpainted, unsanitary building, the surroundings of which are little better than those of the stable or the hog house. And this is the condition of many of our country schoolhouses. The glass in the window is seldom washed, the floors rarely scrubbed, the walls dingy with smoke and checkered with pencil marks, the furniture chipped and whittled by careless hands, the walls blank and bare and the windows shadeless. If there are trees or flowering plants near, they are of Nature's planting. If there happens to be any fence, it is usually an eyesore, even to the children, and no sort of protection to the grounds.

It would be but little trouble for the taxpayers to get together and give a few hours' work to this spot where the children are sent daily to be "educated," but where the conditions are such that no self-respecting child will be proud to claim it as his "alma mater." If the hard work of clearing up the grounds, plowing, spading, fencing and grading were done by the fathers, the children would take a pride in beautifying the place, and the mothers would become interested. If nothing better can be done, the inside should be given a coat of paint or whitewash, the windows cleaned, shades hung, and hardy vines planted about the entrance. What is to hinder having an old-fashioned "bee" some day, and making the old building "a thing of beauty" and the grounds a source of pride to the children? Teach the children to respect the property by remembering the fact that it belongs to them, individually.—*The Commoner.*

The Home World

GERANIUMS AND OTHER FLOWERS

ELIZABETH D. ROSENBERGER

"Oh, what a lovely window," I exclaimed as I saw Aunt Ellan's geraniums. She had six small plants but every one was in bloom. Her window looked like a bower and not unlike a rose bower at that. The blossoms were large and perfect, and brilliantly colored. "Almost anybody could raise geraniums if they cared to," said Aunt Ellan.

And that is true, the geranium is essentially the flower of the people. This is because it is so abundant, and so easy of growth that it is within universal reach. A red geranium blooming in the window always seems to be a pledge of sweet content and happiness within doors. Numbers of flowers have pretty legends concerning them or a curious bit of history connected with their origin. But the geraniums have no family traditions, but can we not appreciate the beauty of the commonplace?

These flowers bravely stand neglect, and repay every slight care with a luxuriance of bloom which is surprising. We glance from the scarlet blossoms in the window to the trees outside. The apple tree just outside the window glitters so white and sparkling in the morning sunlight, that the eye objects to following the outlines; its branches are encased in crystal, the twigs and buds are ice-sheathed. The geraniums carry a message of hope and cheer to the human heart, the promise of springtime—new life and growth.

Many a housekeeper of a humble home reads with envious awe of millionaires' tables being loaded with hothouse flowers at every meal. What is to prevent her having such plants as are within her means in her own home? A few slips from her neighbor's flowers will give her a start and after that she can care for them and raise others. In the country there is a bewildering variety to choose from all the summer through. And she need not wait for summer. In May she can find trailing arbutus or deep-tinted violets.

After the snow and storm of winter these are doubly welcome; they remind us that the time of the singing of birds has come. Then we find daisies in June, and

the pretty wild parsnips' flower, called queen's lace, and black-eyed Susans.

If there are children they will spend many happy hours looking for these flowers; then do not tie them into bundles but arrange them loosely in a vase or glass. In autumn we have the flaming mallows, the purple asters and glowing leaves. When the cold winds blow over barren fields, there is yet the red-berried fruit of the wild rose and dogwood. Then we have Christmas greens, the myrtle wreaths. And dear me, how soon after that we begin to talk about the first snowdrops and pussy willows in the early year.

Flowers do much more than simply beautify the world. Their mission is to refine and purify, and no matter where they are grown, their wide and helpful influences are felt. It is only when we try to imagine what this world would be without flowers that we can appreciate their value.

The love of flowers is inherent in children. No matter how wretched may be the surroundings, a child will love and admire a posy. We remember the case of one poor woman whose husband was a drunkard and the eight children who should have been a comfort were only a care, the oldest one bidding fair to walk in his father's footsteps. It would seem as if all love for the beautiful must have been crushed out of this woman's nature, but a lady at whose house she worked noticed her admiration for the most beautiful plant she possessed. So at the close of a hard day's work, she said, "Come with me into the conservatory." Then she gave her an azalea covered all over with magnificent bloom.

"And where am I to take it, missus?" she inquired.

"It is for you to keep," answered the lady.

"For me!" she gasped. "Not that—not the very purtiest one in the whole lot! Oh, I'd love to have a bloomin' plant but I can't take your purtiest!" But when they convinced her that it really was hers she said: "I don't know how to thank you, ma'am," and

she struggled to keep the tears back as she went home with her plant.

A week passed by, and she came back to work. "O missus, I can't tell how much it has done for us. The children are keepin' the winder clean so's it can git the sunshine, and they's ashamed to have the room dirty with them blessed blossoms lookin' on." Another time she said, "The old man don't have the room full of smoking men no more. Lorrie asked him not to, she was afraid the smoke would hurt the flowers." And so the silent, fragrant blossoms continued their silent ministry.

No one can raise flowers, live among them, love them and not be better for their influence. By their springing up out of hard, uncongenial soil they show us how out of things hard and forbidding creep forth beautiful results. A flower is never misunderstood. They sometimes speak for us when we know not what to say. They adapt themselves to a funeral or a wedding; they are messages of love speaking of him who considered the lilies of the field.

THE BEAUTY OF PLAIN LIVING.

WE love to see people live well, says a thoughtful writer, and to dress respectably, and enjoy themselves, but there is a happy mean in all these things, and when that is passed in the direction of extravagance, the people distress and enslave themselves and diminish their ability to do good. For the sake of keeping up the styles, people live far above their income, harass themselves with debt, wear themselves out, and keep in a constant nervous strain by giving fashionable dinners, fashionable entertaining, and making fashionable calls. How much better is a plain, quiet, Christian home where all is peace and cordiality, the neighbors heartily welcome to come and go at will, and freed from the pestering, senseless conventionalities of fashionable life! Why should our earthly years be fretted and burdened and worn out prematurely by vain efforts to ape the manners of the idle, irreligious, self-seeking, rich devotee of pleasure? God has put us in the world for a nobler purpose than this, and those do well who strive to place his service above all else.

—*The Glendora Gleaner.*

MOTHER PATCHING.

Mother sits beside the window
Fixing up the children's clothes;
Mending overalls and dresses,
Darning holes in stocking toes,
Pressing here a little wrinkle,
Patching there a little tear,
Sewing up each rended garment
For the boy and girl to wear.

Mother knows that they are near her—
Knows that every care or pain
She can soothe in just a moment,

Making smiles come back again—
So she does not heed the patter
Of their feet upon the floor,
Does not hear their childish clatter,
For she thinks of something more.

She is thinking as she patches
Of the dreaded future day
When the boy she loves and watches
Will be gone from her away;
When the girl she guards and blesses
Will have met the stress of life
Far from mother's fond caresses,
In the world's unfeeling strife.

So with every little button
That she fastens on the clothes
There's a thought most sad and tender,
And a little prayer that goes
To the God of good who's near her,
To the King of love and joy,
Asking that he guide and cheer her
As she rears her girl and boy.

—Clara Cooper Burton.

WHAT IS YOUR WEIGHT?

IT seems needless to say that all drugging for the relief of superabundant weight is dangerous. We know of no harmless drug that will accomplish this purpose. The effervescing salts and sodium phosphate for its action upon the liver, are very generally employed. They are useful in some cases, but they have a decidedly depressing effect upon others, and furthermore the body is likely to become "waterlogged" from the large quantity of water which must be taken with the salts.

The following familiar table of heights and weights may be lowered with advantage fully five to ten pounds in every instance in the weight of women:

Height	Weight
5 feet 1 inch	120 pounds
5 feet 2 inches	126 pounds
5 feet 3 inches	133 pounds
5 feet 4 inches	136 pounds
5 feet 5 inches	142 pounds
5 feet 6 inches	145 pounds
5 feet 7 inches	148 pounds
5 feet 8 inches	155 pounds
5 feet 9 inches	162 pounds
5 feet 10 inches	169 pounds
5 feet 11 inches	174 pounds
6 feet 0 inches	178 pounds

The body-weight can be reduced to normal proportions without going on a starvation diet or completely cutting out such articles of food as fats, starches and sugars. The diet should be restricted to plain fare, which must be taken in moderation, eating only when hungry and then only sufficient to supply the needs of the body.—*Selected.*

"FORETHOUGHT is coin in the pocket, quiet in the brain, and content in the heart."

SPRAYS, SPRAYING, AND INSECTS.

BEFORE the buds burst is the last opportunity to use the lime sulphur wash, which is the surest means of fighting San José scale. If you have only one or two trees to bother with, it would probably be more convenient to use some of the miscible oils. Even if they may not be quite as efficient, their convenience is a great recommendation; but the "ready for use" lime-sulphur preparations have given good results.

Destroy all diseased twigs and any branches infested with eggs of plant lice, tree crickets, and buffalo egg hoppers. Make a clean sweep now and lessen the intensity of the fight in the summer.

The fall web worm is always a pest, but its cocoons can be found and attacked now.

If the canker worm is troublesome, put greased bands on the fruit trees that were attacked last year.

The eggs of the caterpillar can be seen in masses;

clean them off with a wire brush dipped in kerosene or crude oil.

Scraping off the loose bark from the trunks of trees will destroy the hiding places of hosts of insects. A sharp hoe may be used for this purpose.

Wherever soft scale is present use sprays of kerosene emulsion, and do not use strong sprays on stone fruits, because they are more susceptible to injury than any other orchard tree or ornamental shrub.

Encourage the birds. Even if they do eat some fruit, you will find they will eat many more insects, and the great prevalence of insect pests is very largely due to the upset of the balance of Nature in the destruction of our native birds.—*The Garden Magazine*.

An apple kept in a cake box will keep a moderately rich cake moist and fresh. The apple should be renewed when it becomes withered.

BETTY BURTON, HEROINE

CLARA NORTH RULEY

SCHOOLDAYS had begun. It was the strangest thing, so Betty thought, that one should be so very happy when schooldays ended in the spring and then so happy again in the autumn when school begun. But then, as Papa Dan said, there was nothing wonderful at all in such a state of affairs, for Betty was so constituted that she was happy all the time.

Directly in front of Betty sat the new girl. Her clothes were not so very pretty and she had freckles. Betty experienced a throb of sympathy for her as she remembered the tiny brown spots that decorated her own little nose.

She resolved to be very good indeed to the new girl.

When recess came one always wished to be the head one in the long procession of children that marched from the schoolhouse to the playground. It gave one a little more time to play, but Betty was not the head one by any means, she was quite far back in the line, and by the time she had put her own cup under the pump spout the new girl was nowhere to be seen. So Betty found Mary Belle and together they went to the playhouse they had made under an oak tree in the corner of the schoolyard.

Soon Betty had quite forgotten about the new girl. But when the recess bell rang, and the children, flushed and panting from their play, sought their seats, Betty saw that the new girl's eyes were red. This made Betty feel very guilty for she knew she should have kept to the resolution she had made before recess. In vain something said, "You were not bad to her, you did not tease her or treat her badly." Betty well

knew that active goodness was often demanded of us when passive goodness was not goodness at all.

In the afternoon recess she found the new girl after a little search, the center of a jeering crowd of boys and girls. Her face was red and she was very angry indeed, and just as Betty was about to speak she heard the new girl say, oh, such a dreadful word. The very thought of such a thing made her turn pale. Betty felt that if she ever, ever soiled her mind and her lips with such a word she would never dare kiss mama again.

She half turned to go away when she remembered the "inasmuch" verse. "Inasmuch as ye have done it unto the least of these." Perhaps the new girl was one of the "least." One could never tell, so Betty tremblingly pushed her way through the noisy crowd and said the first thing that came to her mind, "Won't you come over and play in our playhouse, Mary Belle's and mine?"

The new girl's face paled and softened and without another word she went away with her little rescuer.

Betty almost regretted that she had been so rash, for bashful little soul that she was, she hardly knew what to say, but soon the ice was broken and the three girls had a delightful time. Betty discovered that the new girl belonged to a family that had lately moved into the Flats, and that her name was Phoebe Ann Bagley, that is, that was her truly name, but the girl herself called it "Fe ban," at least that was the way it sounded to Betty.

The girls came to be very good friends and twice

mama gave Betty permission to have Phoebe Ann down to tea. Papa Dan remonstrated, saying that it was too bad to let Betty associate with such trash, but mama's pretty mouth widened into such a coaxing smile that before ever she could say a word Papa Dan succumbed and murmured, "Oh, well, Alice, have your own way; it generally turns out all right." It was a little way mama had of managing Papa Dan.

Phoebe Ann even went to Sunday school with Betty nearly every Sunday, but once she had lost her hair ribbon and even Betty when appealed to by the afflicted Phoebe Ann could not truthfully say that a piece of yellow wrapping twine looked as well as a pink hair ribbon.

And in the course of time Betty's protege came to be a very good little girl indeed, but alas, now and then she would forget and some dreadful word would pass her lips. She was always very repentant, but she hadn't quite been able to break herself of the habit.

Now and then the school practiced the fire drill. It was great fun, the children thought, because it always came so unexpectedly, for all the world like a real for sure fire would.

But one day Miss Hickman, the principal, came in hurriedly and spoke excitedly to Miss Russell, Betty's teacher. The school building was on fire and neither Miss Hickman nor any of the upper teachers could trust any of their pupils who could play the piano not to become hysterical in such a crisis, and demoralize the rest. "Had Miss Russell any one she could trust?"

That lady put her finger on her lips and thought hard and rapidly. There was Betty Burton. True, she was small, but Miss Russell believed she might be depended upon in such an emergency. So Betty was called to the desk and the situation was explained to her. Miss Hickman assured her they would take care of her. Betty turned white. Could she? She was a very little girl and it looked to be a dreadful thing to sit at the piano and play while all the children marched to safety, leaving her in the burning building. Then she thought of her friend, Phoebe, who was trying so hard to be a good girl. What if she could not have another chance? That decided her. A pale but determined little face was turned to the anxious teacher's. "I'll do it." And she did. She sat at the piano and played a little march over and over until six rooms were vacated.

"It was for Phoebe I did it," she sobbed out on mama's comforting shoulder that evening, and mama said, "Yes, dear, I know, and now go to sleep," wondering if after all her shy little Betty were not of the stuff out of which martyrs are made.

MARY AND TROT.

WHEN I lived in Colorado a little girl named Mary who attended the school near my home lived two miles

away. There was no road nor path to guide her across the plain, not even a bush or tree. Mary was about eight years old. She had a shaggy shepherd dog named Trot that came with her every day and waited for her until school was over.

"Mary," I said to her one day, "why do you bring your dog to school? He cannot learn to read and write."

"Oh," said Mary, "I do not bring Trot; he brings me. I could not find the way alone."

"How did Trot learn to find the way?" I asked, "and does he never get tired of waiting and go home without you?"

"The first time we came," replied Mary, "father came with us. When we reached the school I gave Trot a piece of meat, and when we reached home I gave him some more. No one ever feeds him but me. The first two or three days we had to tie him. If he should go home without me father would bring him right back, and that night he would have no potatoes for his supper. But we have no trouble now. He likes school as well as I do."

One day about twelve o'clock the wind clouds began to gather. Children who have never seen a western windstorm can hardly imagine what it is like. In Colorado it does not rain at all during the winter, so the sand is very dry and light. The wind lifts it up from the ground and whirls it round as if it were raining sand. It chokes and blinds you.

On this day the teacher saw the clouds gathering. She closed the school and sent the children home, thinking they could reach shelter before the storm broke. I, too, noticed the darkening skies, and thought at once of brave little Mary as I hastened to the school. I found that Mary had already started for home.

Soon the storm came; the wind howled; the sky grew dark and the sand whirled. Poor little child, alone on the vast prairie! How would she survive the fright, even if she were not entirely lost? As soon as the wind subsided I got on my horse and rode to her home to find if she had arrived. Mary met me at the door.

"Well, I am glad to see you safe," said I. "Do you not think," said Mary's mother, "that dogs know as much as some people? Mary and Trot were about half way home when the wind commenced to blow. There is an old dugout some distance to the right of the way they always take home. Trot took hold of Mary's dress and led her, for the sand blew so in her eyes she could not see where she was going. They cuddled down in the dugout together until the storm was over."

This is a true story of the Colorado plains, and Mary and Trot came to school together for months afterward.—*The Saturday Budget*.

The Quiet Hour

THE TOUCH OF HUMAN HANDS.

Among the hills of Galilee,
Through crowded city ways,
The Christ of God went forth to heal
And bless in olden days.
The sinning and the sad of heart
In anxious throngs were massed
To catch the great Physician's eye
And touch him as he passed.

We have not in our hearts of need
His seamless garment pressed,
Nor felt his tender human hand
On us in blessing rest;
Yet still in crowded city streets
The Christ goes forth again,
Whenever touch of human hand
Bespeaks good will to men.

Whenever man his brother man
Upholds in helpfulness,
Whenever strong and tender clasp
A lonely heart doth bless,
The Christ of God is answering
A stricken world's demands,
And leading back a wandering race
By touch of human hands.

—Woman's Missionary Magazine.

THAT WHICH COMES FIRST.

RICHARD BRAUNSTEIN.

In every man's life some one thing is first, by his permission. It may be pleasure, money, books, business, love or religion. One of these six banners is flying on the castle of his life. When he is young, all six are clamoring for the privilege of living in his castle. Perhaps he lets them all in, but one soon drives out the other, and when the owner of the mansion grows older, he finds that his guest has possessed himself of the castle.

One man chooses pleasure, almost unconsciously, and permits it to be the first thing for a while, thinking to oust it at a later day. It may be the pleasure of drink or the fun of a city winter, or the excitement of some game. Money to him is of value only to buy more pleasure. Books are dry and stupid unless they are the "latest." And as for religion, it is so inconvenient. Some church folks object, you know, to certain amusements, and besides one always wants

Sunday for motoring and a score of other things more necessary (?).

One puts money first, and everything in his life is subordinate to the making and saving of a fortune. He has no time to waste in pleasure or love-making or even in the library. It costs too much to belong to a church and help missionary enterprises.

Another man chooses books and lives among them until he is dried to everything else.

The business man says, "Business before pleasure," and unconsciously means, "Business before all other things." Sunday to him is a day for visiting other human cash registers and for talking over the market.

Then there is that other young man who puts *love* first, who is infatuated with Nellie and her curl, or Phyllis and her eyebrow, and with a score of other charmers. Money? Money is a thing with which to buy paste and Chaw's choicest bonbons for the dear girls. Books? Why, those he talks about to her when he can't converse about "love at first sight." Religion? Why, er, Sundays, especially Sunday evenings, he always has an engagement.

Pleasure-seeker, money-seeker, bookworm, busy business man, love-maker, they all agree in putting foremost anything but the first thing in life which really comes first. They trot along through life in pitiable unconcern, chasing ephemeral things when they should "seek first the kingdom of God, and his righteousness," trusting him to supply their every need. The man who does seek first the kingdom of God, and the man who seeks God's righteousness finds that these other things are added unto him. *Pleasure*, such as a worldling never knew; *money*, sufficient for his daily bread of contentment, the best of *Books* to read, one that is a new Book every time he reads it; *business* enough in extending the kingdom and in counting his blessings, and "*love* that passeth knowledge,"—all these are his. And, besides, in his castle he entertains the King of the Kingdom.

This is harmony.

Cairo, New York.

"We could not enjoy the association of heaven, if we did not love Christian fellowship on earth."

FRUIT-BEARING CHRISTIANS.

It's easy enough to rail at Christians for their lack of liberality, for their record is far from being all that it might when you measure them up against their ideal, but suppose you compare them for a minute with the rest of mankind. I notice in the papers that something like \$90,000,000 was given to various charities last year by people in the United States. Of course that takes no account of the millions contributed by Christians in the regular work of their churches and charitable organizations, nor of the great total expended in private benefactions which are never heard of by the world. These \$90,000,000 were outside all that—large gifts, important enough to get into the papers. How much of that amount do you think was contributed by the atheists? Go through and mark the sums which were given by the agnostics, if you will. It's easy to say that Christians ought to have given a whole lot more, but first show me another religion whose followers gave anything like as much. Point me out a hospital founded by Buddhism; where are the Christian Science homes for delinquent boys; where are the New Thought relief and aid societies? You can travel all through the lands where Mohammedanism has held its sway for centuries and the only hospitals you will find are those which have been established by Christian men and women. All these fancy religions can show you in a minute how much more intellectual and high browed they are, but when it comes to the real down-on-your-knees-work of saving the world, they are perfectly content to leave the whole job to the Christians. The stage coach of progress sticks in the mud and in half a minute every Christian passenger in under the wheels or speaking kind words to the horses; but when you look for the other fellows, they aren't there. The other fellows may get a much finer view as they travel along the road, but at the end of the trip God will notice mighty quick which ones have mud on their shoes. Christians are the only ones who have set up a standard of "by their fruits" and they are the only ones who are willing to be judged by it.—*Home Herald*.

THE PASTOR AND THE SICK ROOM.

THE pastor who neglects the sick of his flock ought to find some other calling or be requested to resign. When once the press of ministerial business crowds out the attention required by the sick the pastor should discard some of his business for the benefit of the sick. A prominent pulpiteer recently asserted that "the sanctimonious, sepulcher-voiced preacher who tiptoes into the sick room ought to be suppressed in order to protect the sick." Perhaps pastors of such a type had better be taught how to enter a sick room. We maintain that the minister is most needed in the sick chamber, and if he is alive to his opportunities

he can do his greatest and best work there. Many persons, when sick, are more easily touched by religious influences and to the tired, lonesome patient the pleasant smile, the chapter from the Word, and the prayer mean more and are more desired than at any other time.—*The Mennonite*.

THE HIGHEST IDEAL.

THE Christian standard of life is very high. Jesus taught that his disciples should not be as others. He said if they should lend to those who lend to them what does it signify? They will be no better than others. And if they should love only those who love them, what better are they than others? Do not even the heathen and publicans the same? Then the great Teacher mounts to a lofty height and says: Forgive your enemies; do good to them that hate you and despitefully use you. And yet higher still he rises with his words of counsel and command: "Be ye therefore perfect as your Father in heaven is perfect."

Many opinions concerning this high teaching have been uttered by men. Some say it tends to weakness. Some tell us that even Christians never attempt to put it into practice. And some have tried to explain it away, and make the standard of our Lord low enough to suit the ideas of men. An eminent English author has published an essay on "Religious Impossibilities," and another on "Moral Impossibilities," in which he seeks to find an explanation of these high teachings of our Lord in the extravagant method of Oriental teaching. But this will never do.

The glory of Christianity is that its standard of life and character is higher than any other. It is a perfect standard. The world has outgrown many ancient ideals, but it has not outgrown the ideals of Jesus, and never will, for they are perfect. It is also the beauty of Christianity that it requires impossible things of men and provides grace to enable them to do impossible things. Those who say that no Christian ever attempted to keep these lofty precepts greatly err. Men and women have both tried and succeeded. Jesus himself kept them, and taught men that he would supply to them the same divine energy wherewith he was able to do the will of his Father. We must confess our failures, but we cannot lay the blame on the New Testament standard of righteousness. We dare not explain away the exalted requirements of our Lord. We must seek that grace which is always sufficient in all things. This standard was too high for the age in which it was given. It is not too high for the measure of a perfect man. By the grace of God each one may rise to the measure of the standard of Christ.—*The Christian Advocate*.

"THERE may be things that we do not know and yet that does not prove their non-existence."

Echoes from Everywhere

The French Chamber of Deputies has granted a subsidy of 10,000 francs to the National Anti-Alcoholic League.

The Students' Total Abstinence Society of the University of Upsala, Sweden, recently celebrated its twentieth anniversary. This society has about 400 members, which is more than one-fifth of the whole number of students.

Fifty-six out of sixty-four leading fraternal orders of the United States now refuse to admit saloonkeepers and bartenders to their ranks. Such discrimination would have been thought impracticable a quarter of a century ago.

The House has passed a resolution extending by two years the limit of the provisions for the control of Niagara River by reason of the pendency of a treaty with Great Britain and other legislation. The provisions will now expire on June 29, 1911.

There are upward of 168,000 children in the United States who are being cared for in other than their homes, 93,000 being in orphanages and children's homes, 50,000 being in private homes on board or in adopted homes and 25,000 being in institutions for juvenile delinquents.

According to announcement of Dr. Henry L. Shively, Mrs. William K. Vanderbilt will invest \$1,000,000 in building tenements with special reference to warding off tuberculosis. Dr. Shively is the chief of the tuberculosis clinic of the Presbyterian hospital in which Mrs. Vanderbilt has taken deep interest.

By a vote of 20 to 8 the Oklahoma Senate passed the Morris-Brownlee joint resolution submitting to the people a constitutional amendment. The resolution forbids any railroad chartered under Oklahoma laws consolidating with another road chartered under the laws of any other State or the United States.

The practice of renewing broken or exhausted filaments in incandescent electric lamps has grown to such an extent that manufacturers have found it necessary to take out patents for its prevention, both in order to maintain their sales and to prevent damage to their reputation by the insertion of inferior filaments in lamps bearing their trademark.

Despite an adverse committee report in the Missouri Legislature, Representative Pros T. Cross succeeded in having his anti-cigarette bill ordered engrossed. The provisions of the bill are the same as those of several other States which have been upheld by supreme courts, and will, Mr. Cross says, absolutely wipe out of existence cigarettes in Missouri.

A bill was introduced in the New Mexico Legislature Feb. 19 providing for the classification of bachelors and widowers and the levying of a tax against them. Bachelors between the ages of 25 and 45 are to pay \$10 annual tax and widowers will be required to pay \$25 annual tax. The revenue from this source is to provide support for unmarried women.

A proclamation was issued March 1 by Governor Deneen designating Friday, April 23, and Friday, Oct. 22, as arbor and bird days, the two days being designated in order to meet the requirements of the season in Illinois. He asks that the days be appropriately observed with exercises and the planting of trees, shrubs and flowers around schoolhouses and homes.

The French Government's project to pension employees of the state railroad has been completed and presented to a parliamentary commission. It provides for the retiring of engineers and firemen over 50 years of age who have been twenty-five years in the service on half pay and gives pensions to disabled men who have fifteen years of service to their credit. The average wages of engineers are \$800 a year and of firemen \$500.

But few people appreciate how extensive and valuable are the sources of natural fuel represented by the peat deposits of the United States. According to Prof. Charles A. Davis, who was in charge of the peat researches of the United States Geological Survey, the bogs and swamps of the United States contain nearly thirteen billion tons of peat, representing a value, exclusive of the by-products, of \$38,000,000,000.

By a decisive vote the House refused to concur in the Senate bill increasing the salary of the President, supreme court justices and other high officials. Fifty Republicans voted with the Democrats. The House voted to make the salary of the President \$75,000 a year instead of \$100,000, the President to pay his own traveling expenses. The provisions for an under secretary of state and a fourth assistant secretary of state were stricken out by the bill.

The postoffice appropriation bill as reported to the Senate authorizes the establishment of an experimental rural parcels post system. The Postmaster-General is authorized to establish the system for experimental purposes in two counties to be selected by him and to operate it under suitable rules and regulations, including the fixing of rates. He is directed to report the result of the experiment to Congress not later than Jan. 1, 1910. The retiring Postmaster-General, Mr. Meyer, has strongly recommended the rural parcels post and has declared before the Senate committee that such a system would result in revenues amounting to at least \$15,000,000 annually.

"Snap Bean Farm and the Sign of the Wren's Nest," as the late Joel Chandler Harris styled his home, is to be purchased by the friends of "Uncle Remus" and presented to the public as a memorial to the distinguished author. The Ladies' Auxiliary of the Uncle Remus Memorial Association desires that the fund shall be secured from the children who have found delight in the writings of "Uncle Remus."

The annual report of the Pennsylvania Railroad Company for the year 1908 shows a decrease in gross earnings compared with the preceding year of \$52,446,722 and a decrease in net earnings of \$7,436,297. The gross earnings for 1908 of all lines east and west of Pittsburg were \$274,338,803, operating expenses \$203,605,335 and net earnings \$70,733,267. There were 334,429,541 tons of freight moved on the entire system, a decrease of 103,381,275 tons. During the year 142,676,779 passengers were carried, a decrease compared with the year 1907 of 10,885,192.

In response to determined protests from shippers the transcontinental freight bureau has decided to restore many of the transcontinental freight rates which were recently increased and to reduce quite a number of other rates. The meeting, in Chicago, which lasted through more than two weeks, will probably go down in railroad history as having made the largest number of important reductions in rates since its organization. The reductions, however, aggregate only about 3 per cent of the recent increases, and Pacific coast shipping organizations are going to appeal to the interstate commerce commission.

Wireless telegraphy under water is now an accomplished fact and bids fair to revolutionize marine communication, according to the statements of Francis B. DeWitt, a student of mechanics at Stanford University, where he has been experimenting with his invention. DeWitt claims to have perfected his instruments, which are radically different from those used in aerial wireless telegraphy, to the extent of establishing communication between divers and their vessels at depths up to 80 feet. He says he will make public the nature of his invention as soon as it has been patented.

The Mexican Academy of Medicine has appropriated \$25,000 for the purpose of discovering the cause of typhus, and to develop a cure for the fever. Of the amount \$10,000 will be awarded to the person or persons discovering the cure. A like amount will be given to the person or persons discovering a serum which will kill the typhus germ in the blood. In the event of any one person solving both problems, an effort will be made to have the Government give a proper reward. Five thousand dollars will be distributed among the persons who have most efficiently helped in solving the problem.

The people of Finland seem to be pretty well satisfied with having admitted women to legislative office, inasmuch as this year 25 women members are in the diet, as against 19 last year. In the diet the women and men do not sit according to sex, but according to party affiliations, so that they are scattered all over the body, and a great difference of political opinion is expressed by the women members. The women, however, seem to get together on those subjects which call for legislation concerning family life, moral questions, and the rights of women and children. In last year's diet there were three married couples.

Of the nine members of the United States supreme court two served in the Union army and one in the Confederacy. Justice Harlan raised the Tenth Kentucky infantry and as colonel of it served under Gen. George H. Thomas. Justice Holmes graduated from Harvard at 20 and was at once commissioned a lieutenant in a Massachusetts regiment. He was shot through the breast at Ball's Bluff; shot through the neck at Antietam; shot in the heel at Fredericksburg; but still served throughout the war, coming out a brevet colonel. Justice White was only 16 when the war began, but was early in the service. When White was in the Senate he and Senator Warren of Wyoming found that they had opposed each other at Port Hudson, La. Warren received a medal of honor for gallantry on that occasion.

The Lake Shore, which has for several years owned a controlling interest in the Big Four railroad, is about to absorb that road and remove its headquarters from Cincinnati to Cleveland. This is the talk of financial circles at present, and it seems well founded. It has long been recognized that the Cleveland, Cincinnati, Chicago and St. Louis, which is the Big Four's official name, would eventually merge with the Vanderbilt road, and the fact that heavy buying of Big Four stock occurred in New York during the last few days demonstrated that some move of this kind was contemplated. Railroad men see in this the hand of Harriman, who not long ago entered the boards of the various New York Central lines and before whose aggressive methods the more conservative Vanderbilt policies are yielding.

The prevailing idea that the Indian is rapidly disappearing is far from correct, according to the board of Indian commissioners. The members say there are about 300,000 Indians in the country now, and that the best estimates hold there never were more than that number—even when Columbus discovered America. It is true, the commissioners say, that many of the 300,000 are not full bloods. Moreover, the ravages of tuberculosis are becoming alarmingly great. The board, in its report to the Secretary of the Interior, urges that a vigorous war be waged on tuberculosis among the red men, with increased hospital service, outdoor camps and more doctors. Late researches of Dr. Herdlicka of the Smithsonian Institution show that in some of the tribes the ravages of tuberculosis are greater than among any other people on earth. The Sioux are most seriously affected, some of the Sioux subtribes showing 34 per cent of tuberculosis.

As demonstrating the great advantages secured to the turpentine industry in the South, the United States forest service has issued a very interesting circular and report showing an average increase of 22.8 per cent produced by the application of improved methods. The report also cites an instance of two Texas companies operating in the same year under practically the same timber and weather conditions, but using different methods of turpentine. The first establishment, using the new method, known as the cup and apron system, yielded an average of 68.2 casks per crop as against 42.8 casks produced where the old methods were employed. It states that some of the most extensive establishments in Texas and Louisiana are operated by large lumbering companies who are bleeding their trees for turpentine and rosin before converting them into lumber, and the fact that the new methods of turpentine are more generally used by these companies, who have studied both methods, indicates their advantages over the old.

Among the Magazines

THE INFERIORITY OF THE CAUCASIAN RACE.

The inferiority of the Caucasian race is recognized and accepted by many of that race in this and other lands. This explains, as nothing else can explain, their fear that they will be overrun and beaten by superior races. They know they have the present advantage in numbers, and wealth and weapons of war, that the government is in their hands, but they see the danger if they allow those of superior races equal opportunities. We can hardly blame them for their fear and their insisting on excluding or suppressing those whom they dread.

This explains the California and the Nevada proposals to forbid aliens to buy and hold land in fee simple. They mean the Chinese and Japanese. They look up to these Mongolians as Tom Thumb, Barnum's white dwarf, looked up to the Chinese giant Chang. The Mongolians are their superiors, they know, in thrift, in diligence, in money-making, in all sorts of acquisition, and they tremble at a rivalry with them. If allowed they would soon own the whole western coast. San Francisco would be theirs. Hence these tears. Hence Mr. Drew's bill; he does not believe he could hold his own modest estate if a Japanese were allowed to ask for it. It is, it can be, nothing else but a sense of their own inferiority which explains the unwillingness of these men to allow Chinese and Japanese to meet them on even terms and let the best win.

To be sure, the President has no fear that these Mongolians will get the better of us Caucasians, but he is a headstrong man, full of conceit, hasty in conclusions, and he does not know as much of Japanese as he does of bears. Because he can shoot a bear he thinks he can beat any alien. But the Japanese are another sort of beast, like the Martians we have heard of, all science, all heartless, and all huge. We poor Caucasians, we puny Anglo-Saxons and Celts, would stand no chance with them; we would be pushed into the mountains or the forests as the pigmies have been driven back by the superior Senegalese and Mandingoes. In the long run the superior wins—it always does—and the Caucasians are doomed. Somehow, by wit or war, the superior race will win over the inferior race. It will be better for the world that those who lack in courage and virility should be replaced by a better stock.

And there are terror-stricken herds of cotton-tails that are trying to hide behind high fences against the advance of the black southern wolves. They talk a very different dialect from what they did half a century ago. Here is what J. Wilkes Booth left behind him in a sealed letter before he fired the shot in the Washington theater:

"The country was formed for the white not for the black man, and looking upon African slavery from the same standpoint held by the noble framers of our Constitution, I, for one, have always considered it one of the greatest blessings, both for themselves and for us, that God ever bestowed upon a favored nation."

He thought the black race so inferior that it was only

fit for slavery. He did not fear them any more than did Abraham Lincoln when he liberated them; for he thought they were only a bit more than a mule. But Senator Tillman has seen the mule become a superior man, and so has Gov. Hoke Smith, and so have the legislators of a dozen States. They are afraid of being beaten. They see how an eighth of negro blood will dominate seven-eighths of Caucasian. They shiver at the thought of probable negro supremacy if they do not, while they can, and while the school has not done its fatal work, exclude the negro from the protection of the ballot-box. There is no other plausible explanation that can be given of their terror except that they feel that they and their children will be beaten in a fair fight. It is natural for a weak race thus to defend itself, by all walls of stratagem and defense against the time when strength shall claim its own. Thus they may save themselves. Thus Ulysses put out the eyes of Polyphemus and escaped the giant's clutch.

Forgive us if we sometimes think this is cowardice, that they ought to be willing to try the arbitrament of the struggle for existence and abide its result. But that implies some hope of success. We must make allowance for the benumbing, the paralyzing effect of conscious inescapable racial inferiority.—The Independent.

SEVENTY-FIVE HUNDRED KICKS A DAY.

If you will take a big green Wentworth Avenue car from the Loop District in Chicago, you will finally reach a factory in which a young woman is affixing wooden handles to metal shanks, thereby composing screwdrivers.

Her machine, resting on a bench, terminates, downward, beneath the bench, in a curved leg at the end of which is a foot-form. She places her right foot on the foot-form and pushes forward (till her left heel rises from the floor) five times in order to get one screwdriver assembled. It is really more a kick than a push. It brings the operative nearly, if not quite, to the posture of a football player whose toe, in the starting of a drop-kick, is just reaching the ball.

The gait of the work is 200 screwdrivers an hour. So say the records of the plant. For allowance on behalf of breakdowns and other troubles, let that gait be slowed to make an average of 150. That means 750 kicks on the foot-form each hour! That means 7,500 kicks on the foot-form each day!

No medical experts are here needed. Here is a case in which women, indubitably, should be debarred from industry.

But legislation covering all such cases would mean little because, because (and on this fact all the subsequent argument of this article will be erected) such cases are rare. It is seldom, extremely seldom, that women are employed at such hideously severe, de-sexing physical toil. There are few, extremely few, "jobs" held

by American workingwomen which are in themselves inherently unsuitable and injurious to a feminine physique.

The unfortunate circumstances surrounding woman's work in America today are almost always incidental, not essential. They can be stripped away and leave the "job" itself intact and harmless.

But there is much stripping to be done.—"The Woman's Invasion," in the March Everybody's.

A GAY DECEIVER.

Some days since Assistant United States District Attorney Dennison in New York made his opening address to the jury which is to try the American Sugar Refining Company, better known as the sugar trust, for defrauding the Government in connection with the weighing of sugar that went through the customs. His catalogue of the sins and offenses of the trust make it out to be one of the gayest old deceivers that have come into the federal courts for a long time. Seven successive methods by which the trust got ahead of the Government are listed, each having been used when its predecessor was detected. The first was "rolling the ball" on the scales and getting thus a false balance. The second was putting the sugar on lighter trucks than were weighed in for it. The third was having the trust's checker put his foot on the scale beam—the scale had to be boarded up to stop that. The fourth was a water-cure method applied to the scales. The fifth operated by hanging hidden weights on the beam. The sixth consisted in rushing sugar sweepings past the customs men without weighing. The seventh—of all possible things—consisted in the use of corset springs to help out the gay deception.

The district attorney charges, indeed, that a "trained band" of deceivers was employed by the trust year in and year out. He wants \$1,250,000 refunded the Government for unpaid duty, and admires his own moderation in not demanding the forfeiture value of all the sugar that went over the scales, \$65,000,000, which he could ask as a penalty under the law.

The district attorney has begun to present his evidence, and if he makes good his case he will have offered material fully worthy the attention of some grave American Lombroso who wishes to study the signs and stigmata of degeneration on the corpus delicti of a trust itself.—Chicago Record-Herald.

THE SIN OF THE CITIES.

At the free clinics of all the other city hospitals you may see daily waiting lines of hundreds of sick, and if you listen for the word that falls oftenest from the lips of the doctors as they diagnose, you will hear, over and over again—tuberculosis.

It is the sin of the cities. There is an interesting new theory that all diseases are, in the final analysis, the manifestation of sin. This one surely is. It is undeniably the result of wrong living conditions. There was held recently at Washington and New York an international tuberculosis exhibit to show the causes of this scourge and how we may be rid of it. Of course the cause of causes back of this sin of the cities is poverty. And if we could only be rid of that at one fell swoop, we should be rid of its effects, more hydra-headed than we usually dream of. If, for instance, people only had the opportunity to earn wages enough to pay for light living-rooms and beautiful surroundings, with air enough to breathe, we shouldn't have to drive them to these conditions by legislation, and we shouldn't have to build

hospitals and endow outdoor camps to help the hurt that civilization itself has given.

But for the present, at least, there seems little prospect of being able to deal with the cause. A great many people don't even know that it exists—this insuperable condition, and they still think that, as in the good old days of a less complex industrial organization, nobody need be poor who is willing to work. And there are a great many other people still piously professing that you can't help it anyway, for it is written that the poor shall be always with us.

But if society as a whole can not yet see the primary cause, it sees the effects quite clearly. So many people have tuberculosis that it cries out for a cure. And the community as a whole is now pretty generally touched with compassion in the matter. It may well be! For this sin of the cities, which civilization is visiting on the poor man, doesn't stay there. It germinates in the slums where crowded humanity affords the most favorable culture conditions for it. Then the infection passes on, for the germ once started in activity is no respecter of persons. From the sweatshop workers it may travel to the multimillionaire, and none of us is immune from the danger that stalks among us all.—The March Delineator.

THE COMING OF THE SLAV.

The tremendous potency and still more tremendous possibilities of the Slavonian element in European nationalities have been recently brought sharply to the world's notice by the revolt of Ferdinand of Bulgaria, and the mutterings of Servia and of Montenegro, behind all three of which stands the vast Empire of Russia. The Slavs are beginning to feel their strength and to assert themselves, declares Mr. W. T. Stead in The Contemporary Review (London). Recent incidents in the Balkan Peninsula, the action of Francis Joseph, and the support which he has received from William II of Germany, have profoundly stirred the racial sentiments of the Slavs from the banks of the Volga to the huts of Cettinge. The points made by Mr. Stead are, that the Slav is prolific and rapidly increasing in population, and is united rather by a racial than a territorial tie. Hence the Slavic race is really one of the most formidable factors in European politics. The Germans, or Teutons, as represented by such sovereigns as Francis Joseph and William of Germany, do not seem to understand this. The Slavs have been a subjugated race. They are now asserting themselves, avers Mr. Stead. To quote his words:

"Of all the great races of Europe the Slavs have received the fewest favors from the fates. Providence has been to them a cruel stepmother. They have been cradled in adversity and reared in the midst of misfortunes which might well have broken their spirit. From century to century they have been the prey of conquerors, European and Asiatic. When, as in Russia, they were able to assert their independence of Tartar and Turk, they could only do so by submitting to an autocrat whose yoke was seldom easy and whose burden was never light. But for this Cinderella of Europe the light is rising in the darkness, and there are not lacking signs that in the future the despised kitchen-maid may yet be the belle of the ball."

The principal advantage which the Slavs have over the nations of western Europe is their numerical superiority, with its ever increasing volume. Mr. Stead tells us:

"The factor that governs the ultimate issue of the clash of national forces is not the statecraft of sovereigns, but the birth-rate of their peoples. If, dismissing all

prejudices, political or religious, we concentrate our attention on the birth-rate, we see at a glance that the future belongs to the Slavs. In the West, population tends to a standstill. In France it is even beginning to decrease. But the Slavonic peoples continue to increase and multiply and replenish the earth. Consequently, Slavonia grows ever more and more, and its growth renders the existing system as useless as pack-thread round the limbs of a giant."

Mr. Stead is evidently inspired by his knowledge of political conditions in this country in predicting the formation of a Slavic Confederacy which is to extend from Montenegro to the Ural Mountains. The idea of one race being dominated by another race is a monstrosity, as J. S. Mill long since pointed out. To quote further from the article in *The Contemporary*:

"The day of cast-iron empires is fast drawing to a close. The new century begins the era of decentralization and federation. In one form or another the whole vast stretch of country from Petersburg to Prague and from Prague to Adrianople will be covered by a federation or federations of free self-governing States as peaceful as the Swiss cantons, in which the Slavs, by the sheer force of numbers, will of necessity be in the ascendant. Nor will it be surprising if the despairing effort of the German to stem the tide of destiny in Posen should lead to the addition of the German Polish lands to the federation of the future."

The Slavs, however, like the Irish, are too much inclined to internal dissension and domestic treason to rise to a concerted struggle for independence and supremacy, until they have passed through a stern ordeal of political education. But the future is theirs, announces this writer:

"The chief danger, almost the only serious danger, that threatens to retard the inevitable triumph, is the fatal tendency to anarchy that has ever been the bane of the Slavonian peoples. It was this that ruined Poland. It may postpone indefinitely the coming of the Slav into his kingdom. If we had the tongues of men and of angels we would cry aloud in the ears of all the Slavonian peoples: 'In unity is your strength. United you can conquer all your foes. Disunited you will remain the despised and impotent thralls of your neighbors. Peace! Peace among yourselves! Patience and Unity, by those watchwords you will conquer.'"—*Literary Digest*.

CHILDREN AS CHILDREN.

I want to plead with the mothers of our Circle for the rights of childhood. At present what my little friend calls "fashion parties" are more numerous than when we mothers were young. We are losing much of the beauty and freshness from our children's childhood and depriving them of simple joys which cannot come again.

Watch the small girl of today, and—unless she happens to have a very judicious mother—she talks of "affairs" she means to attend, of "dances" and "fellows," and tells you patronizingly of "the box party and luncheon I attended last week." Will she not have years in which to be a society belle? Cannot we keep our "little girls" and "little boys" for a few years longer?

Whatever we may feel with regard to the "simple life" for men and women, it is undeniably the proper and normal one for growing children. Why feed them with metaphorical syllabubs and pastries while they should be taking the bread and milk of life?

To my way of thinking, the talk of "beaux" should never be encouraged in a little girl. It takes the bloom

from the peach, and develops self-consciousness where none should exist. Let the boys and girls play together just as if they were all of the same sex, only teaching the boys that, as girls are not as strong as their brothers, they must be treated more gently.

It is comparatively easy to keep the thought of sweethearts and love affairs from the mind of the healthy, normal boy. To use his own word, he regards such talk as "slush." Let us be glad that he does, for his sentimental sister, with her feminine love of admiration and romance, learns all too early of such matters.

Let us, then, try to keep our children children until they are no longer of an age when we can make their pleasures for them. Childhood is so sweet, so unspeakably precious, that we have no right to deprive our little ones of the beauty and joy which lies in its simplicity.—Virginia Terhune Van De Water in *The Circle* for February.

Between Whiles

Placing Him.

"Papa," inquired little May, after Sunday school, "was George Washington an Israelite?"

Before her father could answer this somewhat unexpected question, May's six-year-old brother broke in.

"Why, May, I'm 'shamed of your ignorance! George Washington is in the New Testament, not the Old."—*Woman's Home Companion* for February.

Captain—"In a few minutes we will cross the equator."

Lady Passenger—"Oh, won't that be lovely! I've heard so much about the equator! Lizette, go and get my opera glass!"

A Sign.

"They must be very new to society."

"Why do you think so?"

"The sandwiches that were passed around at their reception last night were so thick one did not need to take more than three of them to get a bite."

Desperate.—Heiress—"But, father, that handsome foreign Count says he will do something desperate and awful if I do not marry him."

Father (dryly)—"He will. He will have to go to work."—*The Pittsburg Observer*.

No Place for Robbers.

"A dangerous neighborhood you're living in, Colonel," said a newspaper man to Charles Edwards, of the Democratic Congressional Campaign Committee, a few nights ago, in Washington. "Been four highway robberies there in the past month. Aren't you afraid that somebody will hold you up and go through you some night?"

"Should say not," said the big Texan. "Why, Ah've got so few means on my pusson at the present time that the robber who goes through me will get hisself in debt."—*Success Magazine*.

INGLENOOK 1909 HANDY ATLAS FREE

This work contains new maps of every State and Territory and of every country in the world, down-to-date in every particular.

This is not an indiscriminate collection of maps and fragments of maps that have for years done duty in other atlases but is built up on a carefully considered plan; every map having been especially constructed to take its place in this new work.

As illustrating the recentness of the work, we give the following, selected from many other changes of nearly equal importance:

Arctic. Shows the "farthest north" attained by Peary in April, 1906.

Australia. Shows the new capital of the commonwealth, Dalgety.

Canal Zone. Shows the limits of the Municipal Districts and the United States postoffices in the Panama Canal Zone.

Cuba. Shows the recent changes in the names of provinces.

Japan. Shows the enlargement of the

Japanese Empire by the accession of a portion of Sakhalin Island, as determined by the Treaty of Portsmouth.

Nevada. Shows the new mining camps of Goldfield, Tonopah, Bullfrog, Searchlight, and several hundred miles of new railroads constructed in that State during the last few months.

North Dakota. Shows over 800 miles of new railroads built in this State during the last few months.

Oklahoma. Shows the correct boundary of the enlarged State on all the maps in which this political division appears.

Philippine Islands. Shows the latest railroad construction and the new cables operated by the U. S. Government.

South Dakota. Shows the new transcontinental line of the Chicago, Milwaukee & St. Paul, the new C. & N. W. line from Pierre to Rapid City and many other railroads just opened.

The Text

The list of cities includes the 1905 census figures of eleven States and official estimates for 1907 of cities of other States. There is also a list of cities of over 10,000 inhabitants in foreign countries, with population figures according to the latest official enumerations and estimates.

The chapter on the United States Reclamation Service, illustrated with a comprehensive map, gives latest and most complete data in regard to irrigation in our western States.

A detailed description of the final plans for construction of the Panama Canal, accompanied with a profile and complete map of the Canal is given.

Among other valuable features is a condensed biography of each of our Presidents, with likenesses in halftone.

The maps in this work are each 5x7 inches and are printed in colors; the work contains 106 pages, each 6x8 inches in size.

Sixty-Day Offer

To every person sending us ONE DOLLAR for a year's subscription to the INGLENOOK before April 20, 1909, we send a free copy of the "INGLENOOK 1909 HANDY ATLAS OF THE WORLD."

If you are already on our subscription list, send us the Dollar and we will extend your subscription for another year or you can have the Magazine sent to a friend and keep the Atlas yourself.

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

OWN A HOME

In the Land of Health and Wealth

Here's an opportunity to make a fortune. It's not a chance—not a risk—but a **positive opportunity**. And combined with this opportunity of wealth, is an offer of culture, education, pleasure and health—for your family as well as yourself.

Clear blue skies, pure air, mild winters, comfortable summers, beautiful scenery, together with excellent church privileges, good schools, pleasant neighbors and **big crops**—they're all to be found at

—Miami Ranch—

18,000 acres of land in Colfax County, New Mexico's choicest farming section. Not a lonesome, dreary tract of land in a boundless desert, but a rich, cheerful valley surrounded by picturesque mountains.

Plenty of elk, deer, bear, and other game can be found in the mountains, while the surrounding lakes are black with wild ducks and geese. The Rayado River, which flows through the ranch, is filled with mountain trout and is famous throughout the Central West for the exhilarating sport which it furnishes.

The MIAMI RANCH is specially adapted to the raising of wheat, oats, barley, sugar beets and fruit. New Mexico wheat took first prize at the World's

Fair in Chicago; and apples raised in an orchard directly adjacent to MIAMI RANCH won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 per acre.

At the National Irrigation Congress Interstate Exposition held at Albuquerque, N. M., last October, Colfax County won the \$400.00 Silver Cup for the best showing in varied resources, embracing agriculture, horticulture, minerals and live stock. Conditions in northern New Mexico for stock and poultry raising and dairying cannot be excelled.

WONDERFUL IRRIGATION SYSTEM

Although the average annual rainfall at MIAMI RANCH is 13.92 inches and the heaviest fall is during June, July and August, when it is most needed, the owners of the MIAMI RANCH have constructed ditches and storage reservoirs which give such an abundant supply of water to all lands which they offer for cultivation as to insure the biggest crops possible for any soil to raise. The irrigation system is in charge of an expert who furnishes instruction in irrigation to the farmers. Every opportunity possible is offered you to make your life a success on MIAMI RANCH.

Less than half fare rates can be secured to MIAMI RANCH via the Atchison, Topeka and Santa Fe Railroad, the first and third Tuesdays of every month. Write for more information regarding these excursions and also ask for our **free** booklet, "Westward Ho." It tells in detail all about MIAMI RANCH and shows illustrations of actual scenes on the ranch.

Prompt action is necessary if you want to take advantage of the present bargain offers being made. Write today—right away.

Farmers Development Company SPRINGER, NEW MEXICO

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

The Brethren Family Almanac for 1909

A FIRST class almanac for the home. The twelve calendar pages contain the date of over 300 important historical events. Every member of the church will be interested in the biographical sketches of such men and women as Elder R. H. Miller, Sister Sarah Major, Elder John H. Umstad, John H. Filmore, Elder Peter Nead and Elder Jacob Mack. Announcements concerning the Annual Conference for 1909, and a History of the Brethren Church in Franklin County, Virginia, are unusually interesting. **The Ministerial List** occupies nearly 19 pages and gives the name and address of the 2,938 ministers of the Church of the Brethren together with a list of the Gish Fund Books. Several pages are devoted to a list of the Home and Foreign Mission Boards of the church with name and address of the members of each board. Sunday-school workers will be interested in the list of State Sunday-school Secretaries. A cyclopedia of useful information. Sixty-four pages. Price, postpaid, 10 cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

The Sunday School Calendar

Issued annually. Enlarged and improved. Beautiful cover design containing reproduction of Hofmann's famous painting of the boy Jesus.

In addition to the International Daily Bible Readings, the calendar contains International Sunday-school lesson titles and references for every Sunday in the year, also the Golden Text for each week, printed in full. Each leaf contains choice selections from the best writers, helpful thoughts for every-day living. A calendar for the entire year is printed on the back, and an extra leaf is inserted containing Scripture selections, etc., arranged for easy memorizing.

This calendar is endorsed by the leaders in Sunday-school work and has proved very helpful wherever used. As a Christmas gift from teacher to pupil it is extensively used. Many schools distribute them at the Christmas season to every scholar. They are especially valuable to Home Department members.

The Olive Branch of Peace and Good Will to Men

By S. F. Sanger and D. Hays.

An Anti-War History of the Brethren and Mennonites, the Peace People of the South During the Civil War of 1861-1865.

From Preface of Book.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.'" Illustrated. 232 pages Cloth with side title in gold stamp.

From the Ball Room to Hell

Is there any harm in dancing? There can be but one answer to this question,

facts are facts. This little book, written by an ex-dancing master, will give you more facts about dancing than can be obtained elsewhere. It places a dark picture before the dancer, and one that is very convincing. It explains the natural and necessary effects of modern waltzing and why

thousands of girls are ruined every year through its influence.

A Sample of the Oat Fields in the Nanton District.

BOUNTIFUL HARVESTS

The prosperous settlers of Sunny Southern Alberta have harvested and threshed enormous crops the past year. The wheat yield on some fields was as high as fifty bushels per acre. The oats yield was as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

REDCLIFFE REALTY CO. (R. R. Stoner, Pres.),

\$25 TO CALIFORNIA, From Kansas City.

\$33 TO CALIFORNIA, . . . From Chicago.

A NEW COLONY

After an extended tour of investigation and careful consideration the CO-OPERATIVE COLONIZATION COMPANY decided to locate its first colony in the famous San Joaquin Valley, California, near the center of the State. This is a fine section of country, with mild, short winters. Grains, grasses, fruits, berries and vegetables of about all kinds are grown here successfully, from oranges, and other citrus fruits, to the most hardy plants of the more northern climate.

EMPIRE

is the name of the new Town and Colony. It is located on the main line of the Santa Fe railroad, in Stanislaus County, five miles east of Modesto, the county-seat, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

This is not a new, undeveloped country. All the colony lands are under cultivation, wheat, oats, barley, etc., being the principal crops, until the installation of the Modesto-Turlock Irrigation system, one of the finest in the State, since which the more intensive methods of farming have been followed, because of the greater profits.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal.

Our next party of Colonists will leave Chicago Tuesday, March 9. Prospective Colonists and Tourists are invited to join this party. For further information write to

One Dollar Per Year

WAGES

If by a day of toil I've earned
A better thought and it becomes
A seed of good in some heart,
I count my wages by the mart,
A dividend of growing worth.

If I have helped a soul to seek
The perfect purpose of its life,
Doubly hath my wages been;
And I am rich, indeed, to win
Small dollars and a living thought.

No. 11.

MENTAL PRODIGIES

JESSE D. MOHLER

WE do not know the full requirements of a good strong mind, just where oddity begins, nor what it takes to make a prodigy. We are sometimes made to think that the mind does not vary in its entire ability much more than does the body. The man who trains one part of the body to a high degree of skill usually neglects what some one else would develop. The man who exercises one talent excessively is usually found short on something else.

The writer has found companionship with various classes of men. With most of them he could readily find some points on which he was clearly the stronger. At this moment he can not recall intimate knowledge of any one who did not have traits and abilities on some other lines that excelled his own unless he would include a degenerate class with which few of us would permit comparison.

It is clear that the man was about correct who said that ninety out of every one hundred people are a little insane on some points and nine out of the other ten are not just right all the time. The question is, which one of the one hundred is exactly right? To put it a little more personally, we are very much like the man who said to his wife: "Everybody has some peculiar ways but you and me, and, my dear, it seems to me sometimes you are just a little peculiar." When we average the whole thing up there is not nearly as much difference between us as people of any community as some of us imagine.

However, there are freaks and prodigies that give us glimpses of what the human mind can become. When we put these several freaks together we see a little of what we may attain to in the future world when all our powers are developed as are the isolated powers in some of the minds that are otherwise weak. This article is to deal with a freak that was well known in the writer's home county when he was a lad, and who had one power remarkably developed, to the weakness of other abilities.

As the man is still living, and we are told is a charge in an adjoining county, and his family sensitive on the matter, we substitute the name of Mr. Reubens for his real name.

Reubens' boyhood home was but about ten miles from that of the writer; but we saw him only once. While talking with a merchant in our town a few years ago the merchant suddenly remarked: "There stands——. I had not seen or heard of him for years and did not know whether he was alive. The last I knew him he was going so fast with drink I did not suppose he could now be living."

The writer took a look at the man in question. He was of good size, stoop-shouldered, head held forward, with chin projecting and eyes half shut. His hands hung limply by his side and his general posture was that of a weakling. His clothes were shabby and old, beard unkempt and face depicting anything but intelligence. Such was the man with one ability that should have given him fame and riches.

Reubens had been a prodigy in mathematical calculation. With little general ability, almost no education, little knowledge of figures, not being able to comprehend ordinary sums in addition placed on paper, he could outdo the claims of any lightning calculator in giving quick and correct answers to problems given him verbally.

Merchants sometimes employed him in making invoices. As soon as the lists were read him the correct answer was given. Men of talent sometimes would give him test problems involving much calculation, and the answer would be so ready it could not be believed until actual calculation proved it correct.

It was claimed one man propounded this question: So many flax seed are in a certain measure. How many seed of that size set edge to edge would reach from town — to —? Without hesitation an answer was given so near correct that calculation could not disprove it. Again, being asked how many revolu-

tions a certain car wheel would make between New York and San Francisco, the correct answer was immediately given. Reubens could be waked from a sound sleep in the middle of night and give exact time by the sun or railroad time in any of the divisions called for, and that without uncertainty.

The stranger naturally inquires why such a prodigy was not rich and famous. There hangs an evidence of correctness of the claims made in the beginning of this article. Reubens' other talents were latent and did not operate with his one strong talent. He was often surly, easily offended and, when out of humor little could be done with him.

At one time a museum is said to have engaged him to travel with them, expecting to exploit his abilities. The manager, in introducing him to the first audience, made a fatal mistake. After telling of the marvelous powers of Mr. Reubens he sought to emphasize the curiosity by stating that in all other respects the man was little more than an idiot. The exhibition became one of rage on the part of the performer. "Ain't no idiot! Got as much sense as you have," and followed with a volley of abuse that drove the manager from the platform. Reubens then refused to show his ability, and would never contract for any further exhibitions.

As to methods of calculation, he had none. He said the answers just came to him. He considered it a gift subject to charm or some mysterious power. To prevent its loss he would carry pieces of soap in his pockets, we are told. One thing we have been told that seems incredible is this: He thought he was specially endowed with this gift so that in the day of judgment there would be some one who could make account of the peoples and nations there appearing. The writer is inclined to doubt the authority of this report, but understands all others given as substantially correct.

The accounting for this freak agrees with a general statement credited to *Literary Digest* in INGLENOOK of Dec. 22. In that article it is given that freaks of the mind often date back to sickness. We understand that Mr. Reubens was very much as other children. Most of us enjoyed chewing sorghum cane stalks some time in our lives. Reubens indulged that liking so freely he became seriously sick. The above freak of mind is said to have dated from this sickness.

He never regarded himself as having shortcomings on other lines. One time his peculiarities were attracting some attention in a crowd. His brothers felt somewhat humiliated and urged the bystanders to pay no attention to him, explaining that he had eaten too much sorghum one time. The boy overheard them, and retorted: "It's a pity you didn't eat a little sorghum yourself."

As to his outcome, the drink habit fastened itself

upon the man and benumbed his one great power as it does the brightest talents of any of its victims. It also increased his moodiness and destroyed possibilities of making good use of his one talent. He became a wanderer without a purpose.

In his wanderings he came one night to the home of the writer's father-in-law. He was kindly cared for till morning. On rising one of his first demands was for liquor. This not being granted he became so angry he would not stay for breakfast, but started for town to satisfy his desire. We have recently been informed the man is a charge of an adjoining county, as stated above.

This brings us back to our original proposition that there is not necessarily so much in favor of a man with certain bright talents over the man with duller abilities to all appearances. The brilliancy may be offset by a lack somewhere else. The dulness of another may be made up by a greater number. Either condition can be entirely ruined by neglect, misdirection or dissipation. The man who makes the most of what he has is the man that really fills his place in the world's make-up and is the one who comes up to the Divine measure of a man.

Warrensburg, Mo.

A WINNING FACTOR.

PUT purpose into your life. That may be the saving element in it. Life looks attractive to youth, but there is nothing in it unless it is buttressed by a good purpose tenaciously adhered to.

One of the most pleasing things is to see a young man or young woman bending his or her energies for the fulfillment of some cherished life plan. Difficulties are met in a cheerful spirit. Hardship is endured with a smile. Disappointment only helps to stimulate ambition. Nothing is permitted to obscure the goal. But all things are made to contribute toward the rounding out of the life purpose.

On the other hand nothing is quite so disheartening as to see bright, capable and useful young people turn aside from the great opportunities of life. They have no special, definite interest in the game. No vision lures them on. They are entranced by the greatness, the grandeur, the glory of life.

Commit yourself to some high purpose. Order your life in accordance with some high and useful plan. Steer for a definite point. Don't drift. The drifters are heading for destruction. Many years ago a wise and pious soul wrote this: "A life without a purpose is a languid, drifting thing." Every day we ought to renew our purpose, saying to ourselves: "This day let us make a sound beginning, for what we have hitherto done is naught."—*Epworth Herald*.

"THE lovelier a thing is in its perfection, the more terrible it becomes through its corruption."

A VISIT TO WYANDOTTE CAVERNS

J. M. COX

AT four o'clock in the evening of a beautiful day in June we left Louisville, Ky., on the steamer "Tell City," for a sixty-mile ride on the Ohio River, our objective point being Leavenworth, Ind. The trip was indeed a delightful one. The band played sweet strains of music, and the supper was par excellence. As the boat passed a certain point the captain called our attention to a massive cliff, far up the right bank of the river, where we could distinctly see the rock-cut tomb of "Old McHarry," the famous steamboat captain. Just previous to his death he requested that he should be buried by the banks of the Ohio, where, in after years, he might hear the melodious whistle of the steamers as they plied up and down that enchanting stream.

Leaving Leavenworth at six o'clock the following morning we had a pleasant drive to the caverns five miles distant. A suit of "uniform" and a competent guide were soon provided, and we are now ready for a visit to this wonder of nature.

The winding path leads us along a hillside a distance of one hundred and fifty yards. Reaching this point the mouth of the cave, six feet in height and twenty in width, looms up before us. Passing through the entrance we find ourselves in Faneuil Hall, two hundred feet in length, fifty in width, and twenty-five in height. The outline of this massive hall is dimly reflected by the light from the entrance, but its stately walls are only a faint imitation of the magnificent palaces of the mystic depths beyond. Now we stand in Twilight Hall, and gaze with admiration upon its quaint sculptured forms. Next we enter Columbian Arch—reminding us of the natural tunnel of southwestern Virginia—with walls and ceilings so symmetrical that you exclaim: "This must have been chiseled by the hand of an artist." Passing on we find the arch rapidly increasing in height. Descending through a narrow gorge we enter

Washington Avenue. Now we walk along a winding path, over and around massive stones, piled fifty feet high, and gaze upon the beautiful ceiling one hundred feet above. At our right is a giant monolith known as "Fallen Rock," fifty feet in length by about half as much in width and thickness. As we stand here, enraptured by our charming surroundings, our guide calls attention to Wyandotte Chief, gazing intently upon us from his crystal bower swinging from the ceiling. Here the visitor cannot fail to note the remarkable purity of the air, which is absolutely free from dust, and the temperature just suited to active exercise, thus enabling a person to walk many miles

with only the slightest fatigue. Leaving Washington Avenue, which continually grows in height and width as we journey onward, we enter Banditti Hall, which seems to be very appropriately named, for one could scarcely conceive of a wilder or rougher looking bit of nature. The ceiling is very high, while the jagged walls cast dark shadows here and there on the floor, which is covered with huge, rough-looking rock, making it an ideal home for bandits. Red light burned by the guide produces a thrilling effect.

Here the cave branches.

Turning to our left we observe a giant crevice reaching from floor to ceiling. Climbing fifty feet up a steep ascent we reach the entrance to "Old Cave," being the first discovered. Leaving this to be visited on our return, we walk down a steep path to our right and enter "Fat Man's Misery," a narrow passage twenty feet in length, but only about twenty inches in width, and less than that in places. Here we vividly recall Dr. Robert McIntyre's description of this spot, in his famous lecture, "Thirty Hours in a Sunless World." We could see the fat man,—the friend and companion of the doctor, using all his energy in trying to pass through this interesting place; his unkind epithets failing to make

Stalactites in Pillared Palace.

him smaller, and only succeeding by the aid of his good friends who would not permit him to "stick" more than an hour. Passing through this "twister" we enter Bat's Lodge, named in honor of the hordes of bats which dwell here in winter. Now we scale Rugged Mountain, which is composed of giant boulders, and crowned by a beautiful circular room, the Rotunda. Here may be seen Epsom salts, pure, white and sparkling, also white gypsum in abundance. Descending Rugged Mountain on the opposite side, we reach Hanover Chapel, a sparkling hall, named in honor of Hanover College. Passing through Bassinite Avenue and Coons' Council Chamber we take a stroll on Delta Island at our right. Next we stand in the center of the great Dining Room, forty feet wide and one hundred and twenty feet long. A belt of blue flint, six inches in thickness, encircles the high and remarkably smooth ceiling, giving it the appearance of a handsomely-wrought cornice.

We now enter the Drawing Room, very similar to, but not quite so large as the Dining Room. The Junction Room next attracts our attention, so called because it stands at the junction of two large avenues, forming an island known as the Continent, which is more than a mile in circumference. Turning to our left we descend into Creeping Avenue, two hundred feet in length, twenty in width and three in height. Emerging from this avenue we behold a scene of unsurpassing beauty, and recall the lines of Longfellow:

"I asked myself, Is this a dream?
Will it all vanish into air?
Is there a land of such supreme
And perfect beauty anywhere?"

We are in Pillared Palace, fifty feet in width, three hundred feet in length, the high ceiling a perfect fringe-work of stalactites; while the floor is as thickly studded with stalagmites, many of which unite with the former, making gigantic pillars of solid crystal. Here one may gaze upon every conceivable style of drapery, transparent as crystal, and ringing like silver bells when tapped with the knuckles of your hand. Now we enter the Palace of the Genii, whose delicate formations even excel what we have previously seen. Stalactites, as white as the whitest marble, abound in great profusion, many of them forming grotesque and fantastic shapes. A king could desire nothing rarer for the decoration of his drawing room. Next we

march through Calliope's Bower, a room several hundred feet in length, with millions of starry crystals flashing like diamonds from the ceiling.

Our good guide now informs us that, after having been surrounded by such enchanting scenes, we must needs enter Purgatory. We feel equal to the task, and go unreluctantly. After proceeding a short distance the lights are extinguished, and the darkness is so dense that one almost wishes for an axe to cut away several blocks of it. Here, perhaps as never before, you realize the meaning of the word darkness in the fullest sense of the term. Suffice it to say that we passed safely through purgatory and reached the Continent where the western channel, forming Charming Island, runs in from the right. Here we notice many very beautiful rooms, among the number being Fairies' Grotto, Neptune's Retreat, and Hermit's Cell.

Niagara Falls, Milroy's Temple.

Gazing into the dizzy heights we behold the Throne, one of the most remarkable formations in the caverns. We reach it by ascending a steep, rugged mountain pass. Now we are in touch with a circular projection from which hang long, transparent stalactites in rich festoons, with corresponding stalagmites pointing upward from beneath, the entire throne having the appearance of a handsomely curtained canopy of gold and silver bedecked with precious gems.

We next visit Niagara Falls, General Scott's Reception Room, Diamond Avenue, Rocky Hill, Amphitheatre, Helen's Dome, Hovey's Point, and many other

places of fascinating interest. Taking the left-hand branch, leading around the Continent, we enter the Hall of Representatives, two hundred feet in diameter. Climbing over wonderful formations we proceed to Wyandotte Grand Council Chamber, one of the largest rooms in the caverns. Here may be seen a large flat rock, called the Card Table, where visitors are expected to leave their cards, or even a photograph if desired. Instead of returning via Delta Island we enter a small hole in the left wall and, after crawling and rolling thirty-five feet, find ourselves in the main cave between Rugged Mountain and Fat Man's Misery. We have now completed the "Short Route" and are eager to start upon the journey known as "The Long Route."

Walking three hundred yards over Sandy Plain,

which is thirty feet in width, the ceiling just high enough for one to stand erect, we suddenly find ourselves confronted by a heap of enormous rocks, the roof in the meantime having arisen to a great height. This is known as the Hill of Difficulty, up which we ascend forty feet, pass through a small opening in the ceiling, and stand in a room so large that seemingly we have entered another world. On either side are to be seen deep valleys, while in front of us towers a mountain so high that the top is lost to our sight in the thick gloom beyond. This is Monument Mountain, one hundred and seventy-five feet in height, while seventy feet above its summit is Wallace's Grand Dome, arching gracefully to the slope of the massive column which looms up beneath it. When our fire-works were ignited we had a glorious view of this majestic temple rising two hundred and forty-five feet from the base of the mountain; while around us extended a circular wall one thousand feet in circumference. Within this rotunda St. Paul's Cathedral, in London—in which we attended services a short time ago—could easily stand. The dome is closed at the top by an elliptical slab, beautifully fringed by broad, leaf-like, curling stalactites, bearing a striking resemblance to the foliage of the acanthus. On the summit of the mountain stands a gigantic stalagmite, one hundred and twenty feet in circumference. Protruding from either side of this column, near the summit, is a large figure which, viewed from the mountain's base, has the appearance of three persons clad in snowy whiteness. At the base of the mountain we drank from a sulphur spring.

Next we enter the Auger Hole, an opening through the stalactite curtain, nearly closing the entrance to Lilliputian Hall, which leads to Spade's Grotto, a veritable fairyland of sparkling stalactites. Our guide now informs us that the only way to the Hall of Ruins is the shining path down Slippery Hill. This path has been worn exceptionally smooth by visitors who have merrily slid down in days of yore. We next traverse the long hall known as the White Cloud Room. This is tunnel-shaped, with towering rocks above, covered with white gypsum, giving them the appearance of moving clouds. Now we step into the Indiana Journal Office, and a few minutes later explore Calypso's Island, to which we find two passages; the one to the right being Calypso's Avenue, the one to the left Ulysses' Strait, which leads to Penelope's Chamber. Penelope was "not at home," but we found the room to contain many attractive formations of sufficient antiquity, perhaps, to have been the dwelling place of this beautiful woman. Soon we are standing in Cerulean Vault, whose high arch, presenting a blue appearance, and traversed by a belt of white gypsum, resembles the milky way.

Climbing a great hill, and walking two hundred yards beyond its crest, we reach the entrance to Mil-

roy's Temple. This was discovered in 1878, by a number of students from Wabash College, led by Mr. Milroy, in whose honor the temple was named. But before being permitted to see the glorious sights beyond we must pass through the most difficult entrance yet undertaken. The floor is solid stone, very slippery, and the ceiling about fourteen inches in height. Our guide informs us that if we now desire to see the most wonderful formations in the caverns we must lie down and "roll." After rolling a long distance we crawled through a narrow opening and stood in Bailey's Gallery, the first spacious room in Milroy's Temple. Here we are permitted to view the most beautiful "curly" stalactites that human eyes have ever seen, so far as known. Now we visit a second Niagara Falls, whose beauty and grandeur are beyond description. Next we walk through Worm Alley, one of the finest rooms in the Temple, and look upon huge rocks, draped with galleries of creamy stalactites, vermicular tubes entwined, frozen cataracts, and other formations of almost incredible beauty. We now feel much more than repaid for our efforts in reaching this enchanted palace.

How we admire Josephine's Arcade, the Parsonage, the Islands of Confusion and Grandview! Walking a mile farther affords us the privilege of hunting crawfish in Crawfish Spring. These creatures are white and devoid of eyes.

We are now six miles from the entrance to the cave and nearly four hundred feet from the surface of the ground. Returning to the Junction we dine in Frost King's Palace. Here our guide burns the Drummond Light, as he has done in every large room, and the walls and ceiling exhibit solid incrustations of gypsum, the crystals imbedded therein glittering like diamonds.

The Ice House next invites us. We find the floor covered with huge blocks of stone which have fallen from the ceiling. They are coated with semi-transparent layers of carbonate of lime, and the constant dripping from above gives them the appearance of massive blocks of ice. Next we walk through Snowy Cliffs, Frosted Rocks, Fairy Palace, Beauty's Bower, and many corridors lined with crystal gems sparkling with delight.

Having completed our tour of this remarkable cave, the guide kindly gave us several valuable specimens for the college museum, and we started on our way rejoicing.

Lordsburg, Cal.

SOMETIMES we do a thing a certain way because we think a certain way because we think it the best way, think it the best way, and sometimes we think it the best way because we are doing it that way. We frail humans often spend a deal of time in trying to justify our particular ways.—*Ohio Educational Monthly.*

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter XLIX.

"THE station is too far off," said the Armenian, when we had closed the heavy door in the high gate with a clang, and followed the gaunt Turk who acted as janitor at the college.

On my way down town at another time I found a wee little kitten about to perish from want of a friend.

In passing a solid row of low houses built right along the edge of the street, I heard the pitiful cries of a kitten in the last desperate hours of its life. I stopped still in my tracks and listened. The kitten needed assistance. There was no one else looking after its interests, and my travel schedule took no account of days of departure. I could continue my journey after the cat had been fondled back into happy life.

The cries came from a broken window in the cellar of a native house through which probably it had staggered and fallen into the darkness below.

I hung around there until an unveiled woman came along, for I did not dare to speak to the veiled Mohammedan ladies who were passing, whom I inveigled to the door by signs made toward the cellar assisted by the plaintive *meows* of the endunged feline. With this woman standing by me on the little porch as a sort of introductory preface to my impromptu call, I rang the knocker hard, and waited.

Emboldened by my "companion," a native with whom the lady inside was partly acquainted, I tried to tell the young woman who came to the door, as she hastily sought in vain to put something over her face, my mission—to rescue a kitten from the dark depths of her own cellar. Knowing how little regard these people pay to dumb animals, I knew it would take the utmost of my nerve to present this matter to her in such a forcible way as to win her confidence in me, and when my eyes met her eyes they trembled and probably looked suspicious to her. Few people show as much interest or sympathy for pets as I, and this woman, called to her front door by a strange foreigner on the behalf of a puny kitten, might well hesitate to believe in my story and allow me to come in and descend into her cellar.

But as she was not forewarned she was not forearmed. Seeing that I was determined to get into the cellar, she allowed me to enter, passing into a square room with big rugs thrown over the mosaic floor. Couches covered by rich, soft silken and woolen goods,

ran along three sides of the room, with little square windows of stained glass high above them. From here she took me through a doorway hung with heavy tasseled curtains of beads and gauze, and down a narrow passageway, from which I had a view of a side chamber much more beautiful than the first one, which I concluded was the "sparking" room. A turn to the right brought us to a still narrower and darker passage, at the entrance to which I would have hesitated had not the continued appeals of the kitten below fed my enthusiasm. "Whoap!" she said, suddenly, "nepho-skek-kek-al-yah-ba-um-bihl," as nearly as I could recall the sounds.

"Yes!" I responded, "I'm going down all right, but only Allah knows whether I'll ever come up again," which of course she did not understand, as I clung to the side of the cellarway.

What a cellar it was! Priceless rugs strewn at every angle and on top of one another above, rats and disease just below. The cellar was of little or no value. Its ceiling was low. I had to bend double when once in it. The only light that entered its damp quarters was that little which accidentally stole in through the broken glass. Coming from the flashing sun outside, my eyes could detect nothing for some time in the gloomy darkness about me. If the house had been a robber's den, a man stationed below could have easily given me my quietus.

The woman above was thoughtful, for when she heard me floundering around in her dark cellar, calling out "Kitty! Kitty!" she handed me a little lamp to help me in my search.

As it mattered little what I called the kitten, whether I spoke in the language of its country, or my own, it understood my tones and accent, its misery found an answer in my voice. The kitten had been struggling toward the window, opaque with dirt, except in the hole made by the broken glass. When it saw the lamp it turned, staggering and falling, dropping exhausted into my hand. At the stairway I set down the lamp, for the woman had gone. She merely took a peep at me from an outer room as I left the house and showed my rescued kitten to the woman still standing on the porch.

With the kitten in my hand I went to a few houses on both sides of the street, asking if it belonged to the ones I met, and not finding an owner I gave up my sight-seeing about town and carried it straight back

to the college. Left in the narrow street it would have been speedily trampled by the camels or people.

In my room I washed its face and placed before it a saucer of goat's milk. When I pushed its little pink nose into the milk to encourage it to drink, its little tongue could not lap it fast enough, so hungry and famished was its condition. From the first taste of this warm, rich milk, it showed its gratitude by sticking its short bushy tail straight up, curling it at the end in "thank you, thank you, thank you," nestling in my lap immediately after its breakfast, for an undisturbed sleep. When I saw its need for a home I regretted that my travel would prevent me from becoming its permanent "mammy." I wanted to help it and all other motherless creatures to a life of joyous comfort. So I kept it in my room, feeding it regularly.

I was surprised to learn that a prayer meeting was to be held in the city one evening of my visit here and took utmost delight in attending. It was held in the prayer-meeting and Sunday-school room of the church controlled by the Greek Protestants. The pastor led the service in Greek, just the same as any American leader. The first hymn sung was "Nearer, My God, to Thee," to the tune used by us, only the Greek words of the sentence above were: "Eggutteron, Pros Ton Theon." The novelty of trying to join in the hymn with these brethren,—using the Greek language,—was inspiring to devotional emotions. I did not remember whether Paul or some other Christian had established the church here long, long ago, but I felt the solemn joy it caused me when I sat here in a Christian prayer meeting in Smyrna, where a church once flourished and then lost its power, a church made up of heroic men and women who were arrested, thrown into dungeons and publicly executed, for daring to follow their Master,—the same church immortalized in John's vision on Patmos. "Be thou faithful unto death and I will give thee a crown of life," he had said to them. Some of them had been faithful. Their names are known in heaven. Though they saw their beloved church die out in Smyrna, their loyalty to the pure doctrine carried it across the waters that washed into the bay, lodging fragments of its precious truths upon the soil of every land, to return at last, after nineteen hundred years, to establish its permanent force upon the people in a college and church organized solely to do those things which had put into manacles the city's first disciples. The bread—a single loaf—that had been cast upon the waters, had after many days returned,—a whole bake-oven and wheat field, with modern machinery and modern methods and modern men to multiply a thousandfold the first few grains that seemed to have been lost in useless toil.

The leader probably made a good talk, the people

were intent. But it was too long—a fault of ninety per cent of prayer-meeting leaders. He gave too little time for discussion or testimony. Several led in prayer and a few others spoke, just as is done in our American services. When the meeting had closed I was introduced to the pastor and invited to his pleasant little home. He was very cordial and lovable.

These Christians still have a hard fight in Smyrna. They have their fears from enemies that never worry Christians in this country. Their merchants and mechanics are boycotted. Their children are often in danger and find no social response in the children about them. Living in spiritually arid soil, with no influence in politics, or popular leadership in any enterprise, their strength is not in numbers or in favors falling to good people in our own land. From day to day they must draw their Christian vitality from the original source and know almost nothing of big conventions or meetings called to inspire enthusiasm and plan progressive schemes of enlarging the power of the Gospel.

Being so entirely dependent upon the exertions and outlays of their little congregation, they find this resource unable to meet the many requirements demanded by the True Prophet. To help them lift their burden, and to make the preaching of the cross count for the most telling success, they require the financial help of those whose lives have been blessed by salvation in the country that flows with milk and honey. Any money which the Protestant churches of the United States might wish to send, through accredited sources, either to them or to the International College, or to any other worthy body of Christians seeking to do religious work here, would be appreciated by them, and also, I believe, by the Giver of all good.

THE BLACKSMITH'S SLEEVES.

AN aged woman was standing before a beautiful picture of a blacksmith in a local department store. The picture was a remarkable painting and had evoked so much praise that hundreds of visitors thronged around it. The figure was that of a village blacksmith standing at his forge, which was blazing with a light that illuminated the whole room. The woman came to the canvas with several younger women, apparently her children. All stood with rapt attention before the work of art, contemplating the light effects and the beautiful shadows. One of the younger women asked of the elderly one what she thought of the picture.

"Well, it's all right but the sleeves," she replied. "I lived in the country a long time, and I know something that the painter with all his knowin' didn't know. That blacksmith's sleeves are rolled out. Now, they don't wear them that way. A blacksmith always turns his sleeves in so the flyin' sparks won't catch."—*Indianapolis News*.

A NOTED INDIAN

GERONIMO, the noted Apache chief, who has been characterized by General Nelson A. Miles as "the worst Indian who ever lived," died Feb. 17 at Fort Sill, where he had been confined as a prisoner of war for a number of years. The Indian warrior, to capture whom cost the government \$1,000,000 and whose record was that of 425 settlers killed in Arizona alone, succumbed to pneumonia after two days' illness. He was eighty-six years old. One daughter, Lola, who lives in Oklahoma, survives him.

The career of Geronimo, last of the famous Indian chiefs, began when he was only sixteen years old. Son of an Apache war chief, Mangus Colorado, who had devastated Arizona, New Mexico and Sonora, Mexico, for half a century, he himself was crowned a war chief at that age, having successfully led a band of braves in battle. After the deaths

successively of Cochise, who had succeeded Mangus Colorado, and of Natchez, son of Cochise, and of Nana Victoria, in 1882, he became chief of all the Apaches. For more than one hundred years the name Apache had spelled nameless atrocities. Geronimo, in the four years of his active chieftaincy, added new terrors to it.

His leadership extended from 1882 until 1886, when he made his last surrender and became at last a prisoner of war for life. Cunning and treachery, no less than fiendish cruelty, transcending even the traditional ferocity of the red man, marked his entire career.

In 1883 Geronimo and his band ambushed between Silver City, N. Mex., and Clifton, Ariz., Judge McComas, of the former city, and his wife and son, six years old. Judge McComas and his wife were murdered after enduring horrible tortures. The boy was carried a few miles and his brains dashed out against a rock because he cried for his mother.

Sweeping the territories of Arizona and New Mexico and dashing into Mexico, the war bands left trails of bleaching bones behind them until General Crook at length forced Geronimo's surrender and installed him and his band as

prisoners of war in camp near Fort Apache, Arizona.

Geronimo's solemn promise never again to go on the warpath soon was broken treacherously. Leaving camp May 17, 1885, he led his braves toward the mountains of Mexico, their progress marked by rapine and death. Again General Crook made war on the chief, but, failing to capture him, was relieved,

Geronimo as He Looked in War Attire.

Courtesy Chicago Record-Herald.

and Nelson A. Miles, then brigadier general, took up the chase. With General Miles were officers destined to become famous, among them then Captain W. H. Lawton and Assistant Surgeon Leonard Wood.

Lawson trailed the wily chief a total of 2,000 miles, and Aug. 20, 1886, located the band near the Mexican border. The final surrender was made to General Miles in Skeleton's Canyon.

Geronimo and his braves were sent to Fort Pickens in Florida. His squaws were sent to Fort Marion, Fla. Two years later, because consumption was decimating the prisoners, they were sent to Mount Vernon Barracks, Ala. There they stayed ten years. Geronimo at last succeeded in obtaining an order transferring him and his people to Fort Sill, Ind. T. Soon after the transfer he professed conversion to the Christian religion and joined the Methodist church.

In 1904 Geronimo emerged from his retirement to participate in the inaugural parade of President Roosevelt. His spirit had been broken by confinement, and as he rode in the parade, hideously ugly, and his low, squat figure hunched low in his saddle, he fell far short of the mind's ideal of a famous Indian chief.

Early in 1908 Geronimo again made a trip to Washington in an effort to interest President Roosevelt in his case and gain his liberty. The old Indian was unsuccessful, however, and to the last was full of bitter hatred for the white man.—*Chicago Record-Herald*.

OLDEN TIMES ON SEACOAST AND OCEAN.

JOHN S. FERNALD.

HERODOTUS described, in the fourth book of his history, how the Phœnician navigators, 550 years before Christ, by command of Pharaoh Necho, sailed from Egypt down the Red Sea, across the Indian Ocean, round Libya, now Africa, up the Atlantic to the Pillars of Hercules and through the Great Sea, now the Mediterranean, back to Egypt, and the great historian thereby added another jewel to his crown as "the father of liars."

Even Herodotus himself was inclined to doubt the statement of the navigators, that when near the southern extremity of Libya the sun was north of them, and when sailing westward he appeared on their right hand. These conditions, now understood by even the younger pupils in our grammar schools, seemed incredible even to the philosophers at a time when the whole known world was north of the equator. Many even doubted if the voyage was ever made or was possible, although Herodotus wrote less than a hundred years after its occurrence.

But hieroglyphics now in the museums of Europe prove that the voyage was actually made and the details substantially as told by Herodotus. The vessels in which the voyage was made were but little if any larger than those in which Paul made his famous

missionary journeys on the Great Sea, and were small and crude as compared with those in which Columbus crossed the unknown Atlantic two thousand years later.

But doubters did not cease to exist in those ancient days. In the early part of the nineteenth century, after Fulton had demonstrated by actual trial that vessels could be propelled by steam power, some of the ablest scientific men of the world argued through the principal magazines and newspapers that steam vessels could never be made profitable in the ocean carrying trade, for the reason that a vessel could not carry coal enough to run her engines across the Atlantic. As vessels and engines were then built the argument was not without force, but improvement along all lines has been the order and we see the result in the so-called ocean greyhounds and the monster freighters that ply on all the waters of the globe.

The *Great Eastern*, built in England in 1858, was a wonder for size, and proved an unprofitable investment on account of the expense of running her and her comparatively small carrying capacity. She was 680 feet long, her engines developed 7,650 horsepower, and her best speed was fourteen knots. She was propelled both by side wheels and screw propeller, and was fully rigged as a sailing ship, with seven masts. The only contract in which she made good, to use a modern expression, was in laying one of the Atlantic telegraph cables. In her day she was a monster of marine architecture, being many times larger than any other craft afloat. Today vessels of her size and larger are to be seen on all oceans and their carrying capacity is many times greater than hers, while their speed is nearly or quite double her best efforts.

The U. S. Government was early to adopt steam as a motive power for war vessels. Fulton made his first successful trip in a steam vessel from New York to Albany, in 1807, covering the one hundred and ten miles in twenty-four hours. Seven years later the steam frigate *Fulton the First* was launched in New York, the launching being made the occasion of a great celebration. She was described in the newspapers of the day as being 145 feet long on deck, 55 feet wide, and drawing 8 feet of water, and as mounting thirty 32-pound carronades and two columbiads, the latter each to carry a 100-pound red hot ball. She was commanded by Commodore Porter, whose achievements in naval warfare are familiar to all readers of American history. A comparison of this fighting craft with any of our modern battleships or cruisers will prove an instructive lesson in the advancement of modern science along this line.

"IRRATIONAL ambition drags more of its disciples down than it uplifts to realization."

Nature Studies

THE STORY OF GOOSEY.

J. O. BARNHART.

THE affection of various animals for man has often been talked and written about and that of the dog and of the horse is well known. Even the lion is loth to part from his keeper and many anecdotes have been related of the love of the king of beasts for his master.

Birds also become closely attached to those who take care of them and their love is often manifested where least expected. Even geese become so fond of their owners that they will follow them everywhere indoors and out, up hill and down dale, never permitting them to get out of their sight.

A friend of mine had such a goose. All of the flock but this one had been destroyed by vermin and by the various hardships to which young poultry is exposed. It of course became the special object of his care and Goosey, as it was called, was very appreciative of its master's attentions. It became so attached to him that it would not permit him to get out of its sight during waking hours.

When the dawn called Mr. K— from his bed and he would start for the barnlot there the goose would be waiting at the door to guide him across the lawn and through the gate to the barn and to the stock pen. To the pig sty or to the water tank, or the haystack it followed, fearing neither horse's hoofs nor swine's tushes. If Mr. K— was there his protege was there too. Then back to the house and into the porch, when his master went, Goosey would try to follow, and if, when company was present, or for other necessary reasons, he was shut out, he would wander round the house till he caught sight of his master through a window and there he would stand or sit while Mr. K— was enjoying his breakfast and if the weather was warm enough to permit the window to be opened he would manifest his delight in every conceivable manner.

But Goosey's notion that by his master's side was safety at last proved his ruin, for through his ubiquitous attendance upon his master, Mr. K— became the butt of all sorts of jokes among his acquaintances so that to end them Goosey was sold to the poultryman, and he found like many people have found before him that misplaced confidence brings disaster.

But this is not the only lesson that we may learn from our feathered friend. Goosey recognized the source from which all his comforts came and manifested his gratitude by refusing to part from his benefactor. Therefore he should be classed with other birds mentioned by the prophet to teach Israel their ungratefulness to God.

"The stork in the heavens knoweth her appointed time and the turtle and the crane and the swallow observe the time of their coming, but my people know not the judgment of the Lord" (Jer. 8: 7).

Isaiah also says, "The ox knoweth his owner and the ass his master's crib, but Israel doth not know, my people doth not consider."

As Israel was to learn from these so we also in our day may learn many lessons even from a goose.

Arcola, Ill.

CLEANLY INSECTS.

BEES give careful attention to a matter which is often neglected by human beings. Every one knows how difficult it is to induce many cottagers to open their windows. "Why, sir," said a woman to the writer the other day, "that winder ain't a-been opened for twenty years," and my nose whispered to me, "I can quite believe it." Bees insist upon proper ventilation, and long before doctors began to insist on the value of fresh air were careful to cool and purify their dwellings by the vibration of their wings. Even in such matters as the position of graveyards insects are in advance of public opinion. Ants never dream of burying the dead in small areas surrounded by living apartments, or under the floors of sacred buildings. With proper regard for the laws of health and the claims of decency, and at the same time with an eye to the respect due to their dead, they seek some sequestered spot, "far from the madding crowd," and there lay them to rest with all reverence and fitting ceremony. The departed are honored and the living are safeguarded.

Insects are exemplars of cleanliness in their persons as well as in their homes. The care taken by bees and ants to keep their young clean and sweet is too familiar to need repetition; suffice it to say that no human babies receive more washing or are more carefully

brushed. Creatures to which we attach mental labels bearing the inscription, "Unclean," are not less tidy in their toilet than we are ourselves. "The common cockroach," says Dr. Sharp, "is a rather amusing pet, as the creatures occasionally assume most comical attitudes, especially when cleaning their limbs; this they do somewhat after the fashion of cats, extending the head as far as they can in the desired direction.

A Quiet Retreat for the Timid, Wild Things.

and then passing a leg or antenna through the mouth; or they comb other parts of the body with the spines on the legs, sometimes twisting and distorting themselves considerably in order to reach some not very accessible part of the body." Grasshoppers, which belong to the same order as cockroaches, pay particular attention to what we may call their hands, giving them a cleansing lick whenever they have a moment's leisure. They also clean their long, graceful antennæ, by drawing them between the jaws and smoothing them by their palpi or feelers.

The toilet of a fly is a subject for admiration and astonishment. The insect hardly ever alights but it sets about the business of brushing up, taking care always that the brushes are themselves clean. The two front legs are carefully rubbed against each other until every atom of dust is removed, and are then applied to the back of the neck with a care and a thoroughness which fond parents vainly look for in the average schoolboy. The hind legs are cleansed by mutual friction, and then used as brushes over the upper and under surface of the wings with a skill which a man trying to remove the dust from the tails of his coat might well envy. Finally, the middle legs receive a touch over in turn from the front pair, and the fly is at last in a state to receive visitors.—*Selected.*

A FLORIDA paper describes a strange creature known as the "vanishing spider." On the borders of the Everglades you often see a large, yellow spider. He swings a strong web from two pliant twigs on each side of a path or clear space of ground and waits for his prey. The web is in the shape of a hammock and tapers at each end to a fine point, though quite broad in the middle. The bright color of the owner seems to mark him out for destruction—he is clearly defined against the white sand or dead leaves, and you wonder what he would do for defense in case of attack. Approach quietly and he watches you intently. Now raise your hand suddenly, and he will disappear! While you are wondering what became of him, you see a blur where he had been, then several spiders, then you catch sight again of the yellow ball that you noticed at first. Repeat the

performance, and the stage effect is renewed. The disappearance is absolute—there can be no doubt about it, and the little magician trusts to it entirely for his protection. How is it done? As soon as he is threatened he starts the vibrations of his airy hammock. These become too rapid for the eye to follow, and he vanishes. As these become slower you see a blur, and then several spiders as the eye catches him at different points of his swing, until finally he rests before you.—*Glenwood Boy.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE COMING OF SPRING.

ONE commendable thing about the climate, in which most of the Nook readers live, is that there is not much chance for one to become sated by the continuance of one kind of weather. Almost every day brings a change—something different from the day before, with the promise of a new feature for the succeeding day. It may be that much of this weather is not at all to our liking, but we can put up with it with very good grace, for we are safe in the assurance that "it can't last."

Then after the variations to which we are treated in one season there comes the wide difference of the seasons. If we do not like the warm weather of summer, or if we tire of it quickly, we have only to exercise a little patience, do a little dreaming and planning about the pleasures of our coming favorite season and, lo, the dreaded days are past! If we dislike the cold of winter the same method will presently find us in the lap of spring.

No one needs any advice as to how to put up with spring, with all its fanciful moods, for it passes much too quickly as it is. What we really need at this time, more than anything else, perhaps, is a little advice as to how to make the most of this season which is so rich in possibilities. If any one is impatient for the passing of spring it is because he is going about with his eyes on the mud and the disorder, blind to the deep blue of the sky, to the fresh green of the sod, blind to the wonders of bursting bud and unfolding leaf and blossom, deaf to the joy-notes of the birds and other living creatures, and unconscious of the sweet breath of the earth, laden with the incense of countless millions of fragrant, growing things. For the one who is really awake to these things which constitute so large a part of spring, the days pass on swiftest wings. Every attraction deepens the nearer we approach to it and the more we know about it. If at any time we

would stop the hands that mark the passing of time it would be at this time when nature is in her friendliest mood, when she even invites us to an intimate acquaintance that will increase many times the power and breadth of our lives.

"AN HONEST CONFESSION."

ONE man has been found, who stands with the liquor forces, who is honest enough to confess that prohibition is hurting his business and the business of brewers in general, in other words, that it does what it aims to do. This honest brewer lives in Ohio where under a local option law one county after another has voted out the saloons during the past few months. Here is what the brewer says, as given in the *American Issue*:

"Our business has been hit hard. We are not selling our goods. Most of the counties about us have gone dry, and our production is greatly curtailed. I am convinced that prohibition does prohibit, regardless of what the circulars say which we send into counties in which contests have been and are being made.

"Here is the situation! A county votes to abolish the saloons. In thirty days the resorts are closed. The business is outlawed. A few of the old-timers will go any length to get their drinks. They will journey to the neighboring city, if they have the money, or they will hunt the bootlegger in the back alley, or in the old barn. But these are exceptions and not the rule.

"A large part of the drinking is done by men who drop into a saloon with a friend or friends. It is a social custom, nothing more. With the saloon gone, the custom is discontinued. Many men who take a glass of beer or a nip of whisky will not walk around the corner for it; most certainly they will not hunt a blind tiger or a bootlegger. They do not care enough for it, and, besides, they refuse to countenance that which public sentiment and a majority of the voters condemn.

"There is no incentive for the average moderate drinker to drink clandestinely and alone. He will not do it. He does without and soon gets over the habit of using it at all. There is no more social drinking. That's cut out, and that's where we brewers lose out.

"And it is a fact that these moderate and social drinkers hit the business hard in these local option campaigns. Of course, many of the hard drinkers vote dry because they want it out of their reach, believing it will be better for themselves and their families. But the other fellows vote against the saloons for various reasons, and I have been surprised at reports brought in by our men to the effect that scores of our patrons are out openly for the dries in these county contests. They have turned the tide against us in more than one instance, I can tell you.

"I am frank to admit we are up against a hard proposition. Our common stock is down to five cents,

and our preferred is worth only twenty-five. The county fights are expensive and almost unanimously disastrous. These contests have developed an army of dry organizers who have become experts at the business, and they go from county to county, until it is almost impossible to make any headway against them. In many of these Ohio counties the temperance people have organizations which I have never seen equaled in politics—and I have mixed with politicians for a good many years.

"What the end will be I do not know, although it looks to be in sight for us. I suppose that in a measure we are to blame, for it is true that we have pushed the business for the money there is in it without much regard for either law or decency.

"Some of us would willingly agree to a stringent license law, but I doubt very much if the people of Ohio will stand for it. They think they have us on the run, and even now are talking of bringing on elections in Montgomery, Clark and other counties containing large cities.

"I am getting tired of this losing fight and nothing better in sight. If I had in cash the money I have invested in the business I would place it where it would yield better returns in a line not condemned by the public. I am frank to say I have had enough."

We have no doubt there are many other brewers who feel just as this one does,—that they have had enough, but they are not as frank to admit it. There are others, of course, who never will lose heart till the last saloon in the country is closed. They have so long gone on their way unhindered, so long ministered to unholy appetites, they cannot understand that the people would ever have it otherwise. But even these will get awake by and by. As they see their strongholds one by one fall into the hands of the temperance forces, they will have to confess in deeds if not in words that their nefarious business does not pay, and that prohibition is a word with mighty meaning.

ADVERSITY NO OBSTACLE.

It is natural to hate poverty, misery and oppression—but it is an open question whether such handicaps do not strengthen worthy men in the race for success, instead of retarding them. Envy not the rich man's son, for instead of having advantages over others he starts out with the odds against him. As a rule the men who are eminent in public affairs today are the sons of lowly working parents; the names of our millionaires very generally become in the second and third generations names without honor, or dishonored. Review the history of your own town and you will find that in most cases the "old families" have run to seed, while new names, many of them alien, monopolize the local columns of the newspaper. This is right, for otherwise there would be no compensation in this life at all and there is little enough at best.

No person need be ashamed because of his low origin or his poverty, or discouraged because of so-called lack of opportunity. There is no race more oppressed than the Russian Jews, yet Mischa Elman, the young violinist who is now captivating this country, and who is the great sensation of the times in the musical world, is a Russian Jew. The wonderful spirit that he throws into his music tells not of ease and plenty and self-indulgence, but of privation and longing—and it was his very lack of the good things of earth that made him the artist that he is.

Sons of rich men are born, live, and die without often winning recognition in any field of high endeavor, for, having plenty, they will not sacrifice themselves for achievement, but the way is always open to the poor and humble. It would be silly to claim that every poor boy can become great before the world; the world is whimsical in bestowing its favors, and merit does not necessarily win success nor lack of merit forbid it. In the evolution and selection of greatness that element that we may call chance plays a large part. Nature is lavish with her material; she makes the trees produce a million seeds for every one that is destined to reach maturity, and for every man who attains position and fame she has a thousand others that could take his place if occasion called.

But it is inspiring to think that oftenest the one who is called for great deeds is one who is a product not of luxury but of hardship. Think of the most illustrious characters in history, the men and women who have won fame by doing great labors in the cause of humanity and progress, and with few exceptions they are those who rose out of obscurity and not those who were favored by fortune.—*The Pathfinder*.

HELD IN MEMORY.

THE eleventh anniversary of the "home going" of Frances E. Willard was observed by special service at Willard Hall, The Temple, Chicago, February 17. Rev. A. H. Harnley delivered the memorial address. The announcement of the service contained a tribute by W. D. Nesbit having for its text Miss Willard's dying words, "How beautiful to be with God."

"How beautiful to be with God!"

How beautiful today it is

To mark the pathway that she trod

And know that its design was his.

She found her work; she did not know

The finding was a wondrous deed;

She only saw the deathless glow

Of the white light far in the lead;

By an unresting impulse urged

She gave herself, her mind, her hands,

Until with her work she was merged—

Now heart and soul of it she stands.

"How beautiful to be with God!"

We know when now we pause and gaze

At the brave path whereon she trod

She had been with him all her days

The Home World

HER OVERDONE HOSPITALITY

HATTIE PRESTON RIDER

MIRIAM STANNARD came down the stairs just as her sister Ethel, divested of cap and apron, hurried in from the kitchen to answer the doorbell. There was a tiny dab of flour on the flushed cheek of the house-mistress. She kept no cook or maid.

A gushing greeting followed the opening of the door. Mrs. Lorimer, leader of the ambitious Clyde Avenue set, had brought an out-of-town friend to call. She was very gracious over Ethel's embarrassment at not yet having made her afternoon toilet, effusively cordial to Mrs. Stannard, and sweetly interested in everything. Presently she waxed eloquent over her enjoyment in entertaining her own guest, glibly enumerating the places at which they had been invited to lunch or dine.

In the significant pause which followed, Miriam glanced at her sister, and sudden consternation seized her. The red in the younger woman's cheeks deepened; she swallowed as if at something tangible, and said with forced heartiness:

"Then, since your friend is staying so long, I shall be pleased to have you both lunch with us on Thursday, if you have no other engagement."

Miriam repressed a gasp, for she knew the little housemother's time for a fortnight was full to overflowing. But Mrs. Lorimer's face instantly became illumined with delighted surprise(?); then it fell theatrically, immediately clearing with relief.

"My dear!" she exclaimed, rapturously, "how perfectly lovely of you to think of such a thing! I was going to say that we could not possibly accept, as we had planned to visit the Art Institute on Thursday. But we can postpone that. Thank you very much, my dear Mrs. Warren. We shall be most happy to come,—shall we not, Isabel? Most happy indeed!"

She smiled herself and her friend out, with assurances of her delight in the prospect of becoming better acquainted with Mrs. Warren's charming sister, and also of meeting whatever mutual acquaintances she chose to ask for Thursday. Ethel shut the door, and went back to the living-room, where her sister stood

with a blank face. She dropped wearily into the nearest chair.

"However on earth am I to do it all?" she groaned, "with the Weavers coming tonight, David's party tomorrow, and Maud's dress to finish for exhibition day?—I won't slight that, if I never do another thing!"

Miriam raised her eyebrows. "Are those callers particular friends of yours, Ethel?" she inquired.

"Indeed they're not!" her sister rejoined, somewhat resentfully. "Do you suppose I'd choose people with such assurance as Mrs. Lorimer, for my intimate friends? She came on purpose to worm an invitation out of me, just because she hates the bother and expense of giving a luncheon herself. She always does that way, when she has visitors."

"Then why need you entertain them?" Miriam asked, in astonishment. Ethel shrugged her shoulders.

"Mrs. Lorimer is president of the Ladies' Social Club," she replied. "When its members fail to live up to her ideals of their duty, she invariably makes her disapproval felt. I don't want her giving me a character behind my back."

There was a moment's silence. "Are they all like that?" Miriam asked, at last, with a queer note in her voice.

"Oh! dear, no!" her sister answered. "Some of them are nice and sweet as can be. It is only a small clique that rules, and they are Mrs. Lorimer's satellites. Nobody really likes them."

"Then why do the others stay in the club?" queried Miriam. "Why don't they choose their own friends and be happy with them?"

Ethel stared.

"Why, you never could do such a thing!" she expostulated, helplessly. "But oh!"—with a sigh of longing—"wouldn't it be heavenly! No jealousy, no criticism, and not half the work preparing for them. I'm always sick abed after I entertain the club."

"Then why in the world do you still entertain them?" Mariam persisted.

Ethel laughed in an embarrassed way.

"You would not have me give up society entirely, would you?" she asked dubiously. "For the children's sake, as well as my own, I must not allow myself to grow rusty. If I fail to keep in touch with the best people, how will Maud and David get a place among them?"

Miriam smiled, "Like Mrs. Lorimer?" she asked.

"I didn't mean her sort," Ethel stammered, wincing.

Miriam laughed outright, and crossed over to kiss the tired face.

"Little girl, you are too nearly worn out to reason consistently," she said. "You want your children to come up in the Lorimer atmosphere, yet your secret heart would be broken if they grew into the likeness. Now, Margaret Weaver is lovely, and all David's friends that I've seen are dear. Why can't you let that sort suffice, and not cast the pearls of your time and strength, which rightly belong to those you love, before—er—well, before people like Mrs. Lorimer, who certainly seem perfectly ready to turn again and rend you?" The droll tenderness in her voice robbed the criticism of its sting.

"I just don't know how to get out of it," Ethel mourned, almost in tears. "I've neither nerve nor tact."

"One way to get out, is to go out," Miriam responded, drily. Then she added, more gently: "Women like Mrs. Lorimer are more to be pitied than blamed. They are living in a world rich with all the beautiful things that real friendship means, yet their blind eyes miss the wealth, their foolish hands gather only husks. One does not help them in the least by catering to their selfishness, but rather the reverse. There is no pursuit in the world more belittling and unsatisfactory than the chase for social popularity, because no matter how high one climbs, she is sure to find another a round higher still, to provoke her envy. Our only guests should be those who love to come because we love to have them, Ethel dear; or at least those who need—"

"Oh!" shrieked Ethel, suddenly springing to her feet with a panic-stricken face, "my cake!" and fled kitchen-ward.

A cloud of smoke floated out, incense-like, as she opened the oven door and lifted a blackened mass from within. It was the feather that broke the camel's long-suffering back. Setting the cremated offering on the table, she sank into the nearest chair and burst into hysterical weeping.

"Ethel," said her sister, with mock solemnity, as she opened the outer door to let the stifling fumes escape, "in this overdone cake, fit symbol of your overdone hospitality, I have an inspiration. May I telephone a message for you to Mrs. Lorimer?"

"Anything!" Ethel consented, in a voice stifled by sobbing.

"Upon maturer consideration," she heard Miriam's polite tones at the telephone a few minutes later, "Mrs. Warren is obliged to recall her invitation for Thursday. She desires to be kindly remembered to your friend."

"It is a wonder," Miriam laughingly commented to Ethel, "that the frost in her answer did not snap the wire"

A month after her return home, Miriam received a letter from her sister, part of which ran thus:

"Several of us have withdrawn from the Social Club, and twice a month we meet at each other's homes. As we do not care for cards or gossip, we decided to read aloud some good book, and discuss it at our leisure. Everything is delightfully informal, and we have a rigid rule prohibiting more than two articles on the menu. The children are invited to drop in after school, and they enjoy it as much as we do."

Miriam smiled. "I'm glad I lectured," she said to herself, whimsically.

THE EFFECT OF COLOR ON CHARACTER.

WE are learning how to live. As an evidence of this, take the discoveries that have been made concerning the effect of wall color upon the occupant of a room.

For some time we have had actual proof of the effect of color on cancerous and other diseases. Now we know further that color has a potential value upon the health and happiness of the occupants of the room.

For instance, blue walls, if they are of light sky-blue tints, have a most cooling, delightful effect upon the occupants, but this cooling effect carried to the extreme in cold weather becomes chilly. On the other hand, the soft, warm tones have the effect of making happy, warm characters.

This is carried out every night and every day in stage settings. When the trained actor desires to produce the effect of passion, of melodrama, he sets his stage in red or orange, those being the colors that depict those conditions as well as arouse them.

That red does arouse the passions, take a red rag and wave it before a bull or a turkey, and note the excitement of the beast or of the fowl.

When it was desired to produce the cool calculating villain—a Becky Sharp of humanity—steely colors were used to indicate her greed and avarice; and conversely, it is said that the steel cold colors are apt to produce avaricious characters; so it is not a far cry to realize that the presence of certain colors is quite sure to produce certain characters of similar nature.

Take the lives of those who live in bare walls and they are quite apt to lack a wide variety of character. Their vision is limited, their aspirations are few. On the other hand, those who are more fortunately sit-

uated, having a wider range in the chromatic scale, have also broader culture and more infinite variety to their lives.

An observing physician in the East, who has noted that red produced discordant effects in animals, rightly reasoned that it might produce similar conditions in human beings, and having a patient with a fixed sense of irritability—excitement growing into a more and more pronounced hysteria—wisely concluded that perhaps the elimination of the red on the walls of her home and the substitution of a softer, more peaceful color might have the effect of overcoming the disturbed conditions. Green was used—green which is said to be the color of hope, the color with which nature clothes its verdure. Green is a soft, restful, harmonious color with which we associate the most delightful associations. The effect on this disturbed woman was immediate; sleep came, and then rest, and finally complete restoration to the normal condition. So the use of color is not a mere gratification of the idle whim of a vain woman, but is rather the expression of a desire for a need in our life to express that which we lack.

Color is also of use in expressing form, for, without it, it would be impossible to have any idea of that which we see. The whole world would be flat; as evidence, suppose everything were green, we would see green houses, green sky, green leaves, green people, our vision would be extremely limited and we would not be able to differentiate the house from the sky, the trees from the people, yet each would possess individual form.

Change in color gives us opportunity or facility in recognizing the difference in form, so we use color in our wall to differentiate the wall surface from other objects in the room.

It is needless to say that the wall being the largest portion of the room, requires the quietest, most subdued colors, and the best artists and the best decorators today are a unit in favor of the softly-colored alabastined wall; this because of its intrinsic value as a background for the home, as well as a background for furniture, pictures and bric-a-brac; and more than all this, as a background for the activities of the occupants of the home.

The medium of color is of importance because it must be of durable quality as well as softness in color and harmonious in tone. Colors that fade, colors that rub, colors that check, peel or blister are thoroughly unsanitary and exceedingly undesirable. Alabastine is fortunate in being a natural cement, so the colors are harmonious and cannot rub off the wall, and are always flat, soft and subdued.

In arranging the color scheme for any house it is a very simple matter if we start in the right direction, just as it is a very easy matter to arrive at any destina-

tion if we select the proper road; so in the matter of selecting decorations, if we just remember a few fundamental things any one can have a color scheme that is desirable and original.

First of all, the conditions in the house must be considered. If the carpets that are in the rooms are to be used again the color scheme for the walls must have some degree of relevancy to the carpet color. If the carpet has blue tones, the wall color must either harmonize or contrast. If the color is of a brown tone, then again the colors for the wall must have a hint of brown or a color that harmonizes with them, but never an antagonistic shade.

We usually build color schemes from floors, choosing the color of the carpet as a base, the heaviest color on the floor, lighter color on the wall, and the lightest color on the ceiling.

These things are simple, easily followed out, yet sometimes we omit the simple things in life, not realizing that the things that lie at our door are sometimes the most essential things we have; we overlook them in searching into some distant future for that which lies at our very hand.

The decoration of a home is more a matter of taste than of expense. It is not necessary to employ skilled city decorators, for every woman in every home has a sense of harmony of color; she has but to look at the sky and trees, at the grass, at the wheat in the fields, and growing things, to get her ideas of combination of color. What more beautiful combination can one see than the soft browns in the fall against a background of blue sky? Nature knows how to arrange color schemes, so also woman.

The sky never presents a mottled surface such as wall papers present, but rather a softly tinted delicate hue, and these things can be carried out on the wall with the greatest ease and the most perfect results.

The wall color in the average home must necessarily be of a material that is sanitary in its nature as well as artistic in effect, for unless a wall is clean, intrinsically clean, clean of itself, it is a failure.

Materials that are made so they have to be stuck on the wall with hot water glue can usually be decided to be the very reverse of the hygienic sanitary conditions which the good housekeeper mostly desires for her home.

So also with wall papers which are stuck on the wall with paste; they become inert and form a most desirable lodging place for bugs and insects, for cockroaches and bacilli. They are dangerous breeding ground, and are better consigned to the fire and flame.

The housekeeping of the future is going to be better housekeeping, for it is going to include a more intelligent sense of our present need and a better appreciation of the existing materials.—*Exchange*.

A BIT OF WISDOM.

ONE can imagine nothing so unbearable as having all one's wants gratified. You have no reason to envy the idle rich lady whose big, grand house is next to your little one. Struggling with difficulties is the finest mental exercise in life. This state is a sure cure for stagnation and dullness and ennui. You will notice that those women who have nothing to do spend a great deal of time quarreling and complaining, which are conceded to be the worst and most profitless occupations on earth. Fanciful ideas of pleasure are a part of youth, but adult years will prove to you that work well done and charity well distributed are the real joy-makers.—*Chicago Record-Herald.*

**MEAT STEWS.**

ONE recipe will answer for all meats. Cut two pounds of meat into cubes of one inch; put them in a hot pan, and shake the pan over the fire until each piece of meat is thoroughly seared; put two tablespoonfuls of either butter, oil or suet into a saucepan and add two tablespoonfuls of flour and mix thoroughly. Add one pint of stock or water and stir until boiling. Add a level teaspoonful of salt, a bay leaf, a slice of onion and one teaspoonful of kitchen bouquet. Add the meat, cover the saucepan and cook slowly, just below the boiling point, for two hours. Garnish the dish with squares of toasted bread or with dumplings.

To make the dumplings, sift one pint of flour with one teaspoonful of baking powder, and half a teaspoonful of salt, two or three times. Then add to the flour sufficient milk to just moisten the flour. Mix quickly. Drop the dough by teaspoonfuls all over the top of the meat fifteen minutes before it is done; cover the pan; put it over a moderate fire and cook the dumplings slowly for fifteen minutes. Do not lift the lid during this time. Then dish the dumplings around the edge of a platter and put the meat in the center. Garnish with finely-chopped parsley.

Irish stew is a light stew garnished with potatoes; the neck of mutton, cut in even-sized pieces is the best for this purpose.—*The Commoner.*

The Children's Corner

THE OUT-DOOR PUSSIES.

Hundreds of pussies are out in the rain,
 Playing, playing, playing;
 Up in the air, and then down to the ground,
 Swaying, swaying, swaying.

Wet are their little gray coats of fur,
 Sopping, sopping, sopping;
 Drenched with the rain from the soft April clouds,
 Dropping, dropping, dropping.

Why don't the pussies run into the barn,
 Leaping, leaping, leaping?
 Why don't they cuddle up snug in the hay,
 Sleeping, sleeping, sleeping?

Just because all of them live in a tree,
 Willow, willow, willow,
 Always the branches their pillow must be,
 Pillow, pillow, pillow!

—Janet Hay.

**THE COUGHING BEAN.**

WOULDN'T you be surprised if you went into the garden some warm summer day and the cabbages or potato vines or berry bushes commenced to laugh? You don't think such a thing would ever happen outside of Fairyland? Well, perhaps not just that, but there are plants that do things just as wonderful—plants that eat insects, some that eat animals, others that tumble about wherever they want to go, and now a traveler tells us of running across one that gets influenza and coughs just like a boy or girl who has a very bad cold.

"I heard a cough and looked behind me nervously; for I was stalking gazelles in that lion-colored waste, the Sahara Desert; and, having gotten rather too far south, I expected at any moment to become a pincushion for the poisoned darts of the dread Houaregs," says the traveler.

"But no one was there. The flat desert quivered in the sunshine, and here and there a dusty plant stood wearily. But, though I commanded the landscape for a radius of fifty miles, not a living creature was in sight. Another cough. I swung round quickly. The same plant, yellow with dust, drooped in the dry heat. That was all.

"'Hack! Hack!' It was at my left this time. I turned again. A like plant met my eye. The thing was growing rather ghastly. As I regarded this last plant, a cough came from it. It shook all over, and then, tightening up as a man does when he is about to sneeze, it gave a violent cough, and a little cloud of dust arose.

"I learned afterward that the plant is the coughing bean, which is common in many tropical countries. In the long, dry heats, this weird growth's pores become choked with dust, and it would die of suffocation were it not that a powerful gas accumulates inside it, which, when it gains sufficient pressure, explodes with a sound precisely like the human cough. The explosion shakes the plant's pores free of their dust, and the coughing bean is in health again."—*Selected.*

A PIECE of flannel dampened with spirits of camphor will remove stains from windows or mirrors.

AN onion cut up in a saucer and placed in a room will absorb all the odor of fresh paint.

The Quiet Hour

MORAL WEAKNESS—SPIRITUAL STRENGTH.

S. S. BLOUGH.

IN a former article, the question was put, what is thy life? If you have answered the question with a firm purpose that your life shall be an honor to God, an inspiration to your fellow-men, and a satisfaction to yourself, you have done well. You have, however, discovered the difference between forming and keeping a purpose. The great difficulty has been a lack of strength. But be not discouraged, for your experience is common to all men. The apostle realized that, when he said, "To will is present with me but to do that which is good is not." Rom. 7: 18. This sad deficiency has often led to disaster. Patriarchs, kings and apostles resolved to do excellent things but failed, and their failure affected the family, the kingdom or the church. If all the good purposes formed could have been put into effect, earth would be almost heaven.

Must this always continue? Is there no way out? There is. He who gave us life is also the source of strength. What kind of character will we have if we do not receive moral strength from him? But coming to him we have the assurance of abundant strength of the right kind. Men may think it is sufficient if they but will to do good by their own strength. Is that sufficient? Too often has the need of outside strength been demonstrated by those who failed in spite of their strongest resolutions. The psalmist realized this when he said, "God is our refuge and strength." Psa. 46: 1. Also Paul, "Wherefore let him that thinketh he standeth, take heed lest he fall." 1 Cor. 10: 12.

There can be no true manhood except it be built upon the morality of Jesus Christ, through his strength. Christian manhood full of Christian strength is the highest type of character, fashioned after the Christ ideal. "Finally be strong in the Lord, and in the strength of his might." Eph. 6: 10.

But again, a knowledge of our weakness is not all. To know that God through Christ is the source of strength is not sufficient. We are then in much the same position as a man who has a machine close by

a dynamo without knowledge to make the proper connections. The strength of the dynamo to turn his machine does not avail.

He must know how to connect with it. So we must know how to appropriate Christ's strength to ourselves. But how?

There must be first faith in the source. There must be second a firm will to take hold of what faith shows us. The prayer of faith is the connection by which we turn Christ's strength into our own weakness. As Christ while on earth gave bodily strength to the sick and feeble who exercised the proper faith, so he will give those mental and soul strength who realize their need and come to him.

All things that are worth while have a value. If they are to be possessed the price must be paid. God's things are no exception to this rule. He who would enjoy the highest degree of moral or spiritual strength, the deepest joy in Christian service, the greatest degree of power to do good, must be willing to pay the price.

Farmer, mechanic, artist or professional man, if he would possess a high degree of efficiency, must sacrifice many things. He must go through a severe apprenticeship or course of study and training before he becomes efficient, a model in his chosen field. This is what I mean by paying the price. Are you willing to have your worldly friends forsake you, to bear persecution, to forsake many worldly pleasures, to come often close to the Lord in prayer? This is the price of spiritual strength.

Are you conscious of weakness, you have a good foundation for strength. Emptying of self-confidence prepares the way for the filling with that better strength. This weakness does not sit down and give up the struggle. It makes humble acknowledgment of insufficiency and willingly comes to receive divine strength for any worthy purpose.

When we feel weak in the presence of temptation the Word says again, "God will with the temptation make also the way of escape." 1 Cor. 10: 13. Success or failure with work or in temptations always depends on our relation to the Divine, and our willingness to use his strength.

If strength has its cost, it also has its reward. The Word is full of promises to those who live the over-coming life. When strength to accomplish a worthy purpose is received it becomes a talent from God. When we use it to do our full duty, all needed strength will be given and a blessed final reward is assured.

"I can do all things in him that strengtheneth me," Philpp. 4: 13. This will be the constant motto of those who believe a life of strength is worth while.

Batavia, Ill.

MORBUS SABBATICUS.

MORBUS SABBATICUS, Sunday sickness, is a disease peculiar to church members. The attack comes on suddenly on every Sunday; no symptoms are felt on Saturday night, the patient sleeps well and wakes feeling well; eats a hearty breakfast, but about church time the attack comes on and lasts until the services are over for the morning. Then the patient feels easy and eats a hearty dinner. In the afternoon he feels much better, and is able to take a walk, talk about politics, and read the Sunday paper: he eats a hearty supper, but about church time he has another attack and stays at home. He retires early, sleeps well and wakes up Monday morning refreshed and able to go to work, and does not have any symptoms of the disease until the following Sunday. The peculiar features are as follows:

1. It always attacks members of the church.
 2. It never makes its appearance except on Sunday.
 3. The symptoms vary, but it never interferes with the sleep or appetite.
 4. Never lasts more than twenty-four hours.
 5. It generally attacks the head of the family.
 6. No physician is ever called.
 7. It always proves fatal in the end—to the soul.
 8. No remedy is known for it except prayer.
 9. Religion is the antidote.
 10. It is becoming fearfully prevalent and is sweeping thousands every year prematurely to destruction.
- Ephrata Reporter*.

TAKE TIME TO THINK.

If some people would but think more they would say less and act better. Everything nowadays seems to go on a rush—even the ride to the graveyard. In many towns and cities trolley lines and funeral cars carry the corpse and the mourners to the cemetery. People live fast and die quickly. From morning till night it is one round of duties and pleasures and bustle and stir and rush and crowd and push—no time scarcely for reflection, for sober thought. Even the Christian Sabbath is so filled with social visiting and pleasure seeking that practically no time is given for sober thought of the present or of the future. Mrs. Harriet L. Hastings, in the *Christian*, has given expression

to the following sensible remarks upon the subject:

"Southey was explaining once to a Quaker woman how he filled up his time, studying Portuguese grammar while shaving, reading Spanish for an hour before breakfast, studying till dinner, and so having every hour and minute occupied with studying, reading, writing, eating, talking, exercising and sleeping.

"'And *when dost thou think?*' inquired the placid Friend, after listening to his long account.

"Sure enough, when do some people think? They talk, they rattle, they clatter, they gossip and gabble, they study, they read, they learn, they teach, but *when do they think?*

"There are persons whose lives seem to be filled up largely with assemblies, conventions, conferences, camp-meetings—anything to be in a crowd and in a rush. They go and hear three sermons a day for ten days in succession, fill up the interstices with social meetings, each sermon crowding out the one before it, as one wad in a popgun crowds out the other, until at the end they probably could not, without taking notes, remember enough of what they had heard during fifteen days, to occupy them in repeating it, fifteen minutes, and are just as ready to hear the same things over again the next week or the next month,—and all this while they perhaps have not real godliness enough to pray in their own families or ask God's blessing at their own tables.

"People need time to *think*. A quiet hour, a quiet half hour, a quiet moment, is sometimes worth more than a large amount of rush and noise and hurry. People need to get alone with God, find out his will, learn what he requires of them, and then strive to do it. They need time to think. Great men, men of brains and mind, must have time for silent meditation. They grow weary of perpetual clatter. They are tired of hearing over and over things which they have heard before, or things which perhaps they never care to hear at all. Thus musing and meditating they grow strong and full of faith and courage.

"The world is full of thoughtless people, people who rush headlong, who drive and rave, and hardly know right from wrong, until they have involved themselves in difficulties and snares. They need more time to think, and pray, and wait on God for wisdom, and guidance, and help, and then they will save themselves from much of the rash folly of restless men who are 'ever learning, and never able to come to the knowledge of the truth.'"—*The Free Methodist*.

We prepare ourselves for sudden deeds by our reiterated choice of good or evil.—*George Eliot*.

You have greatly ventured, but all must do so who would greatly win.—*Byron*.

Echoes from Everywhere

The physicians of Hancock County, Ohio, wishing to assist in the maintaining of the prohibition law there, the county medical association has determined to issue no prescriptions for whiskey except at the bedside of patients.

Exclusive of President Cleveland's messages vetoing private pension claims President Roosevelt sent more messages to Congress than any of his predecessors. In his seven years of incumbency President Roosevelt sent 423 messages and 40 veto messages to Congress.

A book published in Germany in 1906 contains the names of twenty or more fraudulent "cures," so-called, for alcoholism. The mere existence of these widely advertised preparations refutes the false assertions of the American brewers that there is no alcoholism in beer-drinking Germany.

Representative Tawney, chairman of the House appropriations committee, severely criticised the executive branch for submitting unwarranted estimates. He says the appropriations for the last eight years amounted to \$7,007,839,183 and at the end of the present fiscal year the deficiency would be \$150,000,000.

Noting that in Georgia the closing of the saloons, which were the chief venders of cigars, has so diminished the sale of tobacco products that many cigar manufacturers have been compelled to shut down, the cigar manufacturers and dealers of New York city have banded together to wage war against the prohibition movement.

Executive traffic officials of western roads have decided to continue the present low rates of less than 2 cents a mile for special occasions until November 1. As the case now stands no rate less than 2 cents a mile may be made after November 1 next. All the roads but two favor abolishing all low rates, making the minimum 2 cents, including the Alaska-Yukon exposition.

At the request of Chief Forester Gifford Pinchot, President Roosevelt recently set aside 450,000 acres of land in the Olympic Mountains, Washington, for scientific purposes. The land is a dense forest, and contains some of the largest standing trees of fir in the world. These forests are the haunt of the Roosevelt elk. In addition to this the land is a rich field for geological studies. This step is preliminary to the establishment of a national park in the Cascade regions of Washington.

Consul Frank W. Mahan quotes from a Nottingham newspaper the fact that inventions by British women are broadening very much in their scope, and are now including many articles with which one would suppose women would not be intimately acquainted. About 600

patents are now granted to British women annually. Formerly these patents were confined to the dainty order of things, but they now cover the broader sphere of mechanism. Some of the more effective recent improvements in sewing machines, automobiles, and even in marine engines and motors have been patented by British women. Patents for inventions relating to flying machines have been applied for by British women, and they have also directed inventive attention to railroad cars and to wireless telegraphy.

Prof. W. F. Durand, head of the department of engineering at Stanford University, has invented a device which will doubly increase the ability of man to know and harness the earthquake. It will enable scientists to register and measure the force of seismic disturbances which, used in conjunction with the seismograph, is expected to greatly increase human knowledge of quakes. The seismograph registers how far a particle of earth moves during a disturbance. Durand's device will register the speed with which each particle moves.

Secret service men in San Antonio are very much exercised over the apprehension of a number of Chinamen along the Rio Grande border and expect orders from Washington for another drastic campaign against this kind of smuggling of undesirable citizens into the United States. It is believed that an underground railroad for bringing Chinamen to Texas from Mexico has sprung into operation again. In years past this practice met severe treatment and the secret service men will doubtless be massed along the border for vigorous action.

The United States and Canada have decided to limit the amount of water that may be taken from Niagara River for power purposes. The average discharge of the river is 250,000 cubic feet per second; and if the total fall from Lake Erie to Lake Ontario were utilized, it would represent about 7,000,000 horsepower. The total available horsepower at the Falls is estimated at about 4,000,000. According to the treaty, the power companies on the Canadian side are to be limited to 36,000 cubic feet per second, and those on the American side to 20,000.

Assemblyman Oliver of New York has introduced a bill at Albany providing for a graduated inheritance tax to range from one to 25 per cent on all property inherited by will of more than \$5,000, although such inheritance is not liable to tax when it is of a value between \$5,000 and \$10,000 and is transferred to one of the immediate family of the decedent. Otherwise such inheritance of more than \$5,000 and less than \$25,000 is subject to a tax of 1 per cent of its value. The rate then gradually increases until it is 25 per cent for an inheritance of \$20,000,000 or over.

The Senate of the State Legislature has decided to continue county local option in Indiana for the next two years by killing, by a vote of 26 to 23, the enacting clause of a house bill to repeal the county option law, which was passed by a special session of the Legislature last September. County option repeal was a Democratic platform proposition in the last campaign, but since the election so many counties have voted "dry" under the new law that public sentiment had an influential effect on a number of Democratic legislators.

A novelty in correspondence, recently inaugurated by the French postoffice department, has met with such success that it might be tried all over the world. This is the telegraphic letter. The hours between 9 P. M. and 4 A. M. are not busy ones for the French telegraph lines. So the postal authorities decided to turn these hours to some use. Therefore, if one misses the post for a provincial town in France today, one can at the rate of 100 words for 20 cents, have the letter telegraphed and delivered by the first post the next morning. The scheme is very simple and is working well in Paris.

The blizzard which cut off the national capital from the world March 4 and forced a change in the plans for the inauguration will mean that this is the last administration to be inducted into office on March 4 if the plans of the leaders of both Houses of Congress are carried out. Men prominent on both sides of both Houses declare that a bill submitting to the State Legislatures a constitutional amendment providing for a change in the date of inauguration to the latter part of April or the first of May will be rushed through the special session so as to be submitted to the various States in plenty of time for action before the next inaugural.

The English Government will open negotiations with Wilbur and Orville Wright for the English rights to their aeroplane when the famous brothers come to London this month for the aero exhibition. This fact was learned positively, though the Government is still evasive as to its intentions. Ever since the Wrights sold their French rights to their aeroplane for \$100,000 there has been an increasing demand that England take advantage of their wonderful invention as a war measure. Germany is also considering a proposal to buy the Wright machine, the purchase by France making it almost obligatory that the other powers follow suit.

A wonderful instrument is that which has recently been invented for the purpose of measuring the sense of touch. The device consists of a series of little disks suspended by fine, delicate thread from wooden handles, the last being stuck into holes around a block. The lightest disk is taken out and brought into contact with the skin of the subject, the latter having closed his eyes. If nothing is felt, a heavier disk is employed, and so on till the pressure becomes noticeable. Through the medium of these disks, it has been found that the sense of touch is acute on the forehead and temple. A touch of a disk weighing three-hundredths of a grain was observable on the temple; one weighing five-hundredths on the nose or chin, and one weighing nine-hundredths on the inside of a finger.

The situation at Harbin, Manchuria, arising from the apparent determination of the railroad authorities to control the local administration has become a live issue in Russian politics. The protests of China and the United States are claiming public attention and it is believed

that the aggressive stand of the railroad authorities in Manchuria will bring about foreign complications. The negotiations with China are at a standstill until such time as the policy of the Government shall be determined. The foreign office outwardly supports General Horvath in closing the stores of the Chinese merchants who refused to pay taxes to Russia, but privately it is most dissatisfied with the situation. The "Novoe Vremya" sharply criticises the foreign office for its stand in this matter, and says it believes Germany is stirring up the question for the purpose of diverting attention from the near East. The paper intimates that Fred D. Fisher, until recently American consul at Harbin, has been acting in the interests of Germany.

New President Defines His Policy.

Mr. Taft, in his inaugural address, outlines his policy as chief executive of the nation, the following being a summary thereof:

RAILROADS AND TRUSTS: Advocates relieving railroads from "certain" anti-trust law restrictions. Urges proper federal supervision to prevent excessive issues of bonds and stock by railroads. Advises reorganization of certain departments of government to effect better co-operation and obtain more rapid and certain enforcement of laws affecting railroads and industrial combinations.

TARIFF REVISION: Announces that he will call a special session of Congress for March 15 at which Congress will be advised to consider only tariff matters. Urges revision of Dingley act to provide adequate revenue and adjust duties so as to afford labor and the industries tariff protection equal to the difference between the cost of production abroad and the cost of production at home.

REVENUE: Urges economical management to meet big national deficit. Advises adoption of graduated inheritance tax for revenue purposes.

PEACE: Favors promoting every instrumentality for the maintenance of international peace, but protests against foolish idealism and declares we must remain armed as long as other nations do.

IMMIGRATION: Declares foreigners in this country must be protected and asks that the President be empowered to enforce our foreign treaty regulations in the States and cities of the Union.

FINANCIAL SYSTEM: Urges changes in monetary and banking laws and insists that postal savings banks must be established.

FOREIGN TRADE: Asks Congress to promote establishment of direct steamship lines between North and South America by providing mail subsidies. Lays stress on importance of developing oriental and Philippine trade.

PANAMA CANAL: Insists work is progressing satisfactorily, declares lock system is feasible and urges that we coöperate with, instead of harassing, those in charge of the work.

COLONIES: Urges free trade between Philippines and United States.

THE SOUTH: Advocates State laws to prevent domination of an ignorant electorate. Says negro must be encouraged and that recognizing distinguished colored men by appointing them to office is evidence of appreciation of their conduct, but expresses doubt as to advisability of insisting upon such appointments in communities where racial feeling is strong.

LABOR: Favors employers' liability laws and general adoption of good safety devices. Upholds use of injunctions in labor disputes, but would place limitations on power of court in issuing temporary restraining orders. Denounces secondary boycotts.

Among the Magazines

THE COMIC SUPPLEMENT.

It is Sunday morning, the day of peace and rest. The blatant, bulky newspapers are unfolded. The children pounce upon the colored "comic" supplements. They spread them out upon the floor, and soon their innocent laughter resounds through the rooms. The parents beam upon them; it is a sort of new "children's hour," though it be not Longfellow's. The parents turn to their own sections of the paper. They feast upon Macbethian banquets of the world's assorted horrors. The little ones are engrossed in the mishaps of Happy Hooligan or Alphonse and Gaston or in the demoniacal ingenuity of the Katzenjammer Kids.

Yet while the minds of the adults have been dwelling upon the murder, dishonesty, unhappiness, and vice so entertainingly supplied by the papers, the impressionable minds of the children have been saturated with a debauchery of fancy, a harmful travesty of Life and Truth as baneful in its effect as the black news of reality. They have been feeding upon a hypnotic moral poison—the clownish crudities of the supplement. But how few parents seem to realize the insidious effect of these coarse and malignant horrors perpetrated as jokes upon their tender children!

It has been said that in America every story or play ends with a marriage, while the European novel or drama usually begins with one. So it appears that in America all serial jokes must end in some one being maltreated, blown to pieces, or battered to a jelly. These silly and pointless creations sink to lower and more fatuous extremes of absurdity week by week. The climax is unvarying and always disastrous—some wretched human being or animal torn to shreds or whirled about like a rag. The older folk are always the victims of the younger; they are always blind, deaf, and dumb imbeciles, the youngsters always marvels of resource and invention, with a sense of the ludicrous tremendously developed.

Years ago a hue and cry was raised against the evil influence of a book called "Peck's Bad Boy." It was wretched stuff, and soon forgotten. Very young children were unable to read it, so its power for tutoring them into disrespect or rebellion against their elders was insignificant. But the wide-reaching evil influence of these cheap and crude pictorial representations of cruelty, cunning, trickery, and brutality is momentous and immediate. It is, in fact, a national peril, and students of juvenile crime can no longer ignore its influence upon the receptive infant mind. It is a well-known biological and psychological law that the mimetic tendency of children is particularly strong in the domain of the reprehensible. To laugh at the discomfiture of an elder person to whom affection is owing, to seek revenge by underhanded means, to betray guileless and trusting confidence, to be selfish, untruthful, brutal, and crafty, these are the qualities of the heroes of the comic supplements.

Were a person to enter a household and induce the young people to indulge in malicious practical jokes, he

would soon be shown the door by the irate master of the house. Yet every Sunday morning such a visitor is received by the parents, nay, even welcomed, for it "amuses the children."

Proper pictorial amusement is easily and cheaply obtainable. The child should never be permitted to be merely amused. That which induces his laugh should also impart a lesson, however mild or subtle. The comic supplement is not comic, it is incipiently criminal. It appeals to one of the basest traits in human nature—joy at another's misfortune. It wrecks the conceptions of right and wrong in the unformed minds of the young. You parents who say these things "amuse" your children, can you afford the price you will hereafter pay for this indulgence? Pause and ponder.—Herman Scheffauer in March Lippincott's.

ENGINEERS REPORT IN FAVOR OF LOCK CANAL.

In the course of his message to Congress accompanying the report of the engineers who inspected the Panama Canal with President-elect Taft, President Roosevelt hit the nail squarely on the head when he stated that any criticism on the present lock plan "is merely an attack on the policy of building any canal at all."

The President's statement is literally true, for the experience already gained in building the very much less costly lock canal proves that the cost of a sea-level canal would be prohibitive. The estimate of the Taft Board of Engineers places the total cost of the lock canal at \$360,000,000. Some of this increased cost is due to improvements and enlargements of the original plan, and much of it to the steadily increasing cost of labor and material. To complete the canal at sea level would take, we believe, nearly twice as long as to complete it on the present plan. It is likely that the cost of labor and material will continue to increase as the years go by; and the greater length of time, coupled with this ever-increasing labor and materials expense, would bring the cost of the sea-level type up to at least \$500,000,000. It is an open secret that the compelling motive in the construction of this work is the possibility of an acute crisis in the world politics of the Pacific Ocean and the Far East. So swiftly do matters move in this present age, that an international crisis of the first magnitude might easily have arrived and passed, long before the ten years necessary to complete a sea-level canal had gone by.

Furthermore, a sea-level canal carrying a bottom width of only 200 feet for the greater part of its length, would be impossible of safe navigation by the ships of the future, which, many of them, will be not less than 900 feet in length by 110 feet in beam. This would leave but 40 feet of clearance between the ship and the side of the canal; and should a vessel of this length take a sudden sheer in the four or five knot current which would prevail at certain times, due to the 10 feet difference of level of the oceans at each end of the canal, she would be into

the bank before she could be controlled. The lock canal will have but $4\frac{3}{4}$ miles of narrow channel (a sea-level canal would have 40 miles), and for 20 to 30 miles of its length, the ships will be traveling in channels from 500 to 1,000 feet wide and from 45 to 75 feet deep. Because of the higher speed possible in the deeper channels, it will take less time to traverse the lock canal.

The report of the engineers, all of whom are specialists of high reputation in hydraulic work, is a unanimous and unusually strong indorsement of the present lock canal in every feature of its construction. Indeed, the report goes so far as to state that greater caution has been exercised than is strictly necessary, and it suggests lowering the crest of the dam by 20 feet, or from 50 to 30 feet above the level of the water against the dam. The engineers also favor increasing the minimum width at the bottom of the canal for a distance of 4.7 miles through the Culebra cut. In the opinion of the Board, "the work is well organized and is being energetically conducted," and they "see no reason why the canal should not be completed by January 1, 1915."—Scientific American.

BREATHING DUST.

A woman, essaying work in certain rooms in certain cordage factories, has, for initiation, an attack of "mill fever." It is a cold, a temperature, a loss of voice, a lassitude. It keeps the patient to her house for a few days. Passing off, it yields in time to a hoarseness, an asthmatic habit, enfeebling, chronic, in many cases.

These facts, long familiar to older countries, were substantiated for this country in 1905 through the extraordinarily painstaking investigation conducted by Miss Mabel Parton on behalf of the Woman's Educational and Industrial Union of Boston and the Federation of Women's Clubs of Massachusetts. Eleven of sixteen doctors elaborately interviewed by Miss Parton stated, from wide experience among cordage factory operatives, that chronic asthma, chronic catarrh, and chronic bronchitis were unduly prevalent among them.

This is certainly bad. But is it because of something inherent, something irremovable, in the making of cords, ropes, twines? Not precisely. Precisely, it is because of dust, extremely removable dust.

When we see men metal-polishers dying by the hundred of throat and lung diseases, because of the dust which rises into their nostrils when they press metal objects against whirling wheels of emery, corundum, carborundum, we do not say: "Industry is bad for men." We say: "Dust is bad for men." So, sometimes, we put hoods over the whirling wheels and attach pipes to the hoods and place suction fans in the pipes.

On top of one of the buildings of a big manufacturing company in Chicago there is a pipe through which, thick as cinders from a smokestack, come hurled, swirled, scattering, pattering, fine metal particles, drawn up from the rooms beneath, sifted to rifted drifts all over the roof by the wind, lying there a heavy, hell-hued snowstorm of lead, iron, brass. It was all of it in the air of the rooms beneath, breathed by the men, two years ago.

A suction fan can carry metal. It can carry flax fiber. Neither men nor women really need breathe a harmful quantity of any kind of dust, metallic or vegetable.—From "The Woman's Invasion," in the March Everybody's.

FOR REAL AND COMPLETE EDUCATION.

In the great movement for educational reform or readjustment the Religious Educational Association has an

important function. It devotes itself to those aspects of education, public and private, which the advocates of industrial training only incidentally touch upon.

It has often been pointed out in these pages that many of the sweeping and violent attacks on our educational system are weak on their constructive side. But the work of the Religious Educational Association is open to no such criticism. The association has definite, positive aims, and they are aims with which every thoughtful parent or teacher cannot fail to sympathize deeply. If education is to be vital and complete, if it is to train citizens and members of society, if it is to form character, it must attend to the emotional as well as to the intellectual needs of the school population. The three R's are fundamental, but they are only tools, after all. They may be used for immoral and criminal purposes, and they may give the evil-minded advantages over the ignorant and simple. It has been justly said that manual and industrial training has moral and disciplinary value, but the child requires more direct emotional and moral education.

It is the privilege and duty of the association to awaken the country to the full meaning of the ideal in education, "a sound mind in a sound body." A sound mind is distinguished by reverence, by loyalty, by a strong sense of social duty and human worth. No child is born with these qualities; they must be cultivated and developed.

How to cultivate them in an essentially secular system of education is the great American problem. At national and even international conventions the best educators and genuine moral leaders of the world are discussing it, together with allied and secondary topics, and the earnest discussion is bound to bear fruit. Lincoln week was itself an object lesson in the need and possibility of spiritual and ethical education. Fidelity, moral courage, appreciation of beauty of character, charity and good will can be inculcated in various ways, both in the school and the home.—Chicago Record-Herald.

SUCCESSFUL MARKET GARDENING.

WE are situated about twenty-two miles from New York city on the north side of Long Island. Have been in the truck business from boyhood. We have about thirty-seven acres of nearly level land; good soil, a little heavy but well drained; underlaid with clay, and hard pan under that. About four acres are in yard and orchard, from which we receive little or no income. The rest (with the exception of about six acres which is in hay) is under the plow, comprising about twenty-seven acres,—quite a small piece for this section where farms average about 100 acres.

Through the winter we haul home manure which we purchase in New York. It is landed at the dock, about one and a half miles from our place, in large scows carrying from eighty to 150 cords. A cord consists of about two and a half tons. It costs from \$2 to \$2.50 per cord. It is carted during the winter on wagons or sleighs, and spread as carted. About April 1 we begin to plow it under for potatoes.

The ground is then harrowed, followed with a machine potato-planter. We use about 1,200 pounds of high-grade fertilizer. We plant twelve inches apart, the rows being twenty-eight inches apart. Just before the sprouts appear we go over the field with the

weeder once or twice. As soon as we can see the rows we begin cultivating deep with a riding cultivator. Then they are worked at least once a week, but not deep, either with cultivator or weeder. With the weeder we go across the rows, as this way does not pull out so many potatoes.

About June 15 we commence to spray with the Bordeaux mixture, and if necessary add Paris green or white arsenic for bugs. We continue spraying about once in ten or twelve days until vines are dead.

The potatoes are dug with a machine digger which elevates the dirt and potatoes and shakes the potatoes out on top of the dirt.

By the time we finish planting potatoes we begin to plow under manure in another field for early sweet corn, and by May 1 we are ready to plant. We plant in hills four feet apart each way, using about 800 pounds of fertilizer per acre, putting it on top of the hill after the corn is planted and working it in with the weeder. We plant five grains in a hill. The corn is worked both ways with cultivators until it is taller than a man. Sometimes when it gets weedy we hand-hoe it, also. When it is breast high we pull off the suckers and thin it to three stalks in a hill. Of course, as the ground is rich there are a good many suckers (sometimes ten or more in a hill), and if we did not pull them out, the ears of corn would not be salable. As it is, the corn grows very large and commands the best prices. We plant, for early, Early Champion; followed by Long Island Beauty and Late Mammoth. We make plantings up to July 4 so as to have a succession until frost.

Early in August we seed about six acres of corn with clover and timothy and cultivate the seed in, both ways. In the spring we roll the stalks down and sow about 150 pounds of nitrate of soda per acre, and generally get a very heavy yield of hay the next year. This sod is plowed for sweet corn or cabbage.

About June 1 we commence to set out tomato plants for late. We raise no early ones. The plants sometimes are raised under glass, but often we grow them in the open in a sheltered spot. The variety is Stone. When frost time comes we pick off the large unripe tomatoes and ripen them under glass or in sheds.

About July 1 we set cabbage plants on well-manured land (with about 1,500 pounds of fertilizer drilled in with a potato planter and cross marked). We set them two feet and a half apart. Of course we have to set them after a rain. The varieties are mostly Purple Top and Danish Ball. We also grow some red and Savoy cabbage.

The first part of August we commence to pull sweet corn and dig potatoes for market. Having good macadamized roads and heavy market wagons weighing about 2,800 pounds, we can carry from four to five

tons on a load. We drive away in the afternoon, take ferry, and get to New York market in six or seven hours. The horses are stabled and we go to bed; and in the summer are up at three o'clock to sell our load. The market wagons stand in an open square in long lines. The lines are about forty feet apart, giving room for the grocers and peddlers to drive through and buy. It is a sight well worth seeing on an early morning in the summer time during the corn season. The long lines of farmers' wagons, the street full and blocked with the buyers (sometimes four abreast), everybody shouting and talking, and every one in a great hurry.

Now the financial part of this. Of course much depends on the season, how the crops grow and how the prices are. I will give you a statement of 1906 yields and prices:

10 acres potatoes, 900 bbls. @ \$1.90	\$1,710.00
Potato culls, 50 bbls. @ \$1.25	62.50
2 acres tomatoes, 815 crates	857.00
5½ acres cabbages, 19,400	796.00
½ acre Savoy cabbages	25.00
8 acres sweet corn, 52,800	694.45
Hay	162.00
Cabbage seed	100.00

Total receipts\$4,406.95

You can see from this statement that the potato crop was above the average that year, but the price was much below. The tomato crop brought an unusual price. But our cabbage crop was very poor, one-third of it rotted in the stump, and that which we kept until spring brought almost nothing on account of the glut in the market, caused by new cabbage from the South.
—*Farm Journal*.

The Theory.

The single eyeglass is worn by the dude. The theory is that he can see more with one eye than he can comprehend.—United Presbyterian.

A Request.

A parent who evidently disapproved of corporal punishment wrote the teacher:

"Dear Miss: Don't hit our Johnnie. We never do it at home except in self-defense."—Sacred Heart Review.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

FIELD POST (Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind)

Your Children

speak in the language of the twentieth century. In school, they are taught the language of the present day. Is it natural then, that in their Bible study, they should be expected to understand the English of the seventeenth century? The

Edited by the American Revision Committee

is for you and your children. It is the Bible truth revealed in the clear, simple language of the twentieth century.

24-page Booklet Sent Free

This book tells about the previous translations of the Scriptures and shows how, by the growth, change and development of the English language in the past 300 years, the American Standard Bible became a real necessity. The booklet tells also of the thirty years of effort spent in producing the American Standard Bible and gives many endorsements from prominent clergymen and religious writers of all denominations, with names of colleges and institutions where it is used.

A postal will bring the booklet—write for it to-day

Holmes' Green Prolific Pole Lima Bean

Grows Green—Dries Green—Stays Green—Most Prolific

Equals the Early Jersey or any other variety for earliness. More productive than any other Pole Lima we have ever seen grow. Every Bean has that true, distinct, deep grass green color, and this color it retains when the Beans are shelled for market. The large pods hang in clusters of from five to eight, each pod containing from five to six beans.

Stock extremely limited. Positively only three papers will be sold to any one person. Pkts. containing six beans, 25 cents; 3 pkts., 50 cents.

Holmes' Delicious Early Sweet Corn

Entirely new and distinct. Very early. Ready for market in 55 days. The most delicious Early Corn grown. Has twelve rows to the cob, and each stalk bears two or three well-developed ears.

Stock extremely limited. Pkt. containing enough seed for three hills, 25 cents; 3 pkts., 50 cents. Positively not more than three pkts. sold to any one customer.

Fuller description of both above Novelties will be found in our Hand Book on Seeds which is sent free for the asking.

No other seed house can offer these two sterling novelties this year

HOLMES SEED CO., HARRISBURG, PA.

TAKE NOTICE

Are you seeking for health, wealth, happiness, beautiful scenery, fine weather, good schools, and splendid church privileges? If so, come to Reedley, Fresno County, Cal. Located in the famous San Joaquin Valley, where you can enjoy yourself all the year around. Land is not so high yet but what you can get a home. Land is worth from \$10.00 to \$1,000 an acre and steadily advancing in price. It so happens that Reedley lies at the intersecting of two great railroads, the Santa Fe and the Southern Pacific. This gives us an excellent train service and good shipping facilities. Reedley soil under extensive irrigation has proved remarkably productive and the location, near the foothills of the Sierra Nevada Mountains, is a location that cannot be surpassed for the raising of almost any kind of fruit and nuts and all kinds of vegetables. You can raise some kinds of vegetables every day in the year. The "Square Deal for All" is our rule. For further information address

FINCH & HOLDERMAN

Reedley, California, Box 602

NEFF'S CORNER

I used to deal in books, and in clearing out some plunder today I found a few left-overs I had forgotten I had. Now, I'd like to give them away and I propose the following plan. The Lord's work in New Mexico needs finances and if you will help me, we will give these books to the Lord for the support of his work in New Mexico. I have 19 copies of "Daniel the Fearless," by G. B. Royer, my price, post paid, 20 cents per copy; 13 copies of "Path to Wealth," a large volume bound in red leather, an excellent work on financial success from the Bible standpoint, former price, \$2.50, my price \$1.00, post paid; 2 copies "Mr. World and Miss Churchmembers," 60 cents each, post paid; 2 copies Pilgrim's Progress, 15 cents each, post paid; 1 copy "Life and Work of Dr. Talmage," a large illustrated, half-morocco bound volume, former price, \$3.50, my price, post paid, \$1.00; 20 copies of my own little book, "How About Your Bible?" 25 cents each. Send for some of these books. You have neighbors who will join you in making up an order if you show them this announcement, and every cent you send me, over and above cost of mailing the books, I will put into the New Mexico mission fund. Don't wait long. You know we soon forget. Remit any way you like. Address:

JAMES M. NEFF,

Clovis,

New Mexico.

Buckeye Pure Home Made

APPLE BUTTER

is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all.

Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address:

WM. S. MILLER,
Meyersdale, Somerset Co., Pa.

OWN A HOME

In the Land of Health and Wealth

Here's an opportunity to make a fortune. It's not a chance—not a risk—but a **positive opportunity**. And combined with this opportunity of wealth, is an offer of culture, education, pleasure and health—for your family as well as yourself.

Clear blue skies, pure air, mild winters, comfortable summers, beautiful scenery, together with excellent church privileges, good schools, pleasant neighbors and **big crops**—they're all to be found at

—Miami Ranch—

18,000 acres of land in Colfax County, New Mexico's choicest farming section. Not a lonesome, dreary tract of land in a boundless desert, but a rich, cheerful valley surrounded by picturesque mountains.

Elk, deer, bear and other game can be found in the mountains, while thousands of wild ducks and geese inhabit the surrounding lakes. The Rayado River, which flows through the ranch, is famous throughout the Central West for its mountain trout.

The MIAMI RANCH is specially adapted to the raising of wheat, oats, barley, sugar beets and fruit. New Mexico wheat took first prize at the World's

Fair in Chicago; and apples raised in an orchard directly adjacent to MIAMI RANCH won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 per acre.

At the National Irrigation Congress Interstate Exposition held at Albuquerque, N. M., last October, Colfax County won the \$400.00 Silver Cup for the best showing in varied resources, embracing agriculture, horticulture, minerals and live stock. Conditions in northern New Mexico for stock and poultry raising and dairying cannot be excelled.

WONDERFUL IRRIGATION SYSTEM

Although the average annual rainfall at MIAMI RANCH is 13.92 inches and the heaviest fall is during June, July and August, when it is most needed, the owners of the MIAMI RANCH have constructed ditches and storage reservoirs which give such an abundant supply of water to all lands which they offer for cultivation as to insure the biggest crops possible for any soil to raise. The irrigation system is in charge of an expert who furnishes instruction in irrigation to the farmers. Every opportunity possible is offered you to make your life a success on MIAMI RANCH.

Less than half fare rates can be secured to MIAMI RANCH via the Atchison, Topeka and Santa Fe Railroad, the first and third Tuesdays of every month. Write for more information regarding these excursions and also ask for our free booklet, "Westward Ho." It tells in detail all about MIAMI RANCH and shows illustrations of actual scenes on the ranch.

Prompt action is necessary if you want to take advantage of the present bargain offers being made. Write today—right away.

Farmers Development Company SPRINGER, NEW MEXICO

Two Centuries of the Church of the Brethren

Or the Beginnings of the Brotherhood

This book is a fitting souvenir of the Bicentennial conference and is enjoying the large sale it so well deserves.

The introduction is written by Prof. M. G. Brumbaugh. The arrangement of the twenty-four addresses is the work of Eld. D. L. Miller. The book is embellished with Twenty-five Full-page Photogravure Effect Portraits.

These illustrations consist, for the most part, of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

SUBJECTS AND SPEAKERS

The Church in the Fatherland: (1) The Conditions in Germany about 1708. M. G. Brumbaugh, Pennsylvania. (2) The Birth of the Schwarzenau Congregation and its Activities.—T. T. Myers, Pennsylvania.

The Church in Colonial America: (1) The Mother Church at Germantown and her Children.—G. N. Falkenstein, Pennsylvania. (2) The Church Before the Revolution.—J. W. Wayland, Virginia.

The Church in the United States: (1) The Growth to the Mississippi.—J. G. Royer, Illinois. (2) The Growth to the Pacific.—Edward Frantz, Kansas.

The Voice of God Through the Church: (1) What the Church has Heard from God.—L. W. Teeter, Indiana. (2) What the Church has Done with the Message.—J. W. Lear, Illinois.

What the Church Stands For—Her Doctrines.—H. C. Early, Virginia.

Church Polity.—I. D. Parker, Indiana.

The Higher Spiritual Life of the Church.—A. C. Wieand, Illinois.

The Church and the Great Moral Issues of Civilization—Liberty, Temperance, Divorce, Peace, etc.—Daniel Hays, Virginia.

The Work of Women in the Church.—T. S. Moherman, Ohio; Adaline Hohf Beery, Pennsylvania.

The Sunday-school Work of the Church: (1) The Importance of the Sunday-school Work. I. B. Trout, Illinois. (2) The Growth of the Sunday-school Movement.—Elizabeth Myer, Pennsylvania.

The Missionary Work of the Church: (1) The Development of Missions in the Church.—Galen B. Royer, Illinois. (2) The Influence of Missions on the Church.—William M. Howe, Pennsylvania.

The Educational Work of the Church: (1) Early Educational Activities.—S. Z. Sharp, Colorado. (2) Present Educational Activities.—J. S. Flory, Virginia.

The Publications of the Church: History of Growth and Development.—H. B. Brumbaugh, Pennsylvania.

The Philanthropies of the Church: (1) The Church's Care for the Aged and Orphans.—Frank Fisher, Indiana. (2) The Gish Fund and the Care of Superannuated Ministers and Missionaries.—J. E. Miller, Illinois.

Our Pioneer Preachers.—J. H. Moore, Illinois.

Brethren Publishing House, Elgin, Ill.

A Sample of the Oat Fields in the Nanton District.

BOUNTIFUL HARVESTS

The prosperous settlers of Sunny Southern Alberta have harvested and threshed enormous crops the past year. The wheat yield on some fields was as high as fifty bushels per acre. The oats yield was as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

REDCLIFFE REALTY CO. (R. R. Stoner, Pres.),

430 Temple Court

\$25 TO CALIFORNIA, From Kansas City.

\$33 TO CALIFORNIA, . . . From Chicago.

A NEW COLONY

After an extended tour of investigation and careful consideration the CO-OPERATIVE COLONIZATION COMPANY decided to locate its first colony in the famous San Joaquin Valley, California, near the center of the State. This is a fine section of country, with mild, short winters. Grains, grasses, fruits, berries and vegetables of about all kinds are grown here successfully, from oranges, and other citrus fruits, to the most hardy plants of the more northern climate.

EMPIRE

is the name of the new Town and Colony. It is located on the main line of the Santa Fe railroad, in Stanislaus County, five miles east of Modesto, the county-seat, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

This is not a new, undeveloped country. All the colony lands are under cultivation, wheat, oats, barley, etc., being the principal crops, until the installation of the Modesto-Turlock Irrigation system, one of the finest in the State, since which the more intensive methods of farming have been followed, because of the greater profits.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal.

Our next party of Colonists will leave Chicago Tuesday, March 9. Prospective Colonists and Tourists are invited to join this party. For further information write to

One Dollar Per Year

A Hymn of Peace

Breath of the Lord that moved of old
Through chaos of the quickening earth,
Till the wide heavens in light unrolled,
And the sun and star and flower had birth,

Breathe on this warring world of men,
To bid its strife and tumult cease;
Till stars of morning sing again,
With Sons of God, the Song of Peace.

Still on the waters broods thy power;
Through all our discords echoes still
The music of that later hour,
"Peace on the earth! in heaven goodwill!"

Teach thou our hearts that nobler song
Of nobler souls by truth set free,
Till the full chorus, sweet and strong,
From thy glad earth goes up to thee.

—Emily Huntington Miller.

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

“Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: ‘First, to give a true and faithful record of the sufferings and experiences of these Christian People.

“Second, to testify to God’s goodness in protecting them.

“Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.”

One of our agents reports: “I took 12 orders for the book in one hour. It sells on its own merit.” Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes." —Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

John Holtom,	Wheat	52	20
Albert Mickels,	Oats	90	9

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 12.

THE COMMON SCHOOL TEACHER

D. D. THOMAS

THE profession of the teacher cannot be valued too highly. In these American schools he wields an influence that for elevation of character in integrity and power is excelled by none. His work, it is true, deals only with the "moral duties" of life. The Christian "positive duties" are left to the minister, the Sunday-school teacher, and the workers at home. How well they perform their work does not come within the scope of this paper to assert.

The teacher lives within a sphere of trust to the guardian of the child's life. "Here," says he, "you take my child and mold his life, direct his way to usefulness and happiness. I give you full control. Do your work well," and the teacher realizes that a great work is before him. His responsibility is threefold, to the parent, to the child and to his God. But he knows from the start that his greatest responsibility is to his God, and his greatest power comes from him.

He takes up his work with a song. To brood over the affairs of life, to become peevish or morose is not within the sphere of a teacher. His is a song. He who cannot be influenced by the happiness and gayety of children had better go chop wood, or do something to give his blood circulation; at least, there is stagnation somewhere. His is a song, duplicated, enlarged, made grander, and becomes immortal.

The mind of the teacher is creative, using the material there is at hand. This implies resourcefulness. He does not come to his wits' end. He builds a castle for each prince and princess and bids them step in, showing them the glory of the kingdom and the power of the king. He nips the bud of vanity, pruning down the shoots of pride, shows them the beauty of humility and the transcendency of virtue. And at every turn the picture is changed that their eyes may feast thereon.

The teacher is the normal reformer. He begins where the reform becomes a growth. A true reform is accomplished in no other way. The plastic mind of

the child is filled with clear ideas of right and wrong, and strengthened with the growth of years.

The adult may have right ideas but wrong practices. He admits what is right but does what is wrong. Or if he succeeds in overcoming he is not assured that he will not go back to his old practices again. His reform has come late. Not so with the teacher's work. One is reminded of this in the history of the temperance work. Hardly is the teacher fully credited for what he has done here. The knowledge of the effect of alcohol on the system faithfully taught by the teacher for twenty years is literally crowding out the liquor business. It is the grown up knowledge of its evil that has helped them to see that liquor was making tax, not paying it, was breeding poverty, not supporting it, was cherishing crime, not destroying it, and was a curse upon humanity in every way; and the ranks from such teaching are daily growing larger.

A few months ago in Indianapolis a couple were about to be married. The affair was to be celebrated with considerable pomp and expense. The ceremony was to be performed in the church. The wedding robes were donned. The happy pair were on their way to the church when the bride scented the fumes of whisky on the breath of the groom. Everything was stopped. The wedding was called off and the bride went back to her home. Wealth and high standing would not affect her. She preferred a single life rather than a husband whose lips touched the vile stuff. Her early teaching made her willing to stand forth in that critical hour for the right. Here is something noble. A bride who has the strength of character to stand out against the man she loved even at the very steps of the hymeneal altar, such fruit is a glory to the teacher's work.

Much of the teacher's work has been done with poor pay and unfavorable surroundings, though now one can see that his efforts are being crowned with better success. He is placed in a room better suited to the

health of the pupil, and more nearly furnished with proper apparatus needful to facilitate his work, and the spirit of the times seem to indicate that there are better things in store for him. Here again his teaching is shown but it is only through hard labor and self-sacrifice that he has accomplished his ends. The old barriers are slowly being broken down, and he seems to be stepping forth as the child's friend and a benefactor of the age. A teacher's work may be hindered but he still remains. The stocks of Philippi did not destroy a good preacher though his work seemed hindered. Like the dungeons of Rome with a Paul, so adversity with a true teacher should only brighten his work and intensify his glory.

A true teacher's life shines forth in his pupil. He prefers to be hidden away. He sits in the shadow and rejoices to see the pupil step forth into the sunshine of useful deeds and bright prospects. And when the pupil goes into the arena of life and wins laurels or shows bravery in defeat, this is the glory of the teacher. He thanks his Maker in his inmost heart that he has been accounted worthy to do so much for the bettering of the world. The world may not know but his God knows and that is enough. Why should not the last hour of the teacher's life be the most peaceful? He no doubt has made mistakes, an uncalled for rebuke, a correction unjustified, but he meant it well, and the child mind more readily forgives. He has been dealing with the purest epoch of human history. Their faces are nearest like the angel's. Their souls are most like the lilies for whiteness. His life should set as the evening sun, for the great Teacher has said of the child, "Of such is the kingdom of heaven."

WE BOYS.

A. G. CROSSWHITE.

EVERY farm and every home, for that matter, has had some well-remembered spot that the grown-ups and scattered children look for on their return to the home of their childhood days.

Ours had several that were really more sacred to me than even the little bedroom north of the dining room and facing the winding brook that flowed through the meadow whose rippling, laughing waters so often sung us to sleep or waked us in the early morning as they dashed and foamed over succeeding ledges of rocks, waving back a stranger, sadder farewell than ever fell from human lips, for they told us that they were headed for the great boundless sea, and that we should see them no more.

We were taught that the farewells spoken by our departing friends, whether to a distant land or the "invisible beyond," would one day be exchanged for smiles and words of welcome when we cross to the other side, but not so this, for neither the little murmuring wavelets nor the message we send upon its

trembling, sparkling bosom shall ever return, nor shall we ever recognize "the water that has once turned the mill."

This condition of revery suited the quiet hour but there were days when the patter, patter of the summer shower drove us to the family sitting room where our ears were often greeted with the low hum of mother's spinning wheel. This was just as sweet as the murmuring stream, to be sure, but it was entirely too slow for growing boys. The creek was now rising and the big murky waves had turned the little fairy voices of the night into a big bass solo of commercial importance. Before the big drops ceased to fall or the rainbow appeared the boys had donned their old clothes and were ready to "shoot the rapids." There were other big (?) boys along the stream who liked the sport as well as myself. You see a boy counted himself big anywhere from twelve to sixteen years and big boys didn't miss a little patch of skin that was knocked off by the protruding rocks here and there, just so they caught hold of some object before they made the final plunge into the swimming hole. Pig troughs, rails and slabs that lay along the banks of the creek—in fact anything that was loose and possessed floating qualities went down with the tide either with a boy on top of it or it on top of a boy. It mattered little which just so the boy showed up at mealtime.

This swimming hole was not of large proportions but it looked big and deep to boys who had never been far from home. On the side of this pool was a smooth table rock large enough for a nice sunning place for several boys at a time or in their absence for snakes, turtles, and frogs in abundance, and being admirably shut off from public view by a fine lot of friendly willows it was a paradise for either class of animals above named.

But one thought of the old swimming hole brings a tinge of sadness. One evening we had company and everything was joyous and mirthful until it was suddenly discovered that a storm was approaching. All speedily assembled in the sitting room. The doors and shutters were closed and everything in readiness for the worst when the alarm was raised that our little brother was missing.

Every nook and corner was hastily searched but no account could be given of his presence for the past hour. The storm was now quite forgotten and all else in fact save the missing boy.

The news soon spread to the nearest neighbors, who came with lanterns and torches to assist in the search.

The little creek was thought of as his burial place, and every pool that could possibly conceal his precious little body was minutely examined. It seemed quite improbable that his tottering feet should have carried him as far down as the swimming hole which was

some forty rods from the house and the child less than that many months old. But to that point father led the way with the one sad thought that our precious little brother was at the bottom. His feet stood on the rocky platform a foot above the invisible depth of that watery grave that must forever be the tomb of all our happiness. But Providence overruled, and at his feet wrapped in sweet slumber was the object of his search. Scarcely had he reached the house when the storm came in all its fury and at daylight next morning not a trace of his rocky bed was to be seen, for the maddening stream had covered all.

Somebody has a brother, sister or dear one who is on the verge of a darker abyss and the storm is sweeping on. Will they be rescued in time? What will the morning—the morning of eternity—reveal?

Flora, Ind.

CLEOPATRA'S NEEDLES.

T. H. FERNALD.

THE two obelisks known as "Cleopatra's Needles" were erected at the entrance of the Temple of the Sun, at On (Heliopolis), Egypt, about 1600 B. C. by Thothmes III, and were cut from granite from Syene, near the first cataract of the River Nile. Two centuries after their erection Rameses II had the stones nearly covered with carvings setting forth his own greatness and what he had achieved.

23 B. C. Augustus Cæsar moved these obelisks to Alexandria and set them up at the Cæsarium, a palace which now stands a mere mass of ruins, near the station of the railroad to Cairo. In 1801 one of these obelisks was presented to England by the Egyptian government, but as no one knew how to move it, it was not taken to London until 1878. When it was erected on the Thames Embankment. Subsequently the other was presented to the United States, and now stands in Central Park, New York City.

The work of moving this great obelisk from Alexandria to New York was in charge of Commander H. H. Garringe, of the U. S. Navy, who reached Alexandria October 16, 1879, and at once began work, assisted by one hundred Arabs, who completed the

excavation of the pedestal by removing 1,730 cubic yards of earth in about twenty days. The machinery for lowering the monolith was then attached and the block laid in a horizontal position. Inside the foundation, and steps of the pedestal, were found stones and implements engraved with emblematic designs, and some delay was caused so that these might be taken up very carefully so as to be placed in exactly the same position in the pedestal when re-erected in New York.

The obelisk was moved to the wharf and put upon the steamer awaiting it by means of cannon balls rolling in metal grooves. The pedestal, steps and shaft were moved separately, the entire mass weighing 1,470 tons. The steamer with this load left Alexandria, June 22, 1880, and arrived in New York, July 20. The iron tracks and cannon balls were put in place after some delay, and on these the obelisk was unloaded September 16. Then the rise and fall of the tide was used to float it up the North River to the landing at the foot of Ninety-sixth Street, from where it was moved by steam power, on tracks and rollers, to Central Park. This track was two miles long, and inclined, the upper part being laid on trestlework in order to bring the shaft, when raised, to a proper height above the pedestal. Pulleys, chains and ropes were then attached, and, at the signal being given, this great column was rapidly but gently raised, and in a short time stood firmly upon the base, which had previously been securely put in place.

Belfast, Maine.

SLEEPING ON A TRAIN.

"THERE is only one way to sleep on a train," said the porter of a sleeping car, "and that is with the head toward the locomotive. If I should make up my berths so that the passengers would lie with their feet toward the locomotive they would sleep little, if at all.

"The reason is that with the head pointed right the blood runs down to the feet, and the calm head invites sleep. But pointed the other way the head fills up with blood, the mind becomes excited, and sleep is almost an impossibility. It is on this account that on sleeping cars the pillows are toward the engine."—*Selected.*

HENRY WADSWORTH LONGFELLOW.

Richard Braunstein.

A Life Psalm, staidly sweet and simply strong
As any the dead Singer gave the throng,
Sinless to its close. But Fame will yet prolong.

In echoes clear, across two worlds wide winging,
And in all American hearts like home bells ringing
Glad memory of the Singer and his singing.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter L.

ON the way to the railway station I went through the camels' camping ground. Nearly all were lying down in the sand and but for their quaint trappings of shiny metal and bright leather, they could scarcely have been detected from the gate of the enclosure.

Just as I was about to "snap" the picture shown here, the Turks lying by their camels in another part of the camp arose and came toward me, making signs among themselves that sounded like money. I saw at once that the place was very dangerous for a lone foreigner and after catching the picture I made no delay in getting out on the beaten path. In fact, I am finding that "two are better than one," in travel as in home-making.

Before leaving the college I was warned by the president of the danger I might expect from the Turkish brigands. The government had issued an official warning to all Europeans and Americans to look out carefully for the coming at any moment of the brigands that then were terrorizing those who lived near the mountains. The Sultan advised them to stay in the cities, asking all those whose summer homes were in the mountains to remain in their city homes, or take the consequences that might be theirs should they dare to wander about in the hills or to inhabit their summer homes.

Ephesus was forty-one miles away. A railroad carried passengers there and back. One of the lady missionaries wishing an escort, I accepted the position, going with her by rail to visit the chief point of interest of the Seven Churches of Asia, knowing that although the greatest brigand in Turkey had his mountain haunts not far beyond Ephesus, we would have little to fear from our being captured and taken to the hills, there to be held for ransom.

The cars in which we rode were so roughly built

I forgot that a picture of a Turkish train would be interesting to the reader.

The train ran through a picturesque country, most of the way being level or of moderate roughness, on each side the track of which were small patches of raisin farming, many of them being an acre or half acre in size. The raisin grapes raised here are picked and then strewn over the ground in thin layers so that the hot sun may dry them quickly, shrivelling them into nature's sugared tidbits. Peasants looking as if they had "never been anywhere" raked the raisins together, swept the sandy ground so as not to lose any, put them into big sacks, loaded them on camels and started off for Smyrna.

The train ran slowly along a siding, stopped with a jerk at a depot on our right, when some one said, "Ephesus!"

My lady chose a donkey to carry her to the ruins, which are a mile or more distant, down the flattened valley running towards and into the sea. She also hired a guide, and while he led the donkey from the "fore," I twisted his tail from the "aft."

We passed the high aqueduct, the Roman

Castle, the Gate of Persecution, the Great Mosque and then reached the ruins of the Temple of Diana of the Ephesians. When this was reached I let go of the donkey's tail, helped the lady from her throne, and making a post out of the guide, we left the splendid steed hitched securely to it, and descended into the theater to which the mob had run and cried for two hours, "Great is Diana of the Ephesians!" The picture shows it just as it is today,—a mass of ruins.

Again I heard the voices of that ignorant mob, clamoring themselves into slavery to the money kings, fawning at the feet of the heartless grafters who made them believe they ought to buy the silver idols they

The Ships of the Desert Lying in the Harbor of Rest,
Waiting Cargoes of Rich Merchandise.

were manufacturing, not for service, but in order to get their money without a just equivalent. "Lest our profession be brought to naught." There were the round, elegantly-curved marble columns of the fountain, supporting a portico of marble, still lovely in perfection, just as when Paul drank from it and Alexander stood near. But it is dried up now. And everything that went against the gospel movement is dried up. So we are told of the Holy Land, which I shall confirm or deny in a short time. Near by I found the long marble steps leading from the splendid pavement down to the boats rocking one day on the sea that washed close by. But today the sea, as if ashamed of the contemptible people who once lived there, has parted company and receded a mile or more, leaving the place stranded in the midst of a miserable swamp, where hideous lizards dart about with the glassy eyes of little demons, and thorns and weeds grow rank and uncut.

"Ephesus" is the epitome of abject desolation. It made me feel as if I might wither up, wrinkle down and bend all over into an old man if I hung around there much longer.

The only delight springing from the ruins were the fig trees laden with the choicest ripe fruit, some of which had "cured" on the tree and tasted like the best figs we buy at home. Did I eat them? Oh, no! Right out of the rubbish of the Temple of Diana itself, a big tree drooped under its sweet load. I climbed up into it from the rocks that once graced—disgraced—that temple. And not aascal priest was there to call me down. Up I went, eating as I climbed, and dropping down into the big apron of the lady below such of the figs I couldn't eat. They hung as thick on that tree as grapes on a bunch. Only one out of five I ate, for not all figs on the same tree are good. About one out of five is as good as it can be. Some of the others are real good, some are just middlin', and one or two must be thrown away. In buying figs you have noticed this, for when you get the figs at a low price or of small size they usually are not the best, for these inferior ones, even if large in size, are packed with the small ones. I have learned how to tell a good fig without tasting it, both when growing green and when packed in the little flat boxes I always rubber at in show windows. The good ones look this way, and the bad ones look that way. You can always tell by the "way"

they look which are the good and which are bad.

The ugly hills were on both sides of us. On the south and west the hills approached mountains in size and aspect. Bare of vegetation, bleached of the glory that once blossomed forth like June's flowery splendor, they tended to make the blood run chilly in fear. More than this, the great brigand hid in the mountains not very far from here.

Although in a paradise of figs, I constantly threw my eyes over my shoulder to be sure that he with his robber band was not sallying down a gully or peering from behind a rocky covert.

The name of this brigand, feared as death by every one here, is Tchakigis. With him are six others of Jesse James' character, good with rifle, and skillful on their Arab horses as cowboys. But this is not the brigand's greatest asset.

He is an avenger of a ghastly cruel Turkish atrocity. His father was a brigand. So much feared was he the Turks were glad to secure him at any cost. Repeated attempts to capture him being frustrated, the government issued a manifesto to him, offering him the freedom of the city and entire pardon of all his past offenses if he would only come down, enter the city and lay down his arms.

Having confidence in his own countrymen and wishing to obey the wish

of his government, the father packed up his mountain treasures, left the life of dangerous thrill and surrendered, like a man, in the city and place chosen by the officials, meekly waiting for the official pardon of his murders and robberies. But instead of the pardon promised, the Turks shot him down like a dog.

Looking upon that deed of treachery was his young son, Tchakigis. From that moment he vowed vengeance upon his brutal countrymen. While the pulse still beat in the father's temples, he had determined upon his plans. Armed and provisioned better than his father had been, he fled to the hills.

It is he who is now in these mountains and who swears death to every Turk who seeks his head, upon which the government has set a price of one thousand pounds. He has already killed several officers and he and his picked band of five followers are formidable, indeed, for there is no force so great as the wrath inspired by gross injustice.

After Delivering an "Impromptu" on the Death of Mrs. Diana, the Silver Fraud, the Mission Woman "Took" Me from One of the Marble Foundation Stones.

While the father preyed upon foreigners, the son seeks Turks as well. Because of this added phase of the brigand's scheme, the Turks are interested more than usual, for they, too, are in danger of falling into his hands.

This is why right now the government has forbidden foreigners, English, German and others, who have summer resorts upon the sea along these shores, to leave their city homes. The safety of these wealthy folks is a means of no little distribution of funds, in the purchase of provisions and in the work they give to needy artisans, and any jeopardizing of their welfare would spell disaster to income of that sort by driving these away and by keeping others from investing. Securing an Englishman, for instance, and holding him for a ransom of fifty thousand dollars, the English government would act upon the Sultan, demanding that armed soldiers be sent out to recover their citizen, to capture Tchakigis, dead or alive, or convey to him the ransom money demanded. In either case the soldiers going against him, being compelled to encounter him and his band in his rocky fortress, would one by one be picked off before they got to him. Add to this the sympathy of all the people around here for the brigand, whom he has helped by gifts of charity and kind treatment, many of whom would die for him, and the added sympathy of nine out of ten of the soldiery, and you have a fair picture of the brigand problem.

On a bicycle tour in the wild regions farther east which I took with a handsome young Greek merchant and mechanic of Smyrna, I had refreshments at a rude mountain tavern where this brigand, Tchakigis, sometimes eats and drinks when fleeing for his life or when scouting for victims.

To meet either of the two men who were in charge of this rendezvous in this wild region would daze the vision of the coolest of adventurers. My picture of them will be sent in my next letter, if the Turks allow it to go through. They open nearly everything you send or receive.

IMPRISONED SUNBEAMS.

NETTIE CULLER.

IN the study of the history of a piece of coal our teachers tell us that the fact that the coal burns and gives out flame and heat means that in the leaves of the plants that have been molded into the coal has been bottled up the strength of the sunbeams that shone upon them ages ago, for plants do work up the strength of the sun's rays into their leaves and hide black carbon in even the purest substance they contain. So it is probable that the piece of coal is made of plants, that, although greatly altered from their original form, still have much sunbeam strength bottled up in them which can be set free as they burn,

and the coal that flames still has in it much of the tar, gas and oils which the plant stored up in its leaves, and these, when they escape, again give back the sunbeams in a bright flame.

Not only do we get heat and light from the coal, but from it is made paraffine oil and also benzoline. Nor does its value end even here, for from benzoline we get a liquid called aniline, from which so many of our beautiful dyes are made. Also the essences used to flavor various sorts of sweets, such as bitter almonds and pear drops, so well known among children, are derived from coal-tar. Thus, from coal we get not only nearly all our heat and light, but beautiful colors and pleasant flavors. So, although the plants of the coal seem to show no beautiful flowers, yet we see that a very long time after their death they give us beautiful colors and tints, as beautiful as any in the flower world now.

We ought to think for a while of how much we owe to those plants that lived and died so long ago, perhaps in surroundings that were not beautiful—in lonely marshes—where they lived and died all in one spot, generation after generation, with no admirers but possibly a few croaking reptiles and crickets and grasshoppers, and then how they were covered up and away down in the dark earth they were pressed all out of shape and lost their beauty and became only black, hard coal. There they lay so long, and still no one seemed to want them; but when the necessity of more fuel became so self-evident, man dug down into the bosom of the earth and secured the black rock, and each year we learn more of its intrinsic value and prize it more highly.

If those large trees and little plants could have reasoned, they would doubtless have thought they were of very little use, and how many people reason just that way today, but how much happier we could be and of how much more use we could make ourselves, if as we go along we would just take in all the sunshine we could get and as the coal-plant, bottle it up and keep it to give out again when it can do some good. Doubtless many of us are often tempted to feel that our sphere is so narrow, our work so lowly, and that by our feeble efforts we accomplish so little good, that if we were to follow the dictation of our own hearts and minds we would give up the strife, and possibly be overcome by adverse influences. But could we but take a lesson from the bit of coal, however unseemly it may appear, we would take new courage, knowing that in our most humble and insignificant tasks we may do something that may sometime, somehow—do some good in Jesus' name.

The little child, helpless as it is, needing the constant care of those who are able to help it, is yet unconsciously casting brightest beams of joy and gladness about it every day, making lighter and happier many a weary

and burdened heart. As childhood buds into youth, the lessons learned each day and even the routine of daily life—our work and play—all go to make up the aggregate of the life's experiences, and if directed aright will surely some time bring blessings upon others that will prove to be veritable sunbeams that may have in some mysterious way been imprisoned even for many years. Then, for those of us whose earliest youth is past, may we not have it in a great measure, at least, in our own power to gather each day and year of our lives things that would have a tendency to really make us a blessing? Or, on the other side, do we not often allow ourselves to become interested in those environments whose natural and sure tendency is downward?

We can see that only the eye of the Infinite One can trace even the trend of a natural ray of sunlight, and how much less possible is it for us to trace to its limits the span of a single human life, or even a single epoch in our lives. How careful we ought to be—how necessary to be sure we are on the right way, how meek and dependent we should be in our own sight, and how securely we should rest on the strong arm of faith, clinging ever to God who can make of us just what we should be.

New Paris, Indiana.

THE PHILISTINES HAVE SLAIN JONATHAN.

J. C. FLORA.

THE Philistines did not know of the unselfish, sacrificing love that lived within Jonathan's breast—which could sacrifice the prospect of a crown rather than prove unfaithful to a friend. They knew not of the marvelous wisdom by which he remained true to his father although he was a friend to one to whom his father was an enemy. They knew not of the wealth of virtue, piety and valor of which they deprived the world by slaying Jonathan; nor did they care to know.

This is a sad picture, yet it is not uncommon to see similar pictures even in this age.

I have seen a noble youth, with manly ambitions burning in his breast, who was the pride of his mother and the joy of his father, year by year brightening their hearts with joy and gratitude. In his ambition to acquire prominence in the world he leaves his happy home and goes to the city. There by the influence of bad associates he forms bad habits such as cigarette smoking, tippling with the wine cup and visiting places of immorality. The color in his cheek fades, his health is undermined and his character is ruined. He commits some crime and is sentenced to the State prison or probably is murdered in a drunken combat with some of those who led him astray and his corpse is taken back to that broken-hearted father and mother to be buried in disgrace. And I have said, "The

Philistines have slain Jonathan and knew not what a beautiful character they have blighted."

I have known of a loving daughter, with cheeks blooming with health and beauty, whose character was as pure as the sparkling water that flows down over the rocks on the mountain-side, daily administering to the wants of her aged father and mother, thus brightening their lives as only a true daughter can.

At length she is attracted by fashion and society which lead her into the theater, ballroom and other social functions of fashionable society. On and on she goes in this giddy circle till she loses sight of all that is good, pure and innocent and finally her pure character is lost and she becomes a castaway. And I have said, "The Philistines have slain Jonathan and knew not what a beautiful flower they have trampled under foot."

I have known of a husband, strong and gentle companion of a trusting, confiding wife, in a home where love reigned supreme, gradually led away by vicious men and lewd women to a gay and wicked course, and I have said, "The Philistines have slain Jonathan and knew not what a wealth of love has perished from society."

I have seen men rise to prominence in the world, become ornaments to the State and nation and idols of its citizens till they became puffed up with pride and self-conceit and fell far below the plane from which they started. And I have said, "The Philistines have slain Jonathan and knew not what an ornament they have stolen from the nation."

I have seen men and women who were consecrated to the work of Christianity, whose motives were pure and whose only desires were to encourage the down-hearted, uplift fallen humanity, and brings souls to the Savior. They were a credit to society, an honor to the church and a glory to God. The tempter led them to think too highly of themselves and as a result they fell from their high position, bringing disgrace on the church and shame on the fair name of Christianity. Again, I have said, "The Philistines have slain Jonathan and Heaven has been robbed of one of its jewels."

"Alas, other swords than those of steel, and other men than soldiers repeat the catastrophe of Gilboa!" Go anywhere in society and you will find men robbed of their manhood and women disrobed of their virtue; wrecked characters, ruined lives, wretched homes and all is chargeable to the Philistines of sin.

Quinter, Kansas.

HOW MONEY FOR EARTHQUAKE VICTIMS WAS EXPENDED.

THE people of the United States have contributed \$1,800,626.02 to the earthquake sufferers of Italy—three times as much as any other nation, and nearly as much as all Europe combined.

The appropriation of \$800,000 made by Congress has been expended—\$300,000 for food supplies, which were on their way to the battle ship fleet at the time of the earthquake and were diverted to Messina, and \$500,000 for portable houses and extra lumber, tools, hardware, for their transportation to Sicily and for the employment of labor to set up the houses on the scenes of destruction.

The Red Cross Society has sent a total of \$916,000, and has a balance of \$84,626.02 in hand, remaining from a total subscription of \$1,000,626.02 up to and including Feb. 19. There may be additional sums in the hands of local treasurers throughout the United States to be reported later.

The Red Cross money has been sent to Italy in cash, with the exception of \$106,000, which was expended in this country for lumber and portable houses and the chartering of a steamer to transport them to Sicily. Between \$6,000 and \$7,000 was spent for forty-nine portable houses, such as are used extensively in the mining regions of the West and down on the canal zone in Panama. They can be taken apart and put together very easily with the simplest tools. The Red Cross committee was not able to obtain any more of them, but bought 555 frame houses ready to be put together in short order, with doors, windows, floors, partitions, roofs and everything else matched and numbered. They were made in the southern part of Mississippi of pine lumber and will last for several years. These houses were shipped to Messina on a chartered steamer from New Orleans and will be erected by local labor under the direction of master carpenters who were sent with them with supplies of tools and builders' hardware.

Mr. Bicknell, national director of the Red Cross, who did much thorough work in San Francisco, has gone to Sicily and will have general command. The steamer carrying the Red Cross houses should arrive at Messina about the middle of March.

The government of the United States invested \$500,000 of the relief appropriation made by Congress in 2,500 similar houses and extra lumber, tools, builders' hardware and other necessary supplies, which have been shipped in three chartered steamers. One steamer has already arrived in Sicily, the other two are on their way. Lieutenant Commander Belknap, naval attaché at Rome, was at Messina to receive the cargo and will superintend the erection of the houses. The United States government pays for putting them up, and will hire local labor under the direction of the Red Cross master carpenters. This will give employment to several thousand poor people of Sicily who lost everything in the earthquake and have not been able to earn anything since.

The government appropriations will not be sufficient to complete the erection of the houses, but whatever

additional is necessary will be supplied from the surplus fund of the Red Cross Society.

Houses were sent in preference to other supplies because they were most needed. Food could be obtained in the neighborhood, but lumber is very scarce in Italy and very expensive. It was the one thing that the relief committees were unable to obtain there. Nearly all the buildings in Sicily and other parts of Italy are erected of stone, brick and cement, which are much cheaper than wood and last for centuries, but it takes so much longer to build.

Mr. Michelson, American consul at Turin, has made a report to the bureau of manufactures concerning the plans of a society in that city for the reconstruction of Messina, Reggio, Palmi and Bagnara. As soon as the debris left by the earthquake is cleared away, engineers of the department of public works will divide the areas formerly occupied by the cities into building lots and call for proposals from both Italian and foreign contractors to undertake the construction of new buildings. Prizes are offered for a competition of designs, and steel and re-enforced concrete will be the materials used. The height of buildings will be limited to thirty-three feet, and the interior construction, floors, ceilings and roofs will be of metal, paper, wood, asbestos and other light materials. This offers a profitable opportunity for the manufacturers of construction material in the United States, builders' hardware and other supplies, and the bureau of manufactures at Washington will furnish detailed information upon application. The Red Cross Society, however, has nothing to do with this. It is exclusively a matter of the Italian government and the "Public Works Coöperative Society" of Lombardy, which has interested itself in the matter.

The first money sent to Italy by the Red Cross Society was the sum of \$320,000 which was transmitted to the Italian Red Cross officials immediately after the earthquake, and was spent in relief work among the wounded and the sick. The Italian branch of the Red Cross is admirably equipped with hospital ships, hospital railway trains, hospital wagons, ambulances, field hospitals, and has a complete organization of skilled physicians, nurses and other employes for war purposes. It was able, therefore, to make good use of the funds, which were very badly needed.

Shortly after this \$100,000 was sent to Mr. Griscom, the American ambassador at Rome, and was expended by him in fitting out the Red Cross relief ship Bayen, chartered for the purpose of carrying immediate relief. Sixty hours after the steamer was obtained it sailed into the harbor of Messina under the command of Commander Belknap loaded with doctors, nurses, medicines, supplies of clothing, a full equipment for two field hospitals and food for the starving. Commander Belknap was furnished with an adequate sum of money for the employment of labor, and to use at

his discretion in relieving the distressed. Mr. Griscom has written Miss Mabel Bordeman, secretary of the Red Cross Society, that he has been fairly buried under letters of gratitude from mayors and other officials in Sicily and from private persons because of the relief brought to them by the Bayen.

The American Red Cross Society also sent to Sicily Bayard Cutting, Jr., vice consul at Milan, with \$15,000 cash to use at his discretion to relieve the distress of any Americans who might have been caught by the earthquake. He found a few naturalized Italians, but no native Americans, except one family from Maine, who claimed to have lost everything they had, and applied for assistance to go back to their home. Mr. Cutting was making an investigation into their circumstances, but has not reported.

A Miss Davis, who has been superintendent of an industrial school in New York, happened to be at Syracuse, Sicily, as a tourist at the time of the earthquake. She is a woman of remarkable energy and executive ability, and immediately gave her attention to relief work. Mr. Cutting furnished her Red Cross funds to buy large quantities of cheap material and she organized the native women into groups and set them at work making clothing of all kinds. Miss Davis proved very capable and her work was very effective for great good.

Mr. Cutting also supplied several United States consular agents in Sicily with funds to relieve extreme cases and answer appeals that were made to them for food. He also assisted the local authorities in equipping improvised hospitals in railway stations, churches and other buildings that survived.

Mr. Griscom was given \$70,000 to use at his discretion and was also authorized to use a balance of \$17,000 remaining from the steamer Bayen relief expedition, making \$87,000 in all, which was expended in furnishing food, clothing, medicine and medical attendance to the people back in the mountains whose homes were entirely destroyed, and who lost everything in the earthquake. Many of these families were a long distance from the cities and other centers of relief, and until they were discovered in their terrible plight they were not even aware that anything was being done to succor their neighbors.

Acting upon the recommendation of the Italian government a quarter of a million dollars has been invested in American securities by the treasurer of the Red Cross Society for the maintenance of an American Red Cross orphanage at some convenient location in Sicily for the permanent care of the children who lost their parents in the earthquake. The Italian government will provide the buildings, and select the site. It has appointed agents to gather up the orphans and has employed widows who have been left dependent to care for them. The American ambassador will be a member of the board of trustees. The interest upon

the fund, which will be about \$12,500 a year, will be sent in installments to the managers of the institution and, as things go in Sicily, it will be sufficient to support a large number of children.—*William E. Curtis, in Chicago Record-Herald.*

IN THE STUDIO.

HAVE you ever realized how little you observe, even though you think you are feasting the eye upon something? In the art studio this is considered so important that one of the first rules is to be observing, to notice that which is artistic, colorful and appeals to the refined senses. The pupil may arrive at the studio, be seated with palette, paint and brush and be given an assignment, such as: "Outline a dress you saw yesterday; paint a woman's hat you saw last Sunday; draw an ink sketch of an absent friend; paint a picture you saw last week." This is extremely difficult, simply because most persons are not observing. A real artist sees every feature of the subject. Try to remember what you see and keep it in mind; aim to remember something you read and it will be helpful in general conversation. Do not go through the world with closed eyes. A young woman enjoyed the entire summer in the East and upon returning home she remarked: "I saw such a cute little mouse in the museum, and when I was in New York I went up in a high building (I forget the name of the place) and was so tired I had to come down in the elevator." That was about all she mentioned regarding her trip.—*Selected.*

BOY BUILDS AUTO.

BRICE COWEN, a Los Angeles boy 15 years of age, has just completed the construction of a real automobile. He calls it the California Midget. It is built upon principles similar to those of the factory-made cars and is capable, demonstrated by actual tests, of skimming over the road at twenty-five to thirty miles an hour. It has also climbed hills of 30 per cent grade, and has carried three passengers over ordinary roads.

The car is six feet in length and weighs about 300 pounds. It is provided with a three-horsepower engine, has a friction transmission and a double chain drive. It has a three-foot tread, with nine speeds forward and three on the reverse. The machine is air-cooled, the battery control is through an electric light switch and the differential operates successfully. There are external brakes on the rear wheels, and the machine is otherwise fully equipped throughout.

Aside from the engine the machine was built entirely by the boy—and even the engine had to be rebuilt to conform with some of the peculiarities of the automobile's makeup. His other purchases consisted only of rods, wire, nails, pine boards, a few castings and such material, even the wheels representing his workmanship. The latter are equipped with motor-cycle tires.—*Woman's National Daily.*

NATURE STUDIES

"WAITING TO GROW."

" Little white dewdrop just waking up
Violet, daisy, and sweet buttercup!
Think of the flowers that are under the snow,—
Waiting to grow!

" And think what a number of queer little seeds—
Of flowers and mosses, of ferns and weeds,
Are under the leaves and under the snow,
Waiting to grow!

" Think of the roots getting ready to sprout,
Reaching their slender brown fingers about,
Under the ice, and the leaves, and the snow,
Waiting to grow!

" No seed so small, or hidden so well,
That God cannot find it, and soon he will tell
The sun where to shine and his rain where to go.
Making it grow!"

THE COMING OF SPRING.

MRS. M. E. S. CHARLES.

THE very first evidences of spring's presence are to be found in wet meadows, or along the oozy borders of ponds. The grass-blades here show the first spring green. In such a spot, screened from March gales by encircling woods, or by higher land, and open to the sun, the silvery and golden tassels of the pussy willows will early cast off the sleek, brown coats which have covered them all winter.

At first all the willow pussies look alike. A little later those borne by some of the bushes are silvery green, while those on others are golden. The silvery tassels prove, on investigation, to be great groups of pistils, each individual pistil partly covered by a fringed scale. The golden tassels owe their rich hue to the massed heads of many stamens, growing close together. Early roving flies and bees carry pollen from the golden tassels to the silvery green ones, and thus enable the willows to set their seeds.

If without previous experience we could witness the passing of spring and summer, with the birds, insects, and flowers, and then see the destruction wrought by the frosts of autumn, and the apparent death of all vegetable and insect life beneath the snows of winter, it would seem that the end of all things were at hand. But we are so accustomed to the changes of the seasons that we take them as a matter of course, and miss much of the beauty and sweetness of life that a closer acquaintance with nature's wonders would yield us.

When the pussy willows are in bloom, the bees are humming merrily in the garnet-colored flowers of the red maples by the roadsides, and the elms are swaying their pendent, blossom-laden branches, and the crows are cawing as they never caw except in spring.

The margin of the pond where the cattle drink is alive with the strident-voiced frogs, and the purple swallows are skimming the surface in pursuit of insects. If we look carefully we shall find floating in the water, here and there, masses of transparent jelly, and if we look into one of these masses, we shall see that it is full of tiny black specks. This is frog spawn, and the little black specks are the eggs. By and by these eggs will grow and will appear as yellowish globes, each with a pollywog curled up inside of it. Then the jelly will become extremely soft, the eggs will break and the pollywogs will wiggle out to become real frogs later in the year. All these changes may be observed at home if one will carry a mass of the spawn in a wet handkerchief or piece of paper, and set it in a bowl of water in a sunny window.

Early in the spring across the fields flits that handsome velvety-brown butterfly, called the mourning cloak or Camberwell beauty. This is the most common of the few species of butterflies which pass the winter in the perfect or winged state. For four long months they remain securely hidden in crevices of rocks or logs. When called forth by the warm spring breezes they find ready and waiting for them the little snow trilliums with their store of honey.

This is one of the very earliest wild flowers to bloom, and is an example of that mutual interdependence existing everywhere among the various objects of nature, for never does an insect come forth until its particular food plant is ready; and on the other hand, the plant seldom blooms but an insect appears ready to aid in its fertilization.

Among the very early flowers to bloom are the anemones. Now and then one or two come out in the last days of March, but they are small and seem to shake with the cold. White is the usual color of the anemones, but sometimes they are pale purple, pink, or blue.

Another white flower among the first to bloom while yet there are almost no leaves to cast a shade under the trees, is the beautiful bloodroot, the *sanguinaria* of the botanists. It is so called from the

crimson juice of its medicinal root. This is a showy flower and a close cousin to the gaudy poppy. The beauty of this flower is very fleeting. Two or three days will mature all these spotless blossoms, and then the first breeze will sweep them all away, leaving the pistil to expand its sharp-pointed seed vessel.

There is no more delicately beautiful spring flower than the wild dicentra, known in some localities by the ugly name of "Dutchman's Breeches." A much prettier name given in some places where the botanical name is not used is "white hearts," from its heart-shaped corolla. When the warm south hillsides suddenly are covered with the waving plumes of this charming plant, we find it hard to tell which is loveliest—the tassel of white, yellow-tipped bloom, or the fine frilled bluish-green foliage. The whole plant is smooth and shining, a certain fineness and frailty characterizing every part.

A RAT THAT LIVES IN A TREE.

THE old Californian and I had just been two miles out of our way to get a drink from a spring that bubbled up at the head of a canyon in the hills, and after flowing for a few yards lost itself in the sand never to reappear. When we reached the plain again we saw hundreds of ground squirrels scurrying this way and that, and diving into their burrows, and a grizzled Mexican grubbing up roots amid the chaparral to serve as firewood. Thereupon my companion said:

"California is in some ways a topsy-turvy sort of State. For instance, in exact reverse of Eastern ways, we climb for water and dig for wood; the squirrels live underground, and the rats live in trees."

"Yes," said I, "what we have just seen proves that—all except the rats."

"Well, as to the rats," replied the Californian, "they are not so easily to be seen as some other of our curiosities; but if you keep your eyes open in your wanderings, no doubt they will come to light."

Some weeks after this when the thought of rats living in trees had completely gone out of my mind, my attention was attracted one day by the sight of some great bunches of dead leaves intermingled with twigs and sticks, fixed here and there in the forks of the branches of oak trees that grew in the bottom of a canyon. They so much resembled the débris that

is sometimes left in trees by a flooded stream, that my first thought was that they were flotsam that had been carried into these trees by some freshet and lodged there. But as I soon noticed that other oaks far up the side of the canyon and quite out of the reach of any possible flood also contained the curious heaps, that theory was abandoned. I then thought they might be nests of some big bird, yet I could think of no bird that built in that way, for each mass resembled more than anything else a heap of leaf litter such as one sweeps into a bushel basket from his lawn in late autumn.

My curiosity was now excited, and I decided that the way to solve the problem would be to climb one of the trees and investigate. As I crept out on a branch, near the tip of which one of the mysteries was fixed, I was startled by the emergence from the leaves of a small, gray body that glided quickly and quietly almost under my nose, and passing from limb to limb, stopped about twenty feet away on a neighboring tree. The animal was so nearly the color of the bark on which it rested, and it remained so absolutely motionless, that I had difficulty at first in seeing it clearly; but in a minute the secret was out. The mouse-colored, furry hide, whitish beneath the body, the beady eyes, the pointed nose and slender whiskers, the slim, hairless tail, all spelled rat, and there flashed into my memory the old Californian's remark about the rats that live in trees. So the mystery of the leaf heaps in the oaks was explained—they were nests of the California wood rat, or as my neighbor the professor will have it, *Neotoma fuscipes*.

I watched the little creature for some time, in the hope of seeing him return to his nest; but he evidently believed that safety consisted in stillness, and so long as I continued to look, he remained as quiet as if he were dead. He made a quaint-looking figure clinging there amid the protecting branches, his large erect shells of ears, which caught and held the warm colors of the afternoon sun, giving to the gray face a sort of grandfatherly appearance most touching to behold.

I left his abode untouched, and it was pleasant to reflect on sitting down to my supper a couple of hours later, that my little friend was doubtless again in his airy home, discussing his evening meal of acorns in peace and quiet.—*Sabbath Visitor*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WITH OUR READERS.

WE wish to call the attention of our readers to the offer made elsewhere in this issue of a free copy of the "Handy Atlas of the World" with every INGLENOOK subscription sent in before April 20. "Handy" is the right name for this atlas, as it is both convenient in size and in its ability to furnish the information generally found in atlases. The fact that it is free to every person sending in a subscription at any time while the offer is in force, should bring it into many homes where such a help is needed. Combined with the INGLENOOK, with its fifty-two issues, it affords a fund of information not easily secured for the sum asked for both. Call the attention of your friends to this offer and if you have any good words for the magazine include them in your reference to the offer.

Many additions are being made to the list of good writers and interesting subjects which we promised our readers at the beginning of the year. Catharine Beery Van Dyke, of Chicago, will discuss a number of mother-problems in the thorough and pleasing manner which characterizes her writings. J. H. Harnly, of Zion City, Ill., will write of the methods of dealing with juvenile delinquents in State institutions. Mr. Harnly is especially interested in the work done in these institutions and writes from personal experience. We predict that he will give our readers much interesting and valuable information.

THE ROOSEVELT ADMINISTRATION.

ALL of us were more or less aware, during the administration of our ex-President, that we were living in strenuous times—that things were happening, not as the inevitable result of slow and natural processes, but because they were made to happen by a force that could not be repressed and would not be diverted. While Mr. Roosevelt has had many bitter enemies, and much has been done to defeat some of

his efforts, he has also had many staunch friends whose zeal and faithfulness have done much in bringing about the realization of his plans.

But it is impossible to place a true estimate upon any work while that work is in the process of being done, and so it has not been possible rightly to measure the value to our country and to the world of the work of Theodore Roosevelt while he was in the act of setting the work on foot or giving it the impetus it needed to bring it to a successful end. Only by looking through the years, with their larger view and their unerring estimate of values, can we place these seven strenuous years where they belong.

And now while the new President is buckling on the harness and getting acquainted with its workings it might be well for us to take a brief survey of the work done during the last seven years so that we may have it clearly in mind and be therefore better able to follow it up to its ultimate place in history. A writer in *Review of Reviews* for March gives such a survey, and following we give, in abbreviated form, some of the many points mentioned by this writer, with a part of his introduction relative to the manner in which Mr. Roosevelt was initiated into his work.

"Never until Roosevelt had a man stepped from the Vice-Presidency to the Presidency by reason of the death of the chief executive, and been able thereafter to succeed himself through a popular election. The effort of one man to execute the policies and guarantees of another, in a place surrounding him with so many difficulties, had seemed so nearly impossible that it had become a truism of politics that the man who inherited the Presidency thereby lost all chance of winning it. With this historic experience in mind, and with recognition of the tremendous difference between the Roosevelt and McKinley personalities, it must be conceded that, whatever success he has had, however he may have commended himself to his countrymen, one of the greatest achievements of Roosevelt has been this of succeeding in the footsteps of another. Perhaps it was better for Roosevelt and for the country that the necessities of his position as providential heir to McKinley compelled modification and moderation of the real Roosevelt during the first term. It gave him opportunity to feel out his position, to learn its powers and limitations, to study the instruments with which he must work, to test the national mind, and determine by easy advances how far the people were willing to go with him along the course which he knew was laid out for him, but on which he was not yet free to enter save tentatively and experimentally.

"Roosevelt recognized that his administration must be a continuation of McKinley's. The country had chosen McKinley's policies and his methods; twice chosen them, and therefore doubly approved them. Roosevelt kept the faith his party had pledged to the

nation, as nearly as it was in one man to do another's work in that other's way.

"Roosevelt ushered in a period of wonderfully varied and wide-reaching effort at readjustment of conditions. It has been a time in which people have thought farther into their social and economic problems than they are commonly willing to do. This is perhaps the first service of Roosevelt to the country: he set it thinking. He led it to change its mind about a good many things. He clarified its ideas, and he improved its ideals. He preached away at a doctrine, almost new when he began expounding it, of moral leaven in business. He began the movement as a citizen, urging and advising and teaching; he continued it as executive, administrator, and constructive statesman. He preached his crusade first and later he put on the armor and led the crusading hosts. His influence as the preacher of a better community and business morality is certain to be projected as a potent force after he leaves public place.

"Along with this moral contribution, President Roosevelt has made a contribution of the greatest significance to the educational movement which has been changing opinion about the proper relation of the State to its creatures, the corporations. The fact that the State cannot endow its corporate offspring with souls, has been developed into an argument for the alternative, which the President has conceived to be rigorous supervision and control of their methods. Time was when the State commissioned the corporation to go out and deal and make money; if there were complaint against its derelictions the State pleaded irresponsibility, and the public rather cynically accepted the plea and admitted that the case was hopeless. In this regard there has been a change. The corporation is not granted immunity from moral obligation, and the State is not permitted to avoid its responsibility for its creature.

"There has been much of the spectacular, the dramatic, in the Roosevelt procedure. The striking, picturesque things make deeper impression than the plodding drudgery of effort at better administration or at development of sound policies in legislation. How much of the spectacular there has been is illustrated by the result of an effort to get four students of affairs to express their opinions as to the largest achievement of the administration.

"'Reawakening the public conscience,' said one,

"'The peace between Japan and Russia,' insisted the second.

"'The movement for conservation of natural resources,' said the third.

"'Curbing the corporations,' proposed the fourth.

An effort to referee the dispute only brought out as another important achievement the acquisition of

the Panama Canal and the assurance that it will be successfully constructed.

"All the world knows how the President initiated the movement for peace between Japan and Russia, which brought the treaty of Portsmouth and ended the war in Manchuria. Not so many know the significance of his part in preventing a European war over the rival pretensions of France and Germany in Morocco. At the time when those two powers were straining at the leashes, and war seemed possibly a matter of hours, President Roosevelt tendered the good offices of the United States, became an intermediary among the powers directly and indirectly concerned, and initiated the move which made the Algeiras conference possible.

"It was the President who conceived sending Secretary Root and a delegation of appealing personnel to the Pan-American Congress at Rio de Janeiro. South American countries had long misunderstood the Monroe Doctrine, interpreting it as the attempt of this country to maintain a sort of mild suzerainty over the other nations of the Americas. Commerce with the Latin-American countries was mainly controlled by Europe, and their sentiments were far from friendly to us. The time and circumstances were propitious for an appeal to a better understanding, and Secretary Root and his colleagues succeeded in that appeal. Relations have been better, and commercial conditions have shown improvement as a result. The work done at Rio was but a beginning; its effects will go on for generations.

"When the Hague international peace movement had fallen into disrepute after the Russo-Japanese War, it was President Roosevelt who initiated the effort to reinstate it. He issued invitations in the name of the United States to another peace parliament to reaffirm the work of the first parliament, in 1899, and strengthen it. The Czar later indicated that, as prime mover in the first convention, he had been intending to call a second. Whereupon the United States' invitations were withdrawn and the parliament of 1905 was held on the invitations of Russia.

"Arbitration treaties with practically all the countries except Russia and Germany have been made, providing for arbitration at the Hague of all save matters of honor and of vital interest. These pacts are alike a guarantee of our own peace and an example to other nations. Like arrangements with Germany and Russia are under negotiation.

"It was the interest of Mr. Roosevelt likewise which started the movement for the international opium conference now in session at Shanghai. The need of prohibiting or controlling this traffic was suggested to the President by Bishop Brent, of the Philippines; the international conference was the President's idea.

"The movement for conservation of natural re-

THE HOME WORLD

THE RELIGION OF A CHILD

RICHARD BRAUNSTEIN

OF the seven ages into which Shakespeare divided human life, childhood is unique. The change from childhood to youth is the most critical of all that occur from the cradle to the grave. It is marked by increased physical and mental powers, by new appetites, tastes and affections, and just as distinctly by the capacity for a deep and personal religious experience.

Across the chasm which divides childhood and youth, it is difficult for the average adult mind to pass. "Childhood roads are unknown to those who have left them behind." To us poor grown-ups, the child lives in a lost and all but forgotten land. Fortunate are those who in memory or in imagination can still feel the glory and the freshness of childhood's dream. The rest of them, even if we happen to believe that "the little of paradise we still perceive is due to the presence of children," are yet compelled to say:

"Turn wheresoe'er I may
By night or day,
The things which I have seen
I now can see no more."

Yet, in spite of this great gulf which has been fixed we are commanded to become as little children if we would enter the kingdom of heaven. Often, in our ignorance, we blunder, so that in child land we appear as irrational tyrants ruling an alien people.

The child is a candidate for humanity. His life is incomplete, but ever growing. He is "the prophet of the perfect man." Just now all his powers are limited. He is dependent on his elders for his sustenance, for his habits, for his ideals, for his moral and religious life. The child has capacity for growth. He is the heir of all the ages, ready to receive his inheritance, but only able to appropriate so much of it as parents, friends and teachers have the ability and the will to bestow upon him.

The religious and moral life of a child, like his physical and intellectual nature, is limited and incomplete. Here, also, there is just the prophecy of what is to be, *the power to grow*. Only in poetic fancy can we say, "Our birth is but a sleep and a forgetting."

The trailing crowds of glory are a prophecy rather than a reminiscence. Good and evil impulses are curiously mingled in the lives of children. They are no more little angels than they are little devils. Indeed they are neither, but only new in the making, and their little lives are little bundles of warring impulses, both good and bad. In these crude lives the world-old forces of right and wrong are struggling. The battle is fought over again in the life of each little child, and these imaginative, imitative, inconsistent mites of humanity need all the help we can give them to make it *easy* to do right and *hard* to do wrong. They are forming the habits of a lifetime. It is essential they should be formed right.

Children need a sound example and a wise discipline. The little girl who said, "I don't want to go to heaven, Uncle Ed won't be there. I'll stay with him," explained why so many of the rising generation go wrong. They know that a good many uncles and fathers, and other relatives, "won't go," and the result is they imitate their example. Many boys when they are old enough to be with their fathers more than with their mothers, show at once the evil effect of the change. Even good discipline will not take the place of example.

But pity the children who are one day ruled with a rod of iron and the next are allowed to run wild. Children who never can tell what is going to be expected of them next, naturally grow up into wayward, wilful youth. In manhood they lack poise and self-control because, as children, they were subjected to irregular and inconsistent discipline. Happy is the child for whom it is regularly made easy to do right and hard to do wrong. Such a child finds its moral habits early fixed, and half the battle of life won before he knows of the fight.

Before conversion the child has a real, though not an independent, religious life. Faith becomes personal in conversion, and toward this great step all the religious training of the child should lead.

The child believes what he is taught. He has no original fund of ideas about religion and God. His

puzzling questions and queer blunders are only the natural result of his efforts to explain new ideas by means of things he already knows. He is literal because he has to be. It is a necessity that he should be materialistic in his notions. His puzzling questions come because he cannot take mysteries for granted—any more than we could at his age.

In harmonizing difficulties, we must not be dismayed to find very curious notions in young folks' heads. The little girl who buried a prayer which began, "Dear devil," was more in need of advice than of punishment. Fortunately for those who teach children, their puzzles do not continue long. The young mind turns rapidly from one question to another. It is growing very rapidly. For religious growth, as for bodily development, suitable food must be provided. Simple, clear instruction in Bible facts, careful explanation of religious truth, will furnish needed nourishment. It is planting time, and *whatsoever the parent soweth that shall the child reap.*

Some hold that youth is a more impressionable period than childhood. Perhaps this seems to be so from the great neglect of the religious life of children. Really childhood is the most important time. The Catholic church recognizes this opportunity and profits by it. Judaism is a standing argument for the influence of the home upon the religious life. The important religious services of the Jews are held in the home, not in the synagogue. Israel could not have lived as it was without the careful training of the children generation after generation.

For parents, childhood is the golden opportunity. Christian parents want to see their children grow up *pure and true*. They hope to see them enter through conversion into the conscious, personal religious life and join them in the fellowship of the Christian church. For this great step the religion of childhood is the suitable preparation. It is a preparatory stage, under authority, and forms in the child's mind habits and ideas essential to the conscious religious life of its later years. The religious training of a child should be a preparation for conversion and make that crisis a simple, natural, joyful entrance into the life of faith. When the voice of God came to young Samuel he did not recognize it at first, but when he did he was ready to say, "Speak, for thy servant heareth." A child whose religious life has been properly cared for should also be ready when God's call comes, to answer quickly, "Speak, Lord, thy servant heareth."

FOR IDLE HANDS TO DO.

THE idling habit is a menace to the boys of both country and city. Every wise mother must be on her guard against it for her sons. The grocery store furnishes only too easy a lure for village boys, and hun-

dreds of idlers frequent the public squares of the great cities.

There is no accounting for the army of grown-up loafers. Most of them are able-bodied, although some are badly nourished. But the sad truth probably is that a doting mother began the useless career of each of them, and that a hard-working life continues the indulgence.

It is not easy for a mother to invent occupations for her little son. The daughter may early be taught the use of the broom, duster and needle. Then the doll is unfailing and exacting task-mistress. She always needs new clothes. But work for boyish hands and feet is less abundant. The supply of family errands is small. The coal-hod has supplanted the wood-pile. In the end the boy sees through the device of trumped-up work, and runs away from it without hesitation.

Happy the mother who discovers in her boys some taste or talent. The passion of the carpenter for tools, of the draftsman for pencil and paper, or the gardener for growing things ought to be hailed as a safeguard against the loafing disease. If no occupation of the usual boyish sort can be contrived, the boy may better be put to bread making or sweeping than given to idleness. There is scarcely a boy to whom a paint pot and brushes will not appeal, and fence and blinds and steps will bear fresh coats of paint at frequent intervals.

Every device is worth considering if it will erect one new barrier against the loafer's habit—the destroyer of every manly virtue, from industry to self-respect.—*Youth's Companion.*

THE LIGHT IN MOTHER'S EYES.

Dear beacon of my childhood's day,
The lodestar of my youth,
A mingled glow of tenderest love
And firm, unswerving truth,
I've wandered far o'er east and west,
'Neath many stranger skies,
But ne'er I've seen a fairer light
Than that in mother's eyes

In childhood when I crept to lay
My tired head on her knee,
How gently shone the mother-love
In those dear eyes on me;
And when in youth my eager feet
Roamed from her side afar,
Where'er I went that light divine
Was aye my guiding star.

In hours when all life's sweetest buds
Burst into dewy bloom,
In hours when cherished hopes lay dead
In sorrow and in gloom;
In evening's hush, or morning's glow,
Or in the solemn night,
Those mother eyes still shed on me
Their calm, unchanging light.

Long since the patient hands I loved
 Were folded in the clay,
 And long have seemed the lonely years
 Since mother went away;
 But still I know she waits for me
 In fields of Paradise,
 And I shall reach them yet, led by
 The light in mother's eyes.

—L. M. Montgomery.

FAMILY QUARRELS.

PRACTICALLY all of the quarrels that occur in this life are preventable. Nine-tenths of the disputes in which husbands and wives or other members of a family engage are silly.

In a divorce case that is expected to attract considerable (newspaper) attention when it is tried, one of the grounds on which a divorce will be sought, though this allegation is not made in the petition, is that the couple are "temperamentally unsuited." Doubtless it will be shown that the young people—for these are young people, who ought to live happily together for many years—are of "opposite" dispositions; that what ones enjoys the other does not, and that the words and actions of the one are a source of constant annoyance to the other. The real trouble, however, regardless of whether the individuals or the laws recognize the fact, is that the young people have not maintained the right attitude toward one another. The fact that they did get along well together, so far as matters of temperament were alone concerned, during the courtship, is reasonable evidence that they could, if they both so desired, get along equally well after marriage. In fact, we make bold to say that they would get along best because of being of opposite dispositions, provided they were both sincere in their determination to make allowances for one another. There is no particular credit due people of similar tastes and harmonious dispositions because they live many years together in harmony. Both undoubtedly are weaker mentally after they have reached middle age than they would have been had they not been so perfectly attuned.

If we are to have healthy minds, they must be exercised. Self-control is one of the first requisites of happy married life. We need opposition, temperamentally as well as in other respects, in order to make the most of ourselves. Temper tests are as essential to mental improvement as physical training is to muscular development. When things go smoothly, the mind grows slovenly. Opposition makes us keen because our will, in being continually pitted against an opposing will, if properly directed, fights itself. It is difficult to eradicate the bad within ourselves if we are never tempted to do wrong. The man of violent temper who goes through life without having occasion to control that temper is as violent in the end as he was at the outset. But the man who is tempted every day by the irritating

conduct of some other member of the family, if he overcomes the temper that is within him, leaves the world a better man than he was by nature when he entered it.

Hippocrates recognized four temperaments. He thought they were composed of the elements, and he classified them as follows: Blood, composed of hot and moist; phlegm, composed of cold and moist; yellow bile, composed of hot and dry; black bile, composed of cold and dry. We have long since abandoned Hippocrates' theory, but we still recognize it in the names that we give to temperaments. For instance, we have the sanguine or sanguineous, the lymphatic or phlegmatic, the choleric or bilious and the melancholic or atrabilious. To say that because a man or a woman comes into the world possessed of a bad disposition is any reason why he or she should retain a title in fee simple to that disposition is to deny that we have any mission whatever in life. The blood, phlegm, yellow bile and black bile that are in every one of us will manifest themselves whenever they are given the opportunity. No credit is due the total abstainer from intoxicants who was properly reared and who has no thirst for liquor. But the hard drinker who reforms and lives the remainder of his days a teetotaler has accomplished one of the greatest reforms of which the individual is capable. So it is in matters of temperament. If the disposition to quarrel and nag and say nasty things is within us, it is our first duty to ourselves, to our relatives and to future generations to overcome that tendency. As we are endowed with evils to be fought down, so are we endowed with weapons with which to fight them. Will power can be cultivated. And you will search a lifetime without finding a better reason for having been placed here on earth than for the very simple purpose of sending into the hereafter a cleaner soul than came to you out of the past. The little things of life, the attitudes of men toward men, are after all the vital issues. People are "temperamentally unsuited" only because they are neglecting their life mission—they are not endeavoring, as they should, to get the bile out of their systems.—*Woman's National Daily*.

"THE BEST SOAP I EVER USED."

MEASURE twelve quarts of rainwater; put six quarts of this into a large iron or copper kettle and put over the fire. When it comes to a good boil, add five pounds of any kind of grease, from clean tallow to cracklings from which the lard has been tried, and let this boil for a few minutes until it gets thoroughly warmed, stirring. Then add gradually the contents of one box of potash (concentrated lye). Have previously dissolved in one quart of water already measured, four ounces each of borax and sal soda, and when the soap has boiled until it "ropes" off the paddle on being lifted (usually about half an hour, but give it plenty of time)

add the borax and soda, stirring well, and then gradually stir in the remaining five quarts of cold water. This must be thoroughly stirred into the soap. Then pour the soap into any vessel or mold and allow it to cool, when it can be cut into chunks or bars and allowed to thoroughly dry in the air. The soap should not be used for several weeks, until it has had time to ripen.—*The Commoner*.

ASK FOR OLD KIND OF FLOUR.

THE Secretary of Agriculture has condemned bleached flour, and following his suggestion the millers' combination has announced its purpose of discontinuing the further milling of this article. It would consent to acquiesce in the yellow loaf instead of the white one. Possibly it may require a new adjustment of appetite, but the gains will more than compensate for the sacrifices. In the old days when even New Englanders raised their own wheat there was one product of the grain called "canaille," which in spite of its contemptuous title made the sweetest and most nutritious bread that came upon the farmers' table. If the millers can again exalt this humble staple, future generations of healthy Americans will rise up and call them blessed.—*Boston Transcript*.

MACARONI AND CHEESE, ITALIAN STYLE.

BREAK four ounces of macaroni or spaghetti in two-inch pieces, and boil fast for twenty minutes in slightly salted water, then drain and let cool. Bring to a boil a cupful of milk with one slice of onion. Melt in a saucepan a heaping tablespoonful of butter, stir into it a dessertspoonful of flour, and cook for a minute or two but do not let it brown, then add the boiled milk (straining out the onion) also the macaroni and a heaping tablespoonful of grated cheese (Parmesan if possible). Mix and season to taste with salt and pepper. Butter a deep earthenware baking dish and pour the macaroni mixture into it, covering the top with fine breadcrumbs, grated cheese and little dots of butter. Bake for fifteen minutes.—*Selected*.

The Children's Corner

A SPRING REVIEW.

Here on the sunny terrace
Where hyacinths are gay,
I'll look my marbles over,
And choose with which to play.

My best is Captain Agate—
I'll set him off one side;
Yet there are many others
In which I feel a pride.

How lovely in the sunshine
The greens and pinks and blues!

How soft the browns and yellows!

I don't know which to choose.

And then the pretty flakies,

So frosty-white and cool!

There's just one way of choosing—

I'll take them all to school!

—Caro Atherton Dugan.

UPWARDS AND DOWNWARDS.

VIOLA LOVE and Vera Grau were two very dear playmates. Both attended the village school and what was better still, sat together in the same seat. They were bright, industrious little girls ranking among the first in their classes.

At recess time the two girls were always partners. If the game "Old Mother Witch" was played, Vera was the "Old Witch." If "Drop the Handkerchief" was played, Vera always went round as first dropper. You see Vera was the leader.

Just how Vera came to her leadership nobody knew, only this—if the games Vera wanted to play were not played she would turn about and say, "I shan't play any more," and inside she went. Viola often coaxed Vera back after having made the girls promise to play Vera's game.

What could make such a bright, attractive girl as Vera was, so very selfish? You see, Vera was the only and petted child of the family. Her father was the banker, and from early childhood had allowed Vera to have her own way. She had a beautiful home, many pretty dresses, and oh! all the lovely playthings, but do you know children, Vera never thought of making others happy. She just enjoyed to let her playmates know, that she could buy them all if she wanted to. If she had her own way about everything she really was quite lovable but as soon as she was crossed in her plans, the corners of her

mouth would turn downward like this.

Viola, on the other hand, was the oldest of four children. Her father was the storekeeper and owned a pretty home. Viola had pretty clothes and many toys but unlike her chum, Vera, she had been taught the beauty of giving up to her little sister and brothers. She was a happy child, and even if she did have to play "nurse maid" after school when a game of "London Bridge is Falling Down" would have been so jolly one never saw that homely frown so common on Vera's pretty face. Viola was really not as handsome as Vera, but you know those who "do handsome" are the handsome ones. Viola's mouth was never seen to droop at the corners, but she always managed to smile so the corners of her

mouth always turned upward like this.

Little children, which way do the corners of your mouth turn? "Upwards or downwards?"—*S. S. Messenger*.

THE QUIET HOUR

THE HOME ABOVE.

JOSEPH D. REISH.

There's a home above,
Where all is love,
Beyond this vale of tears,
Where all the blest
Shall ever rest
Free from all doubts and fears.

In that fair home
No sorrows come;
There's where saints shall abide.
Shall we be there
Free from all care
Close by our Master's side?

That home so bright
With endless light
Is free from sin and care.
E'en death's cold chill
With all its thrill
Can never enter there.

When in that home,
No more to roam,
The ransomed all shall be,
They'll sing his praise
Through endless days
Who saved and made them free.

STRONG IN THE LORD.

PAUL MOHLER.

THE other day I had some freight to come to me at the depot. It was not heavy; only one hundred pounds; but I didn't carry it home. I was not strong enough to carry it so far. Every day I go ten or twelve miles to school; but I do not go afoot: I have not time enough to walk, and I am not strong enough to run so far. So it is a common thing for me to see things that I should do were I strong enough. Nor am I a weak man as men go. My experience is common in this country. Everywhere men are doing things that they would not think of doing by their own strength. I got my freight home all right, but not by my own strength; I got a horse and wagon to help me. I go to school in less than an hour, but I get an electric current and car to help me.

So it is all over Chicago: men are lifting and shifting the most ponderous masses; but not in their own strength. They employ the strength of steel and steam; of electricity and of gas to do all this mighty work; and it is easily and quickly done. This is so

much the case that no man among us thinks of carrying any but the lightest burdens more than a short distance; yet there never was a time in the world's history when men did so much heavy work. The secret of the whole situation lies in the use of other power than one's own.

When I said that there never was a time when men did so much heavy work; I might also have said that there never was a time when there seemed to be so much to do. Surely, never before were men so ready to undertake great works on short notice and to finish them in such short order. The ability to use great forces gives men courage to undertake great tasks. It is ever so, and will be.

The apostle in his letter to the Ephesians says: "Be strong in the Lord and in the power of his might." Nor is his advice to be ignored. When we take a good square look at the work that is laid out for the Christian we find it a staggering proposition. When the Lord said: "Go ye therefore, and make disciples of all the nations," etc., he gave us something to do: the biggest task ever set for mortal men. Just think of it a bit, and compare it with some smaller tasks.

When Alexander the Great had made his conquest of Greece secure, he started out on a world career; and he set for himself what looks like a mighty task. It was nothing less than to establish the government, language, religion, arts and customs of Greece in all the other nations of the earth. Perhaps no other man the world has ever seen was so well fitted for the task: and it is remarkable how great was his success; but even Alexander failed at last. The task was too great for any man or nation of men.

But Alexander's task was a light one; it was a boy's task compared with the task of Christianizing the world. Yet this task is given the church. It has been the work of the church for nearly two thousand years, and it is still the greatest undertaking in the world. Who of us hopes to see it accomplished in his lifetime?

Oh, I know it isn't such a big job to take an excursion through a country, and proclaim the Good News of Christ to the few wondering ears that hear but do not understand; but it is a different thing to really do what the commission requires. That means labor, and thought and care and everything else that a man can put into it; and then he can't do it by himself. I may teach ten thousand men the truths of the Gospel,

and may argue them to a standstill on all disputed points; but I cannot make a genuine heart and soul Christian of a single one of them. How then can I make disciples of the souls that fall to my share?

Well, it is just like the freight at the depot. If I can't do it by myself, I'll get some one who can. I'll get more power; enough to do the work. That's what the apostle tells me: "Be strong in the Lord." Let me remember that it is the special and particular work of the Spirit of God to *convince* the world of the truth of what I tell them of their sin, of the righteousness that may be theirs through Christ Jesus, and of the judgment that stares them in the face until they are forgiven. That is the thing we cannot do; and this is the power by which we must do the work. To be filled with the Spirit of God is to be "strong in the Lord and in the power of his might"; and it is our blessed privilege to be filled with the Spirit, the glorious spirit of God. God grant us power and wisdom and grace to keep ourselves from the evil, and to do his mighty work in the world. May his strength be made perfect indeed in our weakness.

188 Hastings St., Chicago, Ill.

INASMUCH AS YE DID IT NOT.

MASTER, I have this day broken no law of the ten, have hurt no one. Is it enough?

Child, there stood one by thy side burdened with heavy tasks of lowly earthly labor. For a little help, a little easing of the burden, he looked to thee. Thou hadst time and strength.

Master, I did not see.

Thine eyes were turned within. There was an ignored one crying out in his darkness, "Will none teach me?" I have given thee knowledge.

Master, I did not hear.

Thine ear was dull. There came a guest to seek thy converse, a human friend in quest of fellowship. I marked thy sigh, thy frown. Why was thy heart not glad?

I was reading. I hate to be disturbed and be called away from great thoughts to trifling talk.

The children would have had thee some few moments in their play. Without thee they went wrong, how far wrong thou wilt not know. It is too late.

Child's play? But I was searching for a hidden truth of spiritual import.

Thou didst not turn aside to lift that lame one who had fallen by the way.

I was in haste to do what I had planned. I meant to help him when I should return.

Another lifted him. And shall I question further? Dost thou not yet see? Child, my heart yearns over thee. Dost say thou hast hurt none today? Thou hast hurt many, and thyself not least. Not one of the ten laws hast thou broken? Thou hast robbed these thy

brothers of what I did give to thee in trust for them. In all thy eager grasping to save thy life thou hast this day lost it. Thou art smaller, poorer, blinder than this morning thou wert, after all thy reading, planning, doing. Where, where this day has been thy loving? When thou dost ask, "Is it enough?" there thou dost hurt me. Enough? Dost thou then grudge? Wilt thou weigh and measure, wilt thou bargain with me? Art thou looking for a least requirement! Child, thou grieveest me much.

Master, love me still and teach me, for I have the more need.

Fear not; I will not leave thee. Thou shalt one day know what it is to love.—*Selected.*

DEVELOP CHILD-FAITH.

A THOUGHTFUL biographer has remarked, in dealing with the life of a devoted missionary, whose early manhood had been spent away from Christ, that careful observation has convinced him that when the hearts of the young "are turned Christward, although early impressions may seem evanescent, the first directions return after many days." Naturally, he has strongly deprecated that disparagement of early piety which, alas! is by no means an uncommon fault on the part of thoughtless parents. This he terms "a terrible and most awful mistake," and adds:

"The right course is, by every method, and, by a religious atmosphere of home and school, to form that clinging of faith which is natural to a child. Where there is a rich nature, there will be emotion. To disparage the emotion in such a case will be to prevent or kill the faith. The child-emotion will be corrected by time; the faith, though it may seem to falter, will, through God's grace, assert itself again." —*London Christian.*

LOVE ESSENTIAL.

Though I speak with tongues of mortals,
Or of seraphim above;
I am but a tinkling cymbal
If I have not Love!

Though I reach the heights of knowledge;
Every mystery though I prove;
I am nothing, less than nothing,
If I have not Love.

Though I give with princely bounty,
Yield my life my zeal to prove;
Vain are all my gifts and sufferings
If I have not Love.

Blessed, gentle, holy Jesus,
Blessed, holy, heavenly Dove!
Give to me the Master's Spirit,
Fill my heart with Love.

—*Selected.*

"HAPPINESS is a by-product of helpfulness."

ECHOES FROM EVERYWHERE

The United States Steel Corporation on April 1 will cut the salaries of all employes receiving \$1,500 per annum or more. Deep cuts will be made in the pay of those receiving from \$3,000 to \$6,000 per year. The cut will save the company \$2,000,000 annually.

Lincoln, Nebr., March 12.—In the House today the bill to authorize the State university to accept the Carnegie pension fund on professors was defeated by a vote of 51 to 47. W. J. Bryan appeared before the House committee several weeks ago and opposed the pension fund.

The International Peace Bureau is offering a prize of \$300 for the best exposition, in the form of a textbook, utilizable for all grades of schools, of the principles and consequences of the peace movement. The book may be written in French, German, English, Italian, or Esperanto.

The port of Vladivostock has been closed by the Russian authorities as a free port, according to dispatches received at the state department recently from St. Petersburg. This, it is expected, will have a serious effect upon American commerce in Siberia and Northern Siberia.

The bill forbidding the further purchase of lands in Cuba by aliens has been defeated in the House of Representatives by a vote of 49 to 11. Congressman Arteaga, the author of the measure, made no argument for its support, saying that he knew from the first that there was no chance for the adoption of the bill.

In an interview at Montgomery, Ala., President Eliot of Harvard University not only condemned any intermarriage between whites and blacks, but said Irish should not intermarry with Americans of English descent; Germans should not marry with Italians, and Jews should not marry the French. He thinks each race should maintain its own individuality.

By an order of the interior department about 3,000,000 acres of land in the counties along the border of Wyoming are to be thrown open at once to homesteaders, who will be allowed to take either 160 or 320 acres. The land can not be irrigated and will be used, therefore, for dry farming only. Those who take the full 320 acres must make an attempt to cultivate the land.

Besides the thirty-one counties of Indiana that already have gone "dry" in option elections twenty-one have closed their saloons by local remonstrances. Forty remain "wet," but in the near future many of them will hold elections, with the "drys" in most instances having a good chance of winning. One of the bitterest struggles between the liberal and the anti-saloon elements will come in Vincennes, where a petition for an option election is being circulated. This historic capital of the Northwest Territory has seventy-two saloons, two distilleries and one brewery.

The steamer "Mauretania" is reducing the time of the transatlantic passage on each succeeding trip. On March 2 she established a new record for the east-bound passage of 4 days, 20 hours, and 2 minutes. The best day's run was 607 miles, and the average speed for the whole passage was 25.28 knots. The best previous record for the east-bound passage, made by the same ship, was 4 days, 20 hours and 27 minutes.

Mrs. Millicent Garrett Fawcett is the only woman who has ever been asked to address the University Debating Society at Oxford. At the request of the students, she took woman suffrage as her subject. At the end of her speech a resolution in favor of woman suffrage was put and lost by a majority of 16. There is a rumor that Mrs. Julia Ward Howe will in the near future receive a similar invitation from Harvard. Those who pretend to be informed assert that Harvard's majority would be many times greater than Oxford's.

J. A. D. McCurdy and the Silver Dart aeroplane are objects of unbounded enthusiasm at Baddeck, Nova Scotia, as a result of a flight of more than 20 miles across country. The Silver Dart is the machine built by the Aerial Experiment Association at Hammondsport, N. Y., of which Dr. Alexander Graham Bell is the head. Many aeronauts are inclined to think the Silver Dart's performance more noteworthy than that of the Wright aeroplane, contending that the real test of a flying machine is its ability to fly in a straightaway course.

Lansing, Mich., March 12.—Both the University of Michigan at Ann Arbor and the Michigan Agricultural College at Lansing are applicants for the benefits of the Carnegie Foundation for the pensioning of retired professors. Both houses of the State Legislature yesterday passed a resolution directing the State board of agriculture to apply for the pensions for the agricultural college and a similar application made by the board of regents in behalf of the university was approved by both houses of the Legislature several weeks ago.

Dispatches from Teheran tell of the alarming spread of the Persian revolution. An insurrection in the capital itself is imminent. The Shah is guarded only by the few native troops who remain loyal and by the small Russian detachment under Col. Liakhoff. Their position is critical. Russia is rushing reinforcements to the relief of Teheran and a detachment of Cossacks with rapid fire guns has been sent to Resht, an important Persian port on the Caspian Sea, which is menaced by the rebels. The Russian legation at Teheran has instructed the consuls at Resht and Astrabad to summon warships from the Caspian Sea fleet in the event of an outbreak. Late developments leave little doubt that it will be necessary for Russia to send a large force in Persia if the dynasty is to be saved.

Count Zeppelin will sail his new airship across the Atlantic, according to a statement printed recently in the *Berne Tageblatt*. This paper says that Joseph Brucker, formerly editor of the *Staats Zeitung*, Chicago, has signed a contract guaranteeing Zeppelin a large sum, in addition to his expenses, for the trip, the Count to follow the course of Columbus when America was discovered. The trip, according to the *Tageblatt*, will begin at Cadiz, Spain, July 25 next, and is expected to take a week. Zeppelin will be accompanied by a number of prominent German aeronauts.

Medicine enough for a regiment and surgical instruments enough to do all the work of an ordinary hospital will be carried by Theodore Roosevelt to Africa, all condensed so as to fill a suitcase. There are 15,000 doses in the tabloids, nearly 40 per cent of them quinine. The other medicines are to ward off diseases most prevalent in equatorial Africa, chemicals to make swamp water pure and palatable, cures for snake bites, stimulants, opiates, knives and bandages. These supplies, packed in unbreakable and airtight bottles of a vulcanite composition, fit into an aluminum case 15 by 10 by 8.

Much of the good work being done by us in the Philippines is little known to the people of the United States. The recently completed scheme for supplying Manila with water is a case in point. The supply is taken from a watershed 140 square miles in extent, being drawn from the Mariquina River, at a point 20 miles northeast of Manila. The works include a 42-inch steel pipe, 10½ miles in length, a concrete tunnel 4½ miles in length, and a reservoir of 50,000,000 gallons capacity. The capacity of the system is 22,500,000 gallons per day, equivalent to 100 gallons daily for each person in Manila.

The secretary of the interior has settled the suit against the Union Pacific involving coal lands in Wyoming which had been acquired through what are known as "dummy" entries. The lands are said to be worth millions of dollars. The lands involved aggregated 4,560 acres, and after numerous conferences the company decided not to defend the suit, but instead reconveyed the lands to the Government and also paid nearly \$33,000 in settlement for the coal mined from the lands. The company has discontinued mining from the land reconveyed, which has been withdrawn from entry until June 1 next. Besides reconveying the lands and paying trespass damages, the company loses the \$91,200 which was paid as purchase price for the lands.

A meeting of far-reaching importance to the cotton mill industry of the South was that of the representatives of the various textile associations of Georgia, North Carolina, South Carolina, Alabama, Mississippi and Louisiana, held in Atlanta, March 16, at which tariff revision, with reference to its effect upon cotton manufactures was considered. It is said that New England mills, which manufacture the finer fabrics, are seeking to have the tariff on this grade of goods increased and at the same time favor a reduction on coarser cotton goods, which are manufactured principally by southern mills. This was given by a prominent local mill man as one of the reasons for the meeting. He said that a higher tariff on the finer cotton goods would give to the New England mills a monopoly, whereas a reduction in the present tariff on coarse cotton goods would force the southern mills to compete with foreign countries, which have the advantage of cheaper machinery and cheaper labor.

Stanley Granger, a senior student in the Cornell Medical College, died at his home in Brooklyn from blood poisoning contracted while performing an autopsy in the New York morgue. Development of the case was most unusual. Accompanied by another student, Mr. Granger went to the morgue about a month ago to perform an autopsy on the body of a man who had died of blood poisoning. The students were unusually careful because of the nature of the work, but within three days Mr. Granger fell ill and blood poisoning developed. It was the belief of the many physicians that he contracted the disease from a small cold sore on his lip, which he must have touched while at work.

Rev. J. Wood Miller of Urbana, Ill., performed the feat of repeating the entire Gospel of St. Mark, in the New Testament, at the Godfrey Congregational church a few days ago. It was announced that Rev. Miller, who was visiting the pastor, Rev. H. A. Cotton, an old seminary friend, would tell the story of the life of Christ according to St. Mark, and he surprised the audience by repeating verbatim the whole book in 75 minutes. Rev. Mr. Miller states he has repeated the book 2,000 times in English, Scandinavian and German. Rev. Miller says that he did not begin to learn the book until after he was 35 years old.

A committee of the French Senate has drawn up a bill to establish a system of old age and invalid pensions and insurance, which goes far beyond the recently adopted British system of age pensions. It reduces the age limit to 65 instead of 70 years and incorporates many of the features of the German labor insurance laws. Laborers of both sexes who reach the age of 65 will receive an annuity of \$24 a year, but in addition to this will have an age pension if they need it and one for disablement. The annuity is formed from compulsory contributions of the employers and a part from the state and the age pension from both compulsory and optional contributions by the workers, amounting to about 60 cents a year.

Something wonderful has recently taken place in Alaska. This is the drifting away of icebergs from the front of Muir glacier in Glacier Bay, so that for the first time in nine years this famous glacier, the most noted on this continent, has been visited. In 1889 a subterranean earthquake took place at Yakutat, and ever since the approach to this glacier has been so choked with ice that boats with their passengers have turned away, with their passengers disappointed. Now, through some peculiar drifting of the ice, steamboats can enter the channel and go near the right wing and after cautiously pushing their way, get a glimpse of the left face. In the nine years away from the sight of man this glacier has shown remarkable changes. When Prof. John Muir, after whom it was named, visited it, it had a solid face, two miles long, about 250 feet high above the water line. It was a live glacier from which great ice masses toppled into the sea with reverberations like thunder. Water would splash 50 feet high. Today the glacier has a different aspect, says *Technical World*. Erosion has worked out a new bay which will soon be charted, and the glacier itself seems to have two parts, the live part, from which the icebergs break and fall with tremendous noise, and a dead arm, or one with land forming between it and the sea. The change is due to a hill which projected through the top of the ice when Prof. Muir was there. Now that hill-top is a large mountain, dividing the ice fields. The ice has also receded at least four miles in the nine years.

Among the Magazines

THE COURAGE OF THE LOSING FIGHTER.

"I know a woman who writes," says Lillian Bell, in the March Circle Magazine. "She writes gaily, blithely, helpfully. Thousands regard her as the apotheosis of easy success and envy her position and the happiness which must accompany her supremacy. Yet I happen to know that the one she loves best on earth is dying a lingering death of an illness which neither money nor human skill may even subdue the pain thereof.

"She is both nurse and breadwinner, and doing the work of two is robbing her of health and strength, yet not one complaint ever passes her lips. With her back against the wall she fights her losing fight, which, though won each day, yet loses, loses to her all that she loves best. Such courage as is in her little slender frame and blazes from her dauntless eyes! Yet her success—even though she daily wins her losing fight—brings tears to my eyes.

"The woman who scrubs for me, earning her dollar and a half a day on her knees, is kneeling, not only to her work, but before an altar whereon lies the crippled child she adores. He can never grow up—she must know this in her heart, even though we talk of what he will do when he grows strong and well—he is failing daily, and her eyes know the truth though her lips still speak brave lies. He will live, he is eating better, his lips have more color, his eyes are brighter! Yet as she lifts him in her arms at night she feels that his little frame is daily growing lighter and his feeble clutch on life is nightly growing looser. She talks to me—this poor mother! this brave, losing fighter!—of the time when he will walk, well knowing that the first step his poor little crippled feet will ever take will be in another world. Oh, the poor souls on this earth who fight blindly against the ever-dancing, grimly stalking Death!

"You who are successful in that you are not fighting your battle of life against hopeless disease or a nearby approaching death; you whose wage is equal to your necessities; you who lay by a little each month for a rainy-day fund, or you who count your wealth by millions, will you not give the right hand of fellowship, share your sympathy or in some manner cheer the heart of some proud, courageous, silent-lipped, losing fighter of your acquaintance?—grip the hand of some man struggling with increasing expense and dwindling wage?—write a note of gratitude to some one whose work has inspired you?

"Best of all, won't you pause long enough each day to bestow a helpful thought on the great and noble army of losing fighters in this world?"

JUSTIFYING RELIGIOUS JOURNALISM.

The religious press is from time to time assailed with a request to justify its right to life. In spite of the fact that statistics prove that this branch of journalism enjoys a healthy existence, it is frequently charged with being moribund or living by means of the non-religious

features it has taken over from the secular press. The modern world, says the Chicago Interior, "intimates a suspicion that it might get on very well if there weren't any religious newspapers." To such a proposition as this The Interior addresses itself with a few observations:

"All this is disconcerting enough to a form of enterprise that had in other years lived along undisturbed under a placid assumption that it existed by unquestionable divine right. Now the right is questioned, and the religious newspaper finds itself crowded to answer a harsh and rather humiliating demand for the reasons of its being—its apology for existence.

"What then has the religious newspaper to say for itself?

"Before it puts up any argument, it must—like anybody else in an argument—assume a proposition to start from. It is this:

"The world needs religion.

"If the cross-examiner isn't prepared to concede that, there's nothing more to say. A world that didn't need religion wouldn't have any use for a religious newspaper—that's plain enough.

"Granting that religion is worth while, settle next this:

"If a man takes religion, what ought he to take it for—a nice little keepsake to cherish privately in his own life, or a stir of new force in his heart to drive him out doing something wholesome for his fellow men?

"Now, if the private-individual sort of piety were all there is to Christianity, it seems reasonable to think that the religious newspaper wouldn't be so very important. As a matter of fact the religious periodical may contribute a good deal to personal piety, but the Bible and the great classic devotional books—the books that mean just the same one day and one year as they do any other day and year and so on to the end of time—would well suffice to support that side of religion.

"But if the Christian is going to live an aggressive life of service to his times, then besides his books of timeless validity—good anywhere and anywhen—he needs an inspiring and directing literature that is strictly timely—absolutely up-to-date—good just now and here. And that's where the religious newspaper comes in."

The church in the large is for action. But for the church to work together "it must be pervaded with information that makes known to individual members what to do and how it's proposed to do it." The religious newspaper, this writer believes, is the only "entirely efficient way to spread that information." He proceeds:

"There is no substitute. Books won't do; they are too slow getting out and too hard for the average man to read. Secular papers won't do; they underestimate spiritual necessities and spiritual remedies. 'Uplift' magazines won't do; they talk reform but haven't divined the secret of regeneration. Board circulars won't do; they show only a corner of the picture.

"To pack the ordinary everyday church-member—the average Christian—full of the facts that make him feel

how much the world needs his sacrifice and service; to inspire him with a vision of what it would mean for the whole church to swing in and rush its banner forward everywhere; to teach him where he can take hold with his own hands and where he can lend power to the hands of somebody else; to bring him up at double quick to the help of the Lord in a sudden emergency; to hold him steady with a constant concern in all the great interests of the incoming kingdom—the church paper can do this for militant, aggressive Christianity; and nothing else can.

"There are other factors in the problem, of course, but roughly, the corporate, coöperative efficiency of a church in big united enterprises will be in proportion to the thoroughness with which religious papers circulate information through its membership.

"Information—that's the regal franchise word for the religious journal.

"It's all too palpable, however, that the religious press is not doing this solidifying, energizing work very thoroughly in the present-day church. The blame for the failure is twofold:

"The first half of it lies with the papers themselves. They don't live up to their mission. They print too much matter that would be good any time. All the justification of a church periodical publication lies in the matter that wouldn't be as good any other week as it is the week it is printed.

"The second half of the fault lies with local church officers—ministerial and lay. They don't believe a newspaper can be divinely called into the Christian ministry. They consider it represents merely a shrewd human scheme to make money by catering to a certain easily accessible class of readers. Therefore they let it make its way like any other commercial undertaking.

"A generation of Christian ministers and elders who believed in the Christian press as a power to bring in the kingdom of God would stop the questioning of the world about the use of it.

"As to any one religious journal that you may have in mind—

"If where it goes it makes Christians want to work, help it go farther; if it doesn't do that, have the nerve to help cure or kill it."—Literary Digest.

YOU CAN OWN A PINE FOREST.

All who have had the privilege of living among the pines or in a place easily accessible to the fragrant forests will treasure two thoughts presented by George W. Wilder in the March Delineator, and the thoughts doubtless will lead to action. The two thoughts are: First: Now is the time to plant pine seeds. Second: Now is the time to transplant pine that nature has planted for you.

The next month or six weeks is the time during which to plant pine seeds, whether you pursue the "scientific" method or the "easy way," says Mr. Wilder. The "scientific" method, that is, planting the seeds in a prepared seed-bed and two years from now transplanting them, is, of course, the better way, the only sure way. The "easy way," planting the seeds just where you hope ultimately to have your pine forest, is better than no way at all. Now is the time to plant, whatever way you elect.

This spring, next spring and the following spring will be occasions on which, with practically no work, the wise man whose farm nature has blessed with a planting of pine seeds can multiply what nature has done for him.

In some sections in 1907, in other sections in 1908, nature planted lavishly of pines. They have sprung or will spring up in spots, ten, twenty, maybe even fifty pines to a square foot, and be scattered over an acre or two acres of land. The wise man who owns such a piece of land has only to take up and transplant. If he has an acre covered with young pine anywhere from two inches to a foot tall, averaging, say, ten to a foot, he can make that good for twelve to fifteen acres of pine by resetting them during the wet spring season some five feet apart. Thus it saves nature from her own wastefulness, and with a few days' work makes this acre of pine seed, which, through its own self-destruction, would some years from now be worth only two hundred and fifty dollars, show a promise of three thousand to four thousand dollars. This really seems worth while.

THE PASSING OF COAL.

It was feared at one time that the rate of coal consumption would soon outgrow the rate of production, and there was talk of curtailing the use of coal in many industries. But the inventor proceeded to make coal-mining machinery which lessened the labor of extracting the raw product from the earth and increased the output tenfold. England today bases her hope of extending the period of her profitable coal-mining upon the invention of machinery that will compensate for the added cost of deeper mining. In America coal-mining machinery has doubled and tripled the output. A coal-digger cuts and extracts the coal from its bed as fast as three or four skilled miners could formerly do; it falls automatically upon cars, which swing upward like elevators to the light of day, and deposit their contents into chutes. Down the sooty mass tumbles to the breakers, where it is pounded and broken into sizes suitable for commerce. Thence it slides on to the washery, and comes out at the other end to be dumped on cars. The cars quickly cross the country to some river or bay where canal-boats are waiting. The transference from the cars to the boats, and from the boats to the wholesale and retail dealers' coal-yards, is performed automatically. Even when the coal comes into our homes it is shot down chutes into the cellar, and not carried there in buckets and baskets as of old.

And yet for all this simplifying of labor, this invention of machines to reduce the dust and ashes, nobody likes coal, and we all pray for the time to come when its use may be abolished. It is not a popular article of commerce; it is a clumsy and dirty fuel, and in this age of invention and discovery it seems woefully out of date. It is not new machinery to increase the output that we are longing for, but the discovery of some new method of obtaining heat and power.

In part we have solved the problem by steam-heating and electrical plants, which conduct the heat and energy a long distance under the streets of our homes and public buildings. The amount of the nuisance has been reduced, and its area restricted. Nevertheless, for the majority of humanity there is coal still to be used, and there are ashes to be taken up, much to the detriment of our tempers and the appearance of our homes.

All these improvements are encouraging; they point to an amelioration of present fuel nuisances. But we belong to an age that demands magical performances. Nobody is satisfied with these attainments. The optimism of our science leads us to believe that greater things will soon happen. We are bent upon abandoning the dirty

coal for some cheaper, cleaner, and more suitable fuel. We believe that nature gave us the coal mines for a temporary use—merely to carry us over a period when we were learning to harness the tides and winds, and to unlock the secret of gases. Shall we ever realize that utopian age when a silent, secret agent will enter all our houses and yield us power, heat, and light by the turning of a knob? Very few doubt it. And that agent will not be coal, nor will its power be derived directly or indirectly from coal. When it comes, the vast coal mines will become as useless and valueless as clay pits—more so for clay will still be made into bricks.—March Lippincott's.

THE ROOSEVELT ADMINISTRATION.

(Continued from Page 301.)

sources was a logical development from the experience of the Interior Department in administering the public domain. The President, impressed with the rapid disappearance of forests and consumption of coal, called a Conservation Congress, to which the Governors of the States were invited. This gathering set on foot the practical movement for the preservation and restoration of natural forces. An international conference of representatives of Canada, the United States, and Mexico on this same subject, with the view to co-operation in a continental movement of conservation, has been held, as one of the last big accomplishments of the Roosevelt administration. Parallel to this movement and closely related to it is that for systematic development of waterways as a means of cheap transportation. Only very recently the President has informed Congress of the evidence in his possession, indicating the existence of something like a trust aiming to control and monopolize the water powers, and, distributing their energy electrically, to come into substantial control of the future power of the country. Measures designed thoughtlessly to give away control of this power have been vetoed, and Congress has been urged to establish effective national control of these powers.

"Under Roosevelt one new department,—that of Commerce and Labor,—has been added to the machinery of administration, and another, that of Agriculture, has been built up from small beginnings to large utility and practical value. The Department of Agriculture has introduced and popularized science in the industries of the soil; it has scoured all the continents for varieties of plant life which might be useful here. It has led in better farming methods, has carried on scientific experimentation in breeding and growing of plants and animals, and has gradually been invested with large powers. The pure food law is administered through it, and so is the national meat inspection law. These two pieces of legislation are accomplishments of the Roosevelt era, each being the fruit of a hard fight against determined opposition.

"The Postoffice Department has greatly widened the range of its service through extension of rural free

delivery, till now that service reaches many millions of the rural population who formerly were miles from postal facilities. Two-cent postage has been placed on an international basis as between the United States and several countries, and will be further extended so fast as treaties can be perfected. The President has given his enthusiastic backing to proposals for widening the functions of the postal department to include the postal bank and the parcels post.

"The powers of the Interstate Commerce Commission have been increased through the passage of the Hepburn and Anti-Rebate laws, and the principle of governmental power to control rates and charges and enforce publicity of accounting and financial operations has been established.

"There has been inaugurated a detailed inquiry into labor law has been passed for the District of Columbia as a model for the States; a federal employers' liability law has been passed; and another act defining the liability of the Government to its own employees who may be injured, and opening a way for them to get redress."

We have purposely omitted what this writer says about the improvements made in equipment of the army and navy under the direction of the man who believes in maintaining peace by intimidation. Mention of other improvements made during the past seven years has been omitted because of a lack of space.

"As he goes from the executive chair, Mr. Roosevelt leaves many things long to be remembered as representing his beginnings. He has roused public interest and attention in many subjects which must be disposed of without his assistance. He has had time to finish few things; but he has begun many which others must carry forward. In his determined, insistent way he has in truth piled up business for those who will come after; he has cut out work which they will not be able to avoid, even if they might wish. And his beginnings will keep his own era of personal activity in mind of legislators and administrators who for decades will be wrestling with the troubles he stirred up, but didn't have time to solve."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—494 acres in Mexico \$950. On Southern Pacific Railway in Sinaloa. The New California and Coming Country. Rich soil. Level. Bank and Government References. W. S. Hunt, Culiacan, Sinaloa, Mexico.

FREE—The Inglenook Handy Atlas of the World, with each subscription to the INGLENOOK Magazine at \$1.00 per year. This offer is not good after April 20, 1909.—Brethrer Publishing House, Elgin, Ill.

NEFF'S CORNER

I have just imported from Germany some pretty souvenir post cards of Clovis scenes, artistically wrought in colors. Mailed to you 3 for 5 cents, 6 for 10 cents, or 20 cents per dozen. And, by the way, these cards are a sample of cards you can have made of your residence, favorite animal, church, court house or any other building or landscape view. Send me photographs of what you want on the cards and your orders will have immediate attention. You can get your friends to join you in making up an order, or you can sell thousands of these cards to members of your church, business men, etc., at a good profit to yourself or your church treasury. If you want to get some glimpses of Clovis, order a few cards. If you think of having some cards made, ask for prices when you order the samples. Address,

JAMES M. NEFF,

Clovis, New Mexico

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address:

WM. S. MILLER,
Meyersdale, Somerset Co., Pa.

DO IT NOW.

EVERY SUNDAY SCHOOL TEACHER

has often heard class-members say: "I cannot understand the Bible." They could not understand any other book that was printed three hundred years ago. So many English words of that day were different.

More than forty new dictionaries have been required since then, to keep up with the changes in the English language. The

American Standard Bible

Edited by the American Revision Committee

uses the words of our day, which make the meanings of the Bible writers clear to us.

Write for Our Free Booklet, "How We Got Our American Standard Bible"

No teacher can afford to be without it.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

TAKE NOTICE

Are you seeking for health, wealth, happiness, beautiful scenery, fine weather, good schools, and splendid church privileges? If so, come to Reedley, Fresno County, Cal. Located in the famous San Joaquin Valley, where you can enjoy yourself all the year around. Land is not so high yet but what you can get a home. Land is worth from \$10.00 to \$1,000 an acre and steadily advancing in price. It so happens that Reedley lies at the intersecting of two great railroads, the Santa Fe and the Southern Pacific. This gives us an excellent train service and good shipping facilities. Reedley soil under extensive irrigation has proved remarkably productive and the location, near the foothills of the Sierra Nevada Mountains, is a location that cannot be surpassed for the raising of almost any kind of fruit and nuts and all kinds of vegetables. You can raise some kinds of vegetables every day in the year. The "Square Deal for All" is our rule. For further information address

FINCH & HOLDERMAN

Reedley, California, Box 602

OWN A HOME

In the Land of Health and Wealth

Here's an opportunity to make a fortune. It's not a chance—not a risk—but a **positive opportunity**. And combined with this opportunity of wealth, is an offer of culture, education, pleasure and health—for your family as well as yourself.

Clear blue skies, pure air, mild winters, comfortable summers, beautiful scenery, together with excellent church privileges, good schools, pleasant neighbors and **big crops**—they're all to be found at

—Miami Ranch—

18,000 acres of land in Colfax County, New Mexico's choicest farming section. Not a lonesome, dreary tract of land in a boundless desert, but a rich, cheerful valley surrounded by picturesque mountains.

Elk, deer, bear and other game can be found in the mountains, while thousands of wild ducks and geese inhabit the surrounding lakes. The Rayado River, which flows through the ranch, is famous throughout the Central West for its mountain trout.

The MIAMI RANCH is specially adapted to the raising of wheat, oats, barley, sugar beets and fruit. New Mexico wheat took first prize at the World's

Fair in Chicago; and apples raised in an orchard directly adjacent to MIAMI RANCH won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 per acre.

At the National Irrigation Congress Interstate Exposition held at Albuquerque, N. M., last October, Colfax County won the \$400.00 Silver Cup for the best showing in varied resources, embracing agriculture, horticulture, minerals and live stock. Conditions in northern New Mexico for stock and poultry raising and dairying cannot be excelled.

WONDERFUL IRRIGATION SYSTEM

Although the average annual rainfall at MIAMI RANCH is 13.92 inches and the heaviest fall is during June, July and August, when it is most needed, the owners of the MIAMI RANCH have constructed ditches and storage reservoirs which give such an abundant supply of water to all lands which they offer for cultivation as to insure the biggest crops possible for any soil to raise. The irrigation system is in charge of an expert who furnishes instruction in irrigation to the farmers. Every opportunity possible is offered you to make your life a success on MIAMI RANCH.

Less than half fare rates can be secured to MIAMI RANCH via the Atchison, Topeka and Santa Fe Railroad, the first and third Tuesdays of every month. Write for more information regarding these excursions and also ask for our free booklet, "Westward Ho." It tells in detail all about MIAMI RANCH and shows illustrations of actual scenes on the ranch.

Prompt action is necessary if you want to take advantage of the present bargain offers being made. Write today—right away.

 Elgin, Illinois

Your Children

speak in the language of the twentieth century. In school, they are taught the language of the present day. Is it natural then, that in their Bible study, they should be expected to understand the English of the seventeenth century? The

American Standard Bible

Edited by the American Revision Committee is for you and your children. It is the Bible truth revealed in the clear, simple language of the twentieth century.

24-page Booklet Sent Free

This book tells about the previous translations of the Scriptures and shows how, by the growth, change and development of the English language in the past 300 years, the American Standard Bible became a real necessity. The booklet tells also of the thirty years of effort spent in producing the American Standard Bible and gives many endorsements from prominent clergymen and religious writers of all denominations, with names of colleges and institutions where it is used.

A postal will bring the booklet—write for it to-day

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.
 "I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.
 "A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Our INTRODUCTORY OFFER.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

A Sample of the Oat Fields in the Nanton District.

BOUNTIFUL HARVESTS

The prosperous settlers of Sunny Southern Alberta have harvested and threshed enormous crops the past year. The wheat yield on some fields was as high as fifty bushels per acre. The oats yield was as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Mrs. McHenry's Farm Residence near Empire.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal. For further information address

"Mention Inglenook When You Write"

Told at Twilight; Or Bible Stories That Never Grow Old

By Elizabeth D. Rosenberger

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

Our Price, 25 cents
(Postage extra, 5 cents.)

The Sunday School Calendar

Issued annually. Enlarged and improved. Beautiful cover design containing reproduction of Hofmann's famous painting of the boy Jesus.

In addition to the International Daily Bible Readings, the calendar contains International Sunday-school lesson titles and references for every Sunday in the year, also the Golden Text for each week, printed in full. Each leaf contains choice selections from the best writers, helpful thoughts for every-day living. A calendar for the entire year is printed on the back, and an extra leaf is inserted containing Scripture selections, etc., arranged for easy memorizing.

This calendar is endorsed by the leaders in Sunday-school work and has proved very helpful wherever used. As a Christmas gift from teacher to pupil it is extensively used. Many schools distribute them at the Christmas season to every scholar. They are especially valuable to Home Department members.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

NEFF'S CORNER

I have just imported from Germany some pretty souvenir post cards of Clovis scenes, artistically wrought in colors. Mailed to you 3 for 5 cents, 6 for 10 cents, or 20 cents per dozen. And, by the way, these cards are a sample of cards you can have made of your residence, favorite animal, church, court house or any other building or landscape view. Send me photographs of what you want on the cards and your orders will have immediate attention. You can get your friends to join you in making up an order, or you can sell thousands of these cards to members of your church, business men, etc., at a good profit to yourself or your church treasury. If you want to get some glimpses of Clovis, order a few cards. If you think of having some cards made, ask for prices when you order the samples. Address,

JAMES M. NEFF,

Clovis, New Mexico

The Home Model Washer

Contains new features that should concern all who are in need of a washer. By means of a thumbscrew, the lever can be quickly set for long or short leverage, for light or heavy work, a good feature.

The agitator, the part that does the washing is also something new in that line. It is Simplicity and Strength and

makes this washer noted for easy, fast and clean washing. Do yourself a favor by learning all about this washer. It is low in price. I pay all the freight whether the washer is returned or not after a thorough trial. The circular illustrates and explains it all. Send for circular at once. Agents wanted. Address:

WM. S. MILLER,
Meyersdale, Somerset Co., Pa.

Buckeye Pure Home Made APPLE BUTTER

is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

Holmes' Green Prolific Pole Lima Bean

Grows Green—Dries Green—Stays Green—Most Prolific

Equals the Early Jersey or any other variety for earliness. More productive than any other Pole Lima we have ever seen grow. Every Bean has that true, distinct, deep grass green color, and this color it retains when the Beans are shelled for market. The large pods hang in clusters of from five to eight, each pod containing from five to six beans. Stock extremely limited. Positively only three papers will be sold to any one person. Pkts. containing six beans, 25 cents; 3 pkts., 50 cents.

Holmes' Delicious Early Sweet Corn

Entirely new and distinct. Very early. Ready for market in 55 days. The most delicious Early Corn grown. Has twelve rows to the cob, and each stalk bears two or three well-developed ears.

Stock extremely limited. Pkt. containing enough seed for three hills, 25 cents; 3 pkts., 50 cents. Positively not more than three pkts. sold to any one customer.

Fuller description of both above Novelties will be found in our Hand Book on Seeds which is sent free for the asking. No other seed house can offer these two sterling novelties this year

HOLMES SEED CO., HARRISBURG, PA.

Southwestern Kansas Lands

For a home or a profitable investment.

THE GARDEN CITY LAND & IMMIGRATION COMPANY (Inc.), GARDEN CITY, KANSAS, Offers a fine selection of irrigated, sub-irrigated and diversified farming lands at attractive prices.

SOME SPECIAL BARGAINS.

640 acres in Brethren settlement, 12 miles from County Seat, on line of new R. R. Level, fertile land. All tillable. 480 acres cultivated. 340 acres winter wheat. 3 wells fine water 50 feet. Wind-mills, tanks, etc. Good house and outbuildings. 10 acres fine bearing orchard. Good shade trees. All fenced. ½ mile of school. Near church. Telephone. R. F. D. Only \$25.00 per acre. Easy terms.

160 acres choice level land 1½ miles Garden City. Irrigated from the United States Pumping plant. All under cultivation. All high class alfalfa and sugar beet land. Price, \$10,000.00.

160 acres well improved irrigated farm. 12 miles from good town. A snap at \$25.00 per acre.

Write for descriptive literature and full information.
DO IT NOW.

EVERY SUNDAY SCHOOL TEACHER

has often heard class-members say: "I cannot understand the Bible." They could not understand any other book that was printed three hundred years ago. So many English words of that day were different.

More than forty new dictionaries have been required since then, to keep up with the changes in the English language. The

American Standard Bible
Edited by the American Revision Committee
uses the words of our day, which make the meanings of the Bible writers clear to us.

Write for Our Free Booklet, "How We Got Our American Standard Bible"
No teacher can afford to be without it.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

FOR LAND SALES

come to **Reedley, California** where you can raise all the oranges and lemons you want and make a fortune at the same time. Where snow is practically unknown. Located in the heart of the famous **San Joaquin Valley**, the home of the raisin, peach, pear, apple, fig, nuts and vegetables of all kinds. An extra fine place to go into the dairy or chicken business. Have fine **alfalfa** land and there are hundreds of tons raised here. Located on two railroads and on the banks of the Kings River and always in sight of the stately Sierra Nevada Mountains. Nearly perfect climate. Come to California where you don't freeze to death. We always use the Golden Rule in all our dealings and it will pay you big to see us before you locate. For further particulars address

FINCH & HOLDERMAN

Employment Office

Reedley, California, Box 602

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax County, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every state was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

The results of grain crop following the beet crop.

	Kind of Grain	Bushels Per A.	A.
I Hildreth	Wheat	58	15
Gough & Merrill,	Oats	100	17
Joe Dickens,	Wheat	56	20
Sugar Company,	Barley	60	40
Geo. Duval,	Barley	75	35
John Holtom,	Wheat	52	20
Albert Mickels,	Oats	90	9

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 13.

THE STUDY OF THE PUPIL

D. D. THOMAS

DIRECTLY the teacher has three things to study. He must first study himself. Then, he should know what he is to teach,—he must study his lessons, and lastly he should study the child.

A physician once said to the writer that each individual patient was a separate study, that though the diseases and remedies were classified yet there were such differences as made a separate study necessary. Now something of this kind one finds in the child applicant for the acquirement of knowledge. There are general principles upon which one may depend and which facilitate the work very much, but the especial things enter into his life so largely that make the child a constant study. Nor can the line be drawn by families. Sometimes the greatest differences exist among children of the same family, so that the teacher must make a distinction here. One pupil is interested in one thing and another in another, and where a child's interest is there is the teacher's leverage.

Not long since an old teacher related how he had helped a troublesome boy and as he thought opened up a life of usefulness by taking an interest in his "coon hunting" and thereby gained the confidence of the boy. One can afford to sit down and listen to the story of the boy or girl when by it a clue is given to some bright picture hidden down deep in the soul. And one has reason to rejoice when he can as a teacher bring forth to light that heavenly picture painted by a master heart some generations before.

In a school of thirty there is no lack of material. These thirty faces, clean, bright and with sparkling eyes produce fresh reading matter the five days of a week and the four weeks of a month. Their work is in classes and these classes must be kept together. Some are slower than others. How can they be stimulated to greater exertion? Here is a study. Others are running ahead. How can they be made to have sufficient employment to keep up interest? And here

is a study. Then there are the possibilities of a very dull pupil such as sometimes comes to the day school. How much effort should one make with him and not waste time? Some remarkable results have followed persistent efforts in the cases of very dull and idiotic minds. But, of course, in a school of thirty a teacher's individual work is limited. Primarily the weak minds and weak bodies are sent into the world to remind us of our sins. But may there not be this in it: That they are sent unto us not incapacitated but bound that we should loose them and let them go? That enlarges the teacher's mission. It is only by the loving hand of a skillful teacher that the light may dawn in many a dark corner where sin and degradation are and make the desert of life to bud and blossom as the rose.

A fruitful phase of study is the peculiar bent of the child mind,—a gift to which he affiliates almost as naturally as a duck goes to water.

A story is told of some lumbermen who dwelt in the backwoods. They had the very natural habit of gathering around their camp-fire after one of their number had died and telling of his good traits,—that he was good at some one or more kinds of work. But one day a man died who seemingly had no good trait. They gathered around the fire and sat for a long time in silence. Finally one ventured to say, "He was a good smoker." This story is likely fiction. A man without some good trait does not dwell in a world that God calls to repentance. He wants workers. So no pupil is without some peculiar bent of mind. A Paul would say, "Having gifts differing."

To note that which he can do best coupled with that which he likes best, and never to be found throwing anything in the way of any good trait, and more, always encouraging the child in the line which seems best, these facilitate the study and broaden and enlarge the work.

It is the belief of the writer that many a man and

woman are left in obscurity simply because at the time of development in the child life proper steps were not taken nor encouragement given. The teacher did not see. They went to school the allotted time and because the light did not come to them so much of their life was left in darkness. And with this belief the conscience monitor makes one very serious.

The Great Teacher came into the world to bring light. "In him is no darkness at all." The teacher's mission is just that, to bring light. How often the light that is within us is darkness we do not know, but when it is it is very great.

While it is true that there may be many a bungling piece of work done by the best intentioned and most earnest teacher, yet one should not forget the other side also and note what this integrity and zeal may do. If the lesson is difficult, that does not argue ceasing to study. The intricacy of the problem brings the more glory with the solution. It is the good will and keen efforts that count for us. Not to mourn over our seeming failures but to double our diligence and labor on is the much better way.

The study of the pupil calls for strengthening of the things wherein he is weak as well as the developing of things wherein he is strong. And by this discipline the strong points are made stronger. The

character is rounded out. His sphere of life is enlarged. A child may and does argue against the study of a lesson because he cannot get it. An aversion has grown up because the lesson seems so much more difficult to him than the lessons in other branches he studies. What device has the teacher to offer whereby he may overcome that aversion? And here again is a study.

Today, as the teacher sees them, these same thirty, pass out of the room to their homes, rushing forth with shouts of laughter, how their hope makes one think. The bright sun is sinking in the west, but they are as confident of another day as they are sure of this. They have left with a smile and a "good-night, teacher," and as the teacher sits wrapped in deep thought, they seem somewhat in this order: He recalls the prayers of last night, the beauty of today's recitations, the improvement over yesterday's work. Why, the good angel seems to have stood by him all day! He is tired with his labor but glad for its results.

In a few years they shall go forth and the world shall know. The homes shall be gladdened and the life shall be lifted. 'Tis the greatest mission of man to give life as is his strength. "I am come that they might have life and that they might have it more abundantly," so said the Great Teacher.

LA FONTAINE'S FABLES

ELIZABETH D. ROSENBERGER

JEAN DE LA FONTAINE, the son of a ranger of streams and forests, was born in 1621. It was not until he had reached his forty-eighth year that he published his first fables. Every one who has a genuine love for animals can not help enjoying these fables; they are the best of their kind and La Fontaine is easily the most famous fabulist after Æsop. La Fontaine has a real love for the animals whose doings he relates.

In the seventeenth century, especially in France, people believed that animals were only machines. Descartes said that a beast differed in no wise from a watch, or any other mechanical construction that had been wound up and set going. One man who used to beat his dog said he did not hurt the dog as it could not feel and its howls were only currents of air driven through a vibrating channel. In his fables La Fontaine proved the utter absurdity of such theories.

La Fontaine's fables are a vivid picture of the age of Louis XIV. The king appears sometimes as a lion, sometimes as an eagle. The fox is a courtier, the owl is the recluse, blind to what is going on around him, having eyes only for his books. The wolf is the outcast of society, the poor lean wanderer who might

reform, only no one gives him the chance. The cat is Tartuffe, the religious hypocrite. In one fable a cat had spread so much terror among the rats, that a council was held one day in the cat's absence. One wise old rat proposed to fasten a bell around the cat's neck, so that the sound should give timely notice of the cat's approach. "An excellent idea," said all the rats, but who was to bell the cat? They talked and talked but no one was willing, so the whole thing ended in talk. We see the same thing in human affairs, much talk, much advice, but all shrinking from the test.

Then the hen with the golden eggs is familiar to most of us. La Fontaine the author said that a certain miser had a hen that laid golden eggs. Thinking to possess himself of the whole treasure at once, he killed the hen; but on cutting it up, found it was a bird of ordinary description. There was also a lesson in the fable of the grasshopper who had sung through the summer time but grew pinched and poor as the winter advanced. Not a scrap of bread nor a drop of drink was in her larder. In her trouble she went to the ant, her neighbor, and prayed for a loan of wheat to make

herself a loaf. "I will repay you every grain," she said, "both principal and interest before harvest—on my honour." The ant is never very well disposed to lend; said she to the grasshopper: "How did you spend the summer?" The grasshopper replied: "I sang gaily day and night, to please all people." "You sang? Very well then; dance now."

In his fables, La Fontaine also refers to the reasoning power as exemplified in the partridge which pretends to be lame in order to draw the dogs away from her young ones; and to the building association of the beavers. Then he vouches for the truth of his story and asks, "What shall we think of this partridge as a machine?"

It is his love for animals and close observation of their habits which enable him to describe their outward appearance with such graphic picturesqueness. In the fable of the wolf and the fox, he describes the prowling wolf whose shaggy skin hid little but his bones when he met a mastiff dog, proud, and fat, and sleek. The wolf expressed his admiration for the dog's good looks, and the dog invites him to come with him and share his princely fare. The wolf inquires what he would have to do. The dog assures him: Only light work, bark a little now and then, fawn on friends that come or go, and then he shall have savory messes and meat to satisfy his hunger. The wolf decides to go with the dog, but as they run along he notices a galled spot on the dog's neck. "What's that?" he cried. "Oh, nothing but a speck," answers the dog evasively. "A speck?" "Yes," said the dog, "it does not pain me, it is the collar's mark by which they chain me." But the wolf decided there could be no chains for him; he ran away and he is running yet, wild and free.

Of friendship no one has written with greater truth and feeling. The fables of which the subject is friendship are among his masterpieces, and there is no wonder that the man who could write of friendship as he does, was himself tenderly loved. His rules of morality are four: Love your friends, help your neighbors, work hard, trust in God.

One fable represents the peacock as complaining to the goddess Juno, saying, "Goddess, the song you have given me is not admired; while on the other hand, the nightingale, a paltry little thing, is the glory and delight of springtime, owing to her sweet and powerful singing." The reply of Juno is worth remembering: "Jealous bird, is it for you to envy the singing of others? You who are wearing round your neck a hundred rainbow dyes; is there any bird more fitted to please than you are? No creature engrosses every gift; each has its special dower, and all are content. Cease then to murmur, lest as a judgment I rend the plumage off your foolish back."

In his knowledge of man, sympathy with man and

nature he has few rivals. It is his creative imagination which entitles La Fontaine to the rank supreme in his line as a writer of fables. His creations stand out clear against the horizon as visible, living shapes.

THAT WHICH IS SATISFYING.

THE most helpful and sacred work which can at present be done for humanity is to teach people (chiefly by example as all best teaching must be done) not how "to better themselves" but how to "satisfy themselves." It is the curse of every evil nation and evil creature to eat and not be satisfied. The words of blessing are, that they shall "eat and be satisfied." And as there is only one kind of water which quenches all thirst so there is only one kind of bread which satisfies all hunger—the bread of righteousness; which hungering after, men shall always be filled, that being the bread of heaven. But hungering after the bread, or wages, of unrighteousness shall not be filled, that being the bread of Sodom.—*Modern Painters*.

SAVIOR OF THE BLIND.

ALMOST entirely unnoticed, even on the continent, has passed the centenary of Louis Braille, the man who invented the system of printing for the blind. He was born in January, 1809, the son of a harness-maker, and at the age of 3, when playing at cutting out a strap with a knife, he put out one of his eyes. The other eye followed, and at 10 years old he was placed in an asylum for the blind. He was a remarkably clever boy and became a teacher of history, algebra and the piano to blind children. In those days the blind learned to read with the Roman characters embossed on paper, but Braille, improving on a system introduced by an artillery officer named Barbier, invented his alphabet, which, by means of six dots in high relief, provides all the letters, stops and musical notes. Thanks to this invention the blind have been enabled to read and write, and the system soon became universal. Books and even newspapers are printed in it, and Braille must certainly be considered one of the benefactors of mankind. He lived long enough to see his alphabet universally accepted, but died comparatively young of consumption, just as he had completed his forty-first year. Thanks to him, the blind are no longer cut off from knowledge, and through his system some very remarkable scholars have been educated, even among those who have been born sightless. In this year of centenaries his is by no means the least worthy of remembrance.—*London Globe*.

"NOTHING else so pollutes the springs of human action as does a good picture of a bad thing. This principle applies in the matter of word-painting no less than in that of brush-painting."

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LI.

I ATE all I cared for and filled my pockets with the finest and largest figs and climbed down upon the marble ruins of Diana's Temple.

All around us, covering many acres, lay fallen pillars, crushed pedestals and broken statues, like so many grim skeletons, mute and inglorious, victims on the battle-field of Christian triumph.

The humble worker in wood had won the day from the proud artificers in silver. But the followers of neither knew it. One went away troubled in spirit, broken in plan, but calm in conscience. The other, self-complacent and sure of popular favor, chatted at the coffee-house about the failure of the Christian fanatics. The one boasted in the speech of silver, the other hushed its pleading voice into a golden silence that now thunders its echoes of victory around the world.

Back at the little station long before train time, we bought a watermelon to eat with our lunch. As we ate, a peasant woman and her grown daughter went to the ticket window to purchase a ticket for Smyrna. Just as all oriental purchasers dicker with the seller and haggle about the price, so this ignorant peasant woman was trying to make the agent take a little less for the tickets than the price he had asked. She didn't know how comical she appeared to us,—people who had crossed two oceans to walk along her little raisin farm and who were possessed with so much more common knowledge than she herself. My mission lady understood Turkish. She told me what the woman said: "Too much," she said, and made a movement as if she would go to another

agent or take an aeroplane to Smyrna. The agent shook his head at the piece of money she showed him. "Must have more," he said.

She looked at her daughter. "We can't go, Salina, the man wants two pieces for the tickets."

The third time she laid the piece of silver, a mejidie, upon the counter. The agent moved his hand politely and stepped back, but unlike an American agent, he held his temper, acted every inch the gentleman of refined courtesy, and "staid by" the rustic travelers.

The daughter looked for money about her person.

She found a piece in a colored kerchief, and laid it down upon the window. No surprise was shown by the mother at this, for it had all been schemed out that way at home.

"Now that is all," she said. "That is all, you must take that or none. We'll walk. We can't go unless you give us tickets for that much."

Of course the agent had to refuse her again, being unmoved as be-

fore. The train was coming now, and fearing she might get left, she searched diligently everywhere but the right place, looking now and then at the agent with pitying expression. In a kerchief she, too, like her daughter, found another piece. The three pieces were now laid down and pushed toward the man inside.

"For the sake of Allah," she said, "give my poor daughter and me a ticket. There's our train. We can't go."

Both of us laughed out loud, joining the agent, who by this time was growing a little tired of the foolish deception.

The bell was ringing for the departure of the short

One of the Fig Trees from Which I Gathered Purple, Juicy, Sweet Figs.

train. In another part of the kerchief the mother found a fourth piece which made just enough to buy the ticket.

The missionary tells me that these people can be trusted in nothing,—that they do not know what the truth is. She says they are perfectly unreliable.

Add to this dishonesty of the people the fact that the Turkish money is known as "good money" and "bad money," and you see how difficult and dangerously unpleasant is travel here. A quotation or price is always made in "good piasters." If in bad money, the price is higher. The "bad" money is not counterfeit, but it is computed at a value far below par. "Bad money" is mostly in silver, the kind that most of us must carry, and hence we have to be counting it over all the time and estimating its real value in paper or gold, a task beyond the average intelligent buyer. It is difficult for the missionaries long resident here to compute bad money into good money. I don't even attempt it. I know how many pieces I have in my purse and their relative value, and I know how much French and Italian money I traded off for it. So, at the low prices here I will see to it that I get my money's worth, and I will not haggle with the ticket agent either.

The "haggling" women left the train at Smyrna as we stepped from the rude platform of the station and congratulated ourselves in having escaped the brigand. Some of the American and Grecian residents here had suggested the advisability of my going up into the mountains and being caught by Tchakigis,—that the world-wide news of such an affair would bring my name before everybody. I am not seeking that kind of notoriety, and prefer to win my way by the ladder of true merit.

A young Grecian bicycle merchant offered his company, however, in a ride along the rough and desolate shore in the direction of the brigand's mountain hiding place. Much of the distance was unfit for wheeling, and the peasants living far back from the sights of the city did not know whether our visit on the wheels should be kindly considered or not. A wheelman who tried to pass through here some time ago was stoned so that his only safety lay in his ability to

keep his wheel going at a faster pace than their feet could carry them, as they chased him out of their country with pitchforks and hoes.

On our way back we stopped at the same coffee house where the dreadful brigand, Tchakigis, has been known to take a midnight lunch here from the two suspicious men who run it. We too had coffee here and sipped the black, strong bitters with as much pretended satisfaction as if we sat in an American cafe.

I, for one, was all eyes and ears, though, and wondered what kind of weapons these men concealed in the several long pockets near the girdle.

I did not "contrary" them.

Growing in a fig orchard of several acres near this rustic restaurant was a typical fig tree, full of ripening figs. The tree is about fifteen feet high and being well branched, it is capable of producing more than

enough fruit for its owner to pay the taxes, for trees in Turkey are taxed whether they bear or not.

The figs can be seen easily on this tree. Some of them look round and whitish. The big leaf, with deeply cut edges, hides most of the fruit from view. Unlike apple and other trees that plainly exhibit their fruit, the fig tree hides it under an exuberant foliage, so that the traveler pass-

I Was Told to Help Myself to Eight Tons of Choice Figs.

ing along the wayside must turn from the path and examine the tree from close range. The Savior had thus gone over to a fig tree, desiring just as I did here, to have a lunch on figs, but when he came close to it he found there was no fruit there,—only a lot of leaves. How human he was,—just like us,—turning aside from his chums to look for figs on a tree belonging to somebody else, or at least not his own; peeping around, first the side, and then from under, this tree.

Reaching Smyrna, I visited the fig factory where the figs come into the warehouse in big sacks and baskets by camels, and from which they are shipped to Chicago and Elgin, direct. But as this firm was conducted by Englishmen, most of their shipping is consumed in England where much use is made of the fig. This is the renowned Lawson Packing House of Smyrna and a "tip" to the reader is that you be sure in buying a box of figs that the word Smyrna or Ephesus be

upon the box. Lawson Brothers are reliable fig and raisin merchants, and as I buy great quantities of figs for food at the table, using often the natural shaped ones for stewing, I look for the name of this reliable English firm.

On the floor here was a pile of figs that weighed tons. Twenty-five women sat by them, sorting them into flat baskets which girls carried to the upper floor.

When the women learned that I had ridden all the way from America, across the ocean and all, they sought to outdo one another in kindness to me, throwing to me, now and then, here and there, as they sorted, the really prime figs, the very best in the eight tons. This was a little thing on their part, but it made me to like them. Before I went to another part of the house they had filled my pockets with these select figs. Their judgment was unerring. What man dare say a woman has no judgment. Every fig they flung me was the quintessence of sweetness, and the par excellence in flavor.

Most of the women were barefoot but that did not rob the fig of its virtue, even though the girls after tramping on them, picked them up and threw them higher up on the heap, or into my own hands, to eat.

Say what you will of the rottenness of the Turkish government, we must admit that numerous of the world's best merchandise comes from her workshops and from her farms. The Turkish rug has a reputation for honesty in quality and design possessed probably by no other article used by people of means.

The vessel that is to take me up the Bosphorus is lying in the bay. I leave for Constantinople in the morning.

A THUNDERSTORM IN THE SOUTH.

ROSA MAY MILLER.

THE day awoke calm and peaceful. The silence was broken by the song of the mocking bird.

The sun never shone on a more beautiful morning. Its rays were allowed to reach the earth uninterrupted, as no cloud was in the sky.

It was the last of June, and *very* warm. A gentle breeze was blowing from the south. At noon one could discern small flaky clouds flecking the azure sky, earth's blue canopy.

About three o'clock a dark cloud appeared at the northwest horizon. It rose higher, and higher, growing to a dark blue, then almost black.

It continued to move south, inclined a trifle to the southeast. Now it was a huge black mass with streaks and flashes of lightning. As it came nearer the low thunder could be heard.

The wind now began to blow from the direction of the cloud, which was a huge, rolling mass of indescribable blackness on flashing light.

One could hear the sharp report of the thunder and the lightning now came rapidly in blinding flashes.

Never will I forget that cloud, as it loomed up before us, rolling, tumbling like some frenzied wild being.

But then a change came. The flashes came more frequently and it seemed as if the cloud became white as the large raindrops commenced to fall. We were only at the edge of the storm so we got only a "good shower."

Thirty minutes later all was quiet, save the birds. The verdure looked brighter and greener; and I think we were all thankful for our little thunderstorm that left the heretofore dust-laden air, clear and pure.

Roanoke, La.

BE MERCIFUL.

MARTHA SHEPARD LIPPINCOTT.

Be merciful to erring ones
And let us not forget
That there is not among mankind
One who is perfect yet.
Some's faults are greater than your own;
But their temptations, too,
May have been many more than have
Been ever sent to you.

Their strength to help resist them, too,
Perhaps was less than yours.
You cannot judge what agonies
Another soul endures;
So if it falls, help lift it up,
And ever keep in mind
How Jesus Christ, to erring ones,
Was merciful and kind.

Oh! let our criticism not
Drive souls down to despair,
That we could lift out of life's gloom
By tender thought and care.
Forgive the erring, as Christ would,
And teach them to begin
To live upon a higher plane,
Above all human sin.

THE SCHOOL TEACHER.

"SHE is the good angel of the republic. She takes the little bantling, fresh from the home nest, full of his pouts and passions, an unconquerable little wretch whose own mother admits she sends him to school to get rid of him. The young lady who knows her business takes a whole carload of these little anarchists, half of whom, single-handed and alone, are more than a match for both their parents, and at once puts them in the way of becoming useful and upright citizens. At what expense of toil and soul weariness! Hers is the most responsible position in the whole school system, and if her salary were doubled she would yet receive less than she earns."—*Unknown*.

SOME THINGS I LOVE

FRANK B. MYERS

I love the boy who tells the truth,
And on his honor stands;
Who is obedient, in his youth,
To parents' wise commands.

I love him when he dares to do
The thing he knows is right,
Who, like a Daniel, always true,
Fights wrong with all his might.

No truer hero treads the earth;
I love him for his pluck;
His character of priceless worth
Wins for him rare good luck.

I love the girl who's pure in heart,
And word and action, too;
Who always plays the gentle part
Her Maker means her to.

The girl who's true to all the best
That in her nature lies,—
For such, within my throbbing breast,
Feelings of love arise.

Thou crown of God's creative power!
Thou queen of love and grace!
My heart's affection, hour by hour,
Blends with thy smiling face.

I love the birds of merry May,
In orchard, field and wood;
From early morn till close of day,
They praise him who is good.

Their little hearts o'erflow with joy;
I cannot help but love
Those dear, sweet songsters that employ
Their throats for God above.

To me, the rose of sunny June,
Perfection of all flowers,
Sheds fragrant love, all gone so soon;
A queen of few short hours.

Carnations sweet and lilies fair,
Refreshed with morning's dew,
Enrich the balmy, summer air,
And make my love more true.

I love to hear the rippling brook,
There's music in its sound;
Its pleasant strains, from nook to nook,
With joy supreme resound.

The little birds do quench their thirst,
And bathe their plumage here;
Their panting hearts do almost burst
In sweetest notes of cheer.

The starry sky, a scene most grand,
God's universe of light;
By love impelled, I often stand
And view the wondrous sight.

The thought of such a work displayed,
Infinite worlds on high;
Should prompt a love for him who made
Our souls, which ne'er can die.

The seasons of the year I love,
Some beauty lies in each;
Controlled by God, who reigns above,
They us good lessons teach.

In spring the birds and flowers appear,
Dame Nature then revives,
And plays her harp of love and cheer,
Which sweetens all our lives.

The beaming sun and gentle rain,
In June's long, summer hours,
With gold adorn the waving grain,
And beautify the flowers.

A sadness comes with autumn days,
When birds and flowers depart;
A farewell strain Dame Nature plays,
Which almost breaks my heart.

But deeper than this sense of grief,
The joy that comes to me
For harvests rich, from tree and sheaf.
God's goodness there I see.

The virgin-beauty of the snow,
So fair, and pure, and white,
Which robes the naked earth below,
Presents a lovely sight.

The snowball fights and merry slide,—
Oh, joy of schoolboy times!
Within my heart those scenes abide,—
Fond mem'ries' sleigh-bells chimes.

I love the Bible, book divine,
God's mind it doth unfold;
Of heavenly riches 'tis a mine,
Its truth, eternal gold.

It tells us of the one true God,
Enthroned in realms on high;
And of the way that must be trod,
To live beyond the sky.

Its altar glows with holy fire,
From our dear Savior's breast;
Oh, may this flame with love inspire
Within us all that's best.

When Sunday comes, I love to go
Into the Sunday school,
And try the Master's love to show,
And teach the Golden Rule.

The church of Christ is dear to me,—
The precious, blood-bought throng;
Through time and all eternity
Her glory be my song.

'Tis highest pleasure, thus to live
For all that's good and true,
Our lives their humble part to give,
God's service thus to do.

Great Teacher, may we learn from thee
To cultivate the art
Of loving, some bright day to be
Perfected in thy heart.

Bethany Bible School, Chicago, Ill.

A BIT PERSONAL.

WHILE city ministers are worrying over the question, "Why do men not attend church in larger numbers?" perhaps one man's experience may help them reach a solution.

The writer happens to be the son of a minister (now laugh and get off the usual witty remark about "preachers' boys") and was raised to attend church regularly. In his boyhood days such a thing as a choir was utterly unknown in the country precincts. Usually the organ—if there was one in the church—was stationed about midway of the church, and everybody joined in singing the old hymns. Usually some man accounted a singer of note stood up and led the singing. But there were no solos, or duets, or quartettes in those days. Very few people really needed the hymn books that were passed around, for everybody knew the songs and loved to sing them. Some of those old songs—now seldom heard, but still the best ever written, come to mind. "Old Hundred"—with its majestic swing and its inspiring words, "Before Jehovah's awful throne!" "O, thou fount of every blessing" was another one. Usually the leader would pronounce the "every" as if it were spelled "ev-ri," with the accent on the "ri." "My soul, be on thy guard," "King Jesus, reign for evermore," "Antioch," "Hark! Ten thousand harps and voices," "O could I speak thy matchless worth," "My faith looks up to thee," "Am I a soldier of the cross?" "Come, ye disconsolate," "Nearer, My God, to Thee," "Rock of Ages," "Sweet Hour of Prayer," and scores of other old-time songs surge through the memory as one writes.

Honestly, now Mr. Tired Business Man, Mr. Fatigued Toiler from shop or factory, who happened to be raised in a village community a score and a half years ago, and who seldom go to church these days, wouldn't you like to find some old-fashioned church that had no choir, and where they sang the old-time songs instead of letting a quartette sing some new-fangled ones that are so awfully classic that not even the quartette knows what the words mean?

Don't you wish that you could walk quietly into a church like that, take a seat about midway, pick up one of the old-fashioned hymnals and join with everybody else in singing one of those old-time songs?

Bless the modern ministerial heart, these latter day sermonettes smothered in semi-operatic concerts don't grip the heart like the virile sermons and the soul-inspiring songs of other days. You used to sit for an hour while the pastor preached a scriptural sermon, and you didn't get restless and fidgety, like you do now if the pastor talks longer than twenty-five minutes. The congregation always sang two or three, maybe four, rousing songs before the sermon began, and they set your blood to going rapidly, warmed the

cockles of your heart and put you in a receptive mood mentally.

"At the conclusion of the sermon the congregation will sing hymn number 345," the good pastor would say while he was turning to his text.

You didn't have to turn to the book to see what 345 was. You knew. It was "Come, let us anew our journey pursue," or "My Gracious Redeemer I love," we've forgotten just which. And when the sermon was over you stood up and sang lustily, knowing that even if your voice was a little off the key and your tuneful abilities not exactly par no one would notice it in the grand chorus.

It's different now. You go into a church and the first thing you notice is a sort of "cock-loft" back of the pulpit, and in it is an organist and four salaried singers. The pastor announces a hymn and after the organist has performed a few gymnastics on the keys the quartette rises, and the congregation follows suit—not enthusiastically as of old, but spasmodically, as it were. Then the quartette sings, and here and there through the congregation a few faint voices are heard—sort of weak and ashamed like, don't you know. After the agony is over everybody sits down with a sigh of relief and waits while the organist and the quartette get ready to sing something "way up" in the musical line—something full of trills and warblings and broad "a's" and as empty of soul-stirring sentiment as a miser's heart is of charity. The pastor delivers a sermon on almost anything but the Jerusalem Gospel, and then the quartette sings another song that nobody else knows, the benediction is pronounced, the people depart to their homes, and all during the week the pastor is wondering how he may induce more people, and especially more men, to attend divine worship.

Mr. Preacher Man, you've experimented a lot in trying to find something to attract the average man to your church, and you are forced to confess that you have experimented in vain. Now try just one more thing—not an experiment, but a tested thing, Give the salaried quartette a vacation, pick out the old-time Zion songs that even the present generation knows by heart, and get back to the good old congregational singing style of song worship. Cut out the operatic didos, make everybody feel that they have a part in the services other than merely listening—and then watch for the results. Don't be too impatient, for in this busy age it takes time for even a good thing to become noised around. But in good time you'll get results—our word for it.

A great many souls have been congregationally sung into glory that never would have reached there by the operatic choir route.

Salaried choirs! When we get to the point where we have to hire somebody to sing our Zion songs for us we're going to hire somebody to say our family

prayers, ask the blessing at the family table, read the Good Book for us while we go about our business and act as our proxy at prayer meeting.—*The Commoner*.

THE INTOXICATION OF WEALTH.

THE apostle James, looking down through the ages toward the time when "the coming of the Lord draweth nigh" (James 5:8), speaks of a certain class of the people who live in *pleasure* and have been *wanton*, who *nourish* their hearts as in a day of slaughter (verse 5).

A recent article in the *Record-Herald* by E. P. Moxey, the noted bank examiner for the United States department of justice, who was selected to trace out the financial operations of Chas. W. Morse of New York and who has done similar duty in connection with the irregularities of thirty-nine other banks, was asked to give his *reason* for these bank failures; and his reply is a startling commentary on the words quoted above from the apostle James:

"To say that even a bare majority of the tens of thousands of men who nightly swell the crowd of amusement-crazed spenders, who live in \$5,000 apartments and whose touring cars congest the streets, are doing this with money which is honestly theirs is absurd. They are not earning this money; they are either juggling other people's cash or they are gambling with their own.

"When you can go into a restaurant at two o'clock in the morning and behold \$6,000 worth of women's gowns at the tables and \$3,000 worth of food in process of consumption, something is wrong. And when you observe half a million dollars' worth of automobiles waiting to take this one supper crowd to their homes—or elsewhere—you may be sure that there is queer bookkeeping somewhere.

"It is not only this sort of life in New York, but in a more sinister way, the sight and example of it, which is bringing about a degradation of the sense of common honesty throughout the country. That fine American asset, the New England conscience, has become an object of jest.

"Whatever the cause, there are cycles of honesty and cycles of dishonesty, and the present is a cycle of dishonesty, with its cause in modern standards of enjoyable living.

"There are many direct causes for bank defalcations, but the primal cause is the desire for luxury fostered in the great cities."—*The Lifeboat*.

GEORGIA'S COTTON CROP.

GEORGIA laments that things in its region are not properly distributed. It has an enormous cotton crop, and the value is of such proportions as to make one suppose that everyone is getting rich. Not so. It seems that too much of the money has to be spent elsewhere.

For instance, Georgia produces less than five per cent of the mules used in the State, and without a mule there is no cotton patch. Georgia produces less than fifteen per cent of the cattle used in the State, either for food or dairy purposes, and, what is of vastly more importance, less than seven per cent of the hogs. Without bacon there is no man to drive a mule. Also nearly all of the corn is imported, while about half of the butter, eggs and poultry comes from the North. No wonder there is a lack of accumulated capital when so much of the cost of production goes to other States. Every traveler through the South has noted that cotton farmers raise nothing else, although there is no reason why they should not do so.

The soil of Georgia is not favorable to wheat, but corn and vegetables as well as mules and cattle can be raised there as well as in Missouri or Kentucky—at least in sufficient quantity to meet the local demand. A State cannot grow rich in the proper way unless it makes a turnover in its own neighborhood of most of the money that comes into its pockets when it is possible to do so. The kingdom of cotton is not a stable one. It needs bolstering up.—*Philadelphia Inquirer*.

PECULIAR INDIAN MARRIAGES.

MARRIAGE among the Hopi, a tribe of the Pueblo Indians, is an institution regarding which those most concerned have least to say. When the parents of a girl find it expedient for her to get married, they look up an available man. After the matter has been arranged the principals are notified, the girl goes to the home of the bridegroom's parents and grinds corn for them, for three weeks, while the bridegroom makes a kind of sash for the bride. Then one morning at sunrise they both bathe their heads in cold water, which completes the ceremony.

There have been instances of the bridegroom refusing to go through the performance. It has proceeded without him and been accounted valid, and several weeks later he has yielded and had his head bathed.

The Navajo ceremony is much more elaborate and impressive, but then the Navajo girls are much nicer. The regular tariff on a Navajo girl entering the port of matrimony for the first time is 12 horses. On the second occasion the tax is 9 horses, while subsequent marriages are free.

This is not purchase money, but is merely a tribute of respect to a mother-in-law and a token of appreciation of the care and expense involved in bearing and rearing the lady; a recognition not unworthy of consideration by civilized bridegrooms. On the other hand, and deserving of great condemnation, is that law of many tribes, that a man and his mother-in-law shall never meet after the ceremony.—*Woman's National Daily*.

NATURE STUDIES

MIGRATION OF BIRDS.

JOHN H. NOWLAN.

FOR centuries the migration of birds has been a mystery to man. Why do they migrate at all? What impels them to desert their homes and undertake a long and perilous journey? How do they find their way? Man even with landmarks to guide him, often loses his way. How then do they cross vast expanse of water with no land to guide them? Have they an unknown sense? What routes do they take on their journeys? Do they return to the same locality where reared?

These are only a few of the many questions that perplex the student. One of the reasons given is that they leave because of the failure of the food supply. Another is that the love of home impels them to return in the spring.

If the food supply induces them to leave, why do they go just at the time when it is most abundant and by far the easiest to capture? Why do the seed-eating birds leave just in the heyday of the harvest?

If it is love of home why do they go so soon? They brave the storms to return early, hence why do they not remain till winter drives them from the land they love? Besides, they are as much at home in the South as in the North. Why at all leave the balmy insect-laden air of their winter home and make a long, tiresome journey to a land where the food supply is scarce?

Another theory is that in the early glacial period they came near the ice sheet to build their nests where they could be secure from foes, then on the approach of winter retreated to the tropics to await the next nesting season. As the ice sheet retreated northward with the change of climate the journey was lengthened till it reached its present proportions.

But even this explanation fails in that it proves too much. Why do the migratory birds pass over the tropics to spend their vacation in a land no more bountifully supplied if it may be said to be as well?

How do they find their way back?

One answer is that they travel by sight. This may be true while crossing land but fails for ocean journeys.

Members of the Biological Survey were once making a voyage from Unalaska to Bogoslof Islands, a distance of about sixty miles, in a dense fog. Though it was impossible for the crew to see more than a

few rods ahead, yet they were passed by flocks of murre passing from their feeding grounds to their roosting place. They would appear out of the mists in the rear, fly parallel with the steamer, and disappear in the fog before. They could not possibly see land, yet they were flying as true as the ship sailing by chart and compass.

Land birds are often seen crossing the Gulf of Mexico from Yucatan, some six hundred miles distant. An elevation of five miles would not enable them to see one-third of the way across, while to see the entire distance they would be compelled to seek an altitude of over forty miles, which is surely an impossibility.

It has been suggested that they follow down the stream near which they nested, thus to the river and on down to the ocean. On returning they could retrace their course and arrive at the old home. If such were the case all the birds of the Mississippi Valley would congregate near the mouth of that river and then pass over to the coast. Instead, many more cross by way of Florida than by way of the Mississippi.

How far do they go? Some, as for instance the quail, round out their entire life within a few miles of the place where reared; and on the other hand some northern-reared birds winter in the summer home of their southern kindred. The robin is classed as a migratory bird, yet a few years ago one spent the entire winter at my home. Even when the ground was covered with snow he seemed to be undisturbed and greeted us with his cheery morning song.

The plovers arrive within the arctic circle the first week in June, going at least as far as 81 deg. N. By August they reach Nova Scotia going south, from which place they abandon the land and strike out to sea. The nearest land is the Bermudas, but often they are seen out four hundred miles to the east, passing on to the Antilles, the nearest of which is one thousand miles away. Soon they appear in southern Brazil, Argentina and almost to Patagonia.

Here from September to March they remain care-free while the native birds are busy with their household duties. When March comes away they go again to the North, but this time they avoid the Atlantic coast. Instead they pass by way of Guatemala, Texas, and western United States. By May first they have

left the United States and by June first are again at the arctic circle.

Why make this long journey when they could find the same climatic conditions by means of a short journey toward the south pole? Even when a reason for this is found why have *two* routes?

Many birds make night flights and pass unobserved by the casual observer. On a still night you may sometimes hear the whirr of their wings as they hasten past on an unseen track.

On the other hand some make the most elaborate preparations, gathering in great flocks, and loudly announcing that the time of their departure is at hand.

Their leaving is a deliberate affair. Not so with their return. You go to bed with not a bird in sight and are awakened at early dawn by the shrill whistle of the lark or the "cheer-up" of the robin.

We say spring has come because the bluebird and the robin have come, while the truth is they may have outdistanced spring.

The isotherm of thirty-five degrees requires thirty-five days to travel from New Orleans to the region of the Great Lakes, while the birds make the journey in fifteen days. The summer warblers that nest in the regions of the Great Lakes remain in the tropics till instinct impels them to hasten. When they arrive at New Orleans the temperature is sixty-five degrees. Speeding onward they meet colder weather till by the time the nesting grounds are reached they find a fall to forty-seven degrees.

Many fanciful theories have been advanced and the ascertained truths are almost as strange. The chimney swift is a well-known bird in the eastern part of the United States. With their young they go slowly south till on the Gulf Coast. Then they disappear. Did they drop into the mud and there hibernate as was formerly believed, they could not be more completely lost.

About the last of March they return as suddenly and mysteriously as they disappeared. Where have they been? That is their secret and they keep it well.

The bank swallows nest from Labrador to the arctic circle. Leaving there by August first they reach Chesapeake Bay by the middle of September. Then they disappear. No trace of them can be found till in April they are seen in South America moving northward. Where the interval was spent is unknown.

Thus it is with many others. Some day the secrets may be known and some bright boy or girl who reads this may assist in revealing some of them.

Mulberry Grove, Ill.

THE QUEEN OF THE PALM TREES.

ON a voyage to Australia, or to China and Japan in the Far East, steamers usually touch at Colombo in Ceylon, and during the stay of twenty-four hours or so the passengers often take, as the favorite trip, a jour-

ney to Kandy, where the most glorious vegetation comes into view, for it is possible to look down on seas of palm trees in billow after billow of living green. And among them the queen of all the palms—the Talipot—is often to be seen.

It stands a tall column, with a glorious crown of fan-shaped leaves from twelve to twenty-four feet long, all pleated by nature and ready for use. The people ceil their houses with them; carry a length for a fan or an umbrella; and when they go on a long pilgrimage to worship at some sacred shrine, in forest or on mountain top, they put three or four together and make a tent to rest in during the hot noontide or to sleep in at night.

Besides this the leaves are often cut into strips twenty-four inches by two, and are then strung together to make books, the binding being strips of wood of about the same size. On visiting a Buddhist temple a young priest may often be seen using an iron pen and pricking the letters of his strange language into these lengths of palm-leaf and chanting the teaching and praises of Buddha as he writes.

Until the Talipot Palm grows old it puts forth no blossom or fruit. And then above the glorious crest of leaves a greater glory appears. There shoots forth, often with a loud noise, like that of a gun, a flower which grows and spreads until it looks like a big plume of ostrich feathers, twenty to thirty feet long, scented and yellowish white in color. Then it deepens to gold, and day by day pours down its blossoms in a shower of golden rain.

After thus proudly crowning the tree for about nine months, it begins to fade, and the tree becomes so tired with the effort of putting forth so much life that it dies, breaking off about a third of the way from the top.

During its last weeks it sheds around its hard, ivory-like nuts, from which other trees may grow. And it has pushed itself up toward the sun for from sixty to eighty or more feet, and has lived sixty to eighty years for this!

The rarest and finest show of bloom I ever saw was a dozen of these trees in bloom at once, and fifty of them within a few miles. No one ever forgets the Queen of the Palms, and there is always a feeling of sadness when she bows her head and dies.—*Early Days.*

"IN Pennsylvania practically all the remaining forest tracts are owned by lumbering companies, that are fast clearing them off in the usual wasteful way by destroying all the young trees in getting out the large ones. When the land is entirely denuded, the State buys it up for forest reserves; but as a new start must be made from seed, it will take years to restore what ruthless lumbermen destroy in a single season."

OUR BIRD FRIENDS.

It is a familiar saying that we do not know the real value of our friends until we have lost them, and the statement holds true even though the application is made in widely different fields. Just now we are thinking of our feathered friends and how coldly indifferent we have been not only to the inspiration of their cheery presence but even to their real helpfulness in supplying us with our daily food. It is only when their decreasing numbers are unable to hold in check the ravages of our enemies that we come to realize how very necessary they are to our welfare and happiness.

Since it would seem to be a gigantic task to endeavor to make of each individual a voluntary champion of our feathered friends, the alternative is to interest our lawmakers in the cause and have them pass laws that will insure protection and freedom to the birds which will in turn protect us. It ought not to be necessary to have to ask for this protection for the many birds that furnish us sweet music through a part of the year, but the people whose love of jingling money shuts out even the sweet song of birds and the people whose love of fine feathers—for their own person—shuts out all feeling for the creatures to whom this plumage rightfully belongs, have compelled us to resort to this method. It is hard even to interest our lawmakers in the subject as a matter of sentiment and so in most cases it has been necessary to wait until it has been actually demonstrated by their absence that their presence has been of more value to us than merely that of a summer touring concert company. And often by that time relief is well-nigh too late—both to save our feathered friends from total extinction and to spare us the losses we must suffer without their aid.

Many of our States have seen the wisdom of protecting the insect-eating birds and have passed laws to that effect, but because of the lateness of any such ac-

tion some of them realize that it is necessary to do more than simply to protect these birds. "In the New York Assembly a bill has been introduced not merely to protect but to recruit a bird army to defend the State against an invading army of gypsy moths headed that way from New England, where millions of dollars' worth of damage has been done. Information as to exactly how the army is to be obtained is not at hand, but serious attention is being given to the matter of obtaining and organizing, as it were, regiments of robins and woodpeckers and others of the insect devouring kind.

"Nature has a reason for everything, and whatever the reason for the existence of certain moths and insects may be, one for the existence of birds is to keep crawling depredators from becoming overpopulous. The ornithologists, who with sadness have watched the birds becoming greater strangers with each passing year, undoubtedly would welcome a moth plague that served to arouse the public conscience so as to bring the songsters back and encourage them to multiply with guaranties of unmolested life and domestic happiness."

Our former President showed his interest in this subject of the preservation of our birds by having bird preserves established in certain remote sections of the country. It is to be hoped that many will follow his example by doing all in their power to insure the protection of our friends, the birds.

DIVORCE A CANCER.

THINKING men and women are coming to see that if we are to stop anywhere on this side of ruin for the home and family life it is high time a check is given to the divorce mills which are seemingly running over time in recent years. Within the last three months we have in these pages given the opinion of two well-known people who look upon our loose divorce laws as a menace to our country and a disgrace to society. We here give the words of Bishop Donahue, of Wheeling, W. Va., as he recently expressed himself on the subject at a benefit given by the Catholic Woman's League of Chicago:

"Divorce is eating into the very vitals of the land. Unless this cancer is cut out of this nation, it, together with the greed of wealth and the mad craze for pleasure, will wreck the United States and we shall fall back into the paganism of old.

"The marriage tie held by the founders of our republic as sacred has now become almost a joke.

"But where, I ask, is the warrant in God's Word for the numerous causes of divorce considered sufficient by legislatures and tribunals—drunkenness, desertion, cruelty or nonsupport? No State law yet provides for divorce for 'general cussedness' or being 'just

ornery' or for being 'no good,' but they are getting pretty close to these delectable goals.

"I have heard of a wife seeking a separation from her liege lord, not by reason of cruelty to herself, but to her poodle, by throwing him in the fire. The poodle, and possibly a canary, represented the whole family of another who sought a separation because her husband would not allow her to go to the St. Louis exposition, and a husband quite recently in New York sought his freedom through the intervention of the courts because madame insisted on letting her pet dog first taste of the various dishes before they were set on the table. Every frivolous, childish, trifling cause conceivable will soon be alleged as good ground."

One is made to wonder where the wise people of the land were when these divorce laws were enacted. Most likely the measures won their way by the argument we have all heard—if not on the divorce question then on some other—to the effect that times and people have changed since Christ gave the law on the subject. People fail to consider that Christ made no arbitrary rules, but that he simply reestablished or emphasized laws that were from the beginning and that shall last throughout all time, regardless of the insignificant changes of people's nature and customs. The awful results following on our loose divorce laws as the inevitable punishment of God's broken laws are just beginning to open the eyes of many to this fact. Let us be careful that, because of its commonness and general acceptance, we do not look upon the crime of divorce with a degree of allowance inconsistent with our claims as followers of Christ.

NOTICE.

THE offer of the "Handy Atlas of the World" free with each INGLENOOK subscription, expires April 20. Make up your mind to profit by the offer before this date comes around. Urge your friends to do the same.

CORPORAL PUNISHMENT.

LET us look at the general proposition, "Should corporal punishment be eliminated from the schools?" The average child has much of the animal in his make-up. Since "the child is father to the man," we may judge how much he has by a study of the man. Punishment and reward make up the sum total of that eternal code which is decreed for the evolution of man in his transition from the animal to the spiritual. If my baby should pull at a flower-pot as he first gathers himself together upon his tottering legs at the window ledge, I should say, "No, no," and take the inquisitive hands away. If he reached again, I should repeat the injunction and emphasize it with gentle physical admonition increasing the dose as necessary. I should look for good results in proportion to the persistence which I employed. Further, the memory of this transgression, and the impression of the inevitable in it,

would, in human reason, give an effectiveness to the simple "No" that would happily influence all future dealings. Is the child's affection estranged? Ask the sensible mother who has tried it. But his will power is weakened! Is will power the power to act upon impulse unguided by intelligence? But the child loses respect for the higher things of the human heart if compelled by superior force to do what he does not will to do! No, not if the representative of this superior force is dominated by unchanging love and superior intelligence. . . .

If authority and obedience shall continue to exist, the foundation of human society then with them and before them must go respect for authority, and this implies and necessitates punishment for the violator, corporal punishment, when other forms fail and sometimes before other forms have been employed. I have been told by competent physicians that corporal punishment with the average or normal child is merciful as compared with the mental torture of other forms usually employed,—that the one is ultimately sedative where the other is an extreme irritant. Scolding, threatening, ridiculing, excluding from common privileges, keeping after school, these and other well known forms of punishment are the curse of school life—or home life. But a good, healthy, rightly administered spanking under proper conditions will usually clear the atmosphere like a thunderstorm and the sun will shine cheerfully thereafter for days to come. I am loath to leave this subject without adding another comment. Children who have learned obedience in the home, who believe that *no*, means *no*, that properly constituted authority must be respected, are not the ones who question the teacher's requirements, and get into trouble. To go a step further after a careful investigation of this subject covering over twenty years, I have found not a single case of insubordination in the schools which cannot be traced directly to parental indulgence, mismanagement, and folly. It sounds a little crude and barbarous to hear a parent say to the child, "If you are punished at school, look out for more trouble at home." But verily there is in it a righteousness that exceeds the righteousness of the scribes and Pharisees.—*Selected.*

WHAT an unfortunate thing that the idea should be dinned into the ear of youth everywhere, that it is a disgrace to fail—that is, to fail to make money, to accumulate property. If a man has gotten a fortune, but has left his manhood on the way to it; if he has bartered his good name in the process of getting it, he is still a failure, no matter how much money he may have accumulated. A clean record is the greatest kind of success. And how few men who make big fortunes manage to save their good name, to keep their record clean!—*Success.*

THE HOME WORLD

THE BUSIEST ORGAN OF SPECIAL SENSE

DR. O. H. YEREMAN, UNIVERSITY MEDICAL COLLEGE,
KANSAS CITY, MO.

THE human eye is the most wonderful external organ of the entire body. Mechanically it is the most intricate of all the special senses, and yet it seems to withstand more abuse than most of the others, for we must remember that it is used more than any of the others. This little organ is on duty every moment of your waking hours. Not only when you read or write, but while you eat, speak, play or engage in any kind of work, your eyes are busy.

It is surprising how little the average person knows about this important organ; and many who would give to tired limb or back the needed rest, or nurse a leg with tender care, will goad on their willing but disabled or overstrained eyes, in the most reckless way. While many persons can tax their eyes for long periods and experience no immediate discomfort, there are quite a few others who have a great deal of trouble with them. Although we can not exactly tell why there is this discrimination, still it is safe to believe that every transgression of the laws of nature must be paid for, and straining the eyes is no exception to this rule. As a preventive measure it is well to know the following few conditions which lead to imperfect action of the organ of sight.

The eye is very much like the photographer's camera. It has a lens to focus the rays of light passing through it, and a dark chamber for the formation of images. With the camera, however, you can change the position of the lens. When photographing a small object you approach it, and in taking a large range, you move away from it; but the eye can not change the position of its lens, hence it changes its convexity. Rays of light coming from a distant object reach the eye as parallel, and require little refraction to make

them focus or come to a point on the retina. See Fig. 1.

But rays of light coming from a near object enter the eye as divergent and require much refraction or bending, to bring them to a point on the retina. (Fig. 2.) To do this the ciliary muscle (A, Fig. 1) is employed which presses the lens together from above and below, and thus increases its convexity. Therefore, normally, every moment of the time that you have your eyes fixed on some close object, such as a

book, sewing, painting, etc., the ciliary muscle is on tension. When we remember that this muscle is a very small one, and its task arduous, we can begin to realize how much we have abused it, by compelling it to remain in one position for hours at a time. When after continued application at close fine work your vision blurs, the print runs together or stitches disappear, then you may know that your ciliary muscle has given up from sheer exhaustion. And is it a wonder that it should? Supposing that you hold your arm out in one position for five minutes,—it gets tired; but oh! how often we compel our ciliary muscles to hold the lens steady, in one position, for that many hours instead of minutes. Do you want to save your eyes? At the end of every hour's close work, rest them by changing their focus from near to far objects.

This constant straining of the ciliary muscle makes a great leak in the nerve force of the individual and frequently results in various forms of headache,

neuralgia, tic douloureux, chorea, hysteria, epilepsy and even insanity. There are also optical defects of the eye, wherein the ciliary muscle is brought into action both for near as well as distant vision, but the explanation of that requires the discussion of the subject of refraction and the use of glasses, which I will take up in the next article.

The suggestions and hints given here are for the purpose of prevention rather than cure. It is advisable for every person to understand the care of this delicate organ and exercise common sense in preserving its usefulness; but the treatment of it must be entrusted only into the hands of the individual who is skilled and of unquestioned integrity. For as the lawyers say, "The man who pleads his own case has a fool for a client"; and the person who undertakes to treat his own eyes is subjecting to peril an organ which plays an essential part in the labors and pleasures of life. While in Chicago, some ten years ago, two ladies who were complaining of loss of vision, came under my observation. The first had used medicine which an oculist had prescribed for a neighbor of hers. These drops dilated her pupils and caused dimness of vision, which alarmed her and made her seek medical advice immediately. The drops were discontinued, and when their effect wore off her vision returned to normal. Had she continued their use longer, she might have lost her sight.

The second lady had used a home remedy suggested by a friend, which produced an infection and inflammation of the eyes, ending in irremediable blindness. Both of these ladies were cultured and intelligent and should not have attempted to treat themselves; but that is being done daily by all classes.

The kind and source of light is of great importance in this connection. Our present-day civilization is necessitating thousands of persons to labor all day long with artificial light. Only today a young lady was telling me that she saw very little of the sun or natural light except on Sundays. She went to work early in the morning, finishing late at night, and as they used electric lights at her work in the factory, and gas light at home, practically all her seeing was done by artificial light. It is well known that artificial light is not as good for the eyes as natural light, and a flickering gas light is not as desirable as the steady electric light; but perhaps the least objectionable of any artificial light is the mellow, soft, yellow light of a good kerosene lamp.

The light should come from behind the person, and preferably stream down his left shoulder. It is a mistake to face the glare of the light. If the source of light has to be facing the individual, a shade should be worn on the forehead to protect the eyes. The common habit of reading while lying down is universally condemned, but this need not necessarily be injurious to the eyes, if the source of light is from a favorable

direction, and attention is paid to holding the print parallel with the face. Holding a book in the lap while sitting, or on the chest while lying down causes the rays of light from the page to reach the eye obliquely, and to get them to focus at the posterior part of the eyeball, the ciliary muscle must increase the convexity of the lens more than usual, thus taxing its powers. In fact it is desirable at all times to hold our work or reading on a level with the eyes and directly in front of them. If this measure was generally carried out, it would materially decrease the disease due to eye strain.

Washing the eyeballs in cold water is not to be recommended as a routine practice. Where there is an inflamed condition of the eyes due to dust, smoke, vapor, cinders or cold winds, it is advisable to use hot or cold applications as they prove agreeable to the patient. By cold applications we mean pledgets of absorbent cotton or small squares of soft clean cloth, taken off a block of ice and placed over the eyelids and about the temples. For remedies I believe it is always best to apply to a physician, for even such simple remedies as boracic acid drops or "borax water" have been known to cause infection of the eyes, because of not having been aseptically prepared.

The eyes are always congested and reddened during the early stages of an attack of measles, scarlet fever, influenza and even a common cold in the head. Few mothers realize that during these so-called "mild" diseases of childhood the foundations are laid for life-long trouble with weak or sore eyes. At such times the patient should be kept in an airy, clean room, and the blinds so arranged as to give a subdued light. The eyes should be bathed several times each day with warm soft water, so as to relieve congestion and remove all secretions. Smoked glasses could also be used during this period with advantage. Above all things remember that the sore eyes of measles are not a light thing, and that the strictest cleanliness and skillful treatment are necessary to keep them from leaving evidences of their existence after they are cured.

The fact that what is commonly called "granulated eyelids" is contagious is known by comparatively few people. This ignorance leads to the spreading of the disease throughout entire neighborhoods, being generally transmitted from one child to another in school, or from one member of the family to another in the home. The United States government, recognizing the virulence of this disease, and its obstinacy in yielding to treatment, has the eyes of all immigrants examined. I well remember the experience which a Japanese traveling salesman had, who crossed the Pacific on the same boat with me. The government quarantine officers, who boarded the ship before it reached Seattle, detected the faintest sign of granular lids in this pas-

senger, and in spite of the entreaties of the ship's doctor, refused to allow the passenger to land.

In such cases separate wash-basins should be provided for the afflicted one, and all towels and linen used by him should be kept away from the rest of the family. Such an individual should not be allowed to occupy the same bed with a person having healthy eyes. When we realize that this is a very obstinate disease, requiring prolonged and tedious treatment, no pains should be spared to prevent its occurrence or spread. Such diseases could be wiped out of existence if the people would co-operate with the doctors and the government.

THE STEPCHILD.

When I was little, papa used to tell
Long stories to me every night,
And mama, 'cause she wasn't very well,
Would lie by me and hold me—just as tight!
But mother says I'm most half grown
And ought to go to bed alone,
And making fools of children isn't right.

When I was little, papa used to be
A growly dog, and then I'd be a cat,
Or else he'd be a bear a-chasin' me,
Until I'd run to mama, where she sat,
But papa doesn't want to play
Since mama went and went away,
'Cause mother says I'm much too big for that.

When I was little, papa used to hold
Me on his lap and cuddle me, and let
Me cuddle him, pretendin' he was cold,
And mama never seemed to mind or fret.
But when I go to kiss him now,
He tells me not to make a row,
'Cause mother hopes I'm not a baby yet.

Once mother went away, I don't know where,
And papa was alone, just him and I,
And so I went and climbed up on his chair,
And then got on his knee, and by and by
He cuddled me, and rocked me, too,
Like him and mama used to do,
And then I felt so good I had to cry.
—Edmund Vance Cook, in *Appleton's Magazine*.

THE REAL ISSUE.

IN our eagerness out here in the Middle West to herald to the world the magnitude of our corn and wheat crops, the superiority of our beef cattle and thoroughbred swine, and the tremendous productiveness of our domestic hen, we are prone to lose sight of the real issue, namely, the splendid crop of strong sons and fair daughters that the country is producing. In their joyous natures we behold at once the bright sunlight of hope and the beautiful bow of promise of our future greatness and glory. Drouths and deluges may destroy our growing crops, disease and degeneration may play havoc among our cattle on a thousand hills and our treasured porkers in the alfalfa fields; yea, our boasted domestic hen may even occasionally

cease her productive labors—all these calamities might conceivably come upon us each in turn, and yet our glory not be dimmed; provided only, that our growing boys and girls be so trained and safeguarded in the home, so educated and disciplined in the school, the church and the other institutions of the country, that they will develop into well-rounded, magnificent specimens of manhood and womanhood.—*Interstate Schoolman*.

SEA FOODS.

THE ocean has its flora as well as fauna. We Westerners use the carrageen and dulse infrequently as side dishes or as gastronomic curiosities. On the New England coast the Yankee housewife gathers the pink dulse at low tide and converts it into a delicious blanc-mange. The poor Galway peasant boils his Irish moss as a substitute for cabbage. In Japan the algæ are the subject of a big industry. One class, resembling the pink dulse of New England, is made into jellies, or is dried, ground into flour, and treated like corn-starch. A second class of seaweeds is washed, ground to pulp in a mortar, and again washed so as to separate the woody fiber from the starch and pectin. This is dried into cakes or bars, which make a valuable addition to the resources of the kitchen. One variety consists of long threads like vermicelli, which, when thrown into boiling fat, expands into crude crystalline "pipestems" which are crisp, brittle, and dissolve in a few seconds when held in the mouth. A third class is macerated, boiled, and strained. The clear fluid is evaporated and then cooled, when it becomes the popular pulp, "agar-agar." Than this compound nothing is better for invalids, children, or old folks. It is as digestible as malted foods, without the slightest irritating influence upon the stomach. It is a highly useful material to the cook, who thickens with it soups, stews, and sauces. Nearly all these preparations retain a mild but very pleasant flavor of the sea. It is not fishy, but has the same bouquet as an August wind blowing over a salt meadow.

So far as is known, the Japanese utilize all the salt water bivalves and univalves. The extravagant American confines himself to the oyster and clam, with an occasional departure into scallops and mussels. The European adds to this list the limpet, cockle, periwinkle, and sea snail. The Japanese, wiser in his generation, gratefully accepts all of nature's largesse, and transfers to the kitchen every mollusk upon his coast.

In crustaceans, the mikado is not so rich as Uncle Sam. There is a species of lobster on the Japanese coast, but it is exceedingly rare. Its place is taken by a giant crawfish, which an Irishman defined as "a lobster with no claws, but four-foot cigar lighters on the end of its nose." There are crabs, and a plethora

of smaller crustaceans, which range from tiny shrimps to prawns six inches in length.

In the Japanese markets are more than four hundred kinds of fish. Upon these the chef expends his genius in a thousand ways. He may serve fish raw, with a garniture of parsley, chopped onion, red ribbons made by peeling radishes, and green ones from cucumbers, or a salad in which the fish flavor is partly if not wholly concealed beneath a rich aromatic dressing. There is a prejudice among Americans against eating raw fish, although, paradoxical as it may seem, they take eagerly to raw oysters and clams.—*Twentieth Century*.

✻ ✻ ✻

SETTING THE HENS.

EVERY poultry place should be provided with a hatching pen, separate by itself, in which to set the hens when they become broody. Let them remain on their usual nest for a couple of days; then, after night, remove to their new quarters. Place a "dummy" setting of eggs under her, make her next box dark by mean of a gunnysack or board, place feed and water before her, when she comes off, see she goes back on; if necessary, fasten her on, and in a couple of days she will get down to business and will become as firmly established as a mule that doesn't want to draw.

Leave the chicks in the nest for twenty-four hours; thirty-six hours will not hurt; then remove and feed small grit and water. In a little while after, feed some dry bread steeped in sweet milk and squeezed dry. Some advocate hard-boiled eggs. I do not find it necessary. I like a Johnny-cake made as follows: One pint water, two eggs (infertile), one-half teaspoonful salt, one-half teaspoonful saleratus, corn meal to thicken. Dissolve salt and soda in the water, add the milk. Stir well and add meal and bake.

This Johnny-cake will crumble fine. Recipe is enough for one hundred chicks. Do not bake any more than will last for two days, as it may become sour, and that is fatal to young chicks. They can be fed this three times a day, up to three or four weeks old, when cracked corn, cracked wheat, and wheat screenings may be substituted.—*Selected*.

The Children's Corner

THE BIRDS AND FLOWERS.

"WAKE up! Wake up! Ver-y, ver-y beautiful!" sang Mr. Robin one morning in spring.

"Here I am!" answered a daffydowndilly, as she playfully poked her yellow head through the ground.

"I'm here, too," said a lavender crocus.

"So am I," said a sleepy violet.

"Look! Look! Look over under that tree!" sang a little sparrow.

And, sure enough, over by an oak tree was a baby fern, with some of its fronds still tightly curled up, fast asleep, while a few of them were waking up and gently unfolding.

"Ver-y, ver-y beautiful!" sang Mr. Robin again.

"It is a beautiful world to live in," continued the little crocus.

"And to *work* in," added Mr. Robin, as he thought of the busy summer ahead of him.

"And to *play* in," said daffydowndilly, as she swayed and nodded in the breeze.

"And to *love* in," sighed the little sleepy violet.

"And to *grow* in," said the baby fern.

"And to *sing* in," sang a little bluebird near by.

"And to *trust* in," said a tiny blade of grass.

And so they thought. And each one tried its best to be all that God meant it to be.—*Round Table*.

✻ ✻ ✻

"WASTE NOT, WANT NOT."

"JAMIE, you must eat your crusts," said mother, as the little boy carefully laid up the crusts of his bread around the edge of his plate.

"Don't like 'em, mama!" snapped the boy.

"That makes no difference," said mama.

Jamie pouted.

"They're hard."

"You have good teeth, my boy."

Jamie wanted another good slice of bread and butter, but there were those tough crusts. He knew his mother would give him nothing more till those were eaten. He sat still a few moments, and then, as if a new thought had come to him, he broke out, half laughing, half crying: "Did you eat your crusts, mama, when you were as big as me?"

Mama smiled at the "as big as me," but very good-naturedly answered: "Yes, my boy, I had to. I remember that one day I tucked all my crusts carefully under the edge of my plate on the side opposite to my mother, so that she could not see them. But when I came to the table the next time there were all my crusts in a very neat little pile on my clean plate. I made up a face, and was just going to turn them out of the plate, when my mother, who had been watching me, said, quickly, 'Not so, my little lady; you can have no dinner until you finish your breakfast.' There was nothing for me to do but to munch my crusts. After that I thought it the best way to eat them as I went along."

By this time Jamie's crust had disappeared. He had learned the lesson his mother wished him to.

"The crust is the best part of the bread, my mother said; the very sweetest. If we throw our crusts away, we waste a large portion of our bread. It is wicked to waste. What we waste now we may sorely want some time." —*Exchange*.

THE QUIET HOUR

DE LAWD'S WUK.

De Lawd he hed a job fo' me,
 But Ah'd so much to do,
 Ah ast him git somebody e'se,
 Aw wait till Ah got froo.
 Ah don't know how de Lawd come out,
 But he seemed to git along;
 But Ah felt kind o' sneaken' like,
 'Kase Ah knowed I'd done him wrong.

One day Ah need de Lawd myse'f,
 An' need him right away.
 He nevah answe'd me at all,
 But Ah could heah him say,
 Way down in mah accusin' heah:
 "Ah's got too much to do,
 Yo' bettah git somebody e'se,
 Aw wait till Ah gits froo."

Now when de Lawd he hev a job,
 Ah nevah tries to shu'k;
 Ah draps whatevah Ah's on han',
 An' does de good Lawd's wuk.
 Mah own affaihs kin run along,
 Aw wait till Ah gits froo;
 Nobody e'se kin do de job
 De Lawd lay out fo' you.

THE HIDDEN LIFE.

J. HUGH HECKMAN.

"Your life is hid with Christ in God." Col. 3: 3.

To no one is life so precious a trust as to the Christian disciple. He does not rely upon any ability to care for it himself, but commits it into the keeping of unfailing hands. Reposing in the depths of the Christ-life, that ministry to the soul's best interests is carried on. Self-life must die before the Christ-life can grow. Of high Christian attainment is he who is able to say, "It is no longer I that live, but Christ who liveth in me."

The hidden life is made possible by surrender. Self once capitulated, the soul takes refuge in the citadel of God's love. There it becomes the protected life, safe from the blasts of any storm. This security is maintained by keeping in harmony with the head and government of the kingdom. Prayer is the secret of unbroken harmony between the keeper and the kept.

All men need a time to be quiet. God communes with men when they wait before him to listen. No life is strong unless it affords God a chance to speak

to it. The hidden life is marked by its quiet waiting upon Jehovah. There is an intimate relation between the private and the public life of a Christian. In the quietude of his prayer closet is stored up that power which is shown forth in his activities in the midst of the populace.

The hidden life is a life of power. It is necessarily so because of the connection with the source of power. Men may possess physical strength or mental attainment and yet be incapable of swaying any soul toward higher things. Only spiritual power can move hearts toward God who is a Spirit. Conforming to God's standard of living makes any life fit to receive that power and be an instrument of its working. Living on the plane of the Christ-life means power in God, with God, for God.

Every life makes known its character by its influence, whether that be elevating or debasing. One may well shudder at the imprints upon human souls seen in the wake of ungodly living. The influence of the hidden life is holy because the power to wield that influence is God-given. This world can no longer stand when all the godly characters are removed.

The hidden life is a life of blessing. Spirituality is increased by spending. The kept life knows nothing else but to spread the joy of its security. The words spoken to Abraham are words for us: "I will bless thee . . . be thou a blessing." This is God's plan for every life. God is waiting—and a weary world is waiting—until men will allow the power of the Almighty to work the blessedness which it will when they offer themselves to be instruments of its working.

THE WEALTH OF THE CHURCH.

In the Sunday-school lesson not long ago the beggar asked alms expecting to receive silver and gold. He got far more than he asked—the power to walk. The power of the Gospel is to liberate men from the bondage of sin. If beggars are fed without requiring to work, not only is charity misapplied, but the character of the recipient is weakened and perhaps ruined. Nor is it enough to make men walk, to heal the body; they must walk in spirit and in truth—in the name of Jesus Christ. Even medical missions and all the physical help given by our city missions, are not an end in themselves; they are means by which to reach men's souls.

Peter drew a fine distinction between the wealth that consists of silver and gold, material resources; and that which consists of ability and power, physical, mental, spiritual. He had no money and still he was rich. He had pity and power to help. The strength of the church is not in her silver and gold. Pope Innocent IV said to Thomas Aquinas, "You see the church can no longer say, like Peter, 'silver and gold have I none.'" The philosopher replied: "Nor can she say, 'rise up and walk.'" "When the church became rich in this world's goods, she declined in spiritual power. When she was poor in houses and lands, she was rich in grace and truth. Her debt to humanity is not to be paid in lifeless coin, but by sympathetic service. There is none so poor that he cannot pay his debt. "It is only necessary," says Phillips Brooks, "to be good and brave and true and patient and we give our brethren gifts far beyond all value, great, generous impulses and strong, true principles." Turgeneff, in one of his parables, tells how he was besought by a beggar. Searching his pockets, he said to the man, "I am sorry, brother, I have nothing for thee." But the beggar, with joy beaming in his face, replied, "That is enough, you have given me more than money, for you have called me brother."

Yet we are not to imagine that the church or the Christian has no right to possess property and to use silver and gold in the performance of the work of the kingdom. Money is power, and its proper use depends upon the spirit of those who have it. By means of it the men who preach and teach must be supported, houses and homes and institutions must be built and sustained, and the Gospel is sent to the ends of the earth. The problem is to subordinate money to spiritual and moral ends. A passenger on a sinking boat filled a belt around his waist with gold. After the wreck his body was found at the bottom of the bay. Ruskin says, "Now had he the gold, or had the gold him?" Beware lest the gold have you, instead of you having the gold.—*Christian Monitor*.

TRY HIM WI' A TEXT.

MANY a time has Satan succeeded in his efforts to overcome frail humanity, but in no case could he have done so if always and ever his victims had known how to use the "sword of the Spirit, which is the Word of God." "*It is written,*" said our Savior in the wilderness, and "Satan departed from him."

"What's wrang wi' ye noo? I thocht ye were a'richt," said one Scotch boy to another, who had recently been converted, but who was still disquieted and desponding. "What's wrang wi' ye noo?"

"Man, I'm no richt yet," replied the other, "for Satan's aye tempting me."

"And what dae ye then?" asked his friend.

"I try," said he, "to sing a hymn."

"And does that no' send him awa'?"

"No, I'm as bad as ever."

"Weel," said the other, "when he tempts ye again, try him wi' a text; he canna staun that."

This is the great remedy for temptation; and we can only conquer our adversary the devil by the Word of Truth, by the power of God, by the armor of righteousness on the right hand and on the left.—*Selected*.

DWARFED CHRISTIANS.

CHRISTIAN perfection is something more than purity, something more indeed than maturity. Some people's idea of perfection is like a Chinaman's idea of an oak which he has grown in a pot, and which has reached the size of two feet, and then says to the Western visitor, "It is a perfect tree; why do you not admire it?" "Miserable two-foot oak," says Henry Ward Beecher, who uses the illustration, "I turn from it to think of God's oak in the open pasture, a hundred feet high, wide-boughed, and braving the storm. Now when a man comes to me and says: 'I do not commit this fault, or fall into that error, I have trained and schooled myself. Behold me; I am perfect.' I cannot but exclaim, 'Miserable two-foot Christian!' I have no patience," continues Mr. Beecher, "with this low standard, these earthly comparisons, this relative goodness. I must outgrow this pot of earth. God's eternity is in my soul, and I shall need it all to grow up to the measure of the stature of the fullness of Christ."—*Northwestern Christian Advocate*.

THE BIGNESS OF THE TRIFLING WRONG.

A GREAT deal that is right can be fatally marred by a very little thing that is wrong. It takes only a little thing to spoil a big thing. An outing in the finest and coolest of country air, with the best of meals, the most luxurious of houses, and the most comfortable and sleep-inviting beds, may be ruined by the bark of a dog, or the hum of a mosquito—if either one keeps faithfully at it through the night. A mere trifle like that has changed more than one paradise into an inferno. And it takes only a single serious trifle in the character of an otherwise strong, attractive man or woman to more than blot out all the attractions which might count for so much. It does not pay to overlook the little things, in our surroundings or in ourselves. It may seem an unfair principle, but it is inexorably true, that a little that is bad will more than offset a great deal that is good; while a little that is good will not offset the large evil. How it does behoove us to be vigilant against all evil, no matter how tiny!—*Evangelical Messenger*.

THE fearful never inherit the mysteries; it is the men of faith who see the invisible. To them God reveals his secrets and manifests himself in light and love and fellowship.—*Cecil H. Wright*.

ECHOES FROM EVERYWHERE

Before the American Society of the Study of Alcohol and Other Drug Narcotics Dr. W. S. Hall of Chicago, Dr. H. J. Berkeley of Baltimore, Dr. H. W. Wiley, T. A. Williams, A. MacDonald and I. J. Achard said alcohol could not be considered a food and was responsible for race suicide.

The Lehigh Valley Railroad is reported to have recently issued orders to its employment bureau not to accept any man for service upon the road in future who will not sign a pledge of total abstinence. The road has for years been very strict with its men in regard to drinking, as are all railroads, but not until recently has it gone to the extent of demanding total abstinence.

The Federal quarantine on account of the foot-and-mouth disease has been entirely removed from the States of Michigan and Maryland, no cases of the disease having been found in those States since early in December. The quarantine on certain portions of New York and Pennsylvania remains in effect, but covers only the particular townships in which the disease existed, together with certain adjoining townships.

Art treasures variously estimated at between \$20,000,000 and \$30,000,000 are soon expected to decorate private and public galleries here and in other art centers of the country under the provision of the proposed new tariff which permits the importation of paintings and works of art more than 20 years old free. J. Pierpont Morgan is known to have about \$6,000,000 worth of art possessions in London and it is expected he will remove them to New York.

Now that the misunderstandings between the railroads and the manufacturers have been removed and a satisfactory steel rail assured, orders for new rails are being placed in large quantities. A notable instance is a recent order of the New York Central Railroad for 101,000 tons to be delivered during the spring and early summer. Of this order, 51,000 tons are being rolled by the Lackawanna Steel Company, 42,600 tons by the United States Steel Corporation, and the balance by the Algoma Steel Company and the Bethlehem Steel Company.

The law but recently enforced by the State Legislature prohibiting the manufacture of liquors in the State of Tennessee is to be carried to the supreme court of the United States, if necessary, in a test case. Plans of the liquor interests to attack the law have been guarded with the utmost secrecy, but it became known March 17 that suits will be filed by at least five manufacturers in the State whose stockholders are largely nonresident, in order that the case may be brought in the Federal court. Six attorneys, it is stated, have been engaged—two from Tennessee, one from New York, one from Washington and one from Cincinnati—to prosecute the case. With the attack on the manufacturers' law, it is also planned to attack the State-wide prohibition law.

The frequency of accidents to passengers alighting from the rear platform of one car and walking in front of a car approaching from the opposite direction, has led an inventor to devise an alarm which is sounded by the motorman when he stops his car if he sees another car coming on the opposite track. The alarm is located on the back platform, and at night the device is illuminated, so that the sign reading, "Look out for the car on the other track," may be read.

Capt. C. E. Thomas, of Saranac Lake, has discovered an opening to a great cavern on the summit of a mountain in the Adirondacks, N. Y. He penetrated the cave for about 1,000 feet, and then returned because he had no proper equipment to continue his exploration. The cave is situated on a mountain known as "W" Mountain, several miles from Standish, N. Y. The mouth of the cave is about 50 feet wide, and the first room 50 feet long, 20 feet wide, and 30 feet high. Bats lined the walls. In the second room, which was about 40x15x25 feet, ramified passages were found.

Mrs. Mary Baker G. Eddy, leader of the Christian Science church, has just issued an edict barring all Christian Scientists from reading Rev. Dr. I. M. Haldeman's book condemning Christian Science as immoral and opposed to the teachings of God. Dr. Haldeman's book, "Christian Science in the Light of Holy Scripture," was published only a few weeks ago. Dr. Haldeman is pastor of the First Baptist church at Broadway and Seventy-ninth Street, New York. Dr. Haldeman's attack on Christian Science is particularly severe with regard to the teaching of that church regarding marriage.

The New York Tribune, one of the most conservative and reliable newspapers in the United States, says: "The drink bill of the United States is \$1,410,236,702. All the corn, wheat, rye, oats, barley, buckwheat and potatoes put together will not pay for it. The liquor traffic costs more each year than our whole civil service, our army, navy and Congress, the river, harbor and pension bills, all we pay for local government, all National, State and county debts and all the schools in the country. In fact, this Government pays more for liquors than for every function of every kind of government."

Executive and legal representatives of the railroads operating in Missouri say that they will immediately take steps to attack the 2-cent passenger fare laws of Illinois and Iowa and to urge similar contests, which are now pending, in Kansas, Nebraska and Minnesota. They will also present a strong front in the Arkansas litigation. The railroad officials said that at the recent conference in Chicago, when they concluded to restore the rate of 3 cents a mile in Missouri, they also decided to fight the 2-cent rate cases in the other States mentioned. The 2-cent rate is under suspension in Arkansas through a temporary injunction.

Between the decision written by Judge Grosscup and handed down by the Circuit Court of Appeals and Judge Anderson's interpretation of that opinion, the Standard Oil Company virtually has obtained immunity from further prosecution for accepting rebates or concessions from railroads, at least in this part of the country. Seven other indictments, found against the company in Chicago, but which have not been tried here will be dropped. This procedure was determined upon March 19 at a conference between Assistant Attorney General Wade Ellis and District Attorney Sims and Special Attorney Wilkerson in Washington.

George Thorndike Angell, the founder of humane societies and leader of the movement for the better treatment of dumb animals, died March 16 at his home in Boston after a lingering illness of several months. He was born in Southbridge, Mass., in 1823, and after being graduated from Dartmouth College studied law at the Harvard Law School. Admitted to the bar in 1851, he had for many years a lucrative practice. In 1864 he started the agitation that led to the formation of humane societies in Massachusetts, Illinois and a number of western and southern States. The Illinois Humane Society was founded by him. He established the publication *Our Dumb Animals* and wrote much, besides delivering addresses on the subject for many years.

The censorship of moving pictures recently established in New York City is to affect practically every moving picture show in the United States, according to a statement issued in New York City recently by the Moving Picture Patents Company. This company announces that it has secured an agreement from all its licensed manufacturers and importers, including a majority of the firms engaged in the manufacture and sale of moving pictures in the United States, whereby the decisions of the New York censors will be followed. "We believe," the statement says, "that this agreement means that the death knell of the cheap and low toned picture show has been sounded. We are determined to stamp out all pictures which are for any reason undesirable. The movement is national in scope and will be put in immediate operation."

A Boston inventor is claiming that he has solved the problem of storing the sun's rays and converting them into electrical energy. He has, according to Boston dispatches, succeeded in generating enough electricity by his device to light his workshop. The invention consists of a framework placed in position so it will receive the direct rays of the sun. Into the frame are set a series of short metal composition plugs, there being 61 of the plugs in the frame, which is divided into squares, each one foot square. Projecting from cement in which they are set the plugs come into contact with thick glass; and upon this glass the sun shines. A heat-absorbing material is filled in around the plugs and the plugs are an inch apart, connected in series by a metal strip. The inventor holds that the difference in temperature of the two ends of the metal plugs, one being in the sun, the other in the open with a circulation of air around it, generates a current of electricity. Should the sun go under a cloud and the voltage drop below that of storage batteries, an automatic cutoff breaks the circuit between the generator and batteries. The device, says the inventor, will store up enough electricity for an entire house. The principle is that of the thermo-battery, and is not in itself new, but is unique in its present application.

Birmingham, 25 years ago, took matters into her own hands and cleared away her slums. The city borrowed \$9,000,000, bought the 41 acres of slum section, and tore all the houses down. Then it rented the ground on 75-year leases on condition that at the expiration of the lease both the ground and the office buildings erected thereon should return to the city. The idea is paying well, for the annual rent is covering the interest and sinking fund on the \$9,000,000, the miserable slums are cleared away, the former residents there are in more sanitary houses, and in 50 years more the city will own 41 acres of land covered with buildings which will be of immense value.

Several hundred tin plate workers held a meeting at Sharon, Pa., March 21 to protest against the retention of the rebate clause in the tin plate schedules of the pending tariff bill. A petition will be forwarded to Congress, which, it is expected, will bear the signature of every tin worker in the Beaver Valley. At the meeting the men asserted that approximately 2,000,000 boxes of tin plate are imported from Wales each year by the Standard Oil Company and the big beef packers, who reship their products in cans made from the tin, receiving 99 per cent rebate on the tariff on the tin. The men claim if the tin were made in this country it would keep all the mills busy. They will ask for a reduction of half in the rebate if they cannot get the entire rebate disallowed.

The committee of the Duma that has been examining the proposed bill for the abolition of the death penalty in Russia has been furnished by the police department with statistics regarding the activity of the military courts from Jan. 1, 1905, to Jan. 1, 1909. According to this information there were during this period 3,310 condemnations to death and 1,435 executions. There were 683 additional executions under the special drumhead court-martial law which was effective from Aug. 1, 1906, to May 3, 1907. These last figures are 461 below the press statistics published in the summer of 1907. The commission has decided it is necessary to retain the death penalty for the most serious crimes in regions still under the system of "exceptional laws."

The first few weeks of the old-age pension law developed the fact that 1 person in every 20 in England and Wales is a pauper. In London the ratio is 1 in 14, and the figures gathered tell such a story of national poverty that the Government is believed to be in danger. The Liberals are fast becoming unpopular for their forcing of the act upon the country, as it is already manifest the pensions will greatly increase the tax rate. More than 500,000 persons have been found eligible for the old-age pensions, and it is expected that this total within the next few months will reach 690,000. Figures compiled recently give a population to England and Wales of nearly 35,000,000. The number of paupers is 1,700,000, while 2,000,000 receive Government aid, either as paupers or old-age pensioners. While 1 person in 20 is listed as a pauper, with paupers and old-age pensioners combined, the figures stand at 1 to 16. One person in 14 in London is a pauper, exclusive of the pensioners. The old-age pension law has many restrictions, so that it does not reveal the full extent of the national penury. A full pension of \$1.20 goes only to those over 70 years of age, and who have never accepted charity and who have never been in prison. There are about a dozen minor disabilities, yet, despite all restrictions 500,000 persons are registered for full or partial pensions.

Among the Magazines

DE PROFUNDIS.

REGINALD WRIGHT KAUFFMAN.

Out of the deep! Out of the deep
For them that wake and them that sleep;
For them that sleep no more to wake,
And them that wake with hearts that break;
There, by the blue Sicilian sea,
Out of the deep they call to thee.

O God, so mighty is thy blow
That why they fall they may not know;
So vast the Law thyself hast writ
That they may never measure it:
Yet, though thou send this agony,
Out of the deep they call to thee.

With tongues that lie so still in death,
With tortured mouths that scarce draw breath,
In ruin dealt for no offense,
In poverty and pestilence:
When thy love seems a mockery,
Out of the deep they call to thee.

And we—through all this world of thine,
Who blindly follow thy design—
Still in each terror-mastered soul,
Though strength be shattered, faith is whole;
From land to land and sea to sea,
Out of the deep we call to thee.

Somehow, at last, the night shall fade,
Sometime the riddle plain be made,
Somewhere the broken lives of men
Be gathered by thy hand again:
O Maker, not destroyer, we—
Out of the deep we call to thee.

—From The Circle magazine for March.

THE HOUSE INSURGENTS.

Men in high places to the contrary notwithstanding, the cause of the House of Representatives' insurgents is a worthy one. The President is trying desperately in these last few hours before the convening of Congress in special session to break up the opposition to Speaker Cannon and the opposition to the adoption of the rules that governed the last House. We had imagined that perhaps Mr. Taft would keep his hands off this House of Representatives' affair, because of its strictly internal nature. From the purely partisan standpoint, and from the standpoint of selfishness, it is easy enough to understand why Mr. Taft is urging the postponement of an insurrection until December. He does not desire to block tariff and other legislation. He would like to have Congress get down to work, speedily agree on a tariff bill and thus redeem the first of the administration's pledges. Mr. Taft naturally desires to gain the confidence of the people at the outset of his term of office and he likely fears that criticism instead of praise will be his portion if the House members become involved in a serious controversy over the speaker-

ship or over the rules, or if a speaker with whom he has no understanding respecting legislation is elected.

But there is another side to the issue, and it is a bigger, broader side, because it is non-partisan. Under existing House rules, whatever House leaders may say to the contrary, the people do not have equal representation. A newly elected legislator may introduce a bill that he has pledged himself to his district to introduce, but that is as far as his membership in the House is of advantage to the people whom he represents. The bill goes to a committee and after it has once reached that committee no one except the committeemen and the speaker can get it out again. There is no rule under which that representative, although he is the chosen mouthpiece of just as many people as any other member of the House, can force action on that bill. There is not even any method by which he can bring his bill up for debate. Nor is there any method open to the newly elected member whereby he may gain anything else for his district without first winning the "consent" of a very limited but very powerful clique of House members. All power is centered in committees. The committees are appointed and consequently controlled by the speaker. The speaker alone is elected by the House membership. The individual member, unless he happens to be of the chosen few, is far from being a factor in legislation. The power that he is supposed to possess—power coequal with that possessed by every other member—is taken from him by a set of cumbersome regulations. The individual member of the House is of no more value to his district as a lawmaker, unless he has served a long time in Congress, than as if he were in a padded cell in one of his State's asylums. This is not representative government.

Mr. Taft and other leaders of the administration forces may be of the opinion that tariff readjustment is a matter of great importance at the present time. Possibly it is, for the readjustment is expected to affect in some measure the material welfare of the people. But to us it seems that the issue of representative government, on which the proposed fight in the House is based, is infinitely more important than any other that is likely to come before the present Congress. The House, we have heretofore insisted and still insist, should give us some evidence of its ability to honestly govern itself before it undertakes the task of making laws for the people. A system which effectually hushes the voice of any one of the 391 members diminishes by so much the representation of the people in Congress. And where that system nullifies the wishes of a considerable portion of the membership, as it now undeniably does, it is so faulty as to require immediate repairs. About the only privileges remaining to members of the House who are serving their first terms, or who are of the minority party, are those of drawing their salaries and their mileage, of introducing bills and of voting—probably as party leaders suggest—on such bills as their colleagues in power will consent to have reported. And this is far from valuable service.—*Woman's National Daily*, March 12.

LINCOLN DEIFIED—AND DISREGARDED.

The English and Canadian papers express the view that the present generation of Americans have fallen far behind the standard and example set them by Abraham Lincoln. The London Spectator believes that the simplicity, uprightness and hopefulness of the President who chose Grant as his sword of battle, and emancipated the slaves, have perished with him. Hence the complaint of the Toronto World that the work Lincoln began is not being carried on, and that the American people think they have done their duty when they have merely uttered a laudation of the great emancipator. Any way, we are told, these panegyrics are extravagant. "There is too much of a tendency, a set intention, among our neighbors to overreverence Lincoln," and "the 'Old Abe' of the light-tongued of his time has grown into Father Abraham of the Bosom!" But, the writer is "forced to surmise," the deification of Lincoln is merely "a cover for neglect of political responsibilities," and he remarks that those who praise Lincoln had better follow his example and carry on his unfinished work. As he says:

"The truth is that Lincoln's great task, his herculean labor, was only begun; it still cries for cure if there be any. The terrible blot is still there. See not the blot, deify Lincoln, stand idle till a Savior emerge! As if this kind would not scoff at him when he came! And other social disorders prevail, in regard to the distribution of wealth, the aggrandizement of political power in the hands of a few, of great trusts, of millions of men wearing the collars of these great aggregations who hold it crime in a man in receipt of wages that his hair is turning gray, of widespread misrule and looting of cities, of a press that has gone largely into the service of the new masters of the people, of a debased theater, of the worship of veneer as taught by The Ladies' Home Journal, and of business smartness as glorified by The Saturday Evening Post, of Frank Munseys who write of 'Mrs. Lincoln and her court,' and 'her ladies-in-waiting,' of the high finance of Wall Street and the priesthood of that finance exemplified by Harriman, Ryan, Rockefeller, and Gates—these and other things are so bad that Roosevelt, who had the courage to see them, and name them, to strike at them, to try to cure some of them, has now to make his salutation, about to die, or go out of the ring so damaged and discredited that the people will hardly summon him again! Or is he, too, some day to be another Savior?"—Literary Digest.

**THE CONSERVATION MOVEMENT.**

Three recent expressions may be regarded as signs of the times and indications of national progress.

The first was the report of the Inland Waterways Commission, approved and transmitted by the President in February, 1908. It recognized the essential unity and interstate character of the navigable and source streams of the country; recommended their improvement in the interests of the people through coöperation of the federal Government with States, municipalities, communities, corporations, and individuals; and proposed a conference of State executives with experts on waters and related resources.

The second expression was the conference of Governors with the President in May last, and the unanimous declaration that (among other interstate relations) "in the use of natural resources the independent States are interdependent, and bound together by ties of mutual benefits, responsibilities, and duties." Forty-six Governors of States and Territories took part in this unique

conference, a few only being withheld from personal attendance by illness or pressing official demands; all concurred in the declaration.

The third expression was the joint conference in December last between the National Conservation Commission and some thirty State conservation commissioners, including a score of Governors. A formal report was adopted indorsing the principle of interstate interest in the natural resources, and recommending to the respective legislative bodies the policy of coöperation between States and nation. This report, with the indorsement of the President, is soon to be published.

The conferences between Governors mark a new departure in American history. Still more significant is the underlying motive; for it marks an awakening of the public conscience to the permanent needs of the people, and a stirring of a sense of trusteeship in the guardians of public interest. Viewed broadly in the light of national progress, the first expression was a call to action; the second was a declaration of interdependence among the States, worthy to rank with the Declaration of Independence by the Colonies; the third was a proclamation of union among the States, one breathing full life into the perfectly modeled form of the Constitution.—From "The New Union Among the States," by W. J. McGee, in the American Review of Reviews for March.

**A SUCCESSFUL POULTRY WOMAN AND HER METHODS.**

If the grain a hen eats in a year is measured, it will be found to be about a bushel, but this need not all be expensive wheat. In addition, she will need considerable green food, bone, and grit. The yearly cost of a hen's board in the East runs from seventy-five cents to one dollar. The Utah Station and my own accounts give sixty cents for the West. To get at cost, a poulterer cannot watch every pint, but must measure a considerable quantity of grain, etc., and put it in bins, boxes, or barrels by itself. One woman who did so, told me her husband muddled her by feeding the preacher's horse from her hens' portion.

A hen's four stomachs show she is meant for variety of food and bulky food. Nor would the Lord have given her four stomachs to pour slop through, one stomach, like the pig's, answering that purpose as well as more.

Neither a glutton nor a hungry hen is our ideal, but a compact, active one. A hen to produce a great product needs an eating capacity, as good cows do. She must show room for food, have length, like Spanish fowls, or depth, like Wyandottes. She should have prominent breast and lungs, pliable neck, and velvety comb, the last indicating a soft skin and good health.

Corn is the grain which gives most value for its price. It can be fed winter nights, especially in cold locations, to active fowls and by a skillful feeder who balances its fattening qualities by meat, etc. It is reported that the Amherst, Mass., Agricultural College poultryman said corn was the best grain for poultry. When I got his bulletin, what he did say

was that corn was the best for Leghorns. One glance would show you they could be differently fed from lazy cochins.

Green food colors egg yolks, makes them hatch well, furnishes shells, keeps fowls healthy, and is cheap. Herbs of all sorts, catnip, spearmint, horseradish, nettle, plantain, dandelion, etc., when chopped and added to their pudding, are relished by chicks that would not eat the pungent things clear.

Where meat is not available, some may be glad to have their attention called to the protein foods. A teacup of either bean or linseed meals added to a four-quart pudding of mixed grain, furnishes chickens an excellent builder. Beans can be ground at any feed mill, or can be cooked and mashed. Ducks, however, must have an animal builder, like cheese or meat, to agree with their natural fish-eating nature. My hens laid nearly one and one-half dozen eggs apiece in January, aided by a homemade condition powder of mashed beans, Venetian red (a form of iron), and red peppers of my own raising. This was when "red albumen," that fake of oyster shells and common red clay, was selling at sixty cents a pound.

With large flocks, I have succeeded in getting one hundred and forty-five eggs apiece a year, and that is good work. The only hens I was ever acquainted with that did better were very small flocks, carefully selected, fed on table scraps, petted, studied, etc. But the 200-egg-a-year hen is as possible as the 12,000-pounds-milk-a-year cow.

There are different ways of making averages. Mine are made monthly, each hen counted for each day, or part of a month, present. After half are sold, I do not say those left laid all the eggs. One man, when closely catechised, admitted his total was what the hens would have yielded, had every hen done her duty.

The old theory that brown eggs are better than white ones is exploded. Individual eggs in the same breed differ more, so you can keep the kind of fowls you fancy. The proportion of solids to each other is always about the same with any hen's egg, but she puts in more or less water, as she has it. Like a dairy cow at her normal, which can add flow, but no more richness, so a well-fed hen at her normal can simply add water. It is distilled, flavored water, desired and sold at a high price, an honest watering of stock. Each fowl needs five to eight ounces a day, in dishes easily and regularly cleaned, or she ceases to drink.

A house large enough for days is bleak at night. If snug at night, it is crowded days. Therefore, build a good lodging room and a cheaper day affair, a scratching or shed room, according to the protected or non-protected situation. The value of a south exposure I know in figures. A tank-house is south

of one hen-house and between it and another previously constructed. In winter, when the sun "runs low," the right-hand house is shaded about three hours in the late afternoon. The left-hand house about an equal time each morning. Repeated trials with thermometer showed whichever house was then in shade was seven to twelve degrees colder than the other house.

Two divisions of parasites are the main affliction of hens, namely, lice, which are true insects, and mites, of the spider family. Some lice breed in filth and are scavengers only. Most of them breed on the fowls, and many are bloodsuckers. Mites live in roosts, nests, walls, coops, etc., coming out at night, to feast on blood, then retiring to their haunts through days. To avoid lice, clean the hens. To avoid mites, clean the house. A shallow box, in a sunny spot, with mellow dust inside, assists the hens in their care of themselves. Every bit of poultry-house furniture should be simple and movable to facilitate easy cleaning, a thing not true of some expensive outfits.—*Vick's Magazine*.

Between Whiles

Hirum: "Was yer house damaged by that there cyclone?"

Ike: "Dunno. I hain't found it yit."

The following extract from a letter of thanks is cherished by its recipient:

The beautiful clock you sent us came in perfect condition, and is now in the parlor on top of the book-shelves, where we hope to see you soon, and your husband, also, if he can make it convenient.—*Youth's Companion*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—494 acres in Mexico \$950. On Southern Pacific Railway in Sinaloa. The New California and Coming Country. Rich soil. Level. Bank and Government References. W. S. Hunt, Culiacan, Sinaloa, Mexico.

FREE—The Inglenook Handy Atlas of the World, with each subscription to the INGLENOOK Magazine at \$1.00 per year. This offer is not good after April 20, 1909.—Brethrer Publishing House, Elgin, Ill.

FOR EXCHANGE—Upon receipt of \$1.00 we will send you Inglenook Handy Atlas of the World and the Inglenook Magazine for one year.—BRETHREN PUBLISHING HOUSE, Elgin, Ill.

APRIL 20, 1909

is the date for the withdrawal of our popular sixty-day premium offer. Be sure to mail your order in plenty of time to reach us before the above date or you will be too late to secure a Free copy of the Handiest Geographical Encyclopedia published.

INGLENOOK 1909 HANDY ATLAS

The Inglenook Handy Atlas of the World includes 75 maps in colors. The remotest points of the far away countries are plainly depicted, and our own United States and the newly acquired American possessions are clearly shown. The book is an invaluable aid to any one who follows current happenings in the world's news.

Interesting historical sketches of all the Presidents of the United States are given—from George Washington to William H. Taft, who has just been inaugurated. Readers can glean at a glance information of the life and antecedents of any of these famous characters. A description of the White House is also included.

The Inglenook Handy Atlas of the World contains features of general interest to everybody. Pages are devoted to the United States Reclamation Service, explaining how government land may be reclaimed and acquired by citizens of the country, together with maps and a summary of the principal reclamation projects.

The Panama Canal project is always close to the people, and to be well informed on the subject is essential. The Inglenook Handy Atlas of the World contains an excellent profile map, showing every tracing of the canal's progress, together with an historical sketch and explanation of the final plans adopted by Congress, June 29, 1906.

Data concerning the principal cities of the world, with the 1905 census and the latest official estimates of population, are features that will appeal to everybody. Usually the ordinary atlas is remarkably incomplete in this respect. The cities of the United States, of course, are a feature, and a glance will determine the population and other important matters.

Beautifully colored plates showing the flags of all nations enable the reader to discern the emblem of any kingdom, empire, republic or principality in the world. A great education for old or young in its pages. Just the book for the school children to aid them in their studies.

Sixty-Day Offer

To every person sending us ONE DOLLAR for a year's subscription to the INGLENOOK before April 20, 1909, we send a free copy of the "INGLENOOK 1909 HANDY ATLAS OF THE WORLD."

If you are already on our subscription list, send us the Dollar and we will extend your subscription for another year or you can have the Magazine sent to a friend and keep the Atlas yourself.

Brethren Publishing House, Elgin, Illinois

Wedding-Day Publications

have received more than usual attention in making up this line, and the result is that we have to offer a splendid assortment of the very best items obtainable.

We confidently commend these goods to our patrons for their beauty, originality of design, richness of color, and softness of tone.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the north. There is some snow at times but the Chinook winds quickly melts all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. I. J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

EMPIRE COLONY

IN "SUNNY STANISLAUS"

The CO-OPERATIVE COLONIZATION COMPANY is now locating a colony of our people in the lower San Joaquin valley, in central California. The new town of EMPIRE, as well as the colony lands, is located on the Santa Fe railroad, five miles east of Modesto, the county seat of Stanislaus County, thirty miles south of Stockton, seventy-five from Sacramento and one hundred and fifteen from San Francisco.

The colony lands join the new town site and are within a few miles of three different railroads. These lands are all under cultivation, and are free from brush, stumps, stones or other obstructions. Two large ditches cross the tract, affording ample water for irrigation of all crops.

Mrs. McHenry's Farm Residence near Empire.

IDEAL HOMES AND PROFITABLE INVESTMENTS.

Because of the mild, congenial climate, short winters, rich soil, great variety of products, with good transportation to nearby markets, good roads, in a well developed and prosperous community, we can recommend the EMPIRE Colony as being a suitable place for ideal homes and good investments. We invite a careful investigation of this proposition by Home-seekers and Investors. Here the water for irrigation belongs to the land and "Water is Wealth." For these and other reasons we decided to locate our first Colony in "SUNNY STANISLAUS."

LOW RATES FOR COLONISTS.

During March and April one-way Colonists' Rates will be in effect from Chicago to Modesto, California, for \$33.00. From Kansas City, and other Missouri River points, to Modesto, \$25.00. Via Merced, Cal. For further information address

EASTER DAWN

John Walter Wayland

Ere light of morning breaks
The bird of dawn awakes,
And rippling through the leafy dell
 His note is borne along;
His sweet-voiced mates around
Wake to the cheering sound,
And soon a thousand warblers swell
 The blithesome matin song.

The lily, pure and white,
Smiles in the welcome light
All matchless in its simple grace,
 The fairest of the lawn;
Upon its petals bright
The languid tear of night,
Caught in the sunlight, shines in place
 A diamond in the dawn.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words. This is the Only New and Complete Webster Dictionary issued since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the Best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

NEFF'S CORNER

I have just imported from Germany some pretty souvenir post cards of Clovis scenes, artistically wrought in colors. Mailed to you 3 for 5 cents, 6 for 10 cents, or 20 cents per dozen. And, by the way, these cards are a sample of cards you can have made of your residence, favorite animal, church, court house or any other building or landscape view. Send me photographs of what you want on the cards and your orders will have immediate attention. You can get your friends to join you in making up an order, or you can sell thousands of these cards to members of your church, business men, etc., at a good profit to yourself or your church treasury. If you want to get some glimpses of Clovis, order a few cards. If you think of having some cards made, ask for prices when you order the samples. Address,

JAMES M. NEFF,

Clovis, New Mexico

Your Children

speak in the language of the twentieth century. In school, they are taught the language of the present day. Is it natural then, that in their Bible study, they should be expected to understand the English of the seventeenth century? The

American Standard Bible

Edited by the American Revision Committee

is for you and your children. It is the Bible truth revealed in the clear, simple language of the twentieth century.

24-page Booklet Sent Free

This book tells about the previous translations of the Scriptures and shows how, by the growth, change and development of the English language in the past 300 years, the American Standard Bible became a real necessity. The booklet tells also of the thirty years of effort spent in producing the American Standard Bible and gives many endorsements from prominent clergymen and religious writers of all denominations, with names of colleges and institutions where it is used.

A postal will bring the booklet—write for it to-day

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

THE PARSON'S LAD

HATTIE PRESTON RIDER

"It's not the heart of him that's bad," said Mrs. Murray, leaning her brown elbows on the gate through which her caller had just passed. "All young critters be frisky."

"Granny McDougal will have it that Parson Bryce himself was a lively lad, in his young days," chuckled the other, slyly. "She telt some things as would na bear out his stern doctrine. For mysel', I believe in the rod o' correction, but—"

A clatter of hoofs rang suddenly out, and down the village street a coal-black pony tore at a mad gallop, ridden by a red-haired boy of fifteen years. The apparition passed like a flash. Thirty rods farther on an old bridge spanned a sluggish stream. The Parson's lad made an effort to pull up as he neared it, but the pony's flying feet struck a rotten plank and it gave way. Instantly there was a hideous crunching of breaking bones, and an almost human scream. The Parson's lad was sent headlong into a clump of hazels, while the pony crouched in a groaning, quivering heap behind him.

A crowd gathered quickly. Some one mercifully put the brute out of his misery. Then the dazed boy was helped to his feet, scratched and shaken, but uninjured. When he saw the pony's fate a sharp sob escaped him; refusing all friendly offers, however, he turned and hobbled away toward the parsonage with a white, set face.

"Gi'n the Parson had seen the look the puir lad cast on the dead beastie, he'd reckon punishment was a'ready meted out," said good Mrs. Murray, with much concern.

"A sound thrashing 'll help him forget that same sight!" the blacksmith retorted, grimly. But neither of them guessed the sequel. That night, while Parson Bryce knelt in his dingy little study, his prayerless lips shut, and great beads of sweat dropping from his

seamed face, a slim figure swung itself from the window above, and stole away into the gloom. Toward morning the Parson's lad lay down to sleep under a thick hedge; but his troubled dreams were not of that stormy parting, only of Black Prince lying lifeless on the broken bridge with his slender leg crushed beneath him.

Corrigan's lumbermen of Camp 3 came plodding home through a blinding snowstorm, wet to the skin. Big Dan of the swampers was the last to enter the sleeping-quarters, but he wormed his way through the crowd gathered about the roaring stove, and crouched there, blue and shivering. Some of them swore at him, without effect. When the men had got into dry clothing and filed over to the mess-room, however, big Dan was not among them.

McDermot the cook was setting huge pans of baked beans on the table, when they came in. At one of the great ranges, a red-haired, slender boy was filling tin cups with steaming, fragrant coffee. He noticed less rough joking than usual, as they crowded to their places.

"Where's Danny O'Sullivan?" the cook asked.

"Takin' a vacation for the good af his jaw muscles," spoke up one of the cant-hook men, quickly. "'Tis your grub is that hard chewin', Mc."

"That same is strengthenin' to the cheek o' some, though, Patsy," retorted Mc, good-naturedly. "Where is Danny?"

"Gone to his bunk," the man answered, between huge mouthfuls of beans and bacon. "He wor a-shakin' loike."

McDermot set the remnant of coffee back on the big range.

"There's to be no cossetin' in this camp; them's the orders," he muttered. "But there's no law agin keepin' a hot cup in case it's wanted."

When their meal was finished, the men filed out.

warmed and satisfied. At bedtime Patsy Sheehan returned with a grave face.

"'Tis a bit of ginger I'm wanting, and some hot water," he said to the cook, who was just turning into his bunk. "Danny is shakin' again, and the bones of him near crackin' wid pain."

"He's been gallivantin' up river once too often," the cook answered, as he got the required condiment. "Two men at Garry's has the smallpox. Was Danny there?"

"Give me an aisy one," Sheehan objected. "I ain't big Dan's guardian angel."

He went out, carefully covering the cup, and the cook shut the door, muttering:

"He'll watch all night with the poor fool, though. Guardian angel, indeed!"

"What's the best way to doctor smallpox?" asked the red-haired boy.

McDermot turned, staring. "Who said smallpox?" he snapped.

The red-haired boy grinned, suddenly, widely.

"I did," he answered. The cook chuckled.

"The best way to doctor it, is not to doctor it," he replied, drily. "Keep 'em warm and still,—if ye can, and give 'em plenty o' water to drink and nothing much to eat."

Next morning the men poured in to breakfast agog with excitement. A dozen of the hands had taken French leaves before daylight. The boss had issued orders that the men should bunk for the present on the mess-room floor. Sheehan had been detailed to nurse the patient, and the bunk-house was quarantined.

"Shure, 'tis the plague, an' we'll ketch it av the blankets!" wailed Tim O' Shaughnessy. He stared when the men laughed.

"Shut up!" said the cook, savagely. "The first man that mentions smallpox 'll go out of that door like a bullet!"

Nevertheless, before next morning four more men were stricken. But, short as the force was, only Sheehan could be spared to nurse them. Late that night, as the superintendent came across to give an order, he surprised a slim figure stealing to the bunk-room door.

"Go back, Bryce!" he said, sternly, to the red-haired boy. "Don't you think Sheehan has his hands full enough now?"

A lump rose in Aleck's throat. A year ago, he had nursed his father through a severe attack of pneumonia. The horror of those long lonely nights was with him yet; and Sheehan had been kind to him.

"I wanted to share his handful, sir," he explained, hesitatingly. "I'm strong, and I'm used to sickness."

The dusk hid a queer look in the superintendent's keen eyes.

"I've sent to Camp 4 for help," he said, briefly. "Go back; at least, till you're worse needed."

Aleck obeyed. But at dawn word came that Camp 4 itself was turned into a hospital. Two half-breeds from the Sault had brought the contagion. Panic prevailed. Some preacher from down the river had stopped over, and was helping nurse the sick.

To Aleck's great disappointment, Barney LeDuke was detailed to Sheehan's assistance. But Barney himself fell ill, along with a dozen others, before nightfall. Then Aleck, with scarlet cheeks, walked across to the log office.

"You'll let me help Sheehan now, sir?" he questioned, eagerly.

The superintendent's searching gaze seemed age-long.

"I'm afraid you won't do," he said, deliberately. "You don't know what you're asking."

Aleck went blindly out, his face white and his heart burning.

The dim rays from the bunk-room window drew him like a magnet.

Obedience had always been a hard lesson for him. Twice he approached the door. But he went back, at last, and rolled himself in his blanket on the mess-room floor, never dreaming how the superintendent slipped out after him, following the uncertain line of his foot-prints. There was a grim smile on the great man's lips when he gave the curt order next morning:

"Send Bryce to the bunk-room to help out Sheehan."

That night all but four of the remaining men succumbed, and the mess-room itself was turned into a hospital.

The next three weeks stayed in Aleck's after-memory like a dream. Day and night he tended fires, brought water and made gruels. The plague ran hard; but he seemed to bear a charmed life, never refusing one fever-crazed petition or shrinking from any service, however repulsive. The most desolate night of all he and McDermot dug a shallow grave in the drift behind the bunk-house, and laid O'Shaughnessy there, wrapped in his blanket. And through the long, terrible hours new thoughts came to the lad, even when his hands were busiest, gentle thoughts of his father, and a clearer realization of his own boyish heedlessness.

The tide turned at last; the men began to sit up, and walk feebly about. Then the cook sent Aleck to his bunk, with orders to sleep till he had permission to get up. But the lad turned big, shadowy, imploring eyes upon him.

"I can't sleep, Mc, till you've promised to send this," he said, huskily, holding out a soiled note.

"It's a long day or ever his daddy 'll get it," Mc said to himself, ruefully reading the superscription as Aleck moved away. "No mail for a month yet. I'll keep it, though."

Before morning Aleck was in a raging fever, and babbling deliriously of a hundred things he had never mentioned in camp. The convalescents, who had come to look on the slip of a lad as their good angel, took turns at watching by him, shaking their heads dubiously as they pieced his poor little story out. Then one day a big, grizzled man presented himself at the mess-room door.

"I've come to help out wi' the nursing," he stated, tersely.

It was the preacher from Camp 4. McDermot drew him inside. But before his greeting was finished, Aleck's wistful voice rose suddenly from behind them.

"I'm sorry, father, so sorry," it pleaded. "I'll be careful, next time."

The big man started as if struck a blow. His face blanched.

"Who's yon?" he asked, in a curt, strained voice.

"It's Bryce, the lad who has helped nurse," McDermot answered, his own eyes bulging. "He's down with fever, being clean played out."

The big man crossed the floor with long, unsteady strides, and before the astonished convalescents dropped on his knees beside the bunk.

"Aleck! Aleck! My bairn!" he sobbed. "God above us! Have I found ye at last?"

One bright, wind-swept April Sabbath morning, Aleck awoke to find a familiar face bending over him, its rugged outlines softened with a glorifying tenderness. He opened his lips to utter some weakly-bewildered words, but that moment the mess-room door swung back and big Dan came in, carrying a huge bouquet of gray-blue, silver-hooded hepaticas gathered from some sunny-faced knoll. Their mellow odor floated about him like incense, as he crossed over with elephantine cautiousness and laid his offering on the blanket close to Aleck's nerveless hand.

"'Tis the blessed Easter day, back in God's country, I mind," he said, with reverent dignity that made the lounging listeners suddenly sit up. "They do bring flowers at Easter," he added, shyly indicating his gift.

A glow lit Aleck's pale face, as he glanced at his father. But the preacher got up, with a look such as his congregation had never seen.

"'For this my son was dead, and is alive again,' " he repeated, in an unsteady voice. "'He was lost, and is found.'" He paused a moment, and only Aleck understood the struggle behind those working features. "Aleck, lad,"—he turned and held out shaking hands to the amazed boy, "I was ower hard on ye that night. Ye have asked my pardon again and again in your raving, as well as in your letter,—tell me, bairn, do ye forgive me?"

The men, with one accord, rose and stole softly out into the bright Easter sunshine; and only big Danny, sending back one curious glance, saw Aleck and his father clasped in each other's arms.

SPRING.

Through the casement softly blowing,
Breath of spring!
In the woods the wild flowers growing,
Sure to bring
Wealth to nature, throbbing, waking,
Joy to man just in the taking.
Even robin's notes are making
All our hearts with rapture sing
As we welcome thee, sweet spring.

Like a baby's smiles and glances,
Moods of spring—
Fretful first, then makes advances,
While you sing.
Heartfelt praises in your gladness—
Not a care for winter sadness.
Even storms that rage with madness
Seem to lose their smart and sting
As we hail thee, gladsome spring.

From the skies the warm sun shining,
Life of spring,
Makes the heart cease all repining—
Care to fling
From you as does mother earth
As she gives to life new birth.
Blossoms bright and notes of mirth
Seem to make the breezes sing
As they herald genial spring.

HOW TO SELL CHICKENS.

PAUL MOHLER.

I HAD to go down town today and buy some stuff at one of the big department stores. While I was waiting my turn at the meat counter, I noticed a lady buying a chicken. The chicken the salesman brought her did not suit her very well. "Why," she said, "that chicken looks old." "Oh, no," said the salesman, "it's only a little over a year old." Then, to satisfy her, he look carefully *into the chicken's mouth* and said, "It is just two months over a year old."

"But I want it to be tender."

"Well, that's all in the cooking, you know."

"Well, I can cook it all right."

"Then this is a good chicken."

Still she objected; so he said, "Why, this is one of the best chickens we've had today. It is better than the others. It just came in, and it's just the same price as the others, only fourteen cents a pound." Then she took it. But wouldn't that open your eyes, to see what liars men are? Just think of a man's telling four lies to sell one little chicken!

"What does it profit a man if he gain the whole world and lose his own soul?"

Chicago, Ill.

HERE is a pretty caustic characterization: "He can do less work in more time than any one else I know." The worst thing about a case of this kind is that he thinks he is busy—*Ohio Educational Monthly*.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LII.

THE figs were sorted into four different grades. Your dealer seldom or never carries the first grade, and you usually pay him a first grade price for the third grade fig.

On the second floor of the packing house two hundred men, Greeks, Armenians and Turks, sat on both sides of long, narrow tables extending across the length of the house. Only men skilled in sorting as well as in packing are employed in this department. The women below this floor who sorted four grades of figs from the eight tons that lay in the center of the building, while skillful themselves, threw occasionally a second rate fig into the first rate basket. Once so sorted, however, the men above, with keener appreciation of what was required in each box, made a reassortment, while only the most skillful and experienced of these packed the twenty-five-cent grade of fig in the long, one or two or sometimes three or more rowed box.

The fig when dried and cured is nearly round, wilted and wrinkled, wrinkles being a good sign of quality in a fig, if not on a pretty face. Its appearance is a little like a worthless pear dried up on the tree.

On the table before these men are the baskets of figs. Between every two baskets is a two-gallon pail of sea water. Before them their empty wooden boxes.

The fig is taken up and held between the fingers of both hands, washed and one side of the fig broken open by tearing. It is then pressed out flat, the broken opening being turned downward in the box. This is done so as to make the fig as flat as possible, keep well,

and look well, for as its lower side has been broken, the two edges are pressed apart giving the appearance of a fig of much larger and superior kind. As the fig is flattened into the box, each side is deftly indented or creased by the fingers, the thumbs holding it from above.

In the pails on the table was sea water for a purpose. As each fig was being pressed and flattened, the hand of the workman had moistened it with the salt water which they told me was not only to preserve it but to give it a better flavor.

I thought it so ridiculous—this putting of salty sea water on the delicate fig. I would not believe it until I tasted the water and found it as they had said. This salt water makes the fig pliable, gives it a shiny look, keeps it from souring, and makes it weigh more.

To these six reasons they gave me for using the salt water, they added a seventh: to keep their hands from getting sticky.

I wanted to know

who discovered such a simple remedy for seven good points about packing the fig, but I did not like to increase my queries that had by this time reached a climax of interest.

The men handed me the best figs they could find and to compel me to keep them they broke them so that if I gave them back they could not use them for packing. That was a fine compliment paid to my modesty, for I would have kept all they gave me, anyway.

They were too careful not to offend by the slightest cause and so did not say "eat" for the word in Turkish "to eat" is pronounced "dog," but made signs of eating.

Turks, Greeks and Armenians Packing Figs.

The men were reluctant to tell me all the processes of curing and packing the fig. The salt water bath especially they considered a secret to the success of their trade. Some of them became alarmed and discussion started among them. The interpreter with me told me that they were afraid I would go back to my country and tell my people about the process used by them, which just as soon as known, would create a revolution in the fig industry in the United States. This would bring the American fig up on an equality with the Turkish fig, more men would grow figs, the price for the better product would be higher, and a great market for American figs would be made, not because of a higher price, but because of a much improved quality which would make the American fig more profitable than to export the Turkish fig.

But such international secrets should not, cannot, be kept. What is good for one people ought to be known to all other peoples.

No sooner had I spoken of this Smyrna fig industry and of the use of salt water on them than the tourist told me he lived in one of the fertile valleys of California—Butte or San Joaquin (my notes will give it)—and that he or some fig grower there had discovered—listen! it's almost too good to tell—how to make the California figs taste as good as the Turkish figs. Like the enemies of Luther Burbank, the people around him growing figs they could sell only at a low price, laughed and said:

"You can't import the Turkish climate, it's the sun and air and soil of Turkey that make Turkish figs so much better than ours."

"Admitting that the climate in Turkey is better for figs than our own, which I do not believe," he replied, "I have found the real secret that if applied to our own figs will make them look and taste almost exactly like the Turkish fig. When this is done," he added, with confidence that compelled faith in his words, "when this is done, we farmers and fruit growers in California, studying our soil, applying to it the required fertilizer, or rather, growing upon it that vegetable or cereal that will unlock the mysterious sweetness, locked up till now in its treasure vaults, and bring about a fertile atmosphere and increase the sun's influence,—we farmers, planting the ordinary fig-orchard by our house, will grow on the trees figs that will be as good,—who will not say *better*—than ever came from the barren hills of a soil worn out by the ignorant farming of a thousand years in Asia?"

"What is that?" I asked, excited at the prospect of hearing some new discovery in an industry that has produced a fruit I have liked so much, and jubilant over the idea of some day being able to have an orchard of my own in California.

"It is this," he said. "There is a certain kind of insect, a wasp, native to Turkey. This wasp stings the fruit (or the blossom I have forgotten now which he said), and it is this bite or sting that gives the Turkish fig its great superiority over our own. Well, we have imported that insect and have made trials of it in the valley out there, and we find that those trees visited by it produce a fig so much better than the same trees bore before that we have sold them in packages in the Chicago market as figs equal to the Turkish."

"What do you call the new fig?" I asked the man from California.

"We have named it the 'Calimyrna fig.'"

"I see!" said I. "The best figs in the world come from Turkey. These figs are shipped from the sea-

port town of Smyrna, and are raised, mostly, near Smyrna. Hence the boxes in which these figs are packed are stamped usually "Smyrna," a trade mark very valuable to these Turks. You, now, produce a fig half American and half Turkish. It is raised in California, and you call it *Calimyrna-Calimyrna!* Good!"

I shall with great interest watch for the Calimyrna fig.

These men were kind to me and they knew how to

pack figs. But when I took their picture, they were so ignorant of the laws of photographic optics that fully ten of them stood in studied pose *behind* me. I told them that unless they got within "range of vision" of my camera they would not appear in the photograph. Still they stood where they were, directly behind me, not being able to see my camera. But they thought they were "taken" just the same as the others who stood or sat in front.

The Greek on the left pretended he was smoking a long pipe. It was a jolly factory crowd for Turkey but the seriousness of life in dark Asia tells on even these faces attempting to show a smile.

Turkey is reputed to be the most lawless, dangerous mismanaged government on the earth. Like many other anomalies of human nature, it is queer that we must go to the land of the brigand for the sweetest fruits that grow, the fig and the Sultana seedless raisin.

In a corner of this warehouse a lot of men, barefoot

Although the Exposure Was Insufficient, the Big Figs in Two and Three Rows Are Visible in the Boxes.

and grisly, shoveled the best Sultana seedless raisins about on the floor like dirt. It seemed impossible to bring so many raisins to one heap,—twelve tons,—and though I had eaten all the figs I could care for, I still had an appetite for these. I dugged down into these with my fingers, picking up big handfuls, eating mouthfuls of them at a time. One Sultana raisin smells good. Imagine the fragrance of rich aroma of this newly-cured raisin on a heap of *twelve tons* in one room!

The men, working among them for so long a time, had little taste for them, and when they saw my hunger

A Hill of Sultana Raisins, Twelve Tons,
Over Which Barefoot Men Tramped
at Pleasure.

for them, they worked with greater zeal, believing that others, like me, in far away lands, would like them so well as to pay the fancy price asked for such exquisite goods.

When I was about to leave the packing house the Lawson Bros. gave me *twenty* pounds of finest boxed figs and *twelve* pounds of their finest Sultana seedless raisins to eat at on my way by steamer. These were worth about twenty-five cents a pound. If I were running a grocery or fruit store I should most assuredly write to Messrs. Lawson Bros., Fig Packers, Smyrna, Turkey, for my supply of figs. The English have good taste, are capable of producing the best on the market, and of all nations I have met, they are the most reliable. They have not the ingenuity or native skill of the Yankee or Jap, but they will not cheat you so quickly as either the American or Japanese. They are known to be thick-headed, slow, easily offended. They can't make self-binders, shoes or toys, but what they do make, in field or factory, is pure, clean or durable. I have the greatest respect for the Englishman's code of business honor. They are scrupulous and painstaking in every detail.

THOUGHTS ON EASTER.

D. Z. ANGLE.

EASTER Sunday this year of 1909 comes around on the eleventh of April. The day is commemorative of the ascension of our Savior, but the date on which this festal day occurs varies year after year because custom or science decrees that it shall be the first Sunday after the full moon which happens upon or next after the 21st of March, and if this happens upon a Sunday, Easter day is the next Sunday after. An early Easter is said by some to signify an early spring, but whether that always invariably follows, we are not prepared to say. Neither does an early spring bring unusually abundant crops, though crops would naturally be earlier, but that might be offset by lack of rain or suitable growing weather later on in spring or summer.

Easter, Ascension day, and Christmas, our Lord's supposed birthday, have been celebrated more or less by all Christendom since the time of the apostles. While each and every day is good, and proper time for doing good deeds and accomplishing something in the line of duty, still it seems fitting and proper that the birth and resurrection of the Savior of the world, the Son of the Living God, should be marked and recognized by a God-fearing mankind as special days for rejoicing in remembrance of events foretold by the ancient prophets of God, many centuries before those great important events took place. The civilized nations of the world recognize as a holiday the birthday of Jesus the Son, who came to us in the flesh. The Christian celebrates Easter as a day which finished the fulfillment of much prophecy. For by his resurrection he proved his divinity, and that men might too arise and live in a future happy state. His ascension to his Father, he said was to prepare a place for his followers, "that where I am there ye may be also." Then while we may eat some of the good things earth furnishes us on Easter day, feasting is not necessary to properly observe it or any other holiday, but over-indulgence in life's necessities or dainties is to be condemned. We should live simply and righteously, looking forward also to a final resurrection and ascension to the beautiful home prepared for those who love and serve him.

Mt. Vernon, Ill.

SALOON MAN VOTES "DRY."

A CHICAGO young man who is traveling in the South writes home to his father of a conversation he had with a Memphis saloonkeeper, the proprietor of one of the largest and finest saloons in that city, which, under the new State law, is to become "dry" on the first day of next July.

The young Chicagoan incidentally fell into conversa-

tion with the man at the hotel breakfast table, and asked him what about the new prohibitory law.

"Well, sir, when that law goes into effect I will be a ruined man financially," he said. "Everything I've got will go and I will have to start all over again in some new business."

Being asked if he didn't feel rather sore about it, he replied:

"No, sir, I don't. I am a whisky man; have sold it all my life, and I know that it is the root of all evil. It ruins more lives than any other thing. It is the curse of this country. Though I am not a married man and

have no family, yet when I go to the polls I vote for prohibition."

His new acquaintance seemed surprised at this, and he went on:

"I have sisters and brothers who are married and have children. Do you think I am going to vote for a thing that may ruin the lives of those children and drag them down to destruction? No, sir; I've seen too much misery caused by alcoholic liquors to do a thing like that."

This saloonkeeper predicted that in ten years we would have nation-wide prohibition.—*The Illinois Issue.*

THE CONTROL OF THE SCHOOL

D. D. THOMAS

A MISSION of more than ordinary importance obviously calls for more than ordinary care. The public schoolteacher has such a mission. The dollars and cents vanish from his mind when he "is made to realize the nature of his "high calling." The proper control of the school is a question of interest not only to the teacher but to every one concerned in the future generation. What restraint for character building and soul strengthening and guidance as well should be brought to bear upon the life of the pupil! The control or government of the school prepares the mind and heart as a receptacle for the more direct teaching process. It is the appetizer, the mental stimulus that causes the pupil to love to master his lessons and to exert his power.

The methods are varied somewhat, depending upon the relation of the teacher to his pupils. But this variety is within bounds rather narrow, only affected by peculiar circumstances of the pupil and the natural adaptation of the teacher. A teacher's mind should be drawn out to the fact that his work is eternal. In the substance of his teaching may lie the germs of tyranny or it may be such as to hasten the millennium. He may plant such that shall bring forth in generations to come households of sorrow and strife or it may be peace and joy. Yes, a teacher should be made to feel that the results of his work are eternal.

One cannot pass by, on the very threshold of this subject, natural adaptation. "Apt to teach" is rather a gift than an acquirement. Some have too great a tendency to concentrate their attention upon any subject and lose sight entirely of the pupils under them. They may have excellent knowledge of what to teach and how to teach it, but fail because they are not naturally adapted to it. Others lack power of command. They cannot make their word to be respected;

excellent men every other way but the one fault is fatal. There is a great work for them to do no doubt. Every man has his work, and every one should know himself sufficiently to choose that work. Living under a government "of the people, by the people, and for the people," that spirit predominates in every institution. The rigid goading of former times was a relic of monarchical days and may God hasten the day when the burden of corporeal pain shall be banished from both school and state and the principles of proper government may be planted in every home and practiced around every hearthstone. How that would facilitate the teacher's work!

The question is approximately solved by the self-control of the teacher. A wavering teacher unfits himself for his work. For if he cannot have confidence in himself and control of himself, how can he expect others to have any confidence in him? It is not meant in this that a teacher should not admit his mistake. When he finds himself wrong that is the right thing to do. The occasional making a wrong right gains respect from his pupils, but it should not occur too often. There ought to be no hurry. A fussy, flustering teacher causes levity and draws attention in such a manner as to militate against study. Work should be done but not hurriedly. Rather allow a class or two to go unrecited in the daily routine than bluster over class work. It is a good thing, when the teacher is inclined to hurry, to stop in the midst of the recitation, tell a story or talk of something else until he has full control of himself; always remembering that a little done well is much better than a great deal only half done. One ought to be able to conquer his own empire before crossing the borders to conquer others. To be sure of his strength when he goes forth is only the

part of wisdom. His home strength is the measure of his power abroad.

A teacher should be pleasant. He should not take his sorrows or joys with him in the schoolroom, but be uniformly pleasant. He may help himself to this condition by taking an interest in each pupil. Every child's life is an open book that he who runs may read and gather knowledge and power for the uplifting of those under his care. I believe much in coöperation with the pupils. Let them have a hand in the affairs of the school. Consult them, commend their good judgment. If a cause for dissent is apparent make it appear as little so as possible. The pupils will take most interest in that which they have had a hand in arranging. The expression of their opinion also gives the teacher a better chance to see things from their point of view and to sympathize with them.

When one can do it without too greatly increasing the burden of their work, give them a class to hear. A class in a lower grade or even in their own grade may be heard with profit to themselves and good to the school as a whole. A morning exercise is unifying and pacifying to a school when conducted aright. A teacher has this plan which works quite well: When the bell is rung he quietly takes his seat behind his desk and remains there until the pupils have taken their places and become quiet. He then rises, reads a scripture or tells a story with a moral. At a signal the school rises until a short prayer is offered. A pupil taps the tardy bell. Two others step forward and distribute song books. Another pupil goes to the instrument, makes a selection and the school sings. One or two songs are sung. The books are gathered by the same pupils that distributed them and carefully put in their places, and the school is ready to go to work. All this is done without a word from the teacher.

A rule is rather a trap for the teacher than a law to the pupils. It puts him to more trouble than it does the pupil good. The gradations of its violation make it so often difficult to tell whether the offense is serious enough to come under the rule. And whatever way he may decide he is still open to censure. Interest is the thing to be gained for the pupil,—enough pleasant work to keep him busy under the direction of the teacher. The more that work can be filled with useful thought and drill, or rather the more utility that can be carried in that pleasure the better is the teacher adapted to his work. When interest is once raised the teacher should not do much work for the pupil that he can do for himself. Just enough to keep him from being discouraged. His employment satisfies him, and his tasks strengthen him. He is a law unto himself and a fine example to others. The teacher should let go the exercise of authority as much as possible. He has struck a happy mean when he can constantly deal

with his pupil as his equal; when he can tactfully lead his pupil without the latter knowing it; when he can teach him to want to do the best thing for his advancement.

Lastly, the teacher's life should be hid in that of the pupil. The writer has knowledge of one who is constantly seeking to be hid away. A sort of sacred recluse. One who seems to have no relish for social functions. Whose hands simply do their duty and go their way. Whose feet walk where need is, and whose heart dwells where love is. And everything touched takes on new life, new hope. Should human tongues keep still the very stones would cry out. What must a class of hopeful youths and maidens be under such surrounding? The most powerful weapon that can be wielded. The most far-reaching in its results. Out of the valley is the blue of the sky, the most beautiful and the brightest glory is the soul gems saved by patient hands and made fit for the Master's use.

Lafayette, Ohio.

THE CIGARETTE.

IT seems there could be no greater harm done to childhood than to sell poison to take away its brains. I have never taken statistics on this matter, but we know that the testimony from every State, town and school shows that the cigarette is a bad thing for childhood, and if it is, why not eliminate it? I am looking forward to its entire abolishment. All doctors agree that it is poisonous and dangerous. I have never heard anyone who had the courage to apologize for the cigarette.

You know our most common prayer contains the plea, "Lead us not into temptation, but deliver us from evil." How think you we ever can be justified in tolerating in this nation anything that will lead children, let alone all others, into temptation?

I have found in my experience many boys in court whose difficulties could be traced directly to the cigarette. I have also had many boys who did not use the cigarette, but because they do not this is no proof that their difficulties are not the result of the cigarette. A boy may get into trouble by association with boys who do smoke, so there is no estimating the evil that comes from this habit.

We are all bundles of habit, and character is so much matter of habit. Just so far as we can strengthen the character of the youth of this nation just so far we can strengthen the nation. Everything we permit that causes bad habits, to that extent weakens and damages the citizenship of the future. How long will we permit it?

No man can sit in the children's court among the weak, the miserable, the helpless, unless he is an optimist. I see light ahead. Seven States have outlawed the cigarette, and others will do so soon.

Did it ever occur to you how thoughtless we are when a number of our children are in peril? There is always the hero to rescue the child from before the rushing train; and how the nation is aroused when a schoolhouse is burned down and the children are sacrificed to the flames, and how investigating committees are formed and perhaps prosecutions are inaugurated against the careless! And yet when we know that the brains and souls of children are being burned out by this evil alone, could there be any greater commentary upon the thoughtlessness of this nation, I would say almost selfishness? But it is because our people do not understand, they do not know.

Now, my friends, what is the *remedy*? Education, agitation, facts, facts. Facts are the most valuable engines in reform. It is facts constantly pounded into the ear of the people that will arouse them to work for legislation. Therefore the agitation of a movement of this kind always results in good in the end. Let us continue telling the public and legislatures about this evil of the cigarette until it is entirely eradicated from this nation.—*Judge Lindsey.*

WHICH WAY?

SAY something good when you say anything, or else don't say anything.

A little chap I know of once went visiting with his father and mother. Two places were on the list. One had been visited and the call at the other was in progress.

Somehow things did not go right at this latter place, there were some harsh words; the folks did not look pleasantly upon each other. When they spoke it was with a kind of a growl.

The little chap stood it as long as he could, and then he went to his mother with this appeal: "Let's go back to the other place; it's healthier up there!"

Dear little man! He felt homesick down there, where there were no kind words, and where everything seemed to go wrong. He longed for the "healthier" climate on the hill, where men and women and little folks had a smile and a cheery word for one another.

Sometimes I think that a good share of the failures men make in this world are due to the unhealthy words and looks and acts of those they meet from day to day. Whiplashes cut; old Bill knows that. None of us likes to be stung by hornets. Give me the sharpest kind of a cut with the lash, or let me be set upon by a thousand hornets; but spare me from the man and woman who always carve me to the bone when they speak!

Now the farm is one of the best places in the world to learn good manners,—better by far than any school of culture. A boy and girl may learn how to bow and

scrape and say polite things in a school of manners, and yet be perfect torments in their own homes.

Manners are not kindness. Kindness is a thing of the heart, while manners may be solely of the head.

How do you speak to the boys when you wish some little thing done? Is there something about your tone that makes them spring to do the task? Or do you speak so that for days, and maybe for a whole lifetime, there may be a sting in the heart?

Some things last a long time. You can get the nail out which has been driven in hard and clinched on the other side; but you can't pull a harsh word out with a tenhorse team. It will stick for ever and ever.

Getting in the wood for night is a thing that must be done in every home; busy times come just at dusk. The chores are to be done, things must be put to rights for the night; Billy boy and sweet Nellie can lend a hand now. How gladly they will do it if you go about it in the right way.

And then, how is it at your house between you and your wife? Are there as many kind words and helpful deeds as there should be? Ah, how that question strikes home—doesn't it? It is so much easier sometimes to send a bouquet when some one you love as you do your own life lies on the other side of the door, than it is always to speak kindly!

Did you ever notice how sensitive horses and cows are to such things? They fairly shrink from you when you are cross and say harsh things. The dog takes a bee-line for the woods on days when his master is down in the mouth, and the cat goes on a long hunt when the voice of her mistress strikes the minor tone.

Hearts are such queer things, and everything that lives on the farm has a heart. A strange thing about it, too, is that one heart acts and reacts on another.

Strike a string on a harp anywhere, and all the rest feel it and give back some kind of a note.

One man with a heart set edgewise can set the whole farm household to jangling.

How now, fellow farmer? What shall be our way of doing the things which need doing? With a whistle and a smile and a cheery word? Oh, yes; that's the best way. It is the way that makes the world brighter and better, it is the way that leaves no sting afterward.

Let's take that way! Will you do it?—*Farm Journal.*

"If I were to give you an orange," said a well-known lawyer, "I would simply say, 'I give you an orange'; but should the transaction be intrusted to a lawyer to be put in writing he would adopt this form: 'I hereby give, grant, and convey to you all my interest, right, title, and advantage of and in the said orange, together with its rind, skin, juice, pulp and pips, and all rights and advantages therein, with full power to bite.'"

NATURE STUDIES

A TRAMP ALONG A BANK.

N. J. MILLER.

THE last days of March are here and yesterday's tramp along the snow-touched shrubbery covering the bank wasn't dull distance. The snow storm of thirty minutes' duration threatened to hinder my ease, yet afforded some study of the big flakes as they fell on my coat sleeves.

However, that study was interrupted by a loud, ringing chatter of red-winged blackbirds—a large flock that had been hanging round the farmers' feed-yards all winter. I think it was the largest flock I had ever seen, easily covering half an acre or more of alfalfa stubble, making the area black as plowed ground. The whole flock seemed to move and yet to stand still. Every individual was restless and excited. From all sections of the area dozens would fly upward three or four feet, chattering and fluttering, only to settle to the ground again. This procedure was indulged in for perhaps twenty minutes when the flock began to half run and half fly, a foot or more above ground,—rather to stream from the main crowd due westward, facing the storm and into the road leading to an oat-stubble field. The stream of black pouring from the flock was much like the straw and chaff pouring out of an old-fashioned blow stacker. Finally the roadway was well covered. Then, the chattering and fluttering reached its maximum and the entire flock, lifting itself slightly, formed a long cylinder—its axis parallel to the road and wind—revolving and rolling, always touching the ground, slowly southward until reaching the bank of the high line. Here they settled quietly until the storm ceased.

Never before have I observed such a procedure by the red-wings. I presume the storm, catching them so suddenly, disconcerted the flock's action and that after confidence and order were restored they determined upon this capable method to reach shelter and safety.

The snowstorm was making my walk tedious. Suddenly the flakes ceased falling and old Sol shone brightly. How fresh the atmosphere! One just couldn't help make deep inspirations. But what were those tracks in the snow? Unmistakable evidence that birds were there recently, at least since the storm ceased. A short distance ahead was a bevy of California quail, two, ten, fifteen, twenty-three of them. Their shyness, of course, showed they were responsible for

the tracks I noted before. I could not help but contrast them with the quail of Iowa and Illinois. I noted they are highly colored and beautifully crested, the crests being nearly an inch in height and plume-like, not dissimilar in shape to a wooden tobacco-pipe, the larger end extending vertically and forward from the head. A few years ago, I am told, the birds were introduced. Now, protected throughout the year by game law they have become very plentiful.

Yelp! Yelp! Yelp! Across the alfalfa fields one hundred rods to the south was a race for life—a jackrabbit chased by five hounds. Each was doing

Snow-touched Shrubby Along the Bank.

its best, the hounds slowly gaining in the race directed toward me. I felt certain the rabbit would lose before the contestants reached me. No doubt the dogs were even more certain of their prize. They were ready, it seemed, to make the final leap but, when near me, something happened. Mr. Rabbit stopped quick as thought: four of the dogs leaped past him and the fifth—being in the rear—having time to slacken speed, tried hard for the prize but failed. Mr. Rabbit turned squarely about, ran low between and beneath the dogs and bounded to the southwest. The race began anew, the hounds far in the rear. Pluckily they labored, gaining for the first one hundred rods, when the rabbit bounded across the weeds and tangle along the fence. The latter so delayed the dogs that they gave up the chase.

"Good!" I shouted. "Well done, old rabbit! I

expected to find you along this bank sitting beneath a bit of weeds—sitting stock-still, the image of personified fear: also to see those big eyes staring at me and then suddenly your long ears become pendant and a 'confused mixture of legs' (producing the familiar alarm sound) carry you across the field like the winds. This time, however, you were racing for life! When your best instincts, running, leaping and the like, wouldn't save, you used reason, stopping instantly and running low and beneath your enemies. You verified what David Starr Jordan said of your race, 'But the same animal is capable of reason—that is, of a distinct choice among lines of action.' Not long ago a rabbit came bounding across the university campus at Palo Alto. As it passed a corner it suddenly faced two hunting dogs running side by side toward it. It had the choice of turning back, its first instinct, but a dangerous one; of leaping over the dogs, or of lying flat on the ground. It chose none of these, and its choice was instantaneous. It ceased leaping, ran low, and went between the dogs just as they were in the act of seizing it, and the surprise of the dogs, as they stopped and tried to hurry around, was the same feeling a man would have in like circumstances.

This walk wasn't dull distance. Caught in a snow-storm, peculiar behavior of a flock of red-wing black-birds, a bevy of California quail, and a jackrabbit racing for life wouldn't allow time to be heavy on my hands.

SWIMMING BIRDS.

WHEN we say "swimming bird" we always think at once of ducks and geese as familiar examples. How well their boat-shaped bodies and long legs are suited to living on the water! They, too, are web-footed, which makes swimming easy, and their short legs are placed far back on their bodies. This position is well suited to swimming, but is awkward for walking on land. To "waddle like a duck" is an old expression and certainly true.

We notice what thick, close plumage these swimming birds have. Nature has provided this because of the sudden changes of temperature the birds have as they dive into the water and fly up into the air. Not only are their feathers warm, but the down next to the skin. The oil glands supply an unusually large supply of oil, which makes the plumage have a beautiful gloss and keeps it from getting wet also.

Ducks and geese have an odd way of eating; they gobble up their food, taking water and mud at the same time, but in their flat, broad bills are round plates at the edge, which serve as a strainer. This strainer is able, in some way, to select the foods and keep them in the mouth, allowing the mud to run out.

More graceful than ducks and geese are the swans.

No bird is prettier when swimming, their long necks gently curved and their wings parted to catch the wind. They are not so peaceful as they look, however, for when disturbed they make an ugly, hissing sound and strike violently with their wings.

Swans, geese and wild ducks are good fliers as well as swimmers. They can be recognized at a long distance by their wedge-like flocks. They fly in two lines, coming together in front and separating at the back in the wedge shape. When the leader at the head of the line grows tired of his post he drops back, another bird takes his place, perfect order being kept all the while. They fly thousands of miles at the change of the seasons. In summer they make their nests in the lakes and marshes of cold northern countries.—*Baptist Boys and Girls*.

PAINTING THE LILY.

RECENT investigations have shown that for all fruits and flowers only three coloring substances are furnished by nature. One of these is the familiar "chlorophyll," which paints the beans and peas, the watermelon and the leaves of the trees so vivid a green. Another is "xanthophyll," which exhibits its intense yellow in the carrot, for example. The third is "erythrophyll," which shows its rich red in the beet. The last two are only modified "chlorophyll," however. But it is quite wonderful to realize that all of the varied hues of flowers and fruits are due to these three substances, mixed in different proportions.

Beets contain enormous quantities of "erythrophyll" (as might be judged from their intense redness), and their juice was formerly employed to some extent as a coloring agent. But vegetable dyes, which were extensively used in earlier days, have the disadvantage of lacking permanency. There are some exceptions, it is true—such as indigo, which is a definite chemical compound stored in the plant; and the same may be said of madder. Turmeric and saffron, too, yield important pigments, which are commonly utilized for dyeing.

Several kinds of dyes, by the way, are obtained from trees. In the South the brown juice of "butternut" bark is used to this day for staining cloth.—*Selected*.

A USEFUL PLANT.

THE fibers of the leaves of the American agave, or "hundred years" aloe, are made into thread ropes, and an extract of the leaves is used instead of soap. The flower-stem, which sometimes grows to a height of forty feet, when about to burst into blossom, yields a sap which makes a Mexican drink rather like cider; and the same stem when withered is cut up into slices to form razor strops.—*Selected*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETEREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

NEW LIFE.

SEVERAL months ago all growth in the vegetable world was cut short by blighting frosts. The leaves of the forest came down like a shower of gold. The luxuriant grasses took on a deathly hue and settled back upon their stalks, protectingly covering the tender shoots, just pushing forth, with their graveclothes. The delicate blossoms shriveled in the grasp of the icy hand and the short-lived annuals bound up all their hopes in their tiny seeds and meekly submitted to their cruel fate. Over all there was death, or the deathlike sleep.

Then winter came in earnest. The biting wind howled through the naked branches of the trees. The snow drifted over the bare fields and covered deep the ravages of the frost. The sun withdrew and its slanting rays scarcely reminded one of its warm, life-giving smiles of a short time before. The clouds hung low and often fulfilled their threatenings with fierce storms of snow and sleet.

All the while the earth lay silent under the hand of winter. She made no complaint—no effort to defy the elements. She patiently bided her time and gathered strength and vigor. And now that winter has spent its strength and finds that the sun no longer encourages his rule, the earth begins to show signs of life and returning consciousness. Millions of tiny roots stretch their grasping hands through the moist soil. Millions of tender shoots push up into the light of day. Millions of little seeds burst through their coverings and unfold their secrets. After the storm and stress of winter the deathlike sleep, we have life—new and abundant life.

How like to this was the life of our Lord! First, there was the period of blessed service, when every act and word blossomed into a deed of love and helpfulness. Then the vigorous life was struck down by

the cruel enemy and death and the silence of the grave followed. Finally the germ of immortal life, which no enemy could destroy, burst asunder the bands that confined it and our Lord again appeared among men, all his former loveliness enhanced by the glorified form he bore.

Every year we have enacted again this tragedy of life through death. Every year when bursting bud and unfolding leaf reveal the life hidden in stem and stalk, so long dormant, we are reminded of the One who burst the bars of death and came forth with increased power and glory. And every year this reminder gives us new inspiration for the present and new hope and brighter anticipations of that time when this corruptible shall have put on incorruption and this mortal shall have put on immortality and we shall be changed!

INDIVIDUAL LAW-BREAKING.

OUR respect for law as a people depends upon our respect for law as individuals. So long as we excuse or overlook a disregard for law by individuals in matters that are considered trivial or insignificant, just that long will we have to suffer from the crime of lawlessness in corporations and large businesses. It is the prevalence of this idea of individual immunity that brings our laws into disrepute and threatens us with a generation of anarchists. The immune individuals, of course, are, as a rule, those who are able to purchase their immunity with the almighty dollar if the show of wealth and influence is not enough to secure it.

Just now our speed laws, which are for the protection of our citizens on the street, are broken every day by automobilists, and in many instances an innocent life is made to pay for the broken law. When expostulated with the automobilist either makes his escape by breaking the law again, or pulls out a fat purse and pays the fine and then rides away at a law-breaking speed. "Who cares," says he, "if the law is broken?" and yet this same man cares very much and stands out and shouts anarchy at others who trample the law under foot.

But the automobilist and the wealthy man are not the only ones who think they should belong to the immunity class. The respectable man thinks he should be accepted on his respectability. The law, of course, was made for the vicious and depraved and therefore was not meant for such as he, and any little disregard for it on his part should be passed over as though it did not exist, since it is simply a matter of convenience and does not come from a base motive.

Have any of us ever put up such argument as an excuse for breaking the law? And is the reasoning sound? Is a motive free from baseness which has its root in selfishness? For it is easy to see that selfishness dominates all law-breakers, whether mil-

lionaire, respectable citizen, or wicked outlaw. In trying to solve the problem of America's disrespect for authority, let us begin close home. Let us be sure that we ourselves have at all times the regard for constituted authority that we think everyone else should have.

THROUGH DEATH TO LIFE.

Have you heard the tale of the aloe plant,
 Away in the sunny clime
 By humble growth of a hundred years
 It reaches its blooming time;
 And then a wondrous bud at its crown
 Breaks into a thousand flowers.
 This floral queen in its beauty seen
 Is the pride of the tropical bowers.
 But the plant to the flower is a sacrifice,
 For it blooms but once, and in blooming dies.

Have you further heard of this aloe plant,
 That grows in the sunny clime,
 How every one of its thousand flowers,
 As they droop in the blooming time,
 Is an infant plant that fastens its roots
 In the place where it falls to the ground,
 And fast as they drop from the dying stem
 Grow lively and lovely around?
 By dying it liveth a thousandfold
 In the young that spring from the death of the old.

Have you heard of the tale of the pelican,
 The Arab's Gimel el Bahr,
 That dwells in the African solitudes
 Where the brides that live lonely are?
 Have you heard how it loves its tender young,
 And cares and toils for their good?
 It brings them water from fountains afar,
 And fishes the sea for their food.
 In famine it feeds them—what love can devise!—
 With blood of its bosom, and feeding them dies.

Have you heard the tale they tell of the swan,
 The snow-white bird of the lake?
 It noiselessly floats on the silvery wave,
 It silently sits in the brake,
 For it saves its song till the end of life,
